Preface

As prospective graduate students concerned with professional advancement, you know the importance of using good tools and drawing on solid research. In this Twelfth Edition of Barron's How to Prepare for the GRE, we offer you both.

This revision contains the fruits of our close study of all recent GRE General Tests made public by the Graduate Record Examinations Board. We have scrutinized hundreds of actual GRE questions, traced dozens of GRE reading passages to their sources, analyzed subsets of questions by order of difficulty and question type. In the process, we have come up with the following features, which should make this Twelfth Edition particularly helpful to you:

**Actual GRE Questions Analyzed**
The Twelfth Edition takes you step by step through dozens of verbal, mathematical, and analytical questions from actual published GREs, showing you how to solve them and how to avoid going wrong.

**Testing Tactics**
The Twelfth Edition provides you with dozens of proven, highlighted testing tactics that will help you attack the different types of questions on the GRE.

**High-Frequency Word List**
The Twelfth Edition gives you a new, updated 333-word High Frequency Word List, 333 words from abate to zealot that have been shown by computer analysis to occur and reoccur on actual published GREs, plus Barron's 3,500-word Master Word List, the college-level vocabulary list for over 40 years.

**Comprehensive Mathematics Review**
The Twelfth Edition presents you with extensive mathematical review materials that provide a refresher course for students primarily involved in nonscientific disciplines.

**GRE-Modeled Tests**
The Twelfth Edition offers you a full-length Diagnostic Test geared to the current GRE, a diagnostic test that will enable you to pinpoint your areas of weakness right away and concentrate your review on subjects in which you need most work, plus five additional Model Tests, all with answers completely explained, that in format, difficulty, and content echo today's GRE.

**Computer GRE Update**
The Twelfth Edition introduces you to the latest fashion in GRE testing—the adaptive, computer-based GRE—and helps you determine how to prepare for this interactive form of the GRE.

This Twelfth Edition once more upgrades what has long been a standard text. It reflects the contributions of numerous teachers, editors, and coaches, and the dedication of the staff at Barron's, especially Linda Turner. We, the authors, are indebted to all these individuals and to our publisher, Manuel H. Barron, for their ongoing efforts to make this book America's outstanding GRE study guide.
TIMETABLE FOR THE PAPER-AND-PENCIL GRADUATE RECORD EXAMINATION

IMPORTANT NOTE: This is a typical format only. The GRE you take may be slightly different. The order of the sections will probably vary.

Total Time: 3 hours, 40 minutes

An Overview of the GRE General Test

The GRE General Test is a multiple-choice examination designed to measure the verbal, quantitative, and analytical skills you have developed in the course of your academic career. Because there is a strong correlation between high GRE scores and the probability of success in graduate school, many graduate and professional schools require that their applicants take the GRE General Test. (They may also require their applicants to take the appropriate GRE Subject Test; these tests are offered in seventeen fields.)

There are seven sections on the paper-and-pencil GRE: two verbal sections, two quantitative sections, two sections testing analytical ability, and one experimental section in one of the three tested areas; this experimental section is not counted in the scoring. The verbal sections measure your ability to use words as tools in reasoning; you are tested not only on the extent of your vocabulary but also on your ability to discern the relationships that exist both within written passages and among individual groups of words. The quantitative sections measure your ability to use and reason with numbers or mathematical concepts; you are tested not on advanced mathematical theory, but on general concepts expected to be part of everyone's academic background. The analytical sections measure your ability to make rational assessments about unfamiliar, fictitious relationships and to think through arguments logically. You are given 30 minutes to answer the questions in each section; you may not go back to a section once the time for that section has elapsed.

There are three very important points you should be aware of:

1. Each question on the written exam is worth the same number of points. Whether it was easy or difficult, whether it took you 10 seconds or 2 minutes to answer, you get the same number of points for each question answered correctly.

2. In each group of questions, the questions tend to go from easy to more difficult. This means that the first analogy question in a group will probably be easier than the seventh analogy question in that group, and so on. (An exception is the reading comprehension questions, which are not ordered by level of difficulty.)

3. The GRE General Test does not penalize you for incorrect answers. Leave no question unanswered. When uncertain about an answer, guess—and mark your guesses. You can always come back to them if you have time.

Keep these three points in mind as you learn more about what's on the test, and the tactics and strategies that will help you maximize your test score.
Commonly Asked Questions About the GRE

How Does the GRE Differ from Other Tests?

Most tests students take are achievement tests. They attempt to find out how much the student learned, usually in a specific subject, and how well he or she can apply that information. Without emphasis on memorized information, the GRE General Test measures verbal, mathematical, and analytical reasoning ability that you have developed both in and out of school.

How Can I Determine Which Is the Experimental Section?

Do not waste time in the examination room trying to identify the experimental section. Do your best on all seven sections. Some claim that most often the last section is the experimental part. Others claim that the section with unusual questions is the one that does not count. Ignore the claims: you have no sure way to tell. If you do encounter a series of questions that seem strange, do your best. Either these are experimental and will not count, in which case you have no reason to worry about them, or they will count, in which case they probably will seem just as strange and troublesome to your fellow examinees.

Should I Guess?

Yes, definitely on the General Test. Unlike the Subject Tests, which may have a guessing penalty, the General Test simply gives credit for correct answers; it does not penalize ones that are incorrect. If you are running out of time, eliminate any answer choices you feel sure are wrong. Then go ahead and guess. On the General Test, guessing at an answer is ALWAYS better than not responding at all.

On the Written Test, Is It Advisable to Begin by Doing All the Easy Questions First?

Yes, but don’t devote too much time to any one question, even if you think it should be an easy one for you. Usually, the earlier questions of each type, except for the reading comprehension questions, are easier than the later ones. Most tests begin with “warm-up” questions. But what is easy for one person may be hard for another, so it is good advice not to get bogged down with any one question. Remember, on the written test all questions carry the same point value. After a reasonable amount of time, guess. Just make sure you make a note of your guesses in your test booklet, so that you can come back to them if you have time.

How Important Is Scrap Work on the GRE?

Scrap work on the GRE is important only to the degree that it is helpful to you. You may write in the test booklet as much as you choose. Don’t hesitate to mark key words or phrases in the verbal and analytical sections. Do any necessary mathematical calculations on or near the problem. Since scrap work is not scored, keep it down to a minimum to save time. Be careful not to do any scrap work or leave any stray markings on your answer sheet. The machine that scores the test may mistake a stray mark for a second answer and give you no credit for a question.

Use your test booklet as your guessing guide. Circle any questions to which you want to return. Cross out any answer choices you are sure are wrong, so that you don’t spend time considering them again.

When and Where Is the Test Given?

The GRE is given five times a year at test centers throughout the world. Tests fall on Saturdays in February, April, June, October, and December. In June, only the General Test is given. On the other four dates, the General Test is given in the morning and the Subject Tests are given in the afternoon. Candidates whose religious convictions prohibit their tests on Saturday may arrange for Monday dates.

In New York State, where public disclosure of standardized tests is required by law, a curtailed testing schedule is in effect.

Your college counseling office will have information about the exact test dates and should be able to provide you with a registration form. If a registration form is not available at your school, request one by mail from Graduate Record Examinations, Educational Testing Service, CN 6000, Princeton, NJ 08541-6000. You will receive with it a copy of the current GRE Information Bulletin, a helpful booklet containing sample questions and information about services and fees.

How and When Are GRE Scores Reported?

The General Test raw score, the number of correct answers, is converted to a score on a scale of 200 to 800. With no correct answers at all, a student would still have a score of 200. With one or two unanswered or incorrectly answered questions, a student could still have a score of 800. Separate scores (from 200 to 800) are given for the verbal, quantitative, and analytical reasoning sections. Your score report will include both your scaled scores and your percentile rank indicating the percent of examinees scoring below your scaled scores on the General Test.

You should receive your score report in the mail approximately six weeks after the test date.
What Is the Computerized GRE Option I’ve Heard Mentioned?

In March 1992 the Graduate Record Examination Board announced a new option for test-takers: the computerized GRE. In the not-too-distant future, virtually all GREs will be administered on-line, and students need guidance in handling this new format of the test. Refer to Chapter 13 for a complete description of this test.

GRE Test Format

The following seven sections are on the written test. You will be given 30 minutes to complete each of them.

- 38-question verbal section
- 38-question verbal section
- 30-question quantitative section
- 30-question quantitative section
- 25-question analytical section
- 25-question analytical section
- An experimental section (which can resemble in content any of the six sections described above)

These sections always appear on the GRE, but their order varies. The organization within each section does not vary greatly; sections will tend to be organized as outlined below:

**Verbal Section**
- 1–7 sentence completion questions
- 8–16 analogy questions
- 17–27 reading comprehension questions
- 28–38 antonym questions

**Quantitative Section**
- 1–15 quantitative comparison questions
- 16–20 discrete quantitative (standard multiple-choice) questions
- 21–25 data interpretation questions (tables/graphs)
- 26–30 discrete quantitative (standard multiple-choice) questions

**Analytical Section**
- 1–5 analytical reasoning questions
- 6–8 logical reasoning questions
- 9–22 analytical reasoning questions
- 23–25 logical reasoning questions

The Verbal Sections

The two verbal sections contain four types of questions: sentence completion, analogy, reading comprehension, and antonym. Your academic success will depend on your verbal abilities—especially your ability to understand scholarly prose and to work with specialized and technical vocabulary.

As in all GRE sections, the questions in the verbal sections progress from easy to difficult within each group of the same type of question. In other words, the first antonym question will probably be easier than the last antonym question; the first analogy question will probably be easier than the last analogy question, and the first sentence completion question will probably be easier than the last sentence completion question. Reading comprehension questions, however, are not arranged in order of difficulty. They are arranged according to the logic and organization of the passage on which they are based.

Although the amount of time spent on each type of question varies from person to person, in general, antonyms take the least time, then analogies, then sentence completions, and, finally reading comprehension. Since reading comprehension questions take much longer to answer (you have to spend time reading the passage before you can tackle the questions), you should do these questions last.

Sentence Completion Questions

The sentence completion questions ask you to choose the best way to complete a sentence from which one or two words have been omitted. These questions test a combination of reading comprehension skills and vocabulary. You must be able to recognize the logic, style, and tone of the sentence so that you will be able to choose the answer that makes sense in this context. You must also be able to recognize differences in usage. The sentences cover a wide variety of topics from a number of academic fields. They do not, however, test specific academic knowledge. You may feel more comfortable if you are familiar with the topic the sentence is discussing, but you should be able to handle any of the sentences using your knowledge of the English language.

See Chapter 3 for sentence completion question tactics and practice exercises that will help you handle these questions.

Analogy Questions

Analogy questions test your understanding of the relationships among words and ideas. You are given one pair of words and must choose another pair that is related in the same way. Many relationships are possible. The two terms in the pair can be synonyms; one term can be a cause, the other the effect; one can be a tool, the other the worker who uses the tool.

See Chapter 4 for analogy question tactics and practice exercises that will help you handle these questions.

Reading Comprehension Questions

Reading Comprehension questions test your ability to understand and interpret what you read. This is probably the most important ability you will need in graduate school and afterward.

As we already noted, reading comprehension questions take more time than any other questions on the test.
because you have to read a passage before you can answer them. Therefore, you should do the reading comprehension questions last.

Although the passages may encompass any subject matter, you do not need to know anything about the subject discussed in the passage in order to answer the questions on that passage. The purpose of the questions is to test your reading ability, not your knowledge of history, science, literature, or art. It is true, however, that you might feel more comfortable reading a passage on a topic with which you are familiar. You should, therefore, skim the passages in each section before you start working on the reading comprehension questions, and then start with the questions on the passage with which you feel most comfortable.

See Chapter 5 for reading comprehension question tactics and practice exercises that will help you handle these questions.

Antonym Questions
The antonym questions are always the last group of questions in a verbal section. They are the most straightforward vocabulary questions on the test. You are given a word and must choose, from the five choices that follow it, the best antonym (opposite). The vocabulary in this section may well include words that are totally unfamiliar to you.

See Chapter 6 for antonym question tactics and practice exercises that will help you handle these questions.

The Quantitative Sections
The two quantitative (mathematics) sections have a total of 60 questions: 30 quantitative comparison questions, 20 discrete quantitative questions (these are actually standard multiple-choice questions), and 10 data interpretation questions. These questions assume that you have had, and remember, arithmetic, elementary algebra, and geometry. You do not need to know any more advanced mathematics. You will be asked to use graphic, spatial, numerical, and symbolic techniques in a variety of problems. The questions are intended to show how well you understand elementary mathematics, how well you can apply your knowledge to solve problems, and how good your mathematical instincts are—how well you can use nonroutine ways of thinking. In one sense, you need some insight to spot the right route for solving any mathematical question. More important, on the GRE, is the ability to see which answer must be correct, or at least which answers are impossible, without actually solving the problem. This is basically the ability to apply mathematical rules and principles that you already know. For example, imagine that you are asked to multiply 27,654 x 3,042. You should see right away that the answer will have to end in 8. When the multiplicand ends in a 4 and the multiplier ends in a 2, then the product must end with an 8. This is a typical illustration of saving time with insight rather than doing lengthy, time-consuming computation, which, incidentally, may lead to computational errors. So not only is insight a time-saver, it may also be an error-saver.

Quantitative Comparison Questions
In quantitative comparison questions, you are given two quantities. Sometimes you are also given information about one or both of them. Then you must decide whether one of the quantities is greater than the other, or whether they are equal. Sometimes there will not be enough information for you to be able to make a decision.

These questions reflect the contemporary emphasis on inequalities in school mathematics courses. In general, these questions require less time than the other mathematics questions, since they require less reading and, usually, less computation. These are the only questions on the GRE that have only four choices.

The testing tactics and practice exercises in Chapter 8 will help you handle these questions.

Discrete Quantitative Questions
The discrete quantitative questions are like the math questions you are familiar with from math textbooks and other standardized tests. They will cover only math concepts that you have learned in school, so if a question seems unusual to you, keep in mind that you probably know the necessary facts, formulas, and concepts to work it out.

The testing tactics and practice exercises in Chapter 9 will help you handle these questions.

Data Interpretation Questions
As you might guess from their name, data interpretation questions are based on information given in graphs or tables. This type of question tests your ability to integrate data, to determine what information is needed to answer a question, or to recognize that you lack sufficient data to answer a question.

The testing tactics and practice exercises in Chapter 10 will help you handle these questions.

The Analytical Sections
The two analytical ability sections have a total of 50 questions, the bulk of which are analytical reasoning questions and a small number of which are logical reasoning questions. On the analytical sections, your task is to analyze a passage or set of conditions, reasoning out its implications, and then answer a question or group of questions based upon it. Each section begins with several relatively easy analytical reasoning questions followed by three relatively easy logical reasoning questions. These "warm-up" questions are then followed by additional sets of analytical reasoning questions and three final logical reasoning questions.
Analytical Reasoning Questions

In analytical reasoning questions, the test-makers make up an arbitrary set of conditions and leave it up to you to figure out the relationships ruling them. On the basis of the statements given, you are to make deductions about these relationships. Often it is useful to make charts or diagrams to clarify the relationships and point up conflicts between the statements that have been made. You do not need to have training in formal logic to handle these questions; however, a liking for puzzles may help. Pay particular attention to key words: absolute terms like always, exactly, and never, and relative terms like sometimes, approximately, and almost.

The review of analytical reasoning techniques and practice exercises in Chapter 12 will help you handle these questions.

Logical Reasoning Questions

In logical reasoning questions, you are presented with an argument and must be able to spot its point, recognize the assumptions that lie behind it, and evaluate its worth. You must have a sense of what necessarily follows from a given statement as distinguished from what a statement merely suggests without proof. You must be careful here to avoid being influenced by your own personal opinions: your job is to test the argument for its logical soundness, not to testify or bear witness to the argument’s ultimate truth.

The review of logical reasoning techniques and practice exercises in Chapter 12 will help you to handle these questions.
Testing Tactics

The easiest way to answer a question correctly is to know the answer. If you know what all the words in an antonym question mean, you won’t have any trouble choosing the right answer. If you know exactly how to solve a mathematics question and make no mistakes in arithmetic, you won’t have any trouble choosing the right answer. However, some sensible strategies will help you maximize your score.

The tactics in this chapter apply to all sections of the paper-and-pencil test. In later chapters you will find tactics that apply specifically to each type of question, as well as tactics that apply to the computerized test.

**Tactic 1**

**Know what to expect.** By the time you have finished with this preparation program, you will be familiar with all the kinds of questions that will appear on the GRE. You should also be aware of how long the test is going to take. There are seven sections. Each one is 30 minutes long, and there is supposed to be a 10-minute break midway through the session.

**Tactic 2**

**Memorize the directions for each type of question.** These don’t change. The test time you would spend reading the directions can be better spent answering the questions.

**Tactic 3**

**Don’t get bogged down on any one question.** By the time you get to the actual GRE, you should have a fair idea of how much time to spend on each question. If a question is taking too long, guess and go on to the next question. This is no time to show the world that you can stick to a job no matter how long it takes. All the machine that grades the test will notice is the blank space on your answer sheet. However, before you move on, circle the question so that you can locate it quickly if you have time to come back to it at the end.

**Tactic 4**

**On the other hand, don’t rush.** Since your score will depend on how many correct answers you give within a definite period of time, speed and accuracy both count. Don’t fall into the common errors born of haste. Read all the answer choices, not just some. Make sure you are answering the question asked and not one it may have reminded you of or one you thought was going to be asked. Underline key words like not and except to make sure that you do not end up trying to answer the exact opposite of the question asked.

**Tactic 5**

**Eliminate as many wrong answers as you can.** Deciding between two choices is easier than deciding among five. Even if you have to guess, every answer you eliminate improves your chances of guessing correctly.

**Tactic 6**

**Change answers only if you have a reason for doing so.** It’s usually best not to change based on a hunch or a whim.

**Tactic 7**

**Answer every question.** There is no penalty for incorrect answers on the General Test. It’s folly to leave any question unanswered.

**Tactic 8**

**Remember that you are allowed to write in the test booklet.** You can write anything you want in the test booklet. You can and should do your mathematical computations and analytical diagrams in the booklet. There is absolutely no need to try to do them in your head. And if it helps you to doodle while you think, then doodle away. What you write in the test booklet does not matter to anyone.

**Tactic 9**

**Be careful not to make any stray marks on the answer sheet.** This test is graded by a machine, and a machine cannot tell the difference between an accidental mark and a filled-in answer. When the machine sees two marks, it calls the answer wrong.

**Tactic 10**

**Check frequently to make sure that you are answering the questions in the right spots.**
No machine is going to notice that you made a mistake early in the test by answering question 4 in the space for question 5, and that all your subsequent answers are correct, but are in the wrong spaces.

**Tactic** 11

**Get a good night’s sleep.** The best way to prepare for any test you ever take is to get a good night’s sleep before the test so you are well rested and alert.

**Tactic** 12

**Allow plenty of time for getting to the test site.** Taking a test is pressure enough. You don’t need the extra tension that comes from worrying about whether you will get there on time.

**Tactic** 13

**Bring four sharpened number 2 pencils to the test.** The GRE Information Bulletin tells you to bring three or four sharpened number 2 pencils to the test. Why skimp? They don’t weigh much, and this might be the one day in the decade when two or even three pencil points decide to break. And bring full-size pencils, not little stubs. Bigger ones are easier to write with, and you might as well give yourself every advantage.

**Tactic** 14

**Wear comfortable clothes.** This is a test, not a fashion show. And bring a sweater. The test room may be hot, or it may be cold. You can’t change the room, but you can put on a sweater.

**Tactic** 15

**Bring an accurate watch.** The room in which you take the test may not have a clock, and some proctors are not very good about posting the time on the blackboard. Each time you begin a test section, write down in your booklet the time according to your watch. That way you will always know how much time you have left.

---

**Sample GRE Questions**

The purpose of this section is to familiarize you with the kinds of questions that appear on the GRE by reprinting questions from recent GREs with the permission of Educational Testing Service. Knowing what to expect when you take the examination is an important step in preparing for the test and succeeding in it.

**Verbal Section**

**Sentence Completion Questions**

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. The paradoxical aspect of the myths about Demeter, when we consider the predominant image of her as a tranquil and serene goddess, is her ______ search for her daughter.
   (A) extended  (B) agitated  (C) comprehensive  (D) motiveless  (E) heartless

2. Since she believed him to be both candid and trustworthy, she refused to consider the possibility that his statement had been ______
   (A) irrelevant  (B) facetious  (C) mistaken  (D) critical  (E) insincere

3. During the 1960s assessments of the family shifted remarkably, from general endorsement of it as a worthwhile, stable institution to widespread ______ it as an oppressive and bankrupt one whose ______ was both imminent and welcome.
   (A) flight from...restitution  (B) fascination with...corruption  (C) rejection of...vogue  (D) censure of...dissolution  (E) relinquishment of...ascent

4. The sheer bulk of data from the mass media seems to overpower us and drive us to ______ accounts for an easily and readily digestible portion of news.
   (A) insular  (B) investigative  (C) synoptic  (D) subjective  (E) sensational

---

*GRE test questions selected from Practicing to Take the GRE General Test – No. 4, 5, 7, & 8, Educational Testing Service, 1986, 1987, 1989, 1990. Reprinted by permission of Educational Testing Service. Permission to reprint the above material does not constitute review or endorsement by Educational Testing Service of this publication as a whole or of any other testing information it may contain.*
5. People should not be praised for their virtue if they lack the energy to be _______; in such cases, goodness is merely the effect of _______.

(A) deprived...hesitation
(B) cruel...effortlessness
(C) wicked...indolence
(D) unjust...boredom
(E) iniquitous...impiety

**Analogy Questions**

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

6. **AMORPHOUSNESS : DEFINITION ::**
   (A) lassitude : energy
   (B) spontaneity : awareness
   (C) angularity : intricacy
   (D) rectitude : drabness
   (E) precision : uniformity

7. **PHILATELIST : STAMPS ::**
   (A) numismatist : coins
   (B) astrologer : predictions
   (C) geneticist : chromosomes
   (D) cartographer : maps
   (E) pawnbroker : jewelry

8. **PROCTOR : SUPERVISE ::**
   (A) prophet : rule
   (B) profiteer : consume
   (C) profligate : demand
   (D) prodigal : squander
   (E) prodigy : wonder

9. **FLAG : VIGOR ::**
   (A) endure : courage
   (B) tire : monotony
   (C) question : perception
   (D) waiver : resolution
   (E) flatter : charm

10. **EMBROIDER : CLOTH ::**
    (A) chase : metal
    (B) patch : quilt
    (C) gild : gold
    (D) carve : knife
    (E) stain : glass

**Reading Comprehension Questions**

Directions: The passage is followed by questions based on its content. After reading the passage, choose the best answer to each question. Answer all questions following the passage on the basis of what is stated or implied in the passage.

Visual recognition involves storing and retrieving memories. Neural activity, triggered by the eye, forms an image in the brain’s memory system that constitutes an internal representation of the viewed object. When an object is encountered again, it is matched with its internal representation and thereby recognized. Controversy surrounds the question of whether recognition is a parallel, one-step process or a serial, step-by-step one. Psychologists of the Gestalt school maintain that objects are recognized as wholes in a parallel procedure: the internal representation is matched with the retinal image in a single operation. Other psychologists have proposed that internal representation features are matched serially with an object’s features. Although some experiments show that, as an object becomes familiar, its internal representation becomes more holistic and the recognition process correspondingly more parallel, the weight of evidence seems to support the serial hypothesis, at least for objects that are not notably simple and familiar.

11. The author is primarily concerned with
    (A) explaining how the brain receives images
    (B) synthesizing hypotheses of visual recognition
    (C) examining the evidence supporting the serial-recognition hypotheses
    (D) discussing visual recognition and some hypotheses proposed to explain it
    (E) reporting on recent experiments dealing with memory systems and their relationship to neural activity

12. According to the passage, Gestalt psychologists make which of the following suppositions about visual recognition?
    I. A retinal image is in exactly the same form as its internal representation.
    II. An object is recognized as a whole without any need for analysis into component parts.
    III. The matching of an object with its internal representation occurs in only one step.
    (A) II only
    (B) III only
    (C) I and III only
    (D) II and III only
    (E) I, II, and III

13. It can be inferred from the passage that the matching process in visual recognition is
    (A) not a neural activity
    (B) not possible when an object is viewed for the very first time
    (C) not possible if a feature of a familiar object is changed in some way
    (D) only possible when a retinal image is received in the brain as a unitary whole
    (E) now fully understood as a combination of the serial and parallel processes

14. In terms of its tone and form, the passage can best be characterized as
    (A) a biased exposition
    (B) a speculative study
    (C) a dispassionate presentation
    (D) an indignant denial
    (E) a dogmatic explanation
Antonym Questions

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

15. SYNCHRONOUS ::
(A) off-key (B) out-of-shape (C) without pity (D) out-of-phase (E) without difficulty

16. LIST: (A) be upside down (B) be upright (C) slide backward (D) sway to and fro (E) lie flat

17. TRACTABLE: (A) distraught (B) irritating (C) ruthless (D) headstrong (E) lazy

18. PERFIDY: (A) thoroughness (B) generosity (C) gratitude (D) tact (E) loyalty

19. DISSEMBLE: (A) act conventionally (B) put together (C) appear promptly (D) behave honestly (E) obtain readily

Quantitative Section

Quantitative Comparison Questions

Directions: Each of the following questions consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>$xy &lt; 0$</td>
<td></td>
</tr>
</tbody>
</table>

1. $x$ $y$

The circumference of circle $P$ is greater than the circumference of circle $Q$.

2. The radius of circle $P$ The diameter of circle $Q$

$s + t = 6$

3. $s + 2t$ $2s + t$

Discrete Quantitative Questions

Directions: Each of the following questions has five answer choices. For each of these questions, select the best of the answer choices given.

6. A dresser drawer contains 15 garments. If 40 percent of those garments are blouses, how many are not blouses?
(A) 6 (B) 8 (C) 9 (D) 10 (E) 12

7. $1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} =$
(A) $\frac{32}{25}$ (B) $\frac{117}{60}$ (C) $\frac{52}{25}$ (D) $\frac{109}{50}$ (E) $\frac{137}{60}$

8. The length of a rectangular floor is 16 feet and its width is 12 feet. If each dimension were reduced by $s$ feet to make the ratio of length to width 3 to 2, what would be the value of $s$?
(A) 0 (B) 2 (C) 4 (D) 6 (E) 8

9. What is the area of the quadrilateral shown above?
(A) $2\sqrt{3}$ (B) $3\sqrt{3}$ (C) $6\sqrt{3}$ (D) 6 (E) 8

10. If the length of each of the sides of three square garden plots is increased by 50 percent, by what percent is the sum of the areas of the three plots increased?
(A) 375% (B) 200% (C) 150% (D) 125% (E) 50%
Data Interpretation Questions

Questions 11-15 refer to the following graphs.

11. Total earnings from operations in 1982 were approximately how much more than total earnings from operations in 1978?

(A) $100 million  
(B) $125 million  
(C) $180 million  
(D) $340 million  
(E) $475 million

12. For the year in which earnings from electronic operations first exceeded $400 million, total revenues were approximately

(A) $2.8 billion  
(B) $4.5 billion  
(C) $5.2 billion  
(D) $5.8 billion  
(E) $6.7 billion

13. In 1979, total earnings for Company X were approximately what percent of total revenues?

(A) 1%  
(B) 5%  
(C) 10%  
(D) 15%  
(E) 60%

14. For the two years in which earnings from electronic operations were most nearly equal, the combined earnings from nonelectronic operations were most nearly

(A) $340 million  
(B) $520 million  
(C) $670 million  
(D) $780 million  
(E) $1,520 million

15. In 1983 earnings from financial nonelectronic operations accounted for approximately how many millions of dollars?

(A) 312  
(B) 300  
(C) 180  
(D) 140  
(E) 120
Analytical Ability Section

Analytical Reasoning Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Question 1–4

A cryptanalyst must translate into letters all of the digits included in the following two lines of nine symbols each:

\[ 9 \quad 3 \quad 4 \quad 5 \quad 6 \quad 6 \quad 7 \quad 2 \quad 2 \quad 3 \quad 4 \quad 4 \quad 5 \quad 7 \quad 8 \]

The cryptanalyst has already determined some of the rules governing the decoding:

Each of the digits from 2 to 9 represents exactly one of the eight letters A, E, I, O, U, R, S, and T, and each letter is represented by exactly one of the digits.

If a digit occurs more than once, it represents the same letter on each occasion.

The letter T and the letter O are each represented exactly 3 times.

The letter I and the letter A are each represented exactly two times.

The letter E is represented exactly four times.

1. If 2 represents R and 7 represents A, then 5 must represent
   (A) I
   (B) O
   (C) S
   (D) T
   (E) U

2. Which of the following is a possible decoding of the five-digit message 4 6 5 3 6?
   (A) O-T-A-E-T
   (B) O-T-E-U-T
   (C) O-O-S-E-O
   (D) T-O-I-E-T
   (E) T-O-R-E-T

3. If 9 represents a vowel, it must represent which of the following?
   (A) A
   (B) E
   (C) I
   (D) O
   (E) U

4. If 8 represents a vowel, which of the following must represent a consonant?
   (A) 2
   (B) 4
   (C) 5
   (D) 7
   (E) 9

Questions 5–7

An instructor regularly offers a six-week survey course on film genres. Each time the course is given, she covers six of the following eight genres: adventure films, cinéma noir, detective films, fantasy films, horror films, musical comedies, silent films, and westerns. She will discuss exactly one genre per week according to the following conditions:

Silent films are always covered, and always in the first week.
Westerns and adventure films are always covered, with westerns covered in the week immediately preceding the week adventure films are covered.
Musical comedies are never covered in the same course in which fantasy films are covered.
If detective films are covered, they are covered after westerns are covered, with exactly one of the other genres covered between them.
Cinéma noir is not covered unless detective films are covered in one of the previous weeks.

5. Which of the following is an acceptable schedule of genres for weeks one through six of the course?
   (A) Silent films, westerns, adventure films, detective films, horror films, musical comedies
   (B) Silent films, westerns, adventure films, horror films, detective films, fantasy films
   (C) Fantasy films, musical comedies, detective films, cinéma noir, westerns, adventure films
   (D) Westerns, adventure films, detective films, cinéma noir, musical comedies, horror films
   (E) Detective films, westerns, adventure films, horror films, fantasy films, cinéma noir

6. If musical comedies are covered the week immediately preceding the week westerns are covered, which of the following can be true?
   (A) Adventure films are covered the second week.
   (B) Cinéma noir is covered the fourth week.
   (C) Detective films are covered the third week.
   (D) Fantasy films are covered the fifth week.
   (E) Horror films are covered the sixth week.

7. Which of the following will NEVER be covered in the sixth week of the course?
   (A) Cinéma noir
   (B) Fantasy films
   (C) Horror films
   (D) Musical comedies
   (E) Westerns
Logical Reasoning Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

8. A study of illusionistic painting inevitably begins with the Greek painter Zeuxis. In an early work, which is the basis for his fame, he painted a bowl of grapes that was so lifelike that birds pecked at the fruit. In an attempt to expand his achievement to encompass human figures, he painted a boy carrying a bunch of grapes. When birds immediately came to peck at the fruit, Zeuxis judged that he had failed.

Zeuxis’ judgment that he had failed in his later work was based on an assumption. Which of the following can have served as that assumption?

(A) People are more easily fooled by illusionistic techniques than are birds.
(B) The use of illusionistic techniques in painting had become commonplace by the time Zeuxis completed his later work.
(C) The grapes in the later painting were even more realistic than the ones in the earlier work.
(D) Birds are less likely to peck at fruit when they see that a human being is present.
(E) After the success of his early work, Zeuxis was unable to live up to the expectations of the general public.

9. Dormitories range from two to six stories in height. If a dormitory room is above the second floor, it has a fire escape.

If the statements above are true, which of the following must also be true?

(A) Second-floor dormitory rooms do not have fire escapes.
(B) Third-floor dormitory rooms do not have fire escapes.
(C) Only dormitory rooms above the second floor have fire escapes.
(D) Fourth-floor dormitory rooms have fire escapes.
(E) Some two-story dormitories do not have fire escapes.

10. It is important to teach students to use computers effectively. Therefore, students should be taught computer programming in school.

Which of the following, if true, most weakens the argument above?

(A) Only people who use computers effectively are skilled at computer programming.
(B) Only people skilled at computer programming use computers effectively.
(C) Some people who use computers effectively cannot write computer programs.
(D) Some schools teach computer programming more effectively than others.
(E) Most people who are able to program computers use computers effectively.

11. The Census Bureau reported that the median family income, after adjustment for inflation, increased 1.6 percent in 1983. Poverty normally declines when family income goes up, but the national poverty rate remained at its highest level in eighteen years in 1983. The Census Bureau offered two possible explanations: the lingering effects of the deep and lengthy 1981–1982 recession, and increases in the number of people living in families headed by women and in the number of adults not living with any relatives. Both groups are likely to be poorer than the population as a whole.

Which of the following conclusions can be properly drawn from this report?

(A) The national poverty rate has increased steadily over the last eighteen years.
(B) The national poverty rate will increase when there are lingering effects of an earlier recession.
(C) The median family income can increase even though the family income of some subgroups within the population declines or fails to increase.
(D) The category of adults not living with any relatives is the most critical group in the determination of whether the economy has improved.
(E) The median family income is affected more by the changes in family patterns than by the extent of expansion or recession of the national economy.

12. Literary historians today have rejected conventional analyses of the development of English Renaissance drama. They no longer accept the idea that the sudden achievement of Elizabethan playwrights was a historical anomaly, a sort of magical rediscovery of ancient Greek dramatic form applied to contemporary English subject matter. Instead, most students of the theater now view Elizabethan drama as being organically related to traditional local drama, particularly medieval morality plays.

Which of the following is NOT consistent with the passage above?

(A) England had a dramatic tradition before the Renaissance period.
(B) Elizabethan drama, once thought to be a sudden blossoming forth of creativity, is now seen as part of a historical continuum.
(C) Historians’ views of the antecedents of English Renaissance drama have changed considerably.
(D) Current scholarship applies an evolutionary model to English Renaissance drama.
(E) Although English Renaissance drama treats English subject matter, its source of form and method is classical Greek drama.

A DIAGNOSTIC TEST

This chapter contains a simulated full-length written GRE test. This Diagnostic Test has 7 sections: 2 verbal, 2 quantitative (math), 2 analytical, and 1 experimental (which in this case is another quantitative section). Each section has the same number and type of questions as you'll find on the paper-and-pencil GRE, and each section should be completed in 30 minutes. Taking the Diagnostic Test will provide you with a fairly accurate evaluation of what your GRE score would be barring any special preparation.

After taking the test, score your answers and evaluate your results, using the self-rating guides provided. (Be sure also to read the answer explanations for questions you answered incorrectly and questions you answered correctly but found difficult.)

You should now be in a position to approach your review program realistically and allot your time for study. For example, you should know which topics in mathematics require review and drill. You should also know which of your verbal and analytical skills require concentrated study.

By taking note of how many easy (E), medium (M), or hard (H) questions you answer correctly, you can also gauge how well you will do, particularly if you plan on taking the computer adaptive test (CAT). For more information on the CAT, refer to Chapter 13.

Simulate Test Conditions

Find a quiet place to work, in order to simulate examination conditions. Keep an accurate record of your time. If you complete a section before the suggested time has elapsed, check your work over and do not start another section. Don't be worried, however, if you are not able to answer all questions in the allotted time. This may also occur on the actual test. No one is expected to know the answers to all questions on an aptitude test. Read the questions carefully. Work carefully and as rapidly as possible. Do not spend too much time on questions that seem difficult for you. However, since this is a multiple-choice test, with no penalty imposed for guessing, answer every question even if you have to guess.
Answer Sheet – Diagnostic Test

Start with number 1 for each new section. If a section has fewer than 38 questions, leave the extra spaces blank.

DIAGNOSTIC TEST

SECTION 1
Time—30 minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Any numerical description of the development of the human population cannot avoid ------, simply because there has never been a census of all the people in the world.
   (A) analysis
   (B) conjecture
   (C) disorientation
   (D) corroboration
   (E) statistics

2. Many species of intertidal fish have developed ------ abilities that enable them to ------ a particular location, generally a tide pool, that provides suitable refuge.
   (A) foraging...do without
   (B) compensatory...aspirate to
   (C) natural...vanish from
   (D) singular...escape from
   (E) homing...return to

3. There are any number of theories to explain these events and, since even the experts disagree, it is ------ the rest of us in our role as responsible scholars to ------ dogmatic statements.
   (A) paradoxical for...abstain from
   (B) arrogant of...compensate with
   (C) incumbent on...refrain from
   (D) opportune for...quarrel over
   (E) appropriate for...issue forth

4. It may be useful to think of character in fiction as a function of two ------ impulses: the impulse to individualize and the impulse to ------.
   (A) analogous...humanize
   (B) disparate...aggrandize
   (C) divergent...typify
   (D) comparable...delineate
   (E) related...moralize

5. Relatively few politicians willingly forsake center stage, although a touch of ------ on their parts now and again might well increase their popularity with the voting public.
   (A) garrulity
   (B) misanthropy
   (C) self-effacement
   (D) self-dramatization
   (E) self-doubt

6. It is this tightly circumscribed choice of scene that gives to Mrs. Woolf's novels, despite her modernity of technique and insight, their odd and delicious air of ------, as of some small village world, as bright and vivid and perfect in its ------ as a miniature.
   (A) anachronism...transience
   (B) parochialism...tininess
   (C) cynicism...rusticity
   (D) intrigue...antiquity
   (E) fragility...petiteness

7. Lacking the time to examine the treatise in its entirety, the editors asked the author to provide them with ------ instead.
   (A) a compendium
   (B) a dissertation
   (C) an elaboration
   (D) a facsimile
   (E) an exegesis

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. CLASP : BRACELET ::
   (A) hook : coat
   (B) buckle : belt
   (C) diamond : ring
   (D) wrist : watch
   (E) cuff : trousers

9. SEDAN : AUTOMOBILE ::
   (A) hangar : airplane
   (B) bedspread : bed
   (C) rocker : chair
   (D) rung : ladder
   (E) marble : statue

10. PARDON : OFFENSE ::
    (A) repent : sin
    (B) detect : violation
    (C) arraign : indictment
    (D) forgive : wrong
    (E) surrender : fugitive
11. CIRCUITOUS : ROUTE ::
   (A) problematic : solution
   (B) devious : argument
   (C) elliptical : brevity
   (D) judicious : selection
   (E) profound : depth

12. NONPLUSSED : BAFFLEMENT ::
   (A) discomfited : embarrassment
   (B) parsimonious : extravagance
   (C) disgruntled : contentment
   (D) despicable : contempt
   (E) surly : harassment

13. GULLY : CANYON ::
   (A) eagle : bird
   (B) cliff : granite
   (C) pebble : boulder
   (D) detour : road
   (E) shore : lake

14. HELPFUL : OFFICIOUS ::
   (A) dutiful : assiduous
   (B) effusive : gushing
   (C) gullible : incredulous
   (D) enigmatic : dumbfounded
   (E) deferential : sycophantic

15. BRONZE : PATINA ::
   (A) wood : veneer
   (B) plaque : honor
   (C) mold : yeast
   (D) iron : rust
   (E) lead : tin

16. MELLILOUS : CACOPHONY ::
   (A) dulcet : euphony
   (B) compliant : obsequiousness
   (C) fragrant : noisomeness
   (D) florid : embellishment
   (E) thrifty : parsimony

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

James’s first novels used conventional narrative techniques: explicit characterization, action which related events in distinctly phased sequences, settings firmly outlined and specifically described. But this method gradually gave way to a subtler, more deliberate, more diffuse style of accumulation of minutely discriminated details whose total significance the reader can grasp only by constant attention and sensitive inference. His later novels play down scenes of abrupt and prominent action, and do not so much offer a succession of sharp shocks as slow piecemeal additions of perception. The curtain is not suddenly drawn back from shrouded things, but is slowly moved away.

Such a technique is suited to James’s essential subject, which is not human action itself but the states of mind which produce and are produced by human actions and interactions. James was less interested in what characters do, than in the moral and psychological antecedents, realizations, and consequences which attend their doings. This is why he more often speaks of “cases” than of actions. His stories, therefore, grow more and more lengthy while the actions they relate grow simpler and less visible; not because they are crammed with adventitious and secondary events, digressive relief, or supernumerary characters, as overstuffed novels of action are; but because he presents in such exhaustive detail every nuance of his situation. Commonly the interest of a novel is in the variety and excitement of visible actions building up to a climactic event which will settle the outward destinies of characters with storybook promise of permanence. A James novel, however, possesses its characteristic interest in carrying the reader through a rich analysis of the mental adjustments of characters to the realities of their personal situations as they are slowly revealed to them through exploration and chance discovery.

17. The passage supplies information for answering which of the following questions?
   (A) Did James originate the so-called psychological novel?
   (B) Is conventional narrative technique strictly chronological in recounting action?
   (C) Can novels lacking overtly dramatic incident sustain the reader’s interest?
   (D) Were James’s later novels more acceptable to the general public than his earlier ones?
   (E) Is James unique in his predilection for exploring psychological nuances of character?

18. According to the passage, James’s later novels differ from his earlier ones in their
   (A) preoccupation with specifically described settings
   (B) ever-increasing concision and tautness of plot
   (C) levels of moral and psychological complexity
   (D) development of rising action to a climax
   (E) subordination of psychological exploration to dramatic effect

19. The author’s attitude towards the novel of action appears to be one of
   (A) pointed indignation
   (B) detached neutrality
   (C) scathing derision
   (D) strong partisanship
   (E) decided disapprobation
The theory of plate tectonics describes the motions of the lithosphere, the comparatively rigid outer layer of the earth that includes all the crust and part of the underlying mantle. The lithosphere is divided into a few dozen plates of various sizes and shapes; in general the plates are in motion with respect to one another. A mid-oceanic ridge is a boundary between plates where new lithospheric material is injected from below. As the plates diverge from a mid-oceanic ridge they slide on a more yielding layer at the base of the lithosphere.

Since the size of the earth is essentially constant, new lithosphere can be created at the mid-oceanic ridges only if an equal amount of lithospheric material is consumed elsewhere. The site of this destruction is another kind of plate boundary: a subduction zone. There one plate dives under another and is reincorporated into the mantle. Both kinds of plate boundary are associated with fault systems, earthquakes and volcanism, but the kinds of geologic activity observed at the two boundaries are quite different.

The idea of sea-floor spreading actually preceded the theory of plate tectonics. The sea-floor spreading hypothesis was formulated chiefly by Harry H. Hess of Princeton University in the early 1960s. In its original version it described the creation and destruction of ocean floor, but it did not specify rigid lithospheric plates. The hypothesis was soon substantiated by the discovery that periodic reversals of the earth's magnetic field are recorded in the oceanic crust. An explanation of this process devised by F.J. Vine and D.H. Matthews of Princeton is now generally accepted. As magma rises under the mid-oceanic ridge, ferromagnetic minerals in the magma become magnetized in the direction of the geomagnetic field. When the magma cools and solidifies, the direction and the polarity of the field are preserved in the magnetized volcanic rock. Reversals of the field give rise to a series of magnetic stripes running parallel to the axis of the rift. The oceanic crust thus serves as a magnetic tape recording of the history of the geomagnetic field. Because the boundaries between stripes are associated with reversals of the magnetic field that can be dated independently, the width of the stripes indicates the rate of sea-floor spreading. (Precisely how the earth's magnetic field reverses at intervals of from 10,000 to about a million years continues to be one of the great mysteries of geology.)

It follows from the theory of sea-floor spreading that many of the most interesting geologic features of the earth's surface are to be found on the ocean floor. The investigation of such features has been furthered in recent years by the development of deep-diving manned submersibles. In particular the U.S. research submersible Alvin, operated by the Woods Hole Oceanographic Institution, has proved to be a valuable tool for studies of the seabed. A geologist in the Alvin can collect rock samples and document in detail the setting of each rock. For the first time a marine geologist can have maps of a site as precise as those of a geologist on land.

20. The author's primary purpose in the passage is to
   (A) question established data
   (B) describe current explorations
   (C) trace the development of a theory
   (D) propose an alternative solution
   (E) explain the reasons behind a phenomenon

21. The passage would be most likely to appear in a
   (A) congressional report advocating the continued funding of oceanographic studies
   (B) geological research report focused on the likelihood of volcanism along coastal regions
   (C) pamphlet designed to acquaint visitors to Woods Hole with the capabilities of deep-diving manned submersibles
   (D) scholarly monograph proposing an explanation for the periodic reversals of the earth's magnetic field
   (E) scientific journal article summarizing recent advances in applying plate tectonic theory to marine geology

22. According to the passage, a mid-oceanic ridge differs from a subduction zone in that
   (A) it marks the boundary line between neighboring plates
   (B) only the former is located on the ocean floor
   (C) it is a site for the emergence of new lithospheric material
   (D) the former periodically disrupts the earth's geomagnetic field
   (E) it is involved with lithospheric destruction rather than lithospheric creation

23. It can be inferred from the passage that as new lithospheric material is injected from below
   (A) the plates become immobilized in a kind of gridlock
   (B) the new material is incorporated into an underwater mountain ridge
   (C) the earth's total mass is altered
   (D) the magnetic polarity of the new material is reversed
   (E) the immediately adjacent plates sink

24. The passage contains information that would answer which of the following questions about the theory of sea-floor spreading and the history of the geomagnetic field?
   I. What is the minimum known time span between reversals of the earth's magnetic field?
   II. What mechanism is responsible for the magnetic field's changes in polarity?
   III. Can the pace of sea-floor spreading be determined from current geomagnetic data?
   (A) I only
   (B) III only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III
25. It can be inferred from the passage that a large increase in the creation of new lithospheric material would result in
   (A) at least a slight decrease in activity along the subduction zones
   (B) at the most a slight increase in activity along the subduction zones
   (C) a correspondingly large increase in activity along the subduction zones
   (D) a cessation of activity along the subduction zones
   (E) no change in the level of activity along the subduction zones

26. According to the passage, lithospheric material at the site of a subduction zone
   (A) rises and is polarized
   (B) sinks and is absorbed
   (C) slides and is injected
   (D) spreads and is reincorporated
   (E) diverges and is consumed

27. The passage most directly suggests that, before the recent underwater explorations involving manned submersibles were undertaken, marine geologists
   (A) were negligent in making charts of undersea sites
   (B) underestimated the importance of the lithospheric plates
   (C) labored under a disadvantage compared to land geologists
   (D) had adequate access to those portions of the seafloor under study
   (E) were ignorant of the sea-floor spreading hypothesis

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. DETERIORATE:
   (E) hasten
   (B) demolish
   (C) alter
   (D) unify
   (E) improve

29. EVASIVE:
   (E) frank
   (B) serene
   (C) pensive
   (D) mistaken
   (E) exuberant

30. STREWS:
   (M) (A) deflate
      (B) collect
      (C) weaken
      (D) cleanse
      (E) bolster

31. PRODIGAL:
   (M) (A) nomad
      (B) sycophant
      (C) gifted child
      (D) economical person
      (E) antagonist

32. EQUIVOCATE:
   (M) (A) yield
      (B) distinguish
      (C) condescend
      (D) pledge
      (E) denounce

33. CRASS:
   (M) (A) small
      (B) refined
      (C) cheerful
      (D) modest
      (E) liberal

34. ARTIFICIAL:
   (M) (A) edifice
      (B) sincerity
      (C) prejudice
      (D) creativity
      (E) affirmation

35. OPULENCE:
   (M) (A) transience
      (B) penury
      (C) solitude
      (D) generosity
      (E) transparency

36. UNTENABLE:
   (H) (A) false
      (B) precise
      (C) circumscribed
      (D) defensible
      (E) hypothetical

37. SEDULOUS:
   (H) (A) pointless
      (B) weighty
      (C) lugubrious
      (D) cursory
      (E) tangential

38. DISABUSE:
   (H) (A) maltreat
      (B) violate
      (C) cancel
      (D) deceive
      (E) involve

38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. There was so much ________ material in the argument, ideas dragged in without reference to the case, that it was singularly ________ to grasp the budding lawyer’s point.
   (A) exceptional...unrewarding
   (B) variegated...effortless
   (C) hypothetical...superfluous
   (D) superficial...irrelevant
   (E) extraneous...difficult

2. Since the propensity to migrate has persisted in every epoch, its explanation requires a theory ________ any particular period of time.
   (A) tailored to
   (B) unconscious of
   (C) inapplicable to
   (D) independent of
   (E) anomalous in

3. The earth is a planet bathed in light; it is therefore ________ that many of the living organisms that have evolved on the earth have ________ the biologically advantageous capacity to trap light energy.
   (A) anomalous...engendered
   (B) unsurprising...developed
   (C) predictable...forfeited
   (D) problematic...exhibited
   (E) expectable...relinquished

4. According to one optimistic hypothesis, the dense concentration of entrepreneurs and services in the cities would incubate new functions, ________ them, and finally export them to other areas, and so the cities, forever breeding fresh ideas, would ________ themselves repeatedly.
   (A) immunize...perpetuate
   (B) isolate...revitalize
   (C) foster...deplete
   (D) spawn...imitate
   (E) nurture...renew

5. Man is a ________ animal, and much more so in his mind than in his body: he may like to go alone for a walk, but he hates to stand alone in his ________.
   (A) gregarious...opinions
   (B) conceited...vanity
   (C) singular...uniqueness
   (D) solitary...thoughts
   (E) nomadic...footsteps

6. Although Mrs. Proudie ________ an interest in the spiritual well-being of the parishioners, in actuality her concern for their welfare was so ________ as to be practically nonexistent.
   (A) confessed...circumstantial
   (B) manifested...exemplary
   (C) simulated...profound
   (D) feigned...negligible
   (E) expressed...moribund

7. The term baroque, originally applied to the lavishly and grotesquely ornamented style of architecture that succeeded the Renaissance, is used generally in literary criticism to describe excessive or grandiloquent works that lack ________ of style.
   (A) diversity
   (B) economy
   (C) prolixity
   (D) adornment
   (E) comprehension

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. PROLOGUE : PLAY ::
   (A) chapter : novel
   (B) overture : opera
   (C) intermezzo : symphony
   (D) epilogue : oration
   (E) gesture : pantomime

9. SERRATIONS : SAW ::
   (A) incisions : scalpel
   (B) butchery : cleaver
   (C) mortar : trowel
   (D) cogs : gear
   (E) division : ruler

10. THIRST : DRIVE ::
    (A) inebriety : excess
    (B) success : ambition
    (C) indifferencce : passion
    (D) taste : gusto
    (E) smell : sense

11. SPIKE : SLEDGE ::
    (A) runner : sleigh
    (B) pole : ski
    (C) nail : hammer
    (D) clip : paper
    (E) trestle : train
During the decade of 1880–1890 it was becoming increasingly evident that the factors which had brought about the existence of two separate suffrage institutions were steadily diminishing in importance.

The National Woman Suffrage Association had been launched by the intellectually irrepressible Elizabeth Cady Stanton and the ever-catholic Susan B. Anthony. Both were ready to work with anyone, whatever their views on other matters, as long as they wholeheartedly espoused woman suffrage. Consequently in its earlier years the National was both aggressive and unorthodox. It damned both Republicans and Democrats who brushed the suffrage question aside. It was willing to take up the cudgels for distressed women whatever their circumstances, be they “fallen women,” divorce cases, or underpaid seamstresses.

The American Woman Suffrage Association, by contrast, took its tone and outlook from a New England which had turned its back on those fiery days when abolitionists, men and women alike, had stood up to angry mobs. Its advocacy of worthy causes was highly selective. Lucy Stone was not interested in trade unionism and wished to keep the suffrage cause untarnished by concern with divorce or “the social evil.” The very epitome of the American’s attitude was its most distinguished convert and leader, Julia Ward Howe – erudite, honored

It was not that Mrs. Howe in herself made suffrage respectable; she was a symbol of the forces that were drawing the suffrage movement into the camp of decorum. American society was becoming rapidly polarized. The middle class was learning to identify organized labor with social turmoil. A succession of strikes during the depression of 1873–1878, in textiles, mining, and railroads, culminated in the Great Railroad Strike of 1877 involving nearly 100,000 workers from the Atlantic coast to the Mississippi valley; they did not help to reassure women taught by press and pulpit to identify any type of militancy with radicalism. Nor was this trend allayed by the hysteria whipped up over the Molly Maguire trials for secret conspiracy among Pennsylvania coal miners, or the alleged communist influences at work in such growing organizations as the Knights of Labor and the A.F. of L. The existence of a small number of socialists was used to smear all organized labor with the taint of “anarchism.” The crowning touch took place during the widespread agitation for an eight-hour day in 1886 when a bomb, thrown by a hand unknown to this day into a radical meeting in Chicago’s Haymarket Square, touched off a nationwide wave of panic.

The steady trend of the suffrage movement toward the conservative and the conventional during the last twenty years of the nineteenth century must be viewed in this setting, in order to avoid the misconception that a few conservative women took it over, through their own superior ability and the passivity of the former militants. Even the latter were changing their views, judging by their actions. It was one thing to challenge the proprieties at the Centennial of 1876; ten years later it would have been inconceivable even to the women who took part in the demonstration. Susan Anthony herself would have thought twice about flouting Federal election laws and going to jail in an era which witnessed the Haymarket hysteria.
17. The author’s primary purpose in the passage is to
(A) contrast Susan B. Anthony with Julia Ward Howe
(B) recount the advances in the suffrage movement from 1880 to 1890
(C) account for the changes occurring in the suffrage movement from 1880 to 1890
(D) explain the growing divisions within the women’s movement
(E) point out aspects of the suffrage movement that exist in contemporary feminism

18. Which of the following statements is most compatible with the early principles of the National as described in the passage?
(A) Advocates of suffrage should maintain their distance from socially embarrassing “allies.”
(B) Marital and economic issues are inappropriate concerns for the suffrage movement.
(C) Propriety of behavior should characterize representatives of the women’s cause.
(D) A nominal espousal of woman suffrage is worthy of suffragist support.
(E) The concerns of all afflicted women are the concerns of the suffrage movement.

19. The passage singles out Julia Ward Howe as an example of
(A) a venerated figurehead
(B) an overzealous advocate
(C) a heterodox thinker
(D) an ordained cleric
(E) a militant activist

20. Which of the following titles best describes the content of the passage?
(A) Trade Unionism and the Suffrage Movement
(B) Egalitarianism at the Close of the Nineteenth Century
(C) Riots in the Woman Suffrage Movement
(D) Diminution of Radicalism in the Woman Suffrage Movement
(E) Political Polarization in American Society

21. The author’s attitude toward the public reaction to the Molly Maguire trials is that the reaction was
(A) appropriate
(B) disorganized
(C) overwrought
(D) necessary
(E) understated

22. As used in the passage, the phrase “ever catholic” (line 8) refers primarily to Anthony’s
(A) deep religious beliefs
(B) inclusive sympathies
(C) willingness to work
(D) wholehearted feminism
(E) parochial outlook

23. The author stresses the growing antiradical bias of the American middle class during the decade 1880–1890 in order to
(A) question a trend that proved destructive to the suffrage movement
(B) explain the unexpected emergence of an able body of conservative leaders
(C) refute the contention that Anthony was unchanged by her experiences
(D) correct a misapprehension about changes in the suffrage movement
(E) excuse the growing lack of militancy on the part of the National

24. The passage suggests that, by 1890, attempts to effect woman suffrage by violating the proprieties and defying Federal laws would probably have been viewed even by movement members with
(A) indifference
(B) defiance
(C) disapproval
(D) respect
(E) optimism

Perhaps the first point to grasp about natural selection is that a complex creature, or even a complex part of a creature, such as the eye, did not arise in one evolutionary step. Rather, it evolved through a series of small steps. Exactly what is meant by small is not necessarily obvious since the growth of an organism is controlled by an elaborate program written in its genes. Sometimes a small change in a key part of the program can make a large difference. For example, an alteration in one gene in Drosophila can produce a fruitfly with legs in place of its antennae.

Each small step is caused by a random alteration in the genetic instructions. Many of these random alterations may do the organism no good (some may even kill it before it is born), but occasionally a particular chance alteration may give that particular organism a selective advantage. This means that in the last analysis the organism will, on average, leave more offspring than it would otherwise. If this advantage persists in its descendants, then this beneficial mutant will gradually, over many generations, spread through the population. In favorable cases every individual will come to possess the improved version of the gene. The older version will have been eliminated. Natural selection is thus a beautiful mechanism for turning rare events (strictly, favorable rare events) into common ones.

25. The author’s primary purpose in introducing the reference to Drosophila is to
(A) indicate his familiarity with laboratory experiments on fruit flies
(B) describe the process by which a genetic alteration transmutes the body
(C) provide a vivid illustration of extreme effects of a slight genetic change
26. The passage indicates that the nature of a selective advantage is
   (A) immutable
   (B) reproductive
   (C) limited
   (D) mental
   (E) inequitable

27. The author’s attitude towards the process of natural selection can best be described as one of
   (A) mild skepticism
   (B) puzzled fascination
   (C) controlled apprehension
   (D) appreciative admiration
   (E) lofty detachment

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. TERMINATE:
   (A) depart
   (B) prevent
   (C) begin
   (D) hasten
   (E) change

29. PROTRACT:
   (A) abbreviate
   (B) distract
   (C) reject
   (D) stabilize
   (E) oppose

30. VOLUBILITY:
   (A) shabbiness
   (B) brevity
   (C) disparity
   (D) subtlety
   (E) lucidity

31. LATE-BLOOMING:
   (A) flourishing
   (B) blatant
   (C) punctilious
   (D) embryonic
   (E) precocious

32. HONE:
   (A) broaden
   (B) twist
   (C) dull
   (D) weld
   (E) break

33. PHLEGOMATIC:
   (A) dogmatic
   (B) ardent
   (C) haphazard
   (D) self-assured
   (E) abstracted

34. BANALITY:
   (A) tentative interpretation
   (B) concise summation
   (C) accurate delineation
   (D) laudatory remark
   (E) novel expression

35. ERUDITE:
   (A) unhealthy
   (B) ignorant
   (C) impolite
   (D) indifferent
   (E) imprecise

36. PLETHORA:
   (A) despair
   (B) denial
   (C) avarice
   (D) aversion
   (E) scarcity

37. CURRENCY:
   (A) refractoriness
   (B) obsolescence
   (C) artificiality
   (D) insolvency
   (E) fluency

38. SKIRT:
   (A) embroider
   (B) revert
   (C) address
   (D) disjoint
   (E) brook

SECTION 3
Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1–15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>

In triangle ABC, AC = BC  
$BC \parallel DE$ and $x = 65$

15. $x$ \quad $y$ \quad H

Directions: Each of the Questions 16-30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. Which of the following has the largest numerical value?  
   \[ \frac{8}{0.8} \quad (B) \quad \frac{0.8}{8} \quad (C) \quad (0.8)^2 \quad (D) \quad \sqrt{0.8} \quad (E) \quad 0.8\pi \]

17. If $17xy + 7 = 19xy$, then $4xy = \quad E$  
   \[ (A) \quad 2 \quad (B) \quad 3 \quad (C) \quad 3\frac{1}{2} \quad (D) \quad 7 \quad (E) \quad 14 \]

18. The average of two numbers is $XY$. If one number is equal to $X$, the other number is equal to $XY$?  
   \[ (A) \quad Y \quad (B) \quad 2Y \quad (C) \quad XY - X \quad (D) \quad 2XY - X \quad (E) \quad XY - 2X \]

19. A snapshot $\frac{7}{8}$ inches $\times$ $2\frac{1}{2}$ inches is to be enlarged so that the longer dimension will be 4 inches. What will be the length (in inches) of the shorter dimension?  
   \[ (A) \quad 2\frac{3}{8} \quad (B) \quad 2\frac{1}{2} \quad (C) \quad 3 \quad (D) \quad 3\frac{3}{8} \quad (E) \quad 3\frac{1}{2} \]

20. The length and width of rectangle $AEFG$ are each $\frac{2}{3}$ of the corresponding parts of $ABCD$. $AEB = 12$; $AGD = 6$. The area of the shaded part is  
   \[ (A) \quad 24 \quad (B) \quad 32 \quad (C) \quad 36 \quad (D) \quad 40 \quad (E) \quad 48 \]
Questions 21–25 refer to the following graphs.

**HOMETOWN SAVINGS BANK**

![Graphs showing the number of depositors and the distribution of assets.](image)

21. How many thousands of regular depositors did the bank have in 1980?
   (A) 70  (B) 85  (C) 95  (D) 100  (E) 950

22. In 1979 what was the ratio of the number of Christmas Club depositors to the number of regular depositors?
   (A) $\frac{2}{3}$  (B) $\frac{2}{1}$  (C) $\frac{1}{2}$  (D) $\frac{7}{9}$  (E) $\frac{3}{2}$

23. Which of the following can be inferred from the graphs?
   I. Interest rates were static in the 1980-1983 period.
   II. The greatest increase in the number of Christmas Club depositors over a previous year occurred in 1984.
   III. Hometown Savings Bank invested most of its assets in stocks and bonds.
   (A) I only  (B) II only  (C) III only  (D) I and III  (E) II and III

24. About how many degrees (to the nearest degree) are in the angle of the sector representing mortgages?
   (A) 59  (B) 106  (C) 211  (D) 246  (E) 318

25. The average annual interest on mortgage investments is $m$ percent and the average annual interest on the bond investment is $b$ percent. If the annual interest on the bond investment is $x$ dollars, how many dollars are invested in mortgages?
   (A) $\frac{xm}{b}$
   (B) $\frac{xb}{m}$
   (C) $\frac{100xb}{m}$
   (D) $\frac{bx}{100m}$
   (E) $\frac{200x}{b}$
26. What is the area of $ABCD$?
   \[ \begin{align*}
   \text{(A)} & \quad 24 \\
   \text{(B)} & \quad 30 \\
   \text{(C)} & \quad 35 \\
   \text{(D)} & \quad 36 \\
   \text{(E)} & \quad 48
   \end{align*} \]

27. If $x^2 + 2x - 8 = 0$, then $x$ is either $-4$ or
   \[ \begin{align*}
   \text{(A)} & \quad -2 \\
   \text{(B)} & \quad -1 \\
   \text{(C)} & \quad 0 \\
   \text{(D)} & \quad 2 \\
   \text{(E)} & \quad 8
   \end{align*} \]

28. The distance between two points is correctly expressed as either 720 statute miles or 630 nautical miles. Which of the following most closely approximates the value of one statute mile in terms of nautical miles?
   \[ \begin{align*}
   \text{(A)} & \quad 0.88 \\
   \text{(B)} & \quad 0.89 \\
   \text{(C)} & \quad 0.90 \\
   \text{(D)} & \quad 1.14 \\
   \text{(E)} & \quad 1.25
   \end{align*} \]

29. The afternoon classes in a school begin at 1:00 P.M. and end at 3:52 P.M. There are 4 afternoon class periods with 4 minutes allowed between periods for passing to classes. The number of minutes in each class period is
   \[ \begin{align*}
   \text{(A)} & \quad 39 \\
   \text{(B)} & \quad 40 \\
   \text{(C)} & \quad 43 \\
   \text{(D)} & \quad 45 \\
   \text{(E)} & \quad 59
   \end{align*} \]

30. The average of $P$ numbers is $x$, and the average of $N$ numbers is $y$. What is the average of all the $(P + N)$ numbers?
   \[ \begin{align*}
   \text{(A)} & \quad \frac{x + y}{2} \\
   \text{(B)} & \quad x + y \\
   \text{(C)} & \quad \frac{Py + Nx}{xy(P + N)} \\
   \text{(D)} & \quad \frac{x + y}{P + N} \\
   \text{(E)} & \quad \frac{Px + Ny}{P + N}
   \end{align*} \]

21. How many calories are there in 1 gram of carbohydrate?  
   (A) 0.2  (B) 2  (C) 4.1  (D) 10.25  (E) 1,025

22. What percent (to the nearest %) of the total calories in the average diet is derived from proteins?  
   (A) 12  (B) 14  (C) 22  (D) 27  (E) 32

23. Approximately how many more calories per day are required by boys than girls at age 17?  
   (A) 800  (B) 1,000  (C) 2,500  (D) 3,500  (E) 4,000
24. Which of the following can be inferred from the graphs?

I. Calorie requirements for boys and girls have similar rates of increase until after age 12 to 13.
II. From ages 4 to 12 calorie requirements for boys and girls are wholly dissimilar.
III. Calorie requirements for boys and girls reach their peaks at different ages.

A) I only (B) II only (C) III only (D) I and III (E) II and III

25. How many grams of carbohydrate (to the nearest gram) are needed to yield as many calories as 1,000 grams of fat?

(A) 1,110
(B) 2,050
(C) 2,268
(D) 4,100
(E) 4,536

26. To cross a ferry the total cost T is 50 cents for the car and driver and c cents for each additional passenger in the car. What is the total cost for a car with n persons in the automobile?

(A) n + c
(B) 50 + nc
(C) cn
(D) 50 + c(n - 1)
(E) 50 + (n + 1)c

27. Gloria wants to make some candy using a recipe that calls for 1 1/2 cups of sugar, 1 1/2 cup of boiling water and several other ingredients. She finds that she has only 1 cup of sugar. How much water will she have to use?

(A) 1/6 cup
(B) 1/4 cup
(C) 1/3 cup
(D) 3/4 cup
(E) 1 cup

28. How many pounds of baggage are allowed for a plane passenger if the European regulations permit 20 kilograms per passenger? (1 kg = 2.2 lb)

(A) 11  (B) 44  (C) 88  (D) 91  (E) 440

29. Which of the following statements is (are) always true? (a, b, and c are real and not equal to zero.)

I. \( \frac{1}{a} \) is less than a.
II. \( \frac{a + b}{2a} \) equals \( \frac{2b}{b + a} \) when a equals b.
III. \( \frac{a + c}{b + c} \) is more than \( \frac{a}{b} \).

(A) II only  (B) I and II only  (C) I and III only  (D) II and III only  (E) I, II, and III

30. If \( \frac{y}{s - t} = \frac{s + t}{t - s} \), then y =

(A) \( - s - t \)
(B) \( t - s \)
(C) \( t + s \)
(D) \( s - t \)
(E) \( t^2 - s^2 \)

SECTION 5
Time—30 minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

Michael attends Saddle Rock School on the 9:00-3:00 session, except on Thursdays, when he is dismissed at noon so the teachers can conduct special help classes and parent conferences. Michael takes a piano lesson at home on Mondays from 3:30 to 4:30. On Tuesdays he goes to a karate class from 4:00 to 6:00. His art class meets from 4:00 to 6:00 on Wednesdays. He remains in school after dismissal on Fridays to participate in a 90-minute club program.

1. The most convenient afternoon for Michael to do library research is
   (A) Tuesday
   (B) Wednesday
   (C) Thursday
   (D) Friday
   (E) Monday

2. Keeping the same 3:30-4:30 schedule, Michael can conveniently change his piano lesson to which of the following days?
   (A) Monday
   (B) Tuesday
   (C) Wednesday
   (D) Thursday
   (E) Friday

3. Michael is chosen to play for the varsity basketball team. To attend daily 5:00 P.M. practice sessions, he will have to suspend which of the following activities?
   (A) Piano instruction and karate
   (B) Karate and the club program
   (C) The art class and the club program
   (D) Piano instruction and the art class
   (E) The art class and karate

4. Michael was invited to replace his 4:00-6:00 P.M. art class with an advanced art class that meets at the same time. He could accept this advancement without interfering with his other activities if the class met on which of the following days?
   (A) Mondays and Wednesdays
   (B) Tuesdays and Wednesdays
   (C) Wednesdays and Thursdays
   (D) Thursdays and Fridays
   (E) Mondays and Thursdays

5. Sarah: Only General Council members sit on the President’s Cabinet.
   Charles: That’s not true. Dr. Grogan is a General Council member and she’s not on the President’s Cabinet.
   Charles’s response implies that he incorrectly interpreted Sarah’s statement to mean that
   (A) all Cabinet members are on the General Council
   (B) Dr. Grogan sits on the President’s Cabinet
   (C) all members of the General Council sit on the President’s Cabinet
   (D) no General Council members are on the President’s Cabinet
   (E) Dr. Grogan is not a General Council manager

6. The only unemployment problem we have is not that people can’t find work, but that they won’t work. Thousands of jobs go begging every day, but the unemployed are too lazy to go out and find them.
   The above argument would be more persuasive if it were established that
   (A) the majority of available jobs require unusually high levels of skill or experience or both
   (B) unemployed persons tend to be geographically clustered in regions distant from available jobs
   (C) most unemployed persons are back at work within six months
   (D) most unemployed persons do not seek work until their unemployment benefits expire
   (E) a high unemployment rate has been fostered by the government in order to control inflation

7. My father, my three uncles, and both my grandfathers became bald within five years after they began practicing law. I don’t want to lose my hair, so I’m going to become a doctor.
   Which of the following most closely resembles the reasoning used in the argument above?
   (A) Every time I drink coffee before going to bed, I have trouble falling asleep. I want to sleep well tonight, so I’m going to take a sleeping pill.
   (B) All of the teenagers in my neighborhood have gotten tickets for speeding on Dole Road within the last year. I don’t want to have to pay a fine, so I’m not going to speed on Dole Road.
Everyone else got transferred out of our department within three years after starting work here. I don’t want to work in another department, so I’m going to start working harder.

The other punch press operators on my shift each were seriously injured on the job within a week after eating at Rosie’s Diner. I want to maintain my safety record, so I’m going to eat at Harry’s Luncheonette.

The three other men in my bridge club each became irritable after they quit smoking. I want to be more pleasant, so I’m going to quit my bridge club.

Questions 8–12

The Berkeley-Sotenay Gallery displays seven paintings, one each by Degas, Ernst, Fragonard, Greuze, Hartley, Ingres, and Johns. Each has been valued by the Gallery’s curator.

The value of the Johns is three times that of the Ingres. The Greuze has the lowest valuation of any of the paintings. The Fragonard and the Degas are valued at the same amount. The value of the Ernst is as much as that of the Johns and the Ingres together. The value of the Hartley is as much as that of the Fragonard, the Ernst, and the Johns together. The value of the Degas is as much as that of the Johns and the Ernst together.

8. A buyer who decided not to buy the Hartley could buy for the same price

I. the Degas, the Ingres, and the Fragonard
II. the Ernst, the Johns, and the Degas
III. the Ingres, the Ernst, and the Johns

9. Which correctly lists six of the paintings in order of increasing value?

(A) Greuze, Ernst, Fragonard, Johns, Ingres, Hartley
(B) Greuze, Johns, Degas, Ernst, Fragonard, Hartley
(C) Greuze, Ernst, Johns, Degas, Fragonard, Hartley
(D) Greuze, Ingres, Johns, Degas, Ernst, Hartley
(E) Greuze, Ingres, Johns, Ernst, Fragonard, Hartley

10. The value of the Degas is

(A) twice the value of the Johns
(B) twice the value of the Ernst
(C) three times the value of the Johns, less the value of the Ingres
(D) six times the value of the Ingres
(E) half the value of the Hartley

If the Ernst and the Ingres together are valued at ten times the value of the Greuze, the Hartley is valued at how many times the value of the Greuze?

(A) 12
(B) 14
(C) 21
(D) 28
(E) 49

The paintings are bought by seven rich collectors who then trade with each other. Which trade represents an exchange of even value?

(A) The Hartley for the Degas, the Ernst, and the Ingres
(B) The Hartley and the Ernst for all the others except the Greuze
(C) The Degas and the Fragonard for the Hartley and the Ingres
(D) The Ingres, the Johns, the Ernst, and the Fragonard for the Hartley
(E) The Johns and the Ernst for the Degas and the Ingres

Questions 13–16

13. If statement (2) were shown to be false, which of the following would necessarily be true?

(A) Some M are neither X nor R.
(B) Some P are not N.
(C) Some Q are X.
(D) Some N are neither P nor X.
(E) Either some X are P or some N are neither P nor X, or both.

14. Which of the following statements must be true if the above six statements are true?

I. No R are P.
II. Some X are P.
III. Some X are M.

(A) I only
(B) I and II only
(C) I and III only
(D) I, II, and III
(E) Neither I, II, nor III
15. Which of the following must be false given the conditions as stated?

(A) No Q are P.
(B) Some Q are neither N nor R.
(C) Some R are X.
(D) All R are M.
(E) Some X are not M.

16. Which of the numbered statements can logically be deduced from one or more of the other statements?

(A) (2)  (B) (3)  (C) (4)  (D) (5)  (E) (6)

Questions 17–22

Four persons — Allen, Brian, Carol, and Donna — are camping on four separate campsites — Edmunds, Freeport, Grand Isle, and High Point, not necessarily in that order. The campsites are located on four separate lakes — Indian Point, Jackson, Keewaukett, and Leesville, not necessarily in that order — which are in four separate states — Maine, Nebraska, Ohio, and Pennsylvania, not necessarily in that order.

Brian is camping on Keewaukett Lake.
High Point Campsite is on Jackson Lake, which is in Nebraska.
The person at Indian Point Lake, a native of Pennsylvania, camps only in that state.
Donna is at Freeport Campsite.
Allen is camping in Ohio.

17. Where must Brian be camping?

(A) At Edmunds Campsite
(B) In Maine
(C) On Leesville Lake
(D) At Freeport Campsite
(E) In Nebraska

18. Indian Point Lake is the site of

(A) Freeport Campsite
(B) Allen’s camp
(C) the camp in Ohio
(D) Grand Isle Campsite
(E) Carol’s camp

19. On the basis of the information given, it is possible to deduce that

I. Allen is not at High Point Campsite
II. Carol is in Pennsylvania
III. Donna is not at Edmunds Campsite

(A) I only
(B) II only
(C) III only
(D) I and III only
(E) II and III only

20. Ohio is the site of

I. Leesville Lake
II. Freeport Campsite
III. Jackson Lake

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

21. Which is true of Leesville Lake?

(A) Carol is camping there.
(B) Donna is camping there.
(C) It is in Maine
(D) It is the site of Freeport Campsite.
(E) Allen is camping there.

22. Which cannot be determined on the basis of the information given?

(A) What state Keewaukett Lake is in
(B) Who is at Edmunds Campsite
(C) What campsite is in Pennsylvania
(D) Who is camping in Nebraska
(E) Which states Carol and Donna are in

23. Our new Model EXT Superwash Automatic Dishwasher is the best dishwasher you’ll ever own. It comes in any of fourteen decorator colors. It’s so quiet you’ll find yourself checking to see if it’s really on. And best of all, it comes in different widths and heights so that there’ll be no need to redesign your present kitchen around it.

The argument above is most weakened by its failure to mention

(A) the terms of the warranty
(B) how well the dishwasher washes dishes
(C) the specific sizes available
(D) how much electricity the dishwasher uses
(E) how many dishes the dishwasher holds
24. Based solely on artifacts recently discovered in ancient Xenian tombs, archeologists claim to have reconstructed the Xenian civilization of that time. What could be more absurd? No hieroglyphs or other written records were unearthed; thus, the archeologists are claiming to have reconstructed a culture without any evidence of how the people who lived in that culture thought.

The argument above is based on which of the following assumptions?

(A) Physical artifacts do not provide evidence of how people think.
(B) Archeologists would be able to translate ancient Xenian writing if it were found.
(C) Insufficient effort was expended by the archeologists in searching for written records.
(D) Physical artifacts are of no use in trying to reconstruct a civilization.
(E) Written records are all that is needed to reconstruct a civilization.

25. I'm afraid that Roger will never be an outstanding football player again. Last year he injured his knee, and the doctors had to remove some of the cartilage.

The argument above is based upon which of the following assumptions?

I. One must have healthy knees to play football.
II. How well one plays football may be influenced by the condition of one's knees.
III. Healthy knees are necessary for a professional football career.

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

Time — 30 minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

George adores classical music. He always prefers Beethoven to Bartok and Mahler to Mozart. He always prefers Haydn to Hindemith and Hindemith to Mozart. He always prefers Mahler to any composer whose name begins with B, except Beethoven, and he always chooses to listen to a composer he prefers.

1. George's brother gives him one recording by each of the composers mentioned. Which of the following correctly states the order in which George must play some of the records?
   (A) Beethoven, Bartok, Mozart
   (B) Haydn, Hindemith, Mozart
   (C) Beethoven, Mahler, Bartok
   (D) Hindemith, Mahler, Mozart
   (E) Haydn, Hindemith, Mahler

2. Which of the following cannot be true?
   (A) George prefers Mahler to Bartok.
   (B) George prefers Beethoven to Mahler.
   (C) George prefers Bartok to Mozart.
   (D) George prefers Mozart to Beethoven.
   (E) George prefers Mahler to Haydn.

3. George's mother also gives him one recording by each composer mentioned. Which of the following cannot occur?
   (A) George plays the Beethoven first.
   (B) George plays the Haydn first.
   (C) George plays the Mahler third.
   (D) George plays the Beethoven fifth.
   (E) George plays the Bartok last.

4. George's father gives him several records. If the first record he plays is by Berlioz, which of the following must be true?
   (A) There is no record by Hindemith.
   (B) There is no record by Bartok.
   (C) One of the records may be by Haydn.
   (D) If there is a record by Haydn, George will play it second.
   (E) There is no record by Beethoven.

5. The new Spanish film, The Other Side of the Mirror, the psychologically probing story of a pair of disturbed lovers, is clearly the best foreign film of the year, since its box office receipts show that even more people are seeing it than have seen Double Fugue, the highly acclaimed U.S. film on a similar theme.

6. The argument above is based on which of the following assumptions?
   (A) Double Fugue is the best U.S. film of the year.
   (B) Foreign films should be judged by standards different from those used for U.S. films.
   (C) Foreign films should be judged by the same standards used for U.S. films.
   (D) Psychologically probing stories make the best films.
   (E) The quality of a film can be measured by the number of people who go to see it.

7. By the very nature of their work, scientists must rigorously apply the scientific method. Every conclusion they reach is scrutinized by other scientists and corrected and refined as needed until it can be certified as scientifically valid. No other view of the world is derived in such a manner; neither the theologian nor the sociologist nor the artist makes use of this method. Thus, the scientific worldview must be the most accurate.

Which of the following best describes the flaw in the reasoning used in the argument above?
   (A) The author uses a single term to mean more than one thing.
   (B) The author fails to explain in detail how the scientific method works.
   (C) The truth of the author's conclusion is assumed rather than justified.
   (D) The author ignores the fact that many accepted scientific theories are later disproved.
   (E) The author attacks the people who hold other views, rather than attacking the views themselves.

8. Melinda: George has become a better boxer since he started meditating.
   Alfredo: Impossible. A boxer's most important asset is his aggressiveness.
   Alfredo's statement implies that he believes that
   (A) meditation tends to make a person less aggressive
   (B) meditation has little or no effect on the person who practices it
   (C) George was previously a poor boxer because he was not aggressive enough
   (D) George has not really been meditating
   (E) mental attitude has little or nothing to do with a boxer's effectiveness
Questions 8–12

(1) At a baseball game, five men, L, M, N, O, and P, and five women, S, T, U, V, and W, occupy a row of ten seats. The men are in odd-numbered seats, starting from the left; each woman sits to the right of the man she is dating.
(2) O is V’s date.
(3) W is not at the right end of the row and the man she is dating is not at the left end of the row.
(4) N is one seat from the right end of the row.
(5) The man dating W likes T best among the other women and insists on being seated to the right of T.
(6) M and his date occupy the middle pair of seats.
(7) V sits next to M.

8. Which of the following lists five persons who must sit adjacent to one another, from left to right?
   (A) U, V, O, M, T
   (B) M, T, L, W, N
   (C) O, V, M, T, W
   (D) O, V, M, T, and either L or P
   (E) L or P, O, V, M, T

9. U’s date may be
   (A) N or L
   (B) L or P
   (C) N or P
   (D) N, L, or P
   (E) M, N, or L

10. Which of the following cannot be determined on the basis of the information given?
    I. Who occupies the seat farthest to the left
    II. Who occupies the seat farthest to the right
    III. Which other women are nearest T

   (A) I only
   (B) III only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

11. Which of the following could be determined exactly if the position of either L or P were given?

   (A) The identity of L’s date
   (B) The identity of P’s date
   (C) The identity of L’s date or P’s date, but not both
   (D) Which woman is not seated between two men
   (E) Who is sitting to O’s left

12. In order to determine the position of T, it is necessary to use how many of the numbered statements?

   (A) 3 (B) 4 (C) 5 (D) 6 (E) 7

Questions 13–16

Seven teenagers at Gateway Amusement Park — Carlos, Leona, Gregor, Ingrid, Naomi, Dave, and Rick — are going to ride the new roller coaster, Dragon’s Breath. Two cars are available, but the teens have to split up according to the following conditions:

Carlos and Naomi are boyfriend and girlfriend and must be in the same car.
Dave and Gregor are friends but Ingrid is Gregor’s girlfriend, so Dave cannot be in the same car as Gregor unless Ingrid is also in that car.
The roller coaster rules say that the maximum number of riders in each car is four.
Leona is Gregor’s sister and Rick is Leona’s ex-boyfriend, so neither Leona nor Gregor can ride in the same car as Rick.

13. If Dave rides in the same car as Leona, which of the following must be true?
   (A) Rick rides in the other car.
   (B) Ingrid rides in the other car.
   (C) Gregor rides in the other car.
   (D) Naomi rides in the same car as Dave and Leona.
   (E) Carlos rides in the same car as Dave and Leona.

14. If Naomi rides in the same car as Gregor, which of the following must be true?
   (A) Rick rides in the same car as Naomi and Gregor.
   (B) Leona rides in the same car as Rick.
   (C) Leona rides in the car other than the one in which Gregor rides.
   (D) Naomi and Gregor ride in the car carrying four people.
   (E) Carlos rides in the car other than the one in which Gregor rides.

15. If Rick rides in the same car as Ingrid, which of the following must be true?
   (A) Dave rides in the same car as Leona.
   (B) Dave rides in the same car as Carlos.
   (C) Leona rides in the same car as Gregor.
   (D) Naomi rides in the same car as Rick and Ingrid.
   (E) Dave rides in the same car as Naomi.

16. If Naomi rides in the same car as Dave, which of the following would be a complete and accurate list of the people who must ride in the other car?
   (A) Rick, Gregor, Ingrid
   (B) Rick, Carlos, Leona
   (C) Ingrid, Carlos, Gregor, Rick
   (D) Rick, Ingrid, Leona
   (E) Ingrid, Leona, Gregor
Questions 17–22

Mathematics 11 is a prerequisite for Mathematics 101, except for students with advanced placement in mathematics, who may take Mathematics 101 without any prerequisite.

Chemistry 11 or 21 is a prerequisite for Chemistry 101, except for students with advanced placement in chemistry, who may take Chemistry 101 without any prerequisite.

Physics 1, followed by Physics 11 or 21, is a prerequisite for Physics 101 or 121. There is no advanced placement in physics, but Mathematics 11 is acceptable in place of Physics 1.

Students who have passed Mathematics 101 may take Mathematics 202, 211, or 221; students who have passed Chemistry 101 may take Chemistry 201, 211, or 221, or Mathematics 201 for chemistry credit; students who have passed Physics 101 or 121 may take Physics 201 or 221, or Chemistry 201 for physics credit.

Students who have passed three or more graduate-level courses acceptable for credit in a given field may be admitted to a concentration sequence in that field. (Courses numbered 200 or higher are considered graduate-level.)

17. A student who has passed Physics 101

   I. may be admitted to a concentration sequence in physics without taking Physics 121
   II. may be admitted to a concentration sequence in physics after taking two more physics courses
   III. must have taken Physics 1 or 11 or both

   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III only

18. What is the minimum number of courses in mathematics or chemistry that can satisfy the requirements for admission to a concentration sequence in chemistry for a student without advanced placement in chemistry?

   (A) 3 (B) 4 (C) 5 (D) 6 (E) 7

19. A student with advanced placement in mathematics may qualify for admission to a concentration sequence in chemistry by taking which of the following?

   I. Mathematics 101 and 202, Chemistry 11, 201, and 211
   II. Chemistry 11, 101, 201, 211, and 221
   III. Mathematics 101 and 211, Chemistry 21, 101, 201, and 221

20. How many separate ways are there to qualify for admission to a concentration sequence in physics?

   (A) 3 (B) 4 (C) 6 (D) 8 (E) 12

21. The maximum number of courses that must be taken by any student to qualify for admission to a concentration sequence is

   (A) 4 (B) 5 (C) 6 (D) 7 (E) 8

22. If all chemistry classes are cancelled following an explosion that destroys the chemistry building, which of the following must be true?

   I. No new students will be able to qualify for Mathematics 201.
   II. No new students will be able to qualify for a concentration sequence in physics.
   III. No graduate-level courses will be open to students who have already passed Chemistry 101.

   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III only

23. None of the stockholders in Elronco who knew Ortega and supported her reorganization plan voted for the merger with Anaco, but some of them owned stock in Anaco.

   If the statement above is true, each of the following statements may or must also be true EXCEPT:

   (A) No one who owned Anaco stock supported Ortega’s reorganization plan.
   (B) Everyone who voted for the merger with Anaco owned Anaco stock.
   (C) Some of the Anaco stockholders knew Ortega.
   (D) Some of the Elronco stockholders who opposed Ortega’s reorganization plan knew Ortega.
   (E) None of the Elronco stockholders voted for the Anaco merger.

24. Which of the following contradicts the view that only the smart become rich?

   (A) Brian was smart, yet he was poor his whole life.
   (B) Both “smart” and “rich” are relative terms.
   (C) Different people are smart in different ways.
   (D) Some smart people do not desire to become rich.
   (E) Peter is stupid, yet he amassed a large fortune by the age of 30.
25. Television convinces viewers that the likelihood of their becoming the victims of violent crime is extremely high; at the same time, by its very nature, television persuades viewers to passively accept whatever happens to them. 

The argument above leads most logically to the conclusion that

(A) people should not watch television
(B) television promotes a feeling of helpless vulnerability in its viewers
(C) television viewers are more likely to be victimized than other persons
(D) the content of television programs should be changed to avoid fostering the attitudes mentioned
(E) television viewing promotes criminal behavior

SECTION 7
Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.
Lines shown as straight can be assumed to be straight.
Figures can be assumed to lie in a plane unless otherwise indicated.
Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

Example 2: \(PN\) \(NQ\)

\(x\) \(y\)

(\(x\) and \(y\) are equal angles, hence equal quantities; hence A, (since equal measures cannot be assumed, even though \(PN\) and \(NQ\) appear equal))

Example 3: \(x\) \(y\)

(\(N\) is between \(P\) and \(Q\))

Example 4: \(w + z\) 180

(\(PQ\) is a straight line)
A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. For which values of $n$ and $d$ is $\frac{n}{d} > 1$?
   (A) $n = 5$ and $d = 6$
   (B) $n = 3$ and $d = 2$
   (C) $n = 1$ and $d = 2$
   (D) $n = 1$ and $d = 1$
   (E) $n = 0$ and $d = 1$

17. In the figure above, $l \parallel m$. All of the following are true EXCEPT:
   (A) $c = d$
   (B) $a = d$
   (C) $a = e$
   (D) $f = b$
   (E) $f = c$

18. If 0.6 is the average of the four quantities 0.2, 0.8, 1.0, and $x$, what is the numerical value of $x$?
   (A) 0.2
   (B) 0.4
   (C) 0.67
   (D) 1.3
   (E) 2.4

19. $\frac{a^2 - b^2}{(a - b)^2}$ is equal to
   (A) $a + b$
   (B) $a - b$
   (C) $\frac{a + b}{a - b}$
   (D) $\frac{a - b}{a + b}$
   (E) 1

20. The area of square $EFGH$ is equal to the area of rectangle $ABCD$. If $GH = 6$ feet and $AD = 4$ feet, the perimeter (in feet) of the rectangle is
   (A) 13
   (B) 16
   (C) 24
   (D) 26
   (E) 36
Questions 21–25 refer to the following graphs.

**HIGHEST LEVEL OF EDUCATION OF BRIDEGROOMS IN 24–27 AGE GROUP**

- Below High School Graduation 16%
- High School Graduates 60%
- College Graduates 20%
- Postgraduate Education 4%

**DISTRIBUTION OF 302,000 MARRIAGES ACCORDING TO AGE OF BRIDEGROOM**

21. If drawn accurately, how many degrees should there be in the central angle of the sector indicating the number of college graduates?

(A) 20  
(B) 40  
(C) 60  
(D) 72  
(E) more than 72

22. In one million marriages, how many thousand (to the nearest thousand) bridgets would you expect to be between the ages of 51 and 60?

(A) 5  
(B) 15  
(C) 16  
(D) 17  
(E) 50

23. Which of the following best represents the percentage of men who married at age 24 or younger?

(A) 7  
(B) 10  
(C) 24  
(D) 32  
(E) 48

24. Which of the following can be inferred from the graphs?

I. Almost three times as many marriages occur when bridgets are in the 21–24 age bracket as occur when they are aged 33–36.
II. Most bridgets are high school graduates.
III. About 2920 bridgets aged 24–27 receive postgraduate education.

(A) I only  
(B) II only  
(C) III only  
(D) I and III  
(E) II and III

25. Approximately what percentage of the men who married were between the ages of 21 and 27 years?

(A) 7  
(B) 13  
(C) 26  
(D) 44  
(E) 67

26. The radius of a pool is twice the radius of a circular flower bed. The area of the pool is how many times the area of the flower bed?

(A) \( \frac{1}{4} \)  
(B) \( \frac{1}{2} \)  
(C) 2  
(D) 4  
(E) 8

27. In the figure above, \( AB \) is the diameter and \( OC = BC \). What is the value of \( \frac{x}{2} \)?

(A) 20  
(B) 30  
(C) 60  
(D) 90  
(E) 120
28. One-half of a number is 17 more than one-third of that number. What is the number?
   (A) 52   (B) 84   (C) 102   (D) 112   (E) 204

29. Sam and Florence together have $100. After giving Florence $10.00, Sam finds that he has $4.00 more than $\frac{1}{3}$ the amount Florence now has. How much does Sam now have?
   (A) $18.67
   (B) $20.00
   (C) $21.00
   (D) $27.50
   (E) $35.00

30. If two items cost $c$, how many items can be purchased for $xc$?
   (A) $\frac{x}{2c}$
   (B) $\frac{2c}{x}$
   (C) $\frac{2x}{c}$
   (D) $\frac{cx}{2}$
   (E) $2cx

### Self-Appraisal

Now that you have completed the Diagnostic Test, evaluate your performance. Identify your strengths and weaknesses, and then plan a practical study program based on what you have discovered.

Use the Answer Key to check your answers. Your raw score for each section is equal to the number of correct answers you had. Compute your raw score for each ability area (verbal, quantitative, analytical) by adding your raw scores from the two sections on that area. Since on the actual GRE the experimental section does not count in your score, use only two of the three quantitative sections on this Diagnostic Test when computing your raw quantitative score.

Once you have determined your raw score for each ability area, use the conversion chart that follows to get your scaled score. Note that this conversion chart is provided to give you a rough estimate of the GRE score you would achieve if you took the test now without any further preparation. When ETS administers a GRE, a conversion chart for that particular exam is prepared based on statistical data. The unofficial conversion chart presented here gives you only an approximate idea of how raw scores convert into scaled scores.

Use this Diagnostic Test to identify areas you may be weak in. You may find that you had trouble with a particular question type (for example, you didn’t do well on the analogy questions in either verbal section), or with particular subject matter (for example, you didn’t do well on any geometry questions, whether they were quantitative comparisons or discrete quantitative). Determining what you need to concentrate on will help you plan an effective study program.

Remember that, in addition to evaluating your scores and identifying weak areas, you should read all the answer explanations for questions you answered incorrectly, questions you guessed on, and questions you answered correctly but found difficult. Reviewing the answer explanations will help you understand concepts and strategies, and may point out shortcuts.

Answer Explanations

Section 1   Verbal

1. B. Lacking the information derived from an actual census or population count, a numerical description of the human population would of necessity be a matter of conjecture (supposition based on estimate or guesswork).

2. E. Given that the tide pool provides suitable refuge, it is likely that the intertidal fish would seek to return to it. In such a case, they would be helped by the development of a homing instinct.

3. C. In a case in which experts disagree, it is incumbent on responsible scholars (that is, falls upon them as a scholarly duty or obligation) to refrain from making statements that are dogmatic or excessively assertive and arbitrary about the issue.

4. C. You are dealing with either similar or contradictory impulses. If the impulses are similar (that is, analogous, comparable, or related), the second missing word should be a synonym or near-synonym for individualize. If the impulses are contradictory (that is, disparate or divergent), the second missing word should be an antonym or near-antonym for individualize. In this case, the latter holds true. The impulses are divergent; they are the impulse to individualize and the contradictory impulse to typify (treat characters as representatives of a type).

5. C. The politicians do not forsake center stage. However, if they did forsake center stage once in a while, the public might like them better for their self-effacement (withdrawal from attention).

6. B. The key phrase here is "some small village world." To be concerned only with village or parish affairs is to be parochial; Mrs. Woolf's novels thus have an air of parochialism. Again, it is a small world, perfect in its tininess as miniature paintings are perfect. Choice A is incorrect. It is Mrs. Woolf's choice of scene and not her choice of period that gives her novels their special atmosphere. (Anachronism has to do with chronological misplacements of persons or events.)

Choices C and D are incorrect. Nothing in the sentence suggests cynicism (pessimistic disbelief) or intrigue (love of mystery) to be characteristic of Mrs. Woolf's work. Choice E, though tempting, is incorrect. A village world is not necessarily a fragile one; it is, however, a provincial, narrow one—in other words, a parochial one.

7. A. Because they do not have enough time to read the whole treatise, the editors ask for an abridgment or compendium.

Remember, before you look at the answer choices, read the sentence and try to think of a word that makes sense.

8. B. A clasp is the fastening on a bracelet. A buckle is the fastening on a belt.

(Function)

9. C. A sedan is a kind of automobile. A rocker is a kind of chair.

(Class and Member)

10. D. To pardon an offense by definition is to give up resentment for it without exacting a penalty. To forgive a wrong is to give up resentment for it without exacting a penalty.

(Defining Characteristic)

11. B. By definition, a route that is circuitous follows an indirect course. Likewise, an argument that is devious follows an indirect course.

(Defining Characteristic)
12. A. To be nonplussed (totally at a loss) is to exhibit bafflement (perplexity). To be discomfited (abashed; disconcerted) is to exhibit embarrassment. 
Beware eye-catchers. Choice D is incorrect. To be despicable is to be worthy of contempt; it is not to exhibit contempt.

(Synonym Variant)

13. C. A gully (miniature gorge or valley) is smaller than a canyon (deep gorge or valley). Likewise, a pebble is smaller than a boulder.

(Degree of Intensity)

14. E. To be officious (meddlesome) is to be helpful in an excessive, offensive manner. To be sycophantic (fawning, obsequious) is to be deferential (respectful) in an excessive, offensive manner.

(Manner)

15. D. Patina is the green coating, caused by oxidation, on bronze objects. Rust is the reddish coating, caused by oxidation, on iron objects.

(Defining Characteristic)

16. C. Cacophony (dissonance, harshness of sound) is by definition not mellifluous (pleasant-sounding). Noisomeness (stench, rankness of smell) is by definition not fragrant (pleasant-smelling).

(Antonym Variant)

7. C. The author states that the later novels of James play down prominent action. Thus they lack overtly dramatic incident. However, the author goes on to state that James’s novels do possess interest; they carry the reader through “a rich analysis of the mental adjustments of the characters to the realities of their personal situations.” It is this implicitly dramatic psychological revelation that sustains the reader’s interest.

Question A is unanswerable on the basis of the passage. It is evident that James wrote psychological novels; it is nowhere stated that he originated the genre.

Question B is unanswerable on the basis of the passage. Although conventional narrative technique relates “events in distinctly phased sequences,” clearly separating them, it does not necessarily recount action in strictly chronological order.

Question D is unanswerable on the basis of the passage. The passage does not deal with the general public’s reaction to James.

Question E is unanswerable on the basis of the passage. The passage talks of qualities in James as a novelist in terms of their being characteristic, not in terms of their making him unique.

18. C. While the stories themselves grow simpler, their moral and psychological aspects become increasingly complex.
Choice A is incorrect. The passage mentions the specific description of settings as characteristic of James’s early, conventional novels, not of his later works.
Choice B is incorrect. In his later novels James grew less concerned with plot and more concerned with psychological revelation.
Choice D is incorrect. The “excitement of visible actions building up to a climactic event” is characteristic of the common novel, not of the Jamesian psychological novel.
Choice E is incorrect. The later novels tend instead to subordinate dramatic effect to psychological exploration and revelation.

19. E. The author refers to novels of action as “overstuffed” and “crammed with adventitious events.” However, these comments, though stated with assurance, are merely made in passing. Thus, his attitude is best described as one of decided disapproval or disapproval.
Choice A is incorrect. The author is not pointedly indulgent or deeply resentful in tone. He is merely making mildly critical remarks in passing.
Choice B is incorrect. The author does make passing comments that disparage the novel of action. He is not wholly neutral on the topic.
Choice C is incorrect. While the author does disparage the novel of action, he does not ridicule or deride it sharply.
Choice D is incorrect. The author is certainly not a strong partisan or advocate of the novel of action.

20. C. The author indicates that the theory of plate tectonics draws upon earlier hypotheses on seafloor spreading; he provides details about the history of these hypotheses, tracing them from their initial formulation by Hess to their explanation by Vine and Matthews and finally to their confirmation by the work of the manned submersibles. Thus, he traces the development of a theory.
Choice A is incorrect. The author presents data; he does not question data.
Choice B is incorrect. The author briefly describes current explorations. However, that is not his primary purpose.
Choice D is incorrect. It is unsupported by the passage.
Choice E is incorrect. The author mentions the phenomenon of the periodic reversals of the
earth's magnetic field. However, he states this phenomenon "continues to be one of the great mysteries of geology"; he does not explain the reasons behind it.

21. E. The entire thrust of the article is to summarize the current state of knowledge in marine geology. In addition, both the passage's free use of technical terminology and its careful provision of definitions explaining this terminology are characteristic of scientific journal articles aimed at an educated audience of nonspecialists in a field.

Choice A is incorrect. The passage is expository in tone; it is not persuasive or argumentative.

Choice B is incorrect. It mentions volcanism only in passing.

Choice C is incorrect. The passage is far greater in scope.

Choice D is incorrect. The passage indicates no such explanation of "one of the great mysteries of geology" exists.

22. C. The subduction zone is the site of the destruction or consumption of existing lithospheric material. In contrast, the mid-ocean ridge is the site of the creation or emergence of new lithospheric material.

Choice A is incorrect. Both mid-ocean ridges and subduction zones are boundaries between plates.

Choice B is incorrect. Both mid-ocean ridges and subduction zones are located on the ocean floor.

Choice D is incorrect. It is unsupported by the passage.

Choice E is incorrect. The reverse is true.

23. B. Choice B is correct. You are told that the new lithospheric material is injected into a mid-ocean ridge, a suboceanic mountain range. This new material does not disappear; it is added to the material already there. Thus, it is incorporated into the existing mid-ocean ridge.

Choice A is incorrect. "In general the plates are in motion with respect to one another." Nothing suggests that they become immobilized; indeed, they are said to diverge from the ridge, sliding as they diverge.

Choice C is incorrect. The passage specifically denies it. ("The size of the earth is essentially constant.")

Choice D is incorrect. It is the earth itself whose magnetic field reverses. Nothing in the passage suggests the new lithospheric material has any such potential.

Choice E is incorrect. At a mid-ocean ridge, the site at which new lithospheric material is injected from below, the plates diverge; they do not sink. (They sink, one plate diving under another, at a subduction zone.)

24. D. You can determine the correct answer by the process of elimination.

Question I is answerable on the basis of the passage. The passage states that the earth's magnetic field "reverses at intervals of from 10,000 to about a million years." Therefore, you can eliminate Choice B. Question II is unanswerable on the basis of the passage. What causes the changes in polarity is still a mystery to geologists. Therefore, you can eliminate Choices C and E.

Question III is answerable on the basis of the passage. The width of the magnetic stripes "indicates the rate" or pace of sea-floor spreading. Therefore, you can eliminate Choice A. Only Choice D is left. It is the correct answer.

25. C. Since the passage states that the size of the earth is essentially constant, if large amounts of new lithospheric material are being created at one point, it follows that correspondingly large amounts of lithospheric material are being destroyed at another point. Thus, an increase in activity at a mid-ocean ridge or creation point would be matched by a corresponding increase in activity at a subduction zone or destruction point.

26. B. The third sentence of the second paragraph states that one plate dives under another (sinks) and is reincorporated or absorbed into the mantle.

Choice A is incorrect. Lithospheric material rises at mid-ocean ridges, not at subduction zones.

Choice C is incorrect. New lithospheric material is injected at a mid-ocean ridge.

Choice D is incorrect. The injection of new lithospheric material causes sea-floor spreading around the mid-ocean ridge.

Choice E is incorrect. The lithospheric plates are described as diverging from a mid-ocean ridge, not from a subduction zone.

27. C. Until the most recent explorations, marine geologists lacked maps "as precise as those of a geologist on land." This suggests that, compared to land geologists, marine geologists were laboring under a disadvantage.

Choice A is incorrect. While the marine geologists lacked adequate charts, nothing in the passage suggests they had been negligent in their work.

Choice B is incorrect. It is unsupported by the passage.

Choice D is incorrect. The passage suggests that marine geologists had inadequate access to the ocean floor before submersibles came into use.

Choice E is incorrect. The sea-floor spreading hypothesis has been known to marine geologists
since the 1960s. Thus, they were aware of it well before the recent explorations involving manned submersibles began.

28. E. The opposite of to deteriorate (become worse) is to improve. Think of “deteriorating health.”

29. A. The opposite of evasive (not direct; shifty; equivocal) is frank (candid; open). Think of “evasive remarks from a politician.”

30. B. The opposite of to strew or scatter is to collect. Think of “clothes strewn all over the floor.”

31. D. The opposite of a prodigal (spendthrift; extravagant person) is an economical person. Beware eye-catchers. Choice C is incorrect. A prodigal is not a prodigy (wonder; gifted person). Think of “a prodigal squandering his wealth.”

32. D. The opposite of to equivocate (avoid committing oneself in what one says) is to pledge (bind or commit oneself solemnly). Think of politicians “hedging and equivocating.”

33. B. The opposite of crass (stupid; vulgar; incapable of appreciating refinement) is refined. Think of “a crass blockhead.”

34. B. The opposite of artifice (trickery; guile) is sincerity. Think of being “tricked by her skillful artifice.”

35. B. The opposite of opulence (wealth; affluence) is penury or extreme poverty. Think of “luxurious opulence.”

36. D. The opposite of untenable (not able to be supported or defended) is defensible. Think of “an untenable argument.”

37. D. The opposite of sedulous (diligent; exhibiting care) is cursory (hasty; inattentive). Think of “sedulous attention to details.”

38. D. The opposite of to disabuse (undeceive) is to deceive. Beware eye-catchers. Choice A is incorrect. Disabuse is unrelated to physical maltreatment or abuse. Think of “disabusing someone of a misapprehension.”

Section 2 Verbal

1. E. The presence of extraneous (unrelated; irrelevant) ideas that have been dragged in would make an argument difficult to comprehend. Note that the phrase set off by the commas serves to define the material referred to and thus defines the first missing word.

2. D. Because the tendency to migrate exists in all time periods, you cannot fully explain it on the basis of any single time period. Your explanation, like the phenomenon itself, must be independent of any particular period of time. The conjunction since here is used as a synonym for because; it indicates a cause and effect relationship.

3. B. Given the ubiquity of light, it is unsurprising that creatures have developed the biologically helpful ability to make use of light energy. Note the use of therefore indicating that the omitted portion of the sentence supports or continues a thought developed elsewhere in the sentence.

4. E. After incubating the new functions, the next step would be to nurture or foster their growth until they were ready to be sent out into the world. Their departure, however, would not diminish the cities, for by continuing to breed fresh ideas the cities would renew themselves. Note the metaphorical usage of incubate and breed that influences the writer’s choice of words. Cities do not literally incubate businesses or breed ideas; they do so only figuratively.

5. A. Man is gregarious or sociable. However, he is more in need of mental companionship than of physical companionship. The writer plays on words in his conceit that a man may like to go alone for a walk but hates to stand alone in his opinions.

6. D. Here the contrast is between reality and pretense. Mrs. Proudie feigned or pretended a great interest in the parishioners’ welfare. However, her interest was not great but actually negligible or insignificant, so insignificant as to be almost nonexistent. Note that the conjunction although signals the contrast here. Note also that the phrase “so negligible as to be practically nonexistent” is a cliché, a literary commonplace.

7. B. By definition, an excessive or grandiloquent literary work lacks economy or conciseness in verbal expression. Note that you are dealing with a secondary meaning of economy here.

   (Sequence)

9. D. Serrations are the teeth on the edge of a saw. Cogs are the teeth on the rim of a gear.

   (Part to Whole)

10. E. Thirst is a specific example of a drive (state of instinctual need). Smell is a specific example of a sense.

   (Class and Member)

11. C. A sledge (large, heavy hammer) strikes or pounds in a spike (very large nail). A hammer strikes or pounds in a nail. Beware eye-catchers. Choice A is incorrect. Sledge here is related to sledgehammers, not to sleds or sleighs.

   (Function)

12. A. Something ephemeral (fleeting; transient) lacks permanence. Something erratic (unpredictable) lacks predictability.

   (Antonym Variant)

13. C. Just as the wheat is separated from the worthless straw or chaff, the wine is separated from the worthless sediment or dregs.

   (Part to Whole)

14. D. To ogle is to observe or look at someone provocatively (in an attention-getting manner). To flaunt is to display or show off something provocatively (in an attention-getting manner).

   (Manner)

15. E. Someone abstemious (sparing in drinking and eating) manifests abstinence (self-restraint in drinking and eating). Someone pusillanimous (cowardly) manifests craveness (cowardice).

   (Synonym Variant)

16. A. Something ineluctable (unavoidable) is impossible to avoid. Something ineffable (inexpressible) is impossible to utter.

   (Antonym Variant)

17. C. The passage points out that in this period the differences between the two branches of the suffrage movement were diminishing in importance. Thus, it is accounting for changes occurring in the movement. Choice A is incorrect. Both Anthony and Howe are mentioned (along with other suffragist leaders) in the context of the movements they led, but only the movements, not these two leaders, are directly contrasted.

   Choice B is incorrect. The movement did not advance in this period.

   Choice D is incorrect. The divisions were becoming less important, not more so, as the two branches became increasingly alike in nature.

   Choice E is incorrect. It is unsupported by the passage.

18. E. The National took up the cudgels for all women in distress, whatever their social or economic standing.

19. A. The revered Mrs. Howe stood for the forces of propriety that were engulfing the suffragist movement. The embodiment of decorum, she was a venerated figurehead to be admired and respected, not a revolutionary firebrand to be followed into the battle.

   Choice B is incorrect. Nothing in the passage suggests Mrs. Howe was overzealous.

   Choice C is incorrect. Mrs. Howe was orthodox in her thinking, not heterodox.

   Choice D is incorrect. A lay preacher is by definition not a member of the clergy. Therefore, Mrs. Howe was not an ordained cleric.

   Choice E is incorrect. Mrs. Howe was characterized by a lack of militancy.

20. D. The passage focuses on describing the factors which led to the diminution or lessening of radicalism in the movement for women’s suffrage. Choice A is incorrect. The title is far too limited in scope to cover the entire passage.

   Choice B is incorrect. The title is far too general to suit the passage.

   Choice C is incorrect. The title is inapt: the passage focuses not on the rifts but on the diminution of radicalism which led to the closing of the rifts.

   Choice E is incorrect. The title is far too broad in scope.

21. C. The author refers to the public’s reaction to the Molly Maguire trials as “hysteria” that was “whipped up” or deliberately incited. Clearly, her attitude toward the reaction is that it was overwrought or overexcited.

   Note how the use of words that convey emotion (“hysteria”) helps you to determine the author’s attitude to the subject.

22. B. The passage describes Anthony as “ever catholic”: very broad in sympathies; not provincial in outlook. Anthony was willing to work with anyone; her sympathies were inclusive, extending
sisterhood to all those who shared her espousal of woman suffrage.
Note that *catholic* here is used in its less familiar sense of “inclusive; universal,” not in its
common sense of “pertaining to the Roman Catholic church.”

23. D. The first sentence of the final paragraph indicates that the author’s concern is to avoid a mis
conception or correct a misapprehension about what caused the trend towards conservatism in the
suffrage movement.

24. C. If even the radical Susan B. Anthony would have had second thoughts about flouting or dis
regarding Federal election laws, we may logically infer that the ordinary, not quite so
militant movement member would have viewed such actions with disapproval or disapprobation.

25. C. Scanning the passage, you easily find the one sentence that mentions *Drosophila*. The sent
ence immediately preceding it conveys the author’s point: “A small change in a key part of the program can
make a large difference.”
Choice A is incorrect. While the author does indicate that he is familiar with such experiments,
his primary purpose in citing *Drosophila* is to support a generalization he has made.
Choice B is incorrect. The author gives an example of a genetic change; he does not describe
just how that change took place.
Choice D is incorrect. Any mutation that results in a fly with legs growing out of its head is un
likely to be an advantageous or favorable one.
Choice E is incorrect. The passage suggests that the particular fruit fly mutation mentioned took
place in one step; it says nothing about how long it took for the fruit fly to reach its present form.

26. B. The second paragraph indicates that an organism with a “selective advantage” will re
produce more, that is, “on average, leave more offspring.” Its advantage is reproductive.

27. D. The author’s attitude is most evident in the concluding sentence, in which natural selection is
described as “a beautiful mechanism” that increases favorable events. He clearly views the process with appreciative admiration.
Choice A is incorrect. The author does not question the process; he believes in it implicitly.
Choice B is incorrect. While the author is fascinated by natural selection, he views the process appreciatively, not with puzzlement.

Choice C is incorrect. The author indicates no fear or apprehension of the natural selection process.
Choice E is incorrect. The author is involved with his topic; his attitude is not one of hauteur or lofty detachment.

28. C. The opposite of to terminate (end) is to begin.
Think of “terminating someone’s employment.”

29. A. The opposite of to protract or prolong is to abbreviate or shorten.
Think of “protracting a lawsuit.”

30. B. The opposite of volubility (glibness, talkative
ness) is brevity (briefness, pithiness).
Think of “unrestrained volubility.”

31. E. The opposite of late-blooming is maturing early or precocious.
Beware eye-catchers. Choice D is incorrect.
Something embryonic is in an incipient stage; it has not yet bloomed at all.
Think of Einstein, “a late-blooming genius” who was considered not particularly intelligent
as a child.

32. C. The opposite of to hone or sharpen is to dull
(make blunt).
Think of “honing a razor.”

33. B. The opposite of phlegmatic (stolid; undemon
strative) is ardent (passionate; eager).
Think of “phlegmatic and uncaring.”

34. E. The opposite of a banality (commonplace; trite
expression) is a novel expression.
Think of “the banality of a greeting card rhyme.”

35. B. The opposite of erudite (scholarly; learned) is ignorant.
Think of “an erudite scholar.”

36. E. The opposite of plethora (overabundance) is scarcity.
Think of “a plethora of tax forms.”

37. B. The opposite of currency (vogue or prevalence; period of acceptance) is obsolescence (process
of falling into disuse).
Beware eye-catchers. Choice D is incorrect. *Currency* here is unrelated to money.
Think of “the currency of an idea.”
38. C. The opposite of to skirt something (avoid dealing with a topic or question) is to address or deal directly with it. Think of "skirting an issue."

Section 3 Quantitative

1. B. \[ \frac{n + 7}{3} + \frac{n - 3}{4} \]
   \[ = \frac{4n + 28 + 3n - 9}{12} \]
   \[ = \frac{7n + 19}{12} \]
   The numerators are the same but the fraction in Column B has a smaller denominator, denoting a larger quantity.

2. B. \[ 1y + 0.01y = 2.2 \]
   \[ 10y + 1y = 220 \]
   \[ 11y = 220 \]
   \[ y = 20 \]
   \[ 0.1y = 2 \]

3. C. The reciprocal of 4 is \( \frac{1}{4} \).
   \[ \sqrt{\frac{1}{16}} = \frac{1}{4} \]

4. B. 1 yard = 3 feet
   (0.5) or \( \frac{1}{2} \) yard = 1 foot, 6 inches
   (1.5) or \( \frac{3}{2} \) yards = 4 feet, 6 inches

5. C. Observe 10 + 5; 9 + 6; 8 + 7; . . . . . .
   There are five additions with the sum in each case equal to 15.

6. B. \[ 8 \times 3 = 24, 7 \times 3 = 21 + 2 = 23. \]
   Therefore \( \triangle = 3. \) Since \( 8 \times 7 = 56, \)
   then \( \square = 6. \)

7. B. \[ 4x = 4(14) - 4 \]
   \[ 4x = 56 - 4 \]
   \[ 4x = 52 \]
   \[ x = 13 \]

8. C. Rate = Distance \div Time
   Rate = 36 miles \div \frac{3}{4} hour
   \[ (36) \left( \frac{4}{3} \right) = 48 \text{ miles per hour} \]

9. D. \[ \frac{BC \times AB}{2} = 18, \] but any of the following may be true: \( BC > AB, BC < AB, \) or \( BC = AB. \)

10. A. \[ \sqrt{1440} \] is a two-digit number (37 +). Note: for this test you are required only to estimate square roots.

11. D. Since Rose is older than Mary, she may be older or younger than Sam.

12. D. Since \( AD = 5 \) and the area = 20 square inches, we can find the value of base \( BC \) but not the value of \( DC. \) \( BC \) equals 8 inches but \( BD \) will be equal to \( DC \) only if \( AB = AC. \)

13. C. Since \( y = 50, \) the measure of angle \( DCB \) is \( 100^\circ \) and the measure of angle \( ABC \) is \( 80^\circ \) since \( ABCD \) is a parallelogram. Since \( x = 40: \)
   \[ z = 180 - 90 = 90 \]
   \[ z - y = 90 - 50 = 40. \]

14. A. In Column A, \( d, \) the smallest integer, is subtracted from \( a, \) the integer with the largest value.

15. A. Since \( x = 65 \) and \( AC = BC, \) then the measure of angle \( ABC \) is \( 65^\circ, \) and the measure of angle \( ACB \) is \( 50^\circ. \) Since \( BC \parallel DE, \) then \( y = 50^\circ \) and \( x > y. \)

16. A. \[ \frac{8}{0.8} = \frac{80}{8} = 10 \]
   \[ 0.8 \div 8 = \frac{8}{80} = \frac{1}{10} \]
   \[ (0.8)^2 = 0.64 \]
   \[ \sqrt{0.8} = 0.8 + \]
   \[ 0.8 \pi = (0.8)(3.14) = 2.5 + \]

17. E. \[ 17xy + 7 = 19xy \]
   \[ 7 = 2xy \]
   \[ 14 = 4xy \]

18. D. Average = \( \frac{XY}{2} \)
   \[ \text{Sum} + 2 = \text{XY} \]
   \[ \text{Sum} = 2XY \]
   \[ 2XY = X + ? \]
   \[ ? = 2XY - X \]
19. C. This is a direct proportion.
Let \( x = \text{length of shorter dimension of enlargement} \).

\[
\frac{\text{longer dimension}}{\text{shorter dimension}} = \frac{\frac{21}{4}}{\frac{1}{x}} = \frac{18}{1}
\]

\[2\frac{1}{2}x = (4)(1\frac{7}{8})
\]

\[
\frac{5x}{2} = \frac{60}{8}
\]

\[40x = 120
\]

\[x = 3
\]

the amount invested in mortgages must be \(2\left(\frac{100x}{b}\right)\) dollars or \(\frac{200x}{b}\) since the chart indicates that twice as much (58.6%) is invested in mortgages as is invested in bonds (28.3%).

20. D. \(AEB = 12\) \(AE = 8\)
\(AGD = 6\) \(AG = 4\)
Area \(AEFG = 32\)
Area \(ABCD = 72\)
Area of shaded part = \(72 - 32 = 40\)

21. C. Be careful to read the proper line (regular depositors). The point is midway between 90 and 100.

22. A. Number of Christmas Club depositors = 60,000
Number of regular depositors = 90,000

\[60,000 : 90,000 \text{ or } 6 : 9 \text{ or } \frac{6}{9} \text{ or } \frac{2}{3}
\]

23. B. I is not true; although the number of depositors remained the same, one may not assume that interest rates were the cause. II is true; in 1984 there were 110,000 depositors. Observe the largest angle of inclination for this period. III is not true; the circle graph indicates that more than half of the bank’s assets went into mortgages.

24. C. (58.6%) of \(360^\circ = 0.586(360^\circ) = 210.9^\circ\)

\((\text{Amount invested}) \times (\text{Rate of interest}) = \text{Interest}\)

or, \(\text{Amount invested} = \frac{\text{Interest}}{\text{Rate of interest}}\)

Amount invested in bonds = \(\frac{x}{b}\) dollars
or \(\frac{x}{b}\) or \(x \cdot \frac{100}{b}\) or \((x) \left(\frac{100}{b}\right)\) or \(\frac{100x}{b}\).

Since the amount invested in bonds = \(\frac{100x}{b}\),

26. D. Draw altitudes \(AE\) and \(BF\).
Area of figure = \(\triangle AED + \triangle BFC + \text{rectangle} AEFB\)
Area of \(\triangle AED = \frac{bh}{2}\)
or \((2 \text{ units})(6 \text{ units})\) or 6 square units.
Area of \(\triangle BCF = \frac{bh}{2}\) or \((6 \text{ units})(6 \text{ units})\) or 18 square units.
Area of rectangle \(AEFB = lw\)
or \((2 \text{ units})(6 \text{ units})\) or 12 square units.
Sum = 36 square units.
Or apply formula for area of trapezoid:
Area = \(\frac{1}{2}h(b + b_i)\)
Area = \(\frac{1}{2}(6)(10 + 2)\)
Area = 36 square units.

27. D. Factor \(x^2 + 2x - 8 = 0\) into \((x + 4)(x - 2)\). If \(x\) is either \(-4\) or \(2\), \(x^2 + 2x - 8 = 0\), and \(D\) is the correct answer.

28. A. This is a case of ratio and proportion.
\[
\text{nautical} = \frac{630}{720} = \frac{x}{1}
\]

\[720x = 630
\]

\[x = 0.875
\]

29. B. Between 1 p.m. and 3:52 p.m. there are 172 minutes. There are three intervals between the 4 classes. \(3 	imes 4\) minutes, or 12 minutes, is the time spent in passing to classes. That leaves \(172 - 12\) or 160 minutes for instruction or 40 minutes for each class period.

30. E. (Average)(Number of cases) = \(\sum\)
\[
(x)(P) = Px
\]

\[
(y)(N) = Ny
\]

\[
\frac{\sum}{\text{Number of cases}} = \text{average}
\]

\[
\frac{Px + Ny}{N} = \text{average}
\]
Section 4  Quantitative

1. C.  From $-5$ to zero there are 5 integers and from zero to $+5$ there are 5 integers. Also, from $+5$ to $+15$ there are 10 integers.

2. B.  Since the area = 25, each side = 5.  The sum of three sides of the square = 15.

3. A.  
\[ x = 0.5 \]
\[ 4x = (0.5)(4) = 2.0 \]
\[ x^2 = (0.5)(0.5)(0.5)(0.5) = 0.0625 \]
If you prefer to work with fractions:
\[ \left(\frac{1}{2}\right)(4) = 2 \quad \text{and} \quad \left(\frac{1}{2}\right)\left(\frac{1}{2}\right)\left(\frac{1}{2}\right)\left(\frac{1}{2}\right) = \frac{1}{16} \]

4. B.  The fraction in Column A has a denominator with a negative value.

5. D.  The area of a triangle is one-half the product of the lengths of the base and the altitude, and can't be determined from the values of the sides.

6. C.  Let $x =$ the first of the integers, then:
\[ \text{sum} = x + x + 1 + x + 2 + x + 3 + x + 4 = 5x + 10. \]
\[ 5x + 10 = 35 \text{ (given)}, \text{ then } 5x = 25. \]
\[ x = 5 \text{ and the largest integer, } x + 4 = 9. \]

7. A.  
\[ \sqrt{160} = \sqrt{16\sqrt{10}} = 4\sqrt{10} \]

8. C.  Since the triangle is equilateral, $x = 60$ and exterior angle $y = 120$. Therefore $2x = y$.

9. B.  If \( \frac{2}{3} \) corresponds to 12 gallons, then \( \frac{1}{3} \) corresponds to 6 gallons, and \( \frac{3}{3} \) corresponds to 18 gallons (Column A).

10. C.  Since the triangle is equilateral
\[ 3a + 15 = 5a + 1 = 2a + 22 \]
\[ 3a + 15 = 5a + 1 \]
\[ 14 = 2a \]
\[ 7 = a \]

11. D.  Since $x - y = 7$, then $x = y + 7$; $x$ and $y$ have many values, and $x + y$ may have many values.

12. B.  
\[ \frac{x^2}{2} = 18 \]
\[ x^2 = 36 \]
\[ x = 6 \]
Therefore $AC = 6\sqrt{2}$
\[ 6\sqrt{2} > 6 \]

13. C.  $AB = 6$
\[ \text{Perimeter} = 24 \]

14. C.  
\[ \text{Area} = \frac{1}{2} \times (6)(6) = 18 \]

15. C.  $AB = BC$ (given).
Since the measure of angle $B$ equals the measure of angle $C$, $AB = AC$. Therefore $ABC$ is equilateral and $m\angle A = m\angle B = m\angle C$, and $m\angle B + m\angle C = m\angle B + m\angle A$.

16. C.  Evidently, four cows produce 1 can of milk in 1 day. Therefore, eight cows could produce 2 cans of milk in 1 day. In 4 days, eight cows will be able to produce 8 cans of milk.

17. A.  Visualize the situation. The amount of pure alcohol remains the same after the dilution with water.

18. E.  Note that the question gives information about the transfer of teachers, but asks about the remaining teachers.
\[ \frac{60}{80} = \frac{3}{4} = 75\% \]

19. E.  152 pounds and 4 ounces = 152.25 pounds
\[ 152.25 \div 3 = 50.75 \text{ pounds} \]
\[ 0.75 \text{ or } \frac{3}{4} \text{ pound} = 12 \text{ ounces} \]

20. E.  Let $x =$ number of contestants.
\[ 0.05x = 30 \]
\[ 5x = 3,000 \]
\[ x = 600 \]

21. C.  500 grams of carbohydrates = 2,050 calories
100 grams of carbohydrates = 410 calories
1 gram of carbohydrate = 4.1 calories
22. A. \( \text{Total calories} = 3,390 \)
   \[ \frac{410}{3,390} = \frac{41}{339} = 12\% \]

23. B. Boys at 17 require 3,750 calories per day.
   Girls at 17 require 2,750 calories per day.
   Difference = 1,000

24. D. I is true; observe the regular increase for both sexes up to age 13. II is not true; from age 4 to 12 calorie requirements are generally similar for boys and girls. Note that the broken line and the solid line are almost parallel. III is true; boys reach their peak at 17, while girls reach their peak at 13.

25. C. 100 grams of fat = 930 calories
   1,000 grams of fat = 9,300 calories
   To obtain 9,300 calories from carbohydrates, set up a proportion, letting \( x \) = number of grams of carbohydrates needed.
   \[ \frac{500 \text{ grams}}{2,050 \text{ calories}} = \frac{9,300 \text{ calories}}{x} \]
   \[ 2,050x = (9,300)(500) \]
   \[ x = 2,268 \text{ (to the nearest gram)} \]

26. D. Since the driver’s fee is paid with the car, the charge for \( n - 1 \) person = \( cn(n - 1) \) cents; cost of car and driver = 50¢.
   \[ T = 50 + cn(n - 1) \]

27. C. This is a direct proportion.
   \[ \text{Cups of sugar} = \frac{1.5}{0.5} = \frac{1}{x} \]
   \[ 1.5x = 0.5 \]
   \[ 15x = 5 \]
   \[ x = \frac{1}{3} \]

28. B. 1 kilogram = 2.2 lb
   20 kilograms = 44 lb

29. A. I is not correct because \( \frac{1}{2} \) is not less than \( a \) if \( a \) is 1 or a fraction less than 1.
   \[ \left( \text{e.g., } \frac{1}{1}, \text{or } \frac{1}{8} \right) \text{ is not less than } 1 \text{ or } \frac{1}{8} \] II is correct because \( \frac{a + b}{2a} = \frac{2b}{b + a} \) reduces to \( \frac{2b}{2b} = \frac{1}{2} \) (which we know is correct) when \( a = b \). III is incorrect when \( a \) is greater than \( b \) \( \left( \text{e.g., } \frac{\frac{3}{2} + \frac{1}{2}}{2} \right) \text{ is not more than } \frac{3}{2} \). This statement is also not correct when \( c \) is negative and \( a \) is less than \( b \) \( \left( \text{e.g., } -1, \frac{2}{3} - \frac{1}{3} \text{ is not more than } \frac{2}{3} \right) \).
   The only correct answer is II.

30. A. \[ \frac{y}{s - t} = \frac{s + t}{t - s} \text{ (given)} \]
   \[ \frac{y}{s - t} = -\frac{s - t}{t - s} \text{ (rearrangement of terms)} \]
   \[ y = -s - t \text{ (multiplying by } s - t) \]

Section 5 Analytical

1.4. Summarize Michael’s schedule:
   Monday 3:30-4:30 Piano Lesson
   Tuesday 4:00-6:00 Karate
   Wednesday 4:00-6:00 Art Class
   Thursday 12:00- Free
   Friday 3:00-4:30 Club Program

1. C. Note that Thursday is a free afternoon.

2. D. Since Michael must begin his piano lesson at 3:30 P.M., Thursday is the only available day.

3. E. Since karate and art meet until 6 P.M., Michael will have to give up these activities in order to be present at the 5 P.M. basketball sessions. After his piano lesson, he will have thirty minutes to get to the basketball court. Thursday afternoon is free, and the Friday club program is dismissed by 4:30.

4. C. Since Michael would no longer have to attend his original Wednesday art class, that day and his free Thursday afternoon would be available for his new class.

5. C. This question tests an “all/only” confusion.
   Sarah is saying that only members with General Council status are eligible for a position in the President’s cabinet. Charles assumes that Sarah is saying all the members on the General Council sit on the President’s cabinet. He knows of one Council member who doesn’t, and refutes Sarah’s statement. Choice C accurately summarizes Charles’s misinterpretation. Choice A says the same thing Sarah says, in reverse; Choice B is simply incorrect (Charles says Grogan does not sit on the Cabinet); Choice D directly contradicts Sarah’s statement; and Choice E mentions a post—General Council Manager—that isn’t mentioned in the dialogue.
6. D. Analyze the argument: it says that the unemployment problem has one cause, worker laziness. Anything that gives evidence for this strengthens the argument; anything that gives evidence against it or suggests another explanation weakens it. D, if true, might be evidence that the unemployed are lazy. Choices A, B, and E all suggest different explanations: A, that the unemployed lack the requisite skills or experience; B, that they are in the wrong places; E, that unemployment has another cause altogether. Choice C tends to weaken the idea that unemployed people are lazy.

7. D. Event X (baldness) occurs after Event Y (practicing law). The author of the argument assumes that Event Y caused Event X, and vows to avoid Event X by avoiding Event Y. This is poor reasoning, especially since the author is overlooking at least one far more probable cause for Event X, i.e., heredity. The same kind of poor reasoning is used in choice D, where Event X = injury, Event Y = eating at Rosie’s, and the overlooked probable cause is unsafe working conditions. Choice B has the second closest resemblance, but here the reasoning is somewhat more plausible; speeding can lead to one’s getting a speeding ticket. Choices A, C, and E all differ from the original argument in the latter portion of their reasoning.

8–12. The only problem in puzzles like this one is to rank the items correctly; the questions are then simple. Use initials, since the seven artists’ names begin with different letters. Ignore G, for which no definite value is given, and start with the one whose value seems lowest. This is I. If you call I’s value 1, all the others can be expressed as multiples of 1, and we get:

\[ G = ? \]
\[ I = 1 \]
\[ J = 3 \text{ times } 1 = 3 \]
\[ E = J + I = 3 + 1 = 4 \]
\[ D = J + E = 3 + 4 = 7 \]
\[ F = D = 7 \]
\[ H = F + E + J = 7 + 4 + 3 = 14 \]

8. B. \( H = 14 \). Option I, \( D + 1 + F \), adds up to 15. Option II, \( E + J + D \), adds up to 14, which is right. Option III, \( I + E + J \), adds up to 8.

9. E. You can tell that the Greuze is worth least and the Hartley most without really figuring out the rest, but all choices include those values. If you’ve constructed a table like the one shown here, inspection gives choice E.

10. E. \( D = 7 \), \( H = 14 \). None of the other choices adds up to 7.

11. D. \( E + I = 5 \), so the value of the Greuze, in terms of the value of the Ingres which is our base, is \( \frac{1}{2} \). \( H = 14 \) or 28 times this.

12. B. \( H + E = 18 \). \( 1 + J + D + F = 18 \). Choice A: \( 14 \neq 12 \). Choice C: \( 14 \neq 15 \). Choice D: \( 15 \neq 14 \). Choice E: \( 7 \neq 8 \).

13–16. A diagram of the kind shown here is your best approach to this type of problem.

A circle inside another (like circles P and N) indicates that all members of the first (inner) group belong to the second (outer) group. Overlapping circles (like circles N and M) indicate that the groups have members in common, but neither is contained entirely within the other. Solid lines may be used for relationships that are definitely known; broken lines for relationships that are uncertain. So: statement (1) gives us the two circles N and P; statements (1) and (2) the shaded lines for X. Statement (4) gives us a circle, R, that lies entirely outside N. Why make it border N, instead of being totally separate? Because statement (3) gives us a circle, M, lying outside P, and (5) tells us M lies inside the areas of X and R (and outside P). But circle M is made entirely of broken lines because we can’t know for sure whether it overlaps the R/N border, lies entirely within the X area of N, or lies entirely within R. Finally, statement (6) gives us a group, Q, that lies either inside P, or outside N (whether inside R or not) or both. Once you have all this admittedly complex information diagrammed, the questions are fairly easy.

13. E. Statement (2) could be untrue under either, or both, of two conditions: if some X were P, or if some N that was not P was not X. This is what choice E states. Choice D states only the second possibility; it is not necessarily true if statement (2) is false, because some X that was P would make statement (2) false even if choice D were not true. Choices A, B, and C remain false as long as statements (5), (1), and (6), respectively, are true.
14. A. I is true, because R lies entirely outside N while P is inside. II contradicts condition (2). III may or may not be true, depending on the location of M.

15. C. This is false, because R lies entirely outside N, while X lies inside. Q may lie within P (A) or outside both N and R (B), or both; we don’t know. M may look impossible, but expand the M circle in your mind until it exactly coincides with the R circle: now, all R are M and vice versa. No stated condition prevents you from drawing the circle this way, so it is not impossible. No matter how you draw the M circle, it should be apparent that some X may not be M (E).

16. B. Statement (5), together with statement (2), indicates that no M can be P, since no X can be P. Statement (2) gives information about X not contained in any other statement; (4) excludes R from N; (5), which may look like the counterpart to (2), contains the additional information that no M are to be found outside X and R; and statement (6) contains the only information about Q.

17–22. A four-by-four grid allows you to graph all the information:

<table>
<thead>
<tr>
<th>Name</th>
<th>Allen</th>
<th>Brian</th>
<th>Carol</th>
<th>Donna</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site</td>
<td>High Point</td>
<td>Freeport</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Lake</td>
<td>Leesville</td>
<td>Keewauket</td>
<td>Jackson</td>
<td>Indian Point</td>
</tr>
<tr>
<td>State</td>
<td>Ohio</td>
<td>Maine</td>
<td>Nebraska</td>
<td>Pennsylvania</td>
</tr>
</tbody>
</table>

The other items now follow by elimination. Brian and Keewauket Lake must be in Maine. Since Donna cannot be at High Point, she, and Freeport Campsite, must be on Indian Point Lake in Pennsylvania. Carol must be at High Point. Allen must be at Leesville, the only remaining lake. Brian and Allen must be at Edmunds and Grand Isle Campsites, but we don’t know which person is at which campsite.

17. B. See above. Choice A is possible, but we can’t be sure. C is a direct contradiction of the information about Brian. D and E are ruled out once everything is diagrammed.

18. A. See the diagram and the above discussion.

19. D. Allen is at Edmunds or Grand Isle (I). Carol is in Nebraska (II). Donna is at Freeport (III).

20. A. See the diagram.

21. E. See the diagram. Allen is at Leesville Lake, it is in Ohio, and it is the site of either Edmunds or Grand Isle Campsite, but not Freeport Campsite.

22. B. This is the item that remained ambiguous. Keewauket is in Maine (A); Freeport Campsite is in Pennsylvania (C); Carol is in Nebraska and Donna is in Pennsylvania (D, E).

23. B. The ad states that this dishwasher is the best, but gives only details of its luxury features—its “bells and whistles.” The performance of the appliance would show it was the best, so Choice (B) would be the missing part of the ad that most weakens its argument. Warranty terms, sizes, electrical use, and capacity would also be important, but actual dishwashing performance would be most crucial to proving it was the “best.”

24. A. It is claimed that the archeologists could not have understood the culture because, without written records, they have no evidence about how people thought. The assumption is that only written records provide such evidence, and that physical artifacts do not (A). B and C are side issues: neither one establishes what the argument assumes, that written records are the only clue to what people thought. D and E are too broad: the argument claims neither that the artifacts tell us nothing about other aspects of the civilization (D), nor that written records by themselves are sufficient to reconstruct the civilization (E).

25. B. Statement I is not assumed. The conclusion is that Roger will never be an outstanding football player, not that he will never play football. Statement II is assumed. The injured knee is cited as the reason Roger will never play outstanding football. Statement III is not assumed. Nothing was mentioned in the argument about Roger’s playing professional football.

Section 6 Analytical

1–4. The only problem with this one is that George’s preferences regarding Mahler, Beethoven, and Bartok cannot be related exactly to his preferences among Haydn, Hindemith, and Mozart. Note also that while he definitely doesn’t prefer Mahler to Beethoven, he may or may not prefer Beethoven to Mahler—instead, he may like them equally. (You’re never told that George always has a definite preference.) Otherwise, the questions are fairly straightforward.
1. B. This restates the information in the third sentence; it’s the only set of preferences among three composers that we know for certain. George may or may not play Bartok before Mozart (A). We don’t know that he prefers Beethoven to Mahler, just that he doesn’t prefer Mahler to Beethoven (C). D and E may be true but may not be.

2. D. George definitely prefers Mahler to Mozart, and likes Beethoven as much as, or more than, Mahler. He definitely prefers Mahler to Bartok (A) and may prefer Beethoven to Mahler (B). We know he prefers Mahler to Mozart and to any other composer whose name begins with B, including Bartok, but this doesn’t tell us whether or not he prefers Bartok to Mozart (C). We don’t know how much he likes Mahler, so he may prefer Mahler to Haydn (E).

3. D. George definitely prefers Beethoven to Bartok. He also prefers Mahler to Mozart, and likes Beethoven; at least as much as Mahler. So among the six, Mozart and Bartok must come after Beethoven. All the other choices are possibilities that cannot be eliminated.

4. E. George prefers Mahler to any composer whose name begins with B (including Berlioz) except Beethoven; since he doesn’t prefer Mahler to Beethoven but does prefer him to Berlioz, he must prefer Beethoven to Berlioz. If Berlioz is played first, there can be no Beethoven record. None of the other choices is definitely true.

5. E. Examine the structure of the argument: The Other Side is best since even more people are seeing it... The assumption is that these numbers are a valid measurement of quality (E). All other choices focus on side issues.

6. C. The author is using circular reasoning. He attempts to prove that the scientific worldview is accurate by showing that it has been verified by the scientific method; yet the validity of the scientific method is itself at issue. The author does not commit the errors mentioned in choices A and E. Although choice B is true, it is neither a flaw in nor a necessary part of the author’s reasoning. Choice D is wrong because the author claims merely that the scientific worldview is the most accurate, not that it is perfect.

7. A. Alfredo replies to the claim about meditation by stating that aggressiveness is most important to a boxer. The unstated assumption is that meditation somehow lessens aggressiveness (A). B is off because, clearly, Alfredo assumes that some effect results from meditation. Alfredo implies nothing about how good or poor a boxer George was before, and implicitly accepts Melinda’s testimony that he has been meditating (C, D). E is directly contrary to Alfredo’s comment about aggressiveness, which is certainly a mental attitude.

8–12. As in most logical puzzles, a diagram of some sort is the place to start. The simplest is a sketch of the ten seats (below). When you know someone is in a seat, put his/her initial in the box; if a seat is definitely occupied by either of two persons, put both initials there. If someone’s position is uncertain, jot the initial below the possible seats. Skip to whichever statements yield the most definite information to start. Here, statements (2), (4), (6), and (7) give this information:

```
<p>| | | | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>O</td>
<td>V</td>
<td>M</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>N</td>
</tr>
</tbody>
</table>
```

Statement (3) gives an uncertainty: W must be in seat 6 or 8. Statement (5) resolves the question: W’s date cannot be M, in seat 5, because M is next to V. So W’s date must be in seat 7, W must be in seat 8, and T must be M’s date, in seat 6. Nothing else is known definitely. The two remaining women’s seats must be occupied by S and U, and the two remaining men’s seats by L and P, but we can’t tell exactly who is where. Complete your diagram like this:

```
<p>| | | | | | | | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>
<td>S</td>
<td>O</td>
<td>V</td>
<td>M</td>
<td>T</td>
<td>L</td>
<td>W</td>
<td>N</td>
<td>U</td>
</tr>
</tbody>
</table>
```

The questions are now easy.

8. D. This can be read from the diagram. Choice A reverses O and V and gives a definite location for U, which we don’t know. B puts L in seat 7, when we can’t know that. C and E skip a seat—the question specifies persons sitting adjacent to one another.

9. D. U may be in seat 2 or 10. N is in seat 9, and either L or P is in seat 1. Any of these could be U’s date.
10. C. Look at your diagram. Exactly who is in the seats at the two ends of the row (I, II) remains uncertain. The women nearest T (III) are V on the left and W on the right.

11. C. We know that either L or P is in seat 7, but we don’t know which. The other must be in seat 1. If we are told which of the two is in seat 7, we know his date is W. If we are told which of the two is in seat 1, we don’t know her date (it could be S or U) but we know that the other’s date is W.

12. D. To determine T’s position we need statement (1), which gives the conditions for all seating; (3), which gives the seats W may occupy; (2), (6), and (7), which determine where O, V, and M sit; and (5), which determines that T is to the left of W’s date and that W must be in seat 8. The one statement that is irrelevant is (4).

17–21. The information given can be diagrammed in the way shown here. Many of the questions can then be answered by inspection of the diagram, without even looking back at the rules as printed.

17. C. I is true because Physics 101 and 121 are alternative prerequisites for the 200-level courses in Physics. II is true because Chemistry 201 counts as a graduate-level course, along with Physics 201 and 221. III is not true because Mathematics 111 can substitute for Physics 1, and Physics 21 for Physics 11.

18. C. To qualify using chemistry courses only, the student must take Chemistry 111 or 21, 101, 201, 211, and 221—five in all. Using Mathematics 201 would cut one chemistry course, but to do this the student must take at least two mathematics courses—101 and 201—so the total becomes six.

19. B. I is out because Chemistry 101 must be taken to qualify for the 200-level Chemistry courses. II, though pedestrian, is just fine. III is out because Mathematics 201, not 211, satisfies the chemistry requirement.

20. D. After the Physics 101/121 level, the student must take Physics 201 and 221, plus Chemistry 201—but there are eight separate ways to reach this level. You can just follow the separate lines on the diagram: Mathematics 11 or Physics 1, followed by Physics 11 or 21, followed by Physics 101 or 121.

21. C. In physics, one must take Mathematics 11 or Physics 1, Physics 11 or 21, Physics 101 or 121, and three graduate-level courses. In mathematics or chemistry, one can qualify with five courses, or four if one has advanced placement.
22. C. It is true because Chemistry 101 is the only acceptable prerequisite for Mathematics 201. Ii is true because only two graduate-level physics courses will be available; the third graduate-level course that could be taken for physics credit is Chemistry 201, which will be cancelled. Iii is false because Mathematics 201, will still be open to students who have taken Chemistry 101.

23. A. With a complex statement like this one, a circle diagram similar to those used in some analytical reasoning questions may be a help. In the diagram shown here, those who knew Ortega and those who supported her plan are shown as overlapping circles. The pro-merger voters are shown not intersecting the overlapping area (stockholders who knew Ortega and supported her plan); the circle for Anaco stock-owners does intersect it, and otherwise is drawn as generally as possible.

With the aid of the diagram, you can see that choice A is impossible; choices B, D, and E are all possible, while choice C must be true.

24. E. The claim being discussed is that only the smart become rich, not that all the smart become rich; therefore choice A is wrong. The way to disprove this view would be to point out that some stupid people also become rich (choice E). Choices B, C, and D, while possibly relevant to the issue raised, do not directly contradict the claim.

25. B. This choice combines the two psychological effects mentioned in the original argument. Choices A and D are wrong because the argument states matters of (alleged) fact and does not, by itself, imply any recommendations. Choices C and E are wrong because the argument (if true) establishes that TV viewers believe certain things; it does not imply anything about what actually happens.

Section 7 Quantitative

1. D. No relationship between $a$ and $f$ is given.

2. D. The variable $x$ may have a value between 65 and 80.

3. A. $KL = 23 + \text{length of } AB$
   $KL > 23$

4. B. $\sqrt{144} = 12$
   $\sqrt{100} + \sqrt{44} = 10 + 6 + = 16 +$

5. C. Since $y = z$, because $AB = AC$, $x + y = x + z$ (if equals are added to equals the results are equal).

6. C. $\frac{3\sqrt{48}}{\sqrt{3}} \times \frac{\sqrt{3}}{\sqrt{3}} = \frac{3\sqrt{144}}{3} = \frac{(2)(12)}{3} = 12$

7. A. \[
\begin{align*}
\frac{x}{4} + \frac{x}{3} &= \frac{7}{12} \\
\frac{3x}{12} + \frac{4x}{12} &= \frac{7}{12} \\
x &= 1
\end{align*}
\]

8. B. 0.003% = 0.00003
   0.0003 > 0.00003

9. C. $\frac{k}{4} \div \frac{4}{100} = \frac{k}{4} \div 100 = \frac{k}{4} \times \frac{1}{100} = \frac{k}{400}$
10. C. \[ AB = 3 \text{ inches} + 5 \text{ inches} = 8 \text{ inches} \]
\[ BC = 5 \text{ inches} + 4 \text{ inches} = 9 \text{ inches} \]
\[ AC = 4 \text{ inches} + 3 \text{ inches} = 7 \text{ inches} \]
Total 24 inches = 2 feet

11. B. Since \( y = 130 \), \( z = 50 \).
\[ m \angle ECD = 180^\circ - 130^\circ = 50^\circ \]
\[ 2x = 50^\circ \]
\[ x = 25^\circ \]

12. A. Since \( abc = 0 \) and \( c = 1 \), then either \( a \) or \( b \) = 0 or \( a \) and \( b \) = 0.

13. B. \[ 0.1 + 0.01 + 0.001 = 0.111 \text{(sum)} \]
\[ \text{average} = \frac{0.111}{3} \]
\[ 0.111 > 0.111 \]

14. A. \[ x \triangle y = x^2 + y^2 \]
\[ (x \triangle y)^2 = (x^2 + y^2)^2 = x^4 + 2x^2y^2 + y^4 \text{(Column A)} \]
\[ x^2 \triangle y^2 = (x^2)^2 + (y^2)^2 = x^4 + y^4 \text{(Column B)} \]

15. A. The fraction with the larger denominator has the smaller value. Since the value of \( \frac{9}{b} \) is greater than \( \frac{9}{a} \), then \( a > b \).

16. B. Select the choice in which the value of \( n \) is greater than the value of \( d \) in order to yield a value of \( \frac{n}{d} \) greater than 1.

17. A. \[ c + d = 180 \text{ but } c \neq d \]
\[ a = d \text{ (vertical angles)} \]
\[ a = e \text{ (corresponding angles)} \]
\[ f = b \text{ (corresponding angles)} \]
\[ f = c \text{ (alternate interior angles)} \]

18. B. Sum = (0.6)(4) or 2.4
\[ 0.2 + 0.8 + 1 = 2 \]
\[ x = 2.4 - 2 \text{ or 0.4} \]

19. C. \[ \frac{a^2 - b^2}{(a - b)^2} = \frac{(a + b)(a - b)}{(a - b)(a - b)} = \frac{a + b}{a - b} \]

20. D. Area of square = 36 square feet.
Area of rectangle = 36 square feet.
Since \( AD = 4 \), \( DC = 9 \) feet,
and the perimeter of \( ABCD = 26 \) feet.

21. D. 20% or \( \frac{1}{5} \) of 360° = 72°

22. D. \[ 6,000 : 302,000 :: x : 1,000,000 \]
\[ 302,000x = \]
\[ 6,000 \times 1,000,000 = 6,000,000,000 \]
\[ x = \frac{60,000}{3} \text{ (rounded off)} = 20,000 \]
The closest number is 17.

23. C. \[ 18 - 21 \text{ group} = 11,000 \]
\[ 21 - 24 \text{ group} = 61,000 \]
\[ \text{Total} = 72,000 \]
\[ \frac{72,000}{302,000} = 23 + \% \]

24. D. I is correct; marriages in 21–24 group = 61,000 and in the 33–36 group = 21,000. II is not correct; the circle graph gives data only for bridesgrooms in the 24–27 group. III is correct; the number of bridesgrooms aged 24–27 who receive postgraduate education = (73,000)(0.04) or 2920.

25. D. Total between 21 and 27:
\[ 61,000 + 73,000 = 134,000 \]
\[ \frac{134,000}{302,000} = \frac{134}{302} \approx 44\% \text{ (approx.)} = 44\% \]

26. D. Since the formula for the area of a circle is \( \pi r^2 \), any change in \( r \) will affect the area by the square of the amount of the change. Since the radius is doubled, the area will be four times as much \( (2)^2 \).
27. C. Since \( OC = BC \) and \( OC \) and \( OB \) are radii, triangle \( BOC \) is equilateral and the measure of angle \( BOC = 60^\circ \).
Therefore \( x = 120 \) and \( \frac{1}{2}x = 60 \).

28. C. Let \( x = \) the number.
\[
\begin{align*}
\frac{x}{2} &= \frac{x}{3} + 17 \\
3x &= 2x + 102 \\
x &= 102
\end{align*}
\]

29. B. Let \( x = \) amount Florence had.
Let \( y = \) amount Sam had.
\( x + $10 = \) amount Florence now has.
\( y - $10 = \) amount Sam now has.
\( x + y = $100 \)
\[
\begin{align*}
x + $10 + $4 &= y - 10 \\
x + $10 + $20 &= 5y - $50 \\
x - 5y &= - $80 \\
x + y &= $100 \\
-x - y &= -100 \text{ [multiply by -1]} \\
x - 5y &= - $80 \\
-6y &= - $180 \text{ [subtraction]} \\
y &= $30 \text{ (amount Sam had)} \\
$30 - $10 &= $20 \text{ (amount Sam now has)}
\]

30. C. This is a ratio problem.
\[
\frac{\text{number of items}}{\text{cost in cents}} = \frac{2}{c} = \frac{x}{c} \\
c(?) = 2x \\
(?) = \frac{2x}{c}
\]
Sentence Completion Questions

- Testing Tactics
- Practice Exercises
- Answer Key

GRE sentence completion questions test your ability to use your vocabulary and recognize logical consistency among the elements in a sentence. You need to know more than the dictionary definitions of the words involved. You need to know how the words fit together to make logical and stylistic sense.

Sentence completion questions actually measure one part of reading comprehension. If you can recognize how the different parts of a sentence affect one another, you should do well at choosing the answer that best completes the meaning of the sentence or provides a clear, logical statement of fact. The ability to recognize irony and humor will also stand you in good stead, as will the ability to recognize figurative language and to distinguish between formal and informal levels of speech.

Because the sentence completion questions contain many clues that help you to answer them correctly (far more clues than the antonyms provide, for example), and because analyzing them helps you warm up for the reading passages later on in the test, on the paper-and-pencil test, answer them first. Then go on to tackle the analogies, the antonyms, and, finally, the time-consuming reading comprehension section.

GRE sentence completion questions may come from any of a number of different fields—art, literature, history, philosophy, botany, astronomy, geology, and so on. You cannot predict what subject matter the sentences on your test will involve. However, you can predict what general pattern they will follow.

1. A GRE verbal section will most likely begin with sentence completion questions.

2. On the written test, in each set of sentence completion questions, the first one or two are relatively simple to answer; the last one or two, relatively hard.

A look at the GRE’s published tables showing the percentages of examinees answering each question correctly supports this point. In general, from 80 to 90 percent of the examinees taking a given test will answer the first sentence completion question in a set correctly. On the average, only approximately 35 percent of the examinees taking a given test will answer the last question in that set correctly.

What makes the hard questions hard?

1. Vocabulary Level. Sentences contain words like intransigence, nonplussed, harbingers. Answer choices include words like penchant, abeyance, eclectic. Questions employ unfamiliar secondary meanings of words—brook as a verb, economy with the meaning of restraint.

2. Grammatical Complexity. Sentences combine the entire range of grammatical possibilities—adverbial clauses, relative clauses, prepositional phrases, gerunds, infinitives, and so on—in convoluted ways. The more complex the sentence, the more difficult it is for you to spot the key words that can unlock its meaning.

3. Tone. Sentences reflect the writer’s attitude toward the subject matter. It is simple to comprehend material that is presented neutrally. It is far more difficult to comprehend material that is ironic, condescending, playful, somber, or otherwise complex in tone.

4. Style. Ideas may be expressed in different manners—ornately or sparely, poetically or prosaically, formally or informally, journalistically or academically, originally or imitatively. An author’s style depends on such details as word choice, imagery, repetition, rhythm, sentence structure and length. Many of the most difficult GRE questions hinge on questions of style.

Work through the following tactics and learn the techniques that will help you with vocabulary, grammatical complexity, tone, and style.
Testing Tactics

Tactic 1

Before You Look at the Choices, Read the Sentence and Think of a Word That Makes Sense

Your problem is to find the word that best completes the sentence in both thought and style. Before you look at the answer choices, see if you can come up with a word that makes logical sense in the context. Then look at all five choices. If the word you thought of is one of your five choices, select that as your answer. If the word you thought of is not one of your five choices, look for a synonym of that word. Select the synonym as your answer.

This tactic is helpful because it enables you to get a sense of the sentence as a whole without being distracted by any misleading answers among the answer choices. You are free to concentrate on spotting key words or phrases in the body of the sentence and to call on your own “writer’s intuition” in arriving at a stylistically apt choice of word.

See how the process works in an example from a recent GRE.

Since she believed him to be both candid and trustworthy, she refused to consider the possibility that his statement had been _______.
(A) irrelevant  (B) facetious  (C) mistaken
(D) critical  (E) insincere

This sentence presents a simple case of cause and effect. The key phrase here is candid and trustworthy. The woman has found the man to be frank and honest. Therefore, she refuses to believe he can say something _______. What words immediately come to mind? Dishonest, evasive, hypocritical? The missing word is, of course, insincere. The woman expects openness (candid) and sincerity (trustworthy). The correct answer is Choice E.

Practice Tactic 1 extensively to develop your intuitive sense of the not just one—the exactly right word. However, do not rely on Tactic 1 alone. On the test, always follow up Tactic 1 with Tactic 2.

Tactic 2

Look at All the Possible Answers Before You Make Your Final Choice

Never decide on an answer before you have read all the choices. You are looking for the word that best fits the meaning of the sentence as a whole. In order to be sure you have not been hasty in making your decision, substitute all the answer choices for the missing word. Do not spend a lot of time doing so, but do try them all. That way you can satisfy yourself that you have come up with the best answer.

See how this tactic helps you deal with another question from a recent GRE.

People should not be praised for their virtue if they lack the energy to be _______; in such cases, goodness is merely the effect of _______.
(A) depraved..hesitation
(B) cruel..effortlessness
(C) wicked..indolence
(D) unjust..boredom
(E) iniquitous..impiety

On the basis of a loose sense of this sentence’s meaning, you might be tempted to select Choice A. After all, this sentence basically tells you why you should not praise certain people for virtue. Clearly, you should not call people virtuous merely because they hesitate to perform a depraved or wicked act. However, this reading of the sentence is inadequate: it fails to take into account the sentence’s key phrase.

The key phrase here is lack...energy. Lack energy for what? The first word of each answer choice is a synonym for bad. Thus, goodness is a result of a lack of the necessary energy to be bad. Examine the second word of each answer choice, eliminating those words that carry no suggestion of such a lack of energy. Does indecision or hesitation suggest a lack of energy? No, it suggests a lack of decisiveness. Does effortlessness or absence of strain suggest a lack of energy? No, it suggests a lack of difficulty. Does boredom or monotony suggest a lack of energy? No, it suggests a lack of interest. Does ungodli-
ness or impiety suggest a lack of energy? No, it suggests a lack of reverence. Only one word suggests a lack of energy—indolence. Since goodness results from a lack of the energy to be bad, it is merely the effect of laziness or indolence. The correct answer is Choice C.

Note the satiric tone of this epigram, and the use of merely to point up that this so-called goodness is no goodness at all.

In Double-Blank Sentences, Go Through the Answers, Testing the First Word in Each Choice (and Eliminating Those That Don’t Fit)

In a sentence completion question with two blanks, read through the entire sentence to get a sense of it as a whole. Then insert the first word of each answer pair in the sentence’s first blank. Ask yourself whether this particular word makes sense in this blank. If the initial word of an answer pair makes no sense in the sentence, you can eliminate that answer pair. (Note: Occasionally this tactic will not work. In the preceding question, for example, the first words of all five answer pairs were near-synonyms. However, the tactic frequently pays off, as it does in the following example from a recent GRE.)

During the 1960s assessments of the family shifted remarkably, from general endorsement of it as a worthwhile, stable institution to widespread ------- as an oppressive and bankrupt one whose ------- was both imminent and welcome.

(A) flight from...restitution
(B) fascination with...corruption
(C) rejection of...vogue
(D) censure of...dissolution
(E) relinquishment of...ascent

shifted remarkably from endorsement (approval, support) to _________.

Since endorsement or approval is highly positive, the shift most likely is in the negative direction of condemnation or disapproval. The phrase oppressive and bankrupt supports this conclusion. Your first missing word must be a synonym for disapproval.

Now eliminate the misfits. Choices A, B, and E fail to meet the test: flight, fascination, and relinquishment are not synonyms for disapproval. Consider them no further. Choice C, rejection, and Choice D, censure, however, both express disapprobation; they require a second look.

To decide between Choices C and D, consider the second blank. If you viewed the family as a cruel and worthless institution, what destiny for it would you welcome? You would welcome its dissolution, its destruction, not its popularity or vogue. The correct answer is clearly Choice D.

Remember that, in double-blank sentences, the right answer must correctly fill both blanks. A wrong answer choice often includes one correct and one incorrect answer. ALWAYS test both words.

Watch for Signal Words That Link One Part of the Sentence to Another

Writers use transitions to link their ideas logically. These transitions or signal words are clues that can help you figure out what the sentence actually means.

GRE sentences often contain several signal words, combining them in complex ways.

Cause and Effect Signals

Look for words or phrases explicitly indicating that one thing causes another or logically determines another.

<table>
<thead>
<tr>
<th>Cause and Effect Signal Words</th>
</tr>
</thead>
<tbody>
<tr>
<td>accordingly</td>
</tr>
<tr>
<td>because</td>
</tr>
<tr>
<td>consequently</td>
</tr>
<tr>
<td>given</td>
</tr>
<tr>
<td>hence</td>
</tr>
<tr>
<td>if...then</td>
</tr>
</tbody>
</table>
Support Signals

Look for words or phrases explicitly indicating that the omitted portion of the sentence supports or continues a thought developed elsewhere in the sentence. In such cases, a synonym or near-synonym for another word in the sentence may provide the correct answer.

Support Signal Words

<table>
<thead>
<tr>
<th>Additionally</th>
<th>Furthermore</th>
</tr>
</thead>
<tbody>
<tr>
<td>Also</td>
<td>Indeed</td>
</tr>
<tr>
<td>And</td>
<td>Likewise</td>
</tr>
<tr>
<td>As well</td>
<td>Moreover</td>
</tr>
<tr>
<td>Besides</td>
<td>Too</td>
</tr>
</tbody>
</table>

Contrast Signals (Explicit)

Look for function words or phrases (conjunctions, sentence adverbs, etc.) that explicitly indicate a contrast between one idea and another, setting up a reversal of a thought. In such cases, an antonym or near-antonym for another word in the sentence may provide the correct answer.

Explicit Contrast Signal Words

<table>
<thead>
<tr>
<th>Albeit</th>
<th>Nevertheless</th>
</tr>
</thead>
<tbody>
<tr>
<td>Although</td>
<td>Nonetheless</td>
</tr>
<tr>
<td>But</td>
<td>Notwithstanding</td>
</tr>
<tr>
<td>Despite</td>
<td>On the contrary</td>
</tr>
<tr>
<td>Even though</td>
<td>On the other hand</td>
</tr>
<tr>
<td>However</td>
<td>Rather than</td>
</tr>
<tr>
<td>In contrast</td>
<td>Still</td>
</tr>
<tr>
<td>In spite of</td>
<td>While</td>
</tr>
<tr>
<td>Instead of</td>
<td>Yet</td>
</tr>
</tbody>
</table>

Contrast Signals (Implicit)

Look for content words whose meanings inherently indicate a contrast. These words can turn a situation on its head. They indicate that something unexpected, possibly even unwanted, has occurred.

Implicit Contrast Signal Words

<table>
<thead>
<tr>
<th>Anomaly</th>
<th>Anomalous</th>
<th>Anomalously</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illogic</td>
<td>Illogical</td>
<td>Illogically</td>
</tr>
<tr>
<td>Incongruity</td>
<td>Incongruous</td>
<td>Incongruously</td>
</tr>
<tr>
<td>Irony</td>
<td>Ironic</td>
<td>Ironically</td>
</tr>
<tr>
<td>Paradox</td>
<td>Paradoxical</td>
<td>Paradoxically</td>
</tr>
<tr>
<td>Surprise</td>
<td>Surprising</td>
<td>Surprisingly</td>
</tr>
<tr>
<td>Unexpected</td>
<td>Unexpectedly</td>
<td></td>
</tr>
</tbody>
</table>

Note the function of such a contrast signal word in the following GRE question.

The paradoxical aspect of the myths about Demeter, when we consider the predominant image of her as a tranquil and serene goddess, is her ______ search for her daughter.

(A) extended  
(B) agitated  
(C) comprehensive  
(D) motiveless  
(E) heartless

The ruling image of Demeter is one of tranquility; we normally think of her as calm and serene. One aspect of the myths about her, however, is paradoxical: it contradicts the customary image of her as always calm. This contradictory aspect is her search for her daughter, which is not calm but agitated. The correct answer is Choice B.

Tactic 5

Use Your Knowledge of Word Parts and Parts of Speech to Figure Out the Meanings of Unfamiliar Words

If a word used by the author is unfamiliar, or if an answer choice is unknown to you, two approaches are helpful.

1. Break the word down into its component parts—prefixes, suffixes, roots—to see whether they provide a clue to its meaning. For example, in the preceding GRE question, the word predominant contains two major word parts. Pre- here means exceedingly; domin- means to rule or command. A predominant image, therefore, is a prevailing image, one that has commanding influence or strength.

2. Change the unfamiliar word from one part of speech to another. If the noun precocity is unfamiliar to you, cut off its noun suffix -ity and visualize it with different endings. You may think of the adjective precocious (maturing early). If the verb appropriate is unfamiliar to you, by adding a word part or two, you may come up with the common noun appropriation or the still more common noun misappropriation (as in the misappropriation of funds).

Note the application of this tactic in the following GRE example.
The sheer bulk of data from the mass media seems to overpower us and drive us to ------- accounts for an easily and readily digestible portion of news.

(A) insular
(B) investigative
(C) synoptic
(D) subjective
(E) sensational

First, eliminate any answer choices that are obviously incorrect. If you feel overwhelmed by massive amounts of data provided by the news media, it seems logical that you would seek out brief summaries of the news instead.

You would not be particularly tempted to seek out investigative, subjective, or sensational accounts, since none of these are necessarily brief. Thus, you may rule out Choices B, D and E.

The two answer choices remaining may be unfamiliar to you. Analyze them, using what you know of related words. Choice A, insular, is related to the noun peninsula, a piece of land that juts out so far into the water that it is almost an island. Thus, an insular account is an islander's account, one that reflects the narrow viewpoint of an isolated, detached writer. Choice C, synoptic, is related to the noun synopsis (abridgment or summary). A synoptic account provides a summary, a brief but broad overview. Thus, the correct answer is synoptic, Choice C.

---

**Tactic 6**

Break Down Complex Sentences into Simpler Components

In analyzing long, complex sentence completion items, you may find it useful to simplify the sentences by breaking them down. Rephrase dependent clauses and long participial phrases, turning them into simple sentences.

See how this tactic helps you to analyze the following sentence from a recent GRE.

In failing to see that the judge’s pronouncement merely ------- previous decisions rather than actually establishing a precedent, the novice law clerk ------- the scope of the justice’s judgment.

(A) synthesized..limited
(B) overturned..misunderstood
(C) endorsed..nullified
(D) qualified..overemphasized
(E) recapitulated..defined

What do we know?

1. The judge’s pronunciation did NOT set a precedent. (Note the use of rather than to signal the contrast.)
2. Rather than setting a precedent, the judge’s pronouncement did something RELATIVELY UNIMPORTANT to the earlier decisions. (Note the use of merely to signal the relative unimportance of what the judge did.)
3. The new law clerk did not understand that the judge had done something relatively unimportant. (He failed to see.)

What follows? Because the new clerk failed to see that the judge had done something minor, the clerk believed that the judge had done something major. In other words, the clerk overemphasized the scope of what the judge had done. The correct answer is Choice D.

Note that in sentence completion questions a choice may be complicated by an unusual word order, such as:

1. placing the subject after the verb:
   To the complaints window strode the angry customer.

2. placing the subject after an auxiliary of the verb:
   Only by unending search could some few Havana cigars be found.

3. inverting the subject and verb to give the sense of “if”:
   Were defeat to befall him, today’s dear friends would be tomorrow’s acquaintances, and next week’s strangers.

4. placing a negative word or phrase first, which usually requires at least part of the verb to follow:
   Never have I encountered so demanding a test!

In all these instances, rephrase the sentence to make it more straightforward. For example:

The angry customer strode to the complaints window.

Some few Havana cigars could be found only by unending search.

If defeat were to befall him, today’s dear friends would be tomorrow’s acquaintances, and next week’s strangers.

I have never encountered so demanding a test!
Tactic

If a Sentence Contains a Metaphor, Check to See Whether That Metaphor Controls the Writer’s Choice of Words (and Your Answer Choice)

Writers sometimes indulge in extended metaphors, complex analogies that imaginatively identify one object with another. In the following example from a recent GRE, the effect of words on the shape of our thoughts is compared to a common geologic process.

It is strange how words shape our thoughts and trap us at the bottom of deeply -----. canyons of thinking, their imprisoning sides carved out by the -----. of past usage.

(A) cleaved...eruptions
(B) rooted...flood
(C) incised...river
(D) ridged...ocean
(E) notched...mountains

Note how many words in this sentence contribute to the image of the canyon—bottom, imprisoning sides, sides carved out. This should alert you that the canyon metaphor greatly affects the writer’s choice of words.

The extended metaphor of the canyon unifies this sentence. In choosing an answer, it is necessary to complete the sentence in such a way as to develop that metaphor fully. Choice B does not: one might describe a tree or a tooth as deeply rooted, but not a canyon. Similarly, Choice D fails. A canyon is a deep, narrow valley with precipitous sides; one would not describe it as deeply ridged. Canyons are carved out of the rock. How? Are they cleaved, incised, even notched? To choose the correct answer, you must know some elementary geology, plus the precise meanings of these three verbs. To cleave something is to split it in two parts by means of a cutting blow. Erosion, the process which creates canyons, involves no cutting blows. To notch something is to indent or nick it. It seems almost paradoxical to describe something as deeply notched. In contrast, to incise something is to cut into it, to carve it, to erode it, in geological terms. A look at the second word of the answer pair confirms the choice. Rivers carve out canyons, incising them by erosion. Choice C completes the metaphor; it is the correct answer choice.

Practice Exercises

Sentence Completion Exercise A

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Normally an individual thunderstorm lasts about 45 minutes, but under certain conditions the storm may -----. becoming ever more severe, for as long as four hours.

(A) wane
(B) moderate
(C) persist
(D) vacillate
(E) disperse

2. Perhaps because something in us instinctively distrusts such displays of natural fluency, some readers approach John Updike’s fiction with -----. 

(A) indifference
(B) suspicion
(C) veneration
(D) recklessness
(E) bewilderment

3. We lost confidence in him because he never -----. the grandiose promises he had made.

(A) forgot about
(B) reneged on
(C) tired of
(D) delivered on
(E) retreated from

4. Ms. Sutcliffe’s helpful notes on her latest wine discoveries and her no-nonsense warnings to consumers about -----. wines provide -----. guide to the numbing array of wines of Burgundy.

(A) excellent...a useful
(B) overrated...an inadequate
(C) overpriced...a trusty
(D) unsatisfactory...a spotty
(E) vintage...an unreliable
5. We were amazed that a man who had been hereto-
fore the most ------- of public speakers could, in a
single speech, electrify an audience and bring them
cheering to their feet.
(A) enthralling
(B) accomplished
(C) pedestrian
(D) auspicious
(E) masterful

6. If you are trying to make a strong impression on your
audience, you cannot do so by being understated,
tentative, or -------.
(A) hyperbolic
(B) restrained
(C) argumentative
(D) authoritative
(E) passionate

7. Despite the mixture’s ------- nature, we found that by
lowering its temperature in the laboratory we could
dramatically reduce its tendency to vaporize.
(A) resilient
(B) volatile
(C) homogeneous
(D) insipid
(E) acerbic

8. No other artist rewards the viewer with more sheer
pleasure than Miró: he is one of those blessed artists
who combine profundity and -------.
(A) education
(B) wisdom
(C) faith
(D) fun
(E) depth

9. Some Central Intelligence Agency officers have
------- their previous statements denying any
involvement on their part with the Contra aid net-
work and are now revising their earlier testimony.
(A) justified
(B) recanted
(C) repeated
(D) protracted
(E) heeded

10. New concerns about growing religious tension in
northern India were ------- this week after at least fifty
people were killed and hundreds were injured or
arrested in rioting between Hindus and Moslems.
(A) lessened
(B) invalidated
(C) restrained
(D) dispersed
(E) fueled

11. In a happy, somewhat boisterous celebration of the
European discovery of America, the major phase of
the Columbus Cinqucentenial got off to ------- start
on Friday.
(A) a slow
(B) a rousing
(C) a reluctant
(D) an indifferent
(E) a quiet

12. In one shocking instance of ------- research, one of
the nation’s most influential researchers in the field
of genetics reported on experiments that were never
carried out and published deliberately ------- scientific
papers on his nonexistent work.
(A) comprehensive...abstract
(B) theoretical...challenging
(C) fraudulent...deceptive
(D) derivative...authoritative
(E) erroneous...impartial

13. Measurement is, like any other human endeavor, a
complex activity, subject to error, not always
used -------, and frequently misinterpreted
and -------.
(A) mistakenly...derided
(B) erratically...analyzed
(C) systematically...organized
(D) innovatively...refined
(E) properly...misunderstood

14. In a revolutionary development in technology, sev-
eral manufacturers now make biodegradable forms
of plastic: some plastic six-pack rings, for example,
gradually ------- when exposed to sunlight.
(A) harden
(B) stagnate
(C) inflate
(D) propagate
(E) decompose

15. To alleviate the problem of contaminated chicken,
the study panel recommends that the federal govern-
ment shift its inspection emphasis from cursory bird-
by-bird visual checks to a more ------- random sam-
pling for bacterial and chemical contamination.
(A) rigorous
(B) perfunctory
(C) symbolic
(D) discreet
(E) dubious
16. Her novel published to universal acclaim, her literary gifts acknowledged by the chief figures of the Harlem Renaissance, her reputation as yet ------ by envious slights, Hurston clearly was at the ------ of her career.

(A) undamaged...ebb
(B) untarnished...zenith

11. The ----- of time had left the castle -----; it towered above the village, looking much as it must have done in Richard the Lion-Hearted’s time.
    (A) repairs...destroyed 
    (B) remoteness...alone 
    (C) lack...defended 
    (D) status...lonely 
    (E) ravages...untouched

12. One of the most ----- educators in New York, Dr. Shalala ignited a controversy in 1984 by calling the city public schools a “rotten barrel” in need of ----- reform.
    (A) disputatious...little 
    (B) outspoken...systemic 
    (C) caustic...partial 
    (D) indifferent...pretentious 
    (E) sycophantic...superficial

13. The newest fiber-optic cables that carry telephone calls cross-country are made of glass so ----- that a piece 100 miles thick is clearer than a standard windowpane.
    (A) fragile 
    (B) immaculate 
    (C) tangible 
    (D) transparent 
    (E) iridescent

14. The reasoning in this editorial is so ----- that we cannot see how anyone can be deceived by it.
    (A) coherent 
    (B) astute 
    (C) cogent 
    (D) specious 
    (E) dispassionate

15. The ----- of evidence was on the side of the plaintiff since all but one witness testified that his story was correct.
    (A) paucity 
    (B) propensity 
    (C) accuracy 
    (D) brunt 
    (E) preponderance

16. Glendon provides a dark underside to Frederick Jackson Turner’s frontier thesis that saw rugged individualism as the essence of American society—an individualism which she sees ----- atomism.
    (A) antithetical toward 
    (B) skeptical of 
    (C) degenerating into 
    (D) aspiring to 
    (E) renewed by

17. Chatwin has devoted his life to a kind of Grail quest, hoping to prove—by study and direct experience with primitive people—that human nature is gentle and defensive rather than -----, and that man is -----, not a predator.
    (A) belligerent...an apostate 
    (B) martial...a crusader 
    (C) aggressive...a pilgrim 
    (D) truculent...a gladiator 
    (E) pugnacious...a pawn

18. The texts as we have them were written down and edited carefully by Christians proud of their ancestors but unable to bear the thought of their indulging in heathen practices; thus, all references to the ancient religion of the Celts were -----, if not -----.
    (A) deleted...expunged 
    (B) muddied...suppressed 
    (C) labored...denigrated 
    (D) aggrieved...overawed 
    (E) obscure...ironic
19. Because Inspector Morse could not contain his scorn for the police commissioner, he was imprudent enough to make ______ remarks about his superior officer.

(A) ambiguous
(B) dispassionate
(C) unfathomable
(D) interminable
(E) scathing

20. In Japanese art, profound emotion is frequently couched in images of nature, observed with ______ conditioned by life in a land of dramatic seasonal change, where perils of earthquake and typhoon make nature’s bounty ______ and its processes awesome and beautiful.

(A) an intimacy...precarious
(B) a fidelity...munificent
(C) a skill...excessive
(D) an indifference...chancy
(E) a sensitivity...distinctive

Sentence Completion Exercise C

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. A ______ statement is an ______ comparison: it does not compare things explicitly, but suggests a likeness between them.

(A) sarcastic...unfair
(B) blatant...overt
(C) sanguine...inherent

13. No act of _______ was more pronounced than his refusal of any rewards for his discovery.
(A) abeyance
(B) submission
(C) egoism
(D) denunciation
(E) abnegation

14. The evil of class and race hatred must be eliminated while it is still in an _______ state; otherwise it may grow to dangerous proportions.
(A) amorphous
(B) embryonic
(C) uncultivated
(D) overt
(E) independent

15. Unlike the gregarious Capote, who was never happier than when he was in the center of a crowd of celebrities, Faulkner, in later years, grew somewhat _______ and shunned company.
(A) congenial
(B) decorous
(C) dispassionate
(D) reclusive
(E) ambivalent

16. She is a pragmatist, as _______ to base her future on impractical dreams as she would be to build a castle on shifting sand.
(A) determined
(B) disinclined
(C) quick
(D) apt
(E) diligent

17. We are _______ the intellects of the past; or, rather, like children we take it for granted that somebody must supply us with our supper and our _______.
(A) ungrateful to...ideas
(B) dependent on...repose
(C) unfaithful to...needs
(D) fortunate in...allowance
(E) generous to...wants

18. This island is a colony; however, in most matters, it is _______ and receives no orders from the mother country.
(A) submissive
(B) amorphous
(C) distant
(D) autonomous
(E) aloof

19. Although eighteenth-century English society as a whole did not encourage learning for its own sake in women, nonetheless it illogically _______ women’s sad lack of education.
(A) palliated
(B) postulated
(C) decried
(D) brooked
(E) vaunted

20. Faced with these massive changes, the government keeps its own counsel; although generally benevolent, it has always been _______ regime.
(A) an altruistic
(B) an unpredictable
(C) a reticent
(D) a sanguine
(E) an indifferent

4 Analogy Questions

- Testing Tactics
- Practice Exercises
- Answer Key

Analogy questions ask you to determine the relationship between the two words in a pair and then to recognize a similar or parallel relationship between the members of a different pair of words. You are given one pair of words and must choose from the five answer choices another pair whose words are related in the same way. The relationship between the words in the original pair will always be specific and precise, as will the relationship between the words in the correct answer pair.

In the paper-and-pencil version, on each GRE verbal section the set of sentence completion questions is followed by nine analogy questions. In each set of analogy questions, the first one or two are relatively simple; the last one or two, relatively hard.

Analogies come from a wide variety of fields. You need to know that musicians study in conservatories and ministers in seminaries, that panegyrics praise and elegies lament. You need to be aware of catalysts and conundrums, augers and auguries, and know in which contexts these words are found. You are not, however, dealing with these words in isolation; you are always dealing with them in relationship to other words.

Once you have analyzed analogy questions, you will find that they fall into certain patterns. You should be able to answer them reasonably rapidly. Tackle them after you have warmed up with the sentence completion questions. Then skip to the antonyms.

Note how a GRE analogy question is set up. First you have the two capitalized words linked by a symbol. Take a look at a few examples.

**Fresco : Wall**
A fresco is related to a wall. **How?** A fresco or mural painting is painted on a wall.

**Stammer : Talk**
Stammer is related to talk. **How?** To stammer is to make involuntary stops or repetitions when talking. It is to talk in a halting manner.

**Tile : Mosaic**
Tile is related to mosaic. **How?** A mosaic is made up of tiles. Notice the wording of the last sentence. You could also have said “Tiles are the pieces that make up a mosaic” and maintained the word order of the analogy. Sometimes, however, it is easier to express a relationship if you reverse the order of the words.

Next you come to the five answer choices. See if you can tell which pair best expresses a relationship similar to the relationship of tile to mosaic.

| TILE : MOSAIC : | (A) hoop : embroidery | (B) wick : candle | (C) whalebone : scrimshaw | (D) easel : painting | (E) knot : macrame |

The correct answer is Choice E: macrame is made up of knots. Just as the tiles in a mosaic make a pattern, so too the knots in a piece of macrame make a pattern.

Some of the analogy questions on the GRE are as clear-cut as this. Others are more complex. To answer them correctly involves far more than knowing single meanings of individual words: it involves knowing the usual contexts in which they are found, and their connotations as well. Master the tactics that immediately follow. Then proceed to the practice exercises containing both relatively simple and challenging analogies at the chapter’s end.
Testing Tactics

Tactic 1

Before You Look at the Choices, Try to State the Relationship Between the Capitalized Words in a Clear Sentence

In answering an analogy question, your first problem is to determine the exact relationship between the two capitalized words. Before you look at the answer pairs, make up a sentence that illustrates how these capitalized words are related. Then test the possible answers by seeing how well they fit in your sentence.

Try this tactic on the following two questions from recent GREs.

**DELUGE : DROPLET ::**
(A) beach : wave
(B) desert : oasis
(C) blizzard : icicle
(D) landslide : pebble
(E) cloudburst : puddle

A deluge (drenching rain or flood) is made up of droplets. A landslide or fall of rocks is made up of pebbles. Choice D is correct.

Don’t let Choice E fool you: while a cloudburst, like a deluge, is a drenching rain, it is not made up of puddles; rather, it leaves puddles in its aftermath.

**PHILATELIST : STAMPS ::**
(A) numismatist : coins
(B) astrologer : predictions
(C) geneticist : chromosomes
(D) cartographer : maps
(E) pawnbroker : jewelry

A philatelist collects stamps. A numismatist collects coins. Choice A is correct.

Note how difficult this question would be if you did not know that a philatelist is a stamp collector. You might have guessed that a philatelist primarily studies stamps (as, for example, a geneticist studies chromosomes) or even makes stamps (as a cartographer makes maps). Knowing the primary relationship between the capitalized words, however, you can go through the answer choices eliminating any pairs that do not express the same relationship. Thus, you can eliminate Choice B: an astrologer may possibly collect predictions; but his primary, dictionary-defined, role is to make predictions, to foretell human affairs by studying the positions of the stars. Similarly, you can eliminate Choice E: a pawnbroker does not collect jewelry; he takes jewelry (and many other sorts of personal property) as a pledge to secure the repayment of money he lends. You can eliminate Choice C as well: a geneticist studies chromosomes. This process of elimination leaves you with two relatively unfamiliar words—numismatist and cartographer—and a 50 percent chance of guessing the answer correctly.

If you are not sure of the answer, always rule out answer choices that you know cannot be correct, and then guess among the choices that are left.

Tactic 2

If More Than One Answer Fits the Relationship in Your Sentence, Look for A Nærør Approach

When you try to express the relationship between the two capitalized words in sentence form, occasionally you come up with too simple a sentence, one that fails to include enough details to particularize your analogy. In such cases, more than one answer may fit the relationship, and you will have to analyze the original pair again.

Consider this actual analogy question from the GRE.

**BOUQUET : FLOWERS ::**
(A) forest : trees
(B) husk : corn
(C) mist : rain
(D) woodpile : logs
(E) drift : snow

“A bouquet is made up of flowers.” You have stated a relationship between the capitalized words in a sentence, but you have not stated a relationship that is precise enough. After all, forests are made up of trees, woodpiles are made up of logs, and even drifts are made of snow.

You need to focus on some aspect of the relationship between the words in the original pair that corresponds to an aspect of only one of the answer pairs. Go back to the original pair of words for more details. A bouquet is made up of flowers that have been picked and gathered into a bunch. In contrast, a forest is a tract of land covered with densely growing trees. A drift is a mass of snow driven together by the wind. Neither the relationship in Choice A nor that in Choice E exactly parallels the relationship
between the word pair BOUQUET:FLOWERS. Choice D, however, is perfect: a woodpile is made up of logs that have been cut and gathered into a stack.

In answering analogy questions on the GRE, pay special attention to how a dictionary would define the words involved. Do not settle for what “may be” a good relationship. Precision is important in analogies: a bouquet is not simply made up of flowers, it is made up of flowers that have been cut. Strive to identify the relationship that exists “by definition.”

Tactic 3

Consider Secondary Meanings of Words As Well As Their Primary Meanings

Frequently, the test-makers attempt to mislead you by using familiar words in relatively uncommon ways. When an apparently familiar word seems incongruous in a particular analogy, consider other definitions of that word.

See how this tactic applies to two examples from recent GREs.

AMORPHOUSNESS : DEFINITION ::
(A) lassitude : energy
(B) spontaneity : awareness
(C) angularity : intricacy
(D) rectitude : drabness
(E) precision : uniformity

What relationship exists between amorphousness and definition? Amorphousness means formlessness or shapelessness; an amorphous idea lacks form or shape. But what does formlessness have to do with definition? After all, a definition is a statement of the meaning of a word or phrase.

Look closely at the term definition. When you define a word, you distinguish its essential characteristics; you make its features clear. Definition in fact possesses a secondary meaning: “sharp demarcation of outlines or limits; distinctness of outline or detail.” With this meaning in mind, you can state the essential relationship between the capitalized words: amorphousness is a lack of definition. Analogously, lassitude (listlessness, weariness) is a lack of energy. The correct answer is Choice A.

| EMBROIDER : CLOTH :: (A) chase : metal |
| (B) patch : quilt (C) gild : gold |
| (D) carve : knife (E) stain : glass |

Ostensibly, this is a simple analogy. One embroiders cloth to ornament it, embellishing it with needlework. The relationship between the capitalized words is clear. However, only 9% of the examinees who answered this question answered it correctly. The problem lies not in the original analogy but in the answer pairs.

Consider the answer choices closely. Choices B, C, D, and E are clear enough: one patches a quilt, either repairing it or putting it together (patch has both senses); one gilds something, overlaying it with gold; one carves a knife; one stains glass, imparting color to it. Several of these straightforward choices have something to do with ornamentation, but none seems precisely right. But how does one chase metal? Certainly not the way one chases an ambulance! Among the straightforward answer choices, Choice A seems strangely out of place.

When an item in an analogy strikes you as out of place, take a second look. Remember that the test-makers usually place more difficult analogies toward the end of the analogy section. Therefore, if one of the final analogy questions in a set looks simple, suspect a trap. In this case, the trap is a double one. Choice B, patch : quilt, is an eye-catcher: because embroidery and quilt-making both are related to sewing, Choice B has an immediate appeal. Choose it and you fall into the test-makers’ trap. Choice A, the odd-seeming choice, is the real answer: chase, as used here, means to ornament a metal surface, as silversmiths decorate silver with hammered patterns; chasing metal, thus, is directly analogous to embroidering cloth.

Tactic 4

Watch Out for Errors Caused By Eye-Catchers

When you look at answer choices, do you find that certain ones seem to leap right off the page? For instance, when you were looking for an analogy similar to

EMBROIDER : CLOTH, did the terms related to stitchery catch your eye? These words are eye-catchers. They look good—but not if you take a second glance.
In an analogy you have two capitalized words that relate in a particular way. In creating eye-catchers, the test-makers tempt you with pairs of words that are related, but in a grammatically or logically different way. See how eye-catchers work in an example from a published GRE.

PROCTOR : SUPERVISE :: (A) prophet : rule (B) profiteer : consume (C) profligate : demand (D) prodigal : squander (E) prodigy : wonder

Just as there are many possible relationships linking word pairs, there are many possible ways an eye-catcher may attract your eye. First, an answer choice may somehow remind you in subject matter of one or both of the terms in the original pair. Thus, Choice A is an eye-catcher: rule reminds you of supervise; both words feel as if they belong in the same set of words, the same semantic field. Second, the answer choice may masquerade as a clearcut, precise, dictionary-perfect analogy and yet not be one. Thus, Choice E is an eye-catcher: while there is a clear relationship between the nouns prodigy and wonder, there is no such clear relationship between the noun prodigy and the verb wonder. See how this works:

Noun/Noun A prodigy (marvel) is a wonder. CLEAR ANALOGY

Noun/Verb A prodigy wonders (ponders; marvels). VAGUE ANALOGY

A prodigy excites wonder in others; he is not necessarily astonished or full of wonder himself. The relationship is vague. Eliminate vague analogies when you find them; their only function is to catch your eye.

You have ruled out Choice E; you are suspicious of Choice A. How do you determine the correct answer? In this case, ask yourself who is doing what to whom. A proctor (monitor) by definition supervises students or examinees. You can eliminate Choices B, A, and C because no necessary relationship links the words in these pairs. Prophets prophesy; they do not rule. Profiteers sell goods (at excessive prices) that others consume. Profligates waste their fortunes; they do not necessarily demand.

The correct answer is Choice D. Just as a proctor supervises students, a prodigal or wastrel squanders wealth.

### Tactic 5

**Look at the Answer Choices to Determine a Word’s Part of Speech**

Look at the capitalized words. What parts of speech are they? Words often have several forms. You may think of run as a verb, for example, but in the phrases “a run in her stocking” and “hit a home run” run is a noun.

The GRE plays on this confusion in testing your verbal ability. When you look at a capitalized word, you may not know whether you are dealing with a noun, a verb, or an adjective. Harbor, for example, is a very common noun; in “to harbor a fugitive,” to give refuge to a runaway, it is a much less common verb.

If you suspect that a capitalized word may represent more than one part of speech, don’t worry. Grammatical information built into the question can help you recognize analogy types and spot the use of unfamiliar or secondary meanings of words. In GRE analogy questions, the relationship between the parts of speech of the capitalized words and the parts of speech of the answer choices is identical. If your capitalized words are a noun and a verb, each of your answer pairs will be a noun and a verb. If they are an adjective and a noun, each of your answer pairs will be an adjective and a noun. If you can recognize the parts of speech in a single answer pair, you know the parts of speech of every other answer pair and of the original pair as well. See how this tactic works in a somewhat difficult question from a recently published GRE.

FLAG : VIGOR :: (A) endure : courage (B) tire : monotony (C) question : perception (D) waver : resolution (E) flatter : charm

At first glance, you might think that both flag and vigor were nouns; flag, after all, is a common noun, and vigor ends in -or, a common noun suffix. However, endure is clearly a verb. Simply from looking at the first answer choice, you know flag is a verb, not a noun.

What occurs when someone or something flags? Think of the word in a context. “After 12 miles, the marathon runner flagged.” Clearly the runner is neither waving a flag nor hailing a taxi. The runner is weakening, slackening in pace. Only one answer choice conveys this sense of someone or something slackening or growing weak: Choice D. If one’s resolution or determination wavers, it dwindles or grows weak.
Familiarize Yourself with Common Analogy Types

Analogy Questions

Analogies tend to fall into certain basic types. If you can discover no apparent relationship between the two capitalized words, try establishing a relationship between them based on the types commonly used on this test.

Common Analogy Types

**Definition**

REFUGE : SHELTER
A refuge (place of asylum) by definition shelters.

TAXONOMIST : CLASSIFY
A taxonomist, a person who specializes in classification, by definition classifies.

HAGGLER : BARGAIN
A haggler, a person who argues over prices, by definition bargains.

**Defining Characteristic**

TIGER : CARNIVOROUS
A tiger is defined as a carnivorous or meat-eating animal.

ENTOMOLOGIST : INSECTS
An entomologist is defined as a person who studies insects.

APIARY : BEE
An apiary is defined as a home for bees.

**Class and Member**

AMPHIBIAN : SALAMANDER
A salamander is an example of an amphibian.

METAPHYSICS : PHILOSOPHY
Metaphysics belongs to the field of philosophy.

SONNET : POEM
A sonnet is a specific kind of poem.

**Antonyms**

Antonyms are words that are opposite in meaning. Both words belong to the same part of speech.

CONCERNED : INDIFFERENT
Concerned is the opposite of indifferent (unconcerned).

WAX : WANE
Wax, to grow larger, and wane, to dwindle, are opposites.

ANARCHY : ORDER
Anarchy is the opposite of order.

**Antonym Variants**

In an Antonym Variant, the words are not strictly antonyms; their meanings, however, are opposed. Take the adjective nervous. A strict antonym for the adjective nervous would be the adjective poised. However, where an Antonym would have the adjective poised, an Antonym Variant analogy has the noun poise. It looks like this:

NERVOUS : POISE
Nervous means lacking in poise.

INIQUEOUS : VIRTUE
Something iniquitous lacks virtue. It is the opposite of virtuous.

ABSTINENT : GORGE
Abstinent or sparing in eating means not inclined to cram or gorge.

**Synonyms**

Synonyms are words that have the same meaning. Both words belong to the same part of speech.

MAGNIFICENT : GRANDIOSE
Grandiose means magnificent.

RATILOCINATE : THINK
To ratiocinate is to think.

RECIDIVIST : BACKSLIDER
A recidivist or habitual offender is a backslider.

**Synonym Variants**

In a Synonym Variant, the words are not strictly synonymous; their meanings, however, are similar. Take the adjective willful. A strict synonym for the adjective willful would be the adjective unruly. However, where a Synonym would have the adjective unruly, a Synonym Variant analogy has the noun unruleless. It looks like this:

WILLFUL : UNRULINESS
Willful means exhibiting unruleless.

VERBOSE : WORDINESS
Someone verbose is wordy; he or she exhibits wordiness.

SOLICITOUS : CONCERN
Someone solicitous is concerned; he or she shows concern.

**Degree of Intensity**

FOND : DOTING
Fond is less extreme than doting.

FLURRY : BLIZZARD
A flurry or shower of snow is less extreme than a blizzard.

GRASPING : RAPACIOUS
To be grasping is less extreme than to be rapacious.

**Part to Whole**

ISLAND : ARCHIPELAGO
Many islands make up an archipelago.
SHARD : POTTERY
A shard is a fragment of pottery.

CANTO : POEM
A canto is part of a poem.

FINANCIER : INVEST
A financier invests.

TENOR : ARIA
A tenor sings an aria.

Function
ASYLUM : REFUGE
An asylum provides refuge or protection.

BALLAST : STABILITY
Ballast provides stability.

LULL : STORM
A lull temporarily interrupts a storm.

Worker and Workplace
MUSICIAN : CONSERVATORY
A musician studies at a conservatory.

SCULPTOR : ATELIER
A sculptor works in an atelier or studio.

MINER : QUARRY
A miner works in a quarry or pit.

Manner
MUMBLE : SPEAK
To mumble is to speak indistinctly.

STRUT : WALK
To strut is to walk proudly.

STRAINED : WIT
Wit that is strained is forced in manner.

Tool and Its Action
DRILL : BORE
A drill is a tool used to bore holes.

CROWBAR : PRY
A crowbar is a tool used to pry things apart.

SIEVE : SIFT
A sieve is a tool used to strain or sift.

Action and Its Significance
WINCE : PAIN
A wince is a sign that one feels pain.

BLUSH : DISCOMFITURE
A blush signifies discomfiture or embarrassment.

PROSTRATION : SUBMISSIVENESS
Prostration (assuming a prostrate position, face to the ground) is a sign of submissiveness or abasement.

Less Common Analogy Types
Cause and Effect
SOPORIFIC : SLEEPINESS
A soporific causes sleepiness.

Sex
DOE : STAG
A doe is a female deer; a stag, a male deer.

Age
COLT : STALLION
A colt is a young stallion.

Time Sequence
CORONATION : REIGN
The coronation precedes the reign.

Spatial Sequence
ROOF : FOUNDATION
The roof is the highest point of a house; the foundation, the lowest point.

Symbol and Quality It Represents
DOVE : PEACE
A dove is the symbol of peace.

Worker and Article Created
POET : SONNET
A poet creates a sonnet.

ARCHITECT : BLUEPRINT
An architect designs a blueprint.

MASON : WALL
A mason builds a wall.

Worker and Tool
PAINTER : BRUSH
A painter uses a brush.

SICKLE : REAPER
A reaper uses a sickle to cut the grain.

Carpenter : VISE
A carpenter uses a vise to hold the object being worked on.

Worker and Action
ACROBAT : CARTWHEEL
An acrobat performs a cartwheel.
Practice Exercises

Analogy Exercise A

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

1. MASON : WALL :: (A) artist : easel (B) fisherman : trout (C) author : book (D) congressman : senator (E) sculptor : mallet
2. FIRE : ASHES :: (A) accident : delay (B) wood : splinters (C) water : waves (D) regret : melancholy (E) event : memories
3. GOOSE : GANDER :: (A) duck : drake (B) hen : chicken (C) sheep : flock (D) dog : kennel (E) horse : bridle
4. CARPENTER : SAW :: (A) stenographer : typewriter (B) painter : brush (C) lawyer : brief (D) seamstress : scissors (E) runner : sneakers
5. CAPTAIN : SHOAL :: (A) lawyer : litigation (B) pilot : radar (C) soldier : ambush (D) doctor : hospital (E) corporal : sergeant
6. HORNS : BULL :: (A) mane : lion (B) wattles : turkey (C) antlers : stag (D) hoofs : horse (E) wings : eagle
7. JUDGE : COURTHOUSE :: (A) carpenter : bench (B) lawyer : brief (C) architect : blueprint (D) physician : infirmary (E) landlord : studio
8. HELMET : HEAD :: (A) pedal : foot (B) gun : hand (C) breastplate : chest (D) pendant : neck (E) knapsack : back
9. GULLIBLE : DUPED :: (A) credible : cheated (B) careful : cautioned (C) malleable : molded (D) myopic : misled (E) articulate : silenced
10. DUNGEON : CONFINEMENT :: (A) church : chapel (B) school : truancy (C) asylum : refuge (D) hospital : mercy (E) courthouse : remorse
11. HERMIT : GREGARIOUS :: (A) miser : penurious (B) ascetic : hedonistic (C) coward : pusillanimous (D) scholar : literate (E) crab : crustacean
12. MÉNDACITY : HONESTY :: (A) courage : cravenness (B) truth : beauty (C) courage : fortitude (D) unsophistication : ingenuousness (E) turpitude : depravity
13. MARATHON : STAMINA :: (A) relay : independence (B) hurdle : perseverance (C) sprint : celerity (D) jog : weariness (E) ramble : directness
14. NAIVE : INGENUE :: (A) ordinary : genuis (B) venerable : celebrity (C) urbane : sophisticate (D) crafty : artisan (E) modest : braggart
15. RETOUCH : PHOTOGRAPH :: (A) hang : painting (B) finger : fabric (C) retract : statement (D) compose : melody (E) refine : style
16. INDIGENT : WEALTH :: (A) contented : happiness (B) aristocratic : stature (C) smug : complacency (D) emaciated : nourishment (E) variegated : variety
17. SHALE : GEOLOGIST :: (A) catacombs : entomologist (B) aster : botanist (C) obelisk : fireman (D) love : philologist (E) reef : astrologer
18. DIDACTIC : TEACH :: (A) sophomoric : learn (B) satiric : mock (C) reticent : complain (D) chaotic : rule (E) apologetic : deny
19. HACKNEYED : ORIGINAL :: (A) mature : juvenile (B) trite : morbid (C) withdrawn : reserved (D) evasive : elusive (E) derivative : traditional
20. AUGER : CARPENTER :: (A) studio : sculptor (B) awl : cobbler (C) seam : seamstress (D) cement : mason (E) apron : chef
Analog Exercise B

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

1. MUSTER : CREW :: (A) convene : committee (B) demobilize : troops (C) dominate : opposition (D) cheer : team (E) dismiss : jury

2. DWELL : DENIZEN :: (A) shun : outcast (B) inherit : heir (C) squander : miser (D) obey : autocrat (E) patronize : protégé

3. MEANDERING : DIRECTNESS :: (A) menacing : ambition (B) affable : permissiveness (C) digressive : conciseness (D) circuitous : rotation (E) aboveboard : openness

4. CEMENT : TROWEL :: (A) lawn : rake (B) conflagration : match (C) paint : brush (D) floor : polish (E) wallpaper : ladder

5. PIGHEADED : YIELD :: (A) lionhearted : retreat (B) lily-livered : flee (C) dogged : pursue (D) featherbrained : giggle (E) eagle-eyed : discern

6. ALARM : TRIGGER :: (A) prison : escape (B) tunnel : dig (C) criminal : corner (D) fright : allay (E) trap : spring

7. QUOTATION : QUOTATION MARKS :: (A) remark : colon (B) sentence : period (C) aside : parentheses (D) clause : semicolon (E) interjection : exclamation point

8. SIGNATURE : ILLUSTRATION :: (A) byline : column (B) alias : charge (C) credit : purchase (D) note : scale (E) reference : recommendation

9. SCALES : JUSTICE :: (A) weights : measures (B) laws : courts (C) torch : liberty (D) laurel : peace (E) balance : equity

10. SURPRISE : EXCLAMATION :: (A) insolence : bow (B) dismay : groan (C) happiness : grimace (D) deference : nod (E) contentment : mutter

11. APOSTATE : RELIGION :: (A) potentate : kingdom (B) traitor : country (C) bureaucrat : government (D) jailor : law (E) teacher : education

12. FOX : CUNNING :: (A) dog : playful (B) hyena : amusing (C) beaver : industrious (D) vixen : cute (E) colt : sturdy

13. PERJURY : OATH :: (A) plagiarism : authority (B) embezzlement : trust (C) disrespect : age (D) testimony : court (E) jury : vow

14. EULOGY : BLAME :: (A) elegy : loss (B) satire : mockery (C) tirade : abuse (D) simile : likeness (E) benediction : curse

15. PRIDE : LIONS :: (A) gaggle : geese (B) honor : thieves (C) snarl : wolves (D) arrogance : kings (E) lair : bears

16. RANGE : MOUNTAINS :: (A) atlas : maps (B) plain : prairie (C) string : beads (D) novel : short stories (E) sea : rivers

17. EXCESSIVE : MODERATION :: (A) extensive : duration (B) arbitrary : courage (C) impulsive : reflection (D) distinguished : reverence (E) expensive : cost

18. DEADBEAT : PAY :: (A) killjoy : lament (B) spoilsport : refrain (C) daredevil : risk (D) diehard : quit (E) turncoat : betray

19. MENDICANT : IMPECUNIOUS :: (A) critic : quizzical (B) complainer : petulant (C) physician : noble (D) liar : compulsive (E) philanthropist : prodigal

20. SNICKER : DISRESPECT :: (A) whimper : impatience (B) chortle : glee (C) frown : indifference (D) sneer : detachment (E) glower : cheerfulness
Analogy Exercise C

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

1. MYTH : LEGENDARY :: (A) sermon : lengthy (B) anecdote : witty (C) fable : didactic (D) epic : comic (E) allegory : obscure

2. TIRADE : ABUSIVE :: (A) monologue : lengthy (B) aphorism : boring (C) prologue : conclusive (D) encomium : laudatory (E) critique : insolent

3. EXPEDITIOUS : SPEED :: (A) astute : wisdom (B) decorous : impropriety (C) thoughtful : inanity (D) haggard : sturdiness (E) portable : frailty

4. ANNOTATE : TEXT :: (A) enact : law (B) prescribe : medication (C) caption : photograph (D) abridge : novel (E) censor : film

5. DRUDGERY : IRKSOME :: (A) encumbrance : burdensome (B) journey : wearisome (C) ambivalence : suspicious (D) compliance : forced (E) dissonance : harmonious

6. IMPROMPTU : REHEARSAL :: (A) practiced : technique (B) makeshift : whim (C) offhand : premeditation (D) glib : fluency (E) numerical : calculation

7. ELISION : SYLLABLES :: (A) contraction : letters (B) thesis : ideas (C) diagnosis : symptoms (D) almanac : facts (E) abacus : numbers

8. STICKLER : INSIST :: (A) mumbler : enunciate (B) trickster : risk (C) haggler : concede (D) laggard : outlast (E) braggart : boast

9. DETRITUS : GLACIER :: (A) thaw : snowfall (B) snow : ice cap (C) silt : river (D) range : mountain (E) foliage : tree

10. DESCRY : DISTANT :: (A) mourn : lost (B) whisper : muted (C) discern : subtle (D) destroy : flagrant (E) entrap : hostile

11. HORSE : CORRAL :: (A) oyster : reef (B) dog : muzzle (C) sheep : flock (D) pig : sty (E) deer : stag

12. RUBBER : ELASTIC :: (A) paper : brittle (B) diamond : hard (C) satin : sheer (D) metal : heavy (E) dust : allergic

13. REAM : PAPER :: (A) carton : milk (B) statue : marble (C) tablet : clay (D) ink : pen (E) cord : wood

14. HOBBLE : WALK :: (A) gallop : run (B) stammer : speak (C) stumble : fall (D) sniff : smell (E) amble : stroll

15. DETECTIVE : INFORMER :: (A) spy : counterspy (B) reporter : source (C) author : editor (D) architect : draftsman (E) sailor : mutineer

16. SCULPTOR : STONE :: (A) essayist : words (B) painter : turpentine (C) composer : symphony (D) logger : timber (E) etcher : acid

17. MASTHEAD : NEWSPAPER :: (A) footnote : essay (B) credits : film (C) spine : book (D) ream : paper (E) advertisement : magazine

18. FRAYED : FABRIC :: (A) thawed : ice (B) renovated : building (C) frazzled : nerves (D) watered : lawn (E) cultivated : manner

19. INDOLENT : WORK :: (A) decisive : act (B) gullible : cheat (C) perceptive : observe (D) theatrical : perform (E) taciturn : speak

20. INFAILIBLE : ERROR :: (A) irreversible : cure (B) invulnerable : emotion (C) impeccable : flaw (D) intolerable : defect (E) immovable : choice

Analogy Exercise D

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

1. INFRACTION : LAW :: (A) interruption : continuity (B) renovation : structure (C) establishment : order (D) enactment : amendment (E) punishment : crime
2. LACHRYMOSE : TEARS ::
   (A) effusive : requests    (B) ironic : jests
   (C) morose : speeches     (D) profound : sighs
   (E) verbose : words

3. MOISTEN : DRENCH ::
   (A) enclose : confine     (B) prick : stab
   (C) disregard : ignore    (D) scrub : polish
   (E) heat : chill

4. WITCH : COVEN ::
   (A) ogre : castle         (B) seer : prophecy
   (C) actor : troupe        (D) fairy : spell
   (E) doctor : medicine

5. CONTINENT : ISLAND ::
   (A) ocean : lake          (B) isthmus : peninsula
   (C) cape : cove           (D) river : canal
   (E) plateau : plain

6. SKINFLINT : STINGY ::
   (A) daredevil : alert     (B) braggart : carefree
   (C) blackguard : protective
   (D) spendthrift : weak
   (E) diehard : stubborn

7. STORY : BUILDING ::
   (A) plot : outline        (B) rung : ladder
   (C) cable : elevator      (D) foundation : skyscraper
   (E) spire : church

8. CANONIZE : SAINT ::
   (A) train : athlete       (B) guard : dignity
   (C) defy : sinner         (D) lionize : celebrity
   (E) humanize : scholar

9. STARE : GLANCE ::
   (A) participate : observe (B) scorn : admire
   (C) hunt : stalk          (D) gulp : sip
   (E) confide : tell

10. PERFORATE : HOLES ::
    (A) speckle : spots       (B) evaporate : perfume
    (C) decorate : rooms      (D) filter : water
    (E) repent : sins

11. PUGNACIOUS : BATTLE ::
    (A) timorous : beg        (B) loquacious : drink
    (C) tenacious : persist   (D) veracious : lie
    (E) wicked : survive

12. CLEARSIGHTED : PERSPICACITY ::
    (A) daring : temerity      (B) reserved : impulsiveness
    (C) transparent : opacity (D) severe : clemency
    (E) lethargic : energy

13. PLEAD : SUPPLIANT ::
    (A) disperse : rioter     (B) shun : outcast
    (C) revere : elder        (D) beg : philanthropist
    (E) translate : interpreter

14. EPIGRAM : PITHY ::
    (A) allegory : lengthy    (B) saga : heroic
    (C) anecdote : humorous  (D) elegy : satiric
    (E) proverb : modern

15. BOLT : FABRIC ::
    (A) lock : key           (B) book : paper
    (C) roll : film           (D) needle : thread
    (E) light : lamp

16. PROOF : ALCOHOL ::
    (A) cream : milk         (B) canteen : water
    (C) tanker : oil         (D) octane : gasoline
    (E) pulp : juice

17. INCUBATOR : INFANT ::
    (A) henhouse : chicken   (B) greenhouse : plant
    (C) archives : document  (D) cooler : wine
    (E) hive : bee

18. CITADEL : DEFENSE ::
    (A) chapel : refreshment (B) gazebo : refuge
    (C) marina : contemplation
    (D) warehouse : storage
    (E) rampart : supervision

19. RANCID : TASTE ::
    (A) tepid : temperature  (B) glossy : look
    (C) rank : smell         (D) dulcet : sound
    (E) savory : odor

20. TRYST : CLANDESTINE ::
    (A) reverie : dreamy     (B) acquaintanceship : brief
    (C) expectation : hopeless
    (D) glance : resentful
    (E) journey : leisurely

**Analogical Exercise E**

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

1. WHISPER : SPEAK ::
    (A) brush : touch    (B) skip : walk
    (C) listen : hear     (D) request : ask
    (E) whimper : whine

2. ELUSIVE : CAPTURE ::
    (A) persuasive : convince (B) elastic : stretch
    (C) headstrong : control (D) sensible : decide
    (E) gullible : trick

3. LINEAGE : PERSON ::
    (A) foliage : tree    (B) derivation : word
    (C) adolescence : child (D) title : book
    (E) landscape : portrait
4. IMPANEL : JUROR :: (A) accuse : defendant (B) convict : culprit (C) testify : witness (D) enroll : student (E) involve : bystander

5. PECCADILLO : TRIFLING :: (A) pariah : popular (B) diagnosis : accurate (C) notion : farfetched (D) squabble : petty (E) pursuit : trivial

6. PHYSIQUE : STURDY :: (A) intellect : noble (B) punctuality : tardy (C) investment : sound (D) fabric : worn (E) technique : inept

7. TRAILER : MOTION PICTURE :: (A) truck : cargo (B) theater : play (C) edition : novel (D) commercial : product (E) libretto : opera

8. SIGN : ZODIAC :: (A) poster : billboard (B) letter : alphabet (C) prediction : prophecy (D) signal : beacon (E) rhyme : almanac

9. LUMINARY : ILLUSTRIOUS :: (A) zealot : intense (B) miser : prodigal (C) atheist : devout (D) dignitary : conceited (E) celebrity : wealthy

10. BUFFOON : DIGNITY :: (A) braggart : modesty (B) blackguard : strength (C) laughingshock : ridicule (D) impostor : identification (E) gambler : risk

11. ROUT : DEFEAT :: (A) ovation : applause (B) triumph : failure (C) grief : loss (D) pathway : ruin (E) memory : oblivion

12. METAPHOR : FIGURATIVE :: (A) fable : contemporary (B) adage : paradoxical (C) precept : instructive (D) irony : dramatic (E) epic : literal

13. CALUMNY : ASPERSIONS :: (A) approbation : praise (B) slander : mockery (C) approval : criticism (D) expectation : threats (E) satire : laments

14. LAST : SHOE :: (A) cuff : trousers (B) finale : curtain (C) pattern : glove (D) buckle : belt (E) strap : slip

15. INDOLENT : SLOTH :: (A) wrathful : ire (B) arrogant : acuity (C) covetous : enigma (D) gluttonous : loyalty (E) impatient : apathy

16. GROVEL : SERVILITY :: (A) titter : arrogance (B) fume : anger (C) yawn : civility (D) preen : modesty (E) snivel : hypocrisy

17. DELICATE : FASTIDIOUS :: (A) hard-working : diligent (B) altruistic : mercenary (C) demonstrative : effusive (D) deceptive : fallacious (E) blithe : melancholy

18. RICOCHET : BULLET :: (A) soar : falcon (B) aim : crossbow (C) pierce : dart (D) carom : ball (E) catapult : missile

19. JUGGERNAUT : INEXORABLE :: (A) cosmonaut : worldly (B) colossus : gigantic (C) demagogue : liberal (D) philistine : cultivated (E) despot : immaculate

20. APOCRYPHAL : AUTHENTICITY :: (A) nefarious : wickedness (B) dogmatic : assertiveness (C) hypocritical : integrity (D) perspicacious : discernment (E) deceptive : artifice

5 Reading Comprehension Questions

Testing Tactics
Practice Exercises
Answer Key

GRE reading comprehension questions test your ability to understand what you read—both content and technique. Each verbal section on the paper-and-pencil GRE includes two passages, one short, one long, the short passage followed by three or four questions, the long passage followed by seven or eight. One passage deals with the sciences (including medicine, botany, zoology, chemistry, physics, geology, astronomy); the other deals with the humanities (including art, literature, music, philosophy, folklore), or with the social sciences (including history, economics, sociology, government). Each test generally contains a passage that is "ethnic" in content: whether it is a history passage or a passage on music, art, or literature, it deals with concerns of a particular minority group (including women).

The single verbal section on the computerized test follows yet another pattern.

<table>
<thead>
<tr>

<td>(500 words)</td>
<td></td>
</tr>
<tr>
<td>1 Nonscience Passage</td>
<td>Aqueducts in Roman Britain</td>
</tr>
<tr>
<td>(150–200 words)</td>
<td></td>
</tr>
</tbody>
</table>

The GRE tends to take its reading passages from Scientific American, from prestigious university presses (Harvard, Princeton, Oxford), from scholarly journals. Often the test-makers hit academically "hot" topics—sociobiology, plate tectonics, damage to the ozone layer, Arthurian romance, the status of women's literature—that have aroused controversy over the past two decades. Frequently they edit these passages to make them more demanding both in vocabulary level and in grammatical complexity.

Even though the reading passages on the GRE may be taken from disciplines outside your field of expertise, you need not feel any special concern. The material under discussion may initially seem foreign to you, but you should find it comprehensible. Remember that the passages on the GRE are chosen because they are self-contained: they explain their own terms, either by explicit
definition or in context, and they provide all the information you need to answer the subsequent questions successfully. You will be able to understand them even if you lack specialized background in the discipline on which they are based.

Some of the reading comprehension questions on the GRE are factual, asking you about specific details in the passages. Others ask you to interpret the passages, to make judgments about them. Still others ask you to recognize various techniques used by the authors or possible applications of their ideas to other circumstances. Many of the questions include lengthy and complex statements, as lengthy and complex as any sentences in the passage. All require you to read closely, as does the text.

Be sure, in answering reading comprehension questions, that you read all the answer choices before deciding which is correct.

Unlike the antonym, analogy, and sentence completion questions, the reading comprehension questions following each passage are not arranged in order of difficulty. Their arrangement tends to reflect the way the passage’s content is organized. (A question based on information found at the beginning of the passage generally will come before a question based on information at the end.) If you are stumped by a tough reading question, do not skip the other questions on that passage. The next question may be an easy one.

Testing Tactics

**Tactic 1**

**Save the Reading Comprehension Questions for Last**

(This applies only to paper-and-pencil testing.)

To answer an antonym question takes you seconds; to answer a reading comprehension question takes minutes of going over the passage before you ever get to the questions at all.

On the GRE, you get the same points for answering a “quick and easy” question correctly as you do for answering a time-consuming one. The more questions you answer correctly, the higher your score will be. Therefore, it makes sense for you to tackle the quick-to-answer questions—the sentence completions, the analogies, the antonyms—first. Get as many of them right as you can, and then settle down to answering the reading questions, knowing you’ve done everything possible to maximize your score.

One word of caution: Remember that the reading questions typically occur toward the end of the section, just before the antonyms. If you plan to skip them and come back to them later, be very careful in marking your answer sheet.

**Tactic 2**

**Tackle Passages with Familiar Subjects Before Passages with Unfamiliar Ones**

(This applies only to paper-and-pencil testing.)

Just as it is common sense to tackle quick-to-answer questions before time-consuming ones, it is also common sense to tackle reading passages with familiar subjects before reading passages with unfamiliar ones. If you know very little about the physics of elementary particles or are uninterested in it, you are all too likely to run into trouble reading a passage about quantum theory.

It is hard to concentrate when you read about something wholly unfamiliar to you. Give yourself a break. If you find one reading passage interests you or deals with a topic in which you are well grounded, attack that passage first. There is nothing wrong with skipping questions. Just remember to check the numbering of your answer sheet. You should, of course, go back to the questions you skipped if you have time. If you find you are running out of time, simply guess at random: you get no points for empty spaces on your answer sheet.
First Read the Passage, Then Read the Questions

Students often ask whether it is better to read the passage first or the questions first. Those who want to read the questions before reading the passage think it will save time. Ninety-nine times out of a hundred they are wrong.

Reading the questions before you read the passage will most likely not save you time. It may well cost you time. If you read the questions first, when you turn to the passage you will have a number of question words and phrases dancing around in your head. These phrases might possibly focus you; more likely, they will distract you. You will be so involved in trying to spot the places they occur in the passage that you will not be able to concentrate on comprehending the passage as a whole. Why increase your anxiety and decrease your capacity to think? First read the passage, using the following technique:

1. Read as rapidly as you can with understanding, but do not force yourself. Do not worry about the time element. If you worry about not finishing the test, you will begin to take short cuts and miss the correct answer in your haste. Remember, if you have followed Tactic 1 and answered the quick questions first, you have already maximized your score and made the best use of your time.

2. As you read the opening sentences, try to anticipate what the passage will discuss. Whom or what is the author talking about?

3. As you continue reading, try to identify what kind of writing this is, what techniques are being used, who the intended audience may be, and what feeling (if any) the author has toward the subject. Try to retain names, dates, and places for quick reference later. In particular, try to remember where in the passage the author makes major points. Then, when you start looking for the phrase or sentence that will justify your choice of answer, you will be able to save time by going back to that section of the passage immediately without having to reread the entire selection. (This is particularly important in dealing with the two 500–600 word passages on the test.)

4. Your first reading of the passage should give you a general impression of the theme of the passage and of the location of its major subdivisions. In order to answer each question properly, you must go back to the passage to verify your choice of answer. Do not rely on memory, and, above all, do not rely on knowledge gained from other sources.

5. Underline sparingly, if at all. You may want to circle key words in question stems (words like EXCEPT and LEAST, which the test-makers capitalize for emphasis, and which restrict your answer choice) or put an asterisk (*) or check mark in the margin next to an important word or phrase. You do not, however, want to underline everything in sight, making the passage harder to read.

6. Then read the first question. You may remember where the answer to that question is to be found. If so, go directly to the relevant part of the reading selection. If not, read the entire selection again. Do not jump around, hoping to encounter the answer by chance. Decide on your answer, or, if you cannot be certain you have identified the correct answer, guess. Then go on to the next question.

We have found that most students do better by tackling reading exercises in the way described above. It has also been our experience, however, that some students, often very good ones, may get better results if they skim the questions first to get a sense of what they should be on the lookout for. As always, the important thing is for you to figure out what kind of reader you are and which tactics work best for you.

Use the practice exercises at the end of this chapter to find out whether or not the "questions first" approach could work for you. Select a 600-word passage and skim the questions on it. Next, read the passage and answer the questions. Check your answers. Then think over your experience.

Did you get through the passage and all seven questions in 12 minutes or less?
Did you answer a reasonable number of questions correctly?
Did you feel in control as you started to read the passage, or was a jumble of question words dancing around in your head?
Do you feel that skimming the questions in advance slowed you down and wasted your time?

Try another 600-word passage, this time reading the passage first. Compare the scores you get using the two approaches. Reading is a highly individual skill. See what approach works better for you. The important thing is to know yourself and to feel comfortable with what you do.
Learn to Spot the Major Reading Question Types

Just as it will help you to know the common types of analogies found on the GRE, it will also help you to familiarize yourself with the conventions of academic writing, and with the major types of reading questions on the test.

Many academic articles follow a set basic pattern: "While it has been traditionally thought that X is the case, in fact Y seems a better description of what is going on." Scholars are engaged in an ongoing reassessment of what is accepted as truth in their fields. They constantly are revising or discarding established notions in order to replace them with their own contributions to academic knowledge. Thus, many reading passages taken from academic texts have a "comparison-contrast" structure, with one thesis first undergoing examination and then a second, presumably more satisfactory thesis being offered in its place. If you are aware of this underlying structure, you should find the rhetorical moves in such passages easier to understand. Similarly, if you can recognize just what a given question is asking for, you will be better able to tell which reading tactic to apply.

Here are six categories of reading questions you are sure to face:

1. **Main Idea** Questions that test your ability to find the central thought of a passage or to judge its significance often take the following forms:
   - The main point of the passage is to...
   - The passage is primarily concerned with...
   - The author's primary purpose in this passage is to...
   - The chief theme of the passage can best be described as...
   - Which of the following titles best states the central idea of the passage?
   - Which of the following statements best expresses the main idea of the passage?

2. **Finding Specific Details** Questions that test your ability to understand what the author states explicitly are often worded:
   - According to the author...
   - The author states all of the following EXCEPT . . .
   - According to the passage, which of the following is true of the...
   - The passage supplies information that would answer which of the following questions?

3. **Drawing Inferences** Questions that test your ability to go beyond the author's explicit statements and see what these statements imply may be worded:
   - It can be inferred from the passage that...
   - The author implies that...
   - The passage suggests that...
   - Which of the following statements about...can be inferred from the passage?

4. **Application to Other Situations** Questions that test your ability to recognize how the author's ideas might apply to other situations often are worded:
   - With which of the following statements would the author of the passage be most likely to agree?
   - With which of the following aphorisms would the author be in strongest agreement?
   - The author's argument would be most weakened by the discovery of which of the following?
   - The author's contention would be most clearly strengthened if which of the following were found to be true?
   - Which of the following examples could best be substituted for the author's example of...
   - Which of the following statements would be most likely to begin the paragraph immediately following the passage?
   - The author is most probably addressing which of the following audiences?

5. **Tone/Attitude** Questions that test your ability to sense an author's emotional state often take the form:
   - The author's attitude toward the problem can best be described as...
   - The author regards the idea that...with...
   - The author's tone in the passage is that of a person attempting to...
   - Which of the following best describes the author's tone in the passage?

6. **Technique** Questions that test your ability to recognize a passage's method of organization or technique often are worded:
Which of the following best describes the development of this passage?
In presenting the argument, the author does all of the following EXCEPT...
The relationship between the second paragraph and the first paragraph can best be described as...
In the passage, the author makes the central point primarily by...
The organization of the passage can best be described as...

7. Determining the Meaning of Words from Their Context Questions that test your ability to work out the meaning of unfamiliar words from their context often are worded:

As it is used in the passage, the term...can best be described as...
The phrase...is used in the passage to mean that...
As used by the author, the term...refers to...
The author uses the phrase...to describe...

Tactic 5
When Asked to Find the Main Idea, Be Sure to Check the Opening and Summary Sentences of Each Paragraph

Authors typically provide readers with a sentence that expresses a paragraph’s main idea succinctly. Although such topic sentences may appear anywhere in the paragraph, most often a topic sentence is either the opening or the closing sentence.

Note that in GRE reading passages topic sentences are sometimes implied rather than stated directly. If you cannot find a topic sentence, ask yourself these questions:

1. Who or what is this passage about?
   (The subject of the passage can be a person, place, or thing. It can be something abstract, such as an idea. It can even be a process, or something in motion, for which no single-word synonym exists.)

2. What aspect of this subject is the author talking about?

3. What is the author trying to get across about this aspect of the subject?
   (Decide the most important thing that is being said about the subject. Either the subject must be doing something, or something is being done to it.)

Read the following natural science passage from a recent GRE and apply this tactic.

When the same parameters and quantitative theory are used to analyze both termite colonies and troops of rhesus macaques, we will have a unified science of sociobiology. Can this ever really happen? As my own studies have advanced, I have been increasingly impressed with the functional similarities between insect and vertebrate societies and less so with the structural differences that seem, at first glance, to constitute such an immense gulf between them. Consider for a moment termites and macaques. Both form cooperative groups that occupy territories. In both kinds of society there is a well-marked division of labor. Members of both groups communicate to each other hunger, alarm, hostility, caste status or rank, and reproductive status. From the specialist’s point of view, this comparison may at first seem facile — or worse. But it is out of such deliberate oversimplification that the beginnings of a general theory are made.

[Adapted by ETS from Sociobiology by Edward O. Wilson.]

Now look at the GRE’s main idea question on this passage.

Which of the following best summarizes the author’s main point?

(A) Oversimplified comparisons of animal societies could diminish the likelihood of developing a unified science of sociobiology.

(B) Understanding the ways in which animals as different as termites and rhesus macaques resemble each other requires training in both biology and sociology.

(C) Most animals organize themselves into societies that exhibit patterns of group behavior similar to those of human societies.

(D) Animals as different as termites and rhesus macaques follow certain similar and predictable patterns of behavior.

(E) A study of the similarities between insect and vertebrate societies could provide the basis for a unified science of sociobiology.
Look at the opening and summary sentences of the passage: "When the same parameters and quantitative theory are used to analyze both termite colonies and troops of rhesus macaques, we will have a unified science of sociobiology....it is out of such deliberate oversimplification that the beginnings of a general theory are made." First, is there a person, place, thing, idea, or process that is common to both sentences? Are there any words in the last sentence that repeat something in the first? A general theory repeats the idea of a unified science of sociobiology. The paragraph's subject seems to be the unified science of sociobiology. Note as well the words pointing to expectations for the future—will have, beginnings. The tone of both sentences appears positive: when certain conditions are met, then a specific result will follow—we will have a unified science or general theory of sociobiology. This result, however, is not guaranteed: it can come about only if the conditions are met.

Now turn to the answer choices. What does Choice A say about a unified science of sociobiology? It states some things could make it less likely, not more likely, to come about. Choice A is incorrect; it contradicts the passage's sense that a unified science of sociobiology is a likely outcome. Choices B, C, and D also may be incorrect: not one of them mentions a unified science of sociobiology. On closer inspection, Choice B proves incorrect: it makes an unsupported statement that one needs biological and sociological training to understand the resemblances between insects and vertebrates. Choice C also proves incorrect: it goes far beyond what the passage actually states. Where the passage speaks in terms of termites and rhesus macaques, Choice C speaks in terms of most animals and extends the comparison to include humans as well. Choice D, while factually correct according to the passage, is incorrect because it is too narrow in scope. It ignores the author's main point: it fails to include the author's interest in the possibility that a study of such similar patterns of behavior might lead to a general theory of sociobiology. The correct answer is Choice E. It is the only statement that speaks of a unified science of sociobiology as a likely possibility.

**When Asked to Choose a Title, Watch Out for Choices That Are Too Specific or Too Broad**

An appropriate title for a passage must express the central theme developed in the passage. It should be neither too broad nor too narrow in scope; it should be specific and yet comprehensive enough to include all the essential ideas presented. For a passage of two or more paragraphs, it should express the thoughts of ALL the paragraphs.

When you are trying to select the best title for a passage, watch out for words that come straight out of the passage. They may not always be your best choice.

This second question on the sociobiology passage is a title question. Note how it resembles questions on the passage's purpose or main idea.

Which of the following is the best title for the passage?

(A) Deceptive Comparisons: Oversimplification in Biological Research
(B) An Uncanny Likeness: Termites and Rhesus Macaques
(C) Structural Dissimilarities Between Insects and Vertebrates
(D) Arguments against a Science of Sociobiology
(E) Sociobiology: Intimations of a General Theory

Choice A is incorrect: it is at once too narrow and too broad. It is too narrow in that the passage refers to oversimplification only in passing. It is too broad in that the passage emphasizes sociobiology, not the whole realm of biological research. It is also misleading: the passage never asserts that the deliberate oversimplification of the comparison between termites and macaques is intended to deceive.

Choice B is incorrect: it is too narrow. True, the author discusses the resemblance between termite and macaque societies; however, this likeness is not his subject. He discusses it to provide an example of the sort of comparison that may lay the groundwork for a potential science of sociobiology.

Choice C is also incorrect because it is not inclusive enough. It fails to mention the potential science of sociobiology. In addition, while the passage refers to structural differences between insect and vertebrate societies, it stresses structural similarities, not structural dissimilarities.

Choices D and E both mention the theory of sociobiology. Which is the better title for the piece? Clearly, Choice E. The author is not arguing against the potential science of sociobiology; he is discussing favorably the likelihood of sociobiology's emergence as a unified science. Thus, he finds in the termite-macaque comparison intimations or hints of an incipient general theory.
When Asked to Determine Questions of Attitude, Mood, or Tone, Look for Words That Convey Emotion, Express Values, or Paint Pictures

In determining the attitude, mood, or tone of an author, examine the specific diction used. Is the author using adjectives to describe the subject? If so, are they words like fragrant, tranquil, magnanimous—words with positive connotations? Or are they words like fetid, ruffled, stingy—words with negative connotations?

When we speak, our tone of voice conveys our mood—frustrated, cheerful, critical, gloomy, angry. When we write, our images and descriptive phrases get our feelings across.

The third GRE question on the Wilson passage is an attitude question. Note the range of feelings in the answer choices.

The author’s attitude toward the possibility of a unified theory in sociobiology is best described as which of the following?

(A) Guarded optimism
(B) Unqualified enthusiasm
(C) Objective indifference
(D) Resignation
(E) Dissatisfaction

How does the author feel about the possibility of a unified theory of sociobiology? The answer choices range from actively negative (dissatisfaction) to actively positive (unqualified enthusiasm), with passively negative (resignation), neutral (objective indifference), and cautiously positive (guarded optimism) in between.

Wilson’s attitude toward the possibility of a unified theory of sociobiology is implicit in his choice of words. It is clear that he views this possibility positively. The whole thrust of his argument is that the current studies of the similarities between insect and vertebrate societies could mark the beginnings of such a unified theory and that the specialist should not dismiss these studies as facile or simple-minded. Note, however, in the third sentence how Wilson’s specific choice of words conveys his feelings and value judgments. He describes his own studies as having “advanced”—not as having merely continued, but as having progressed and ultimately improved. He implies that he knows better now than he did in earlier years and deprecates less advanced viewpoints with the negative phrases “at first glance” and “seem.”

Wilson is certainly not unhappy or dissatisfied with this potential unified theory, nor is he merely languishing or resigned to it. Similarly, he is not objectively indifferent to it; he actively involves himself in arguing the case for sociobiology. Thus, you can eliminate Choices C, D, and E. But how do you decide between the two positive terms, optimism and enthusiasm, Choice A and Choice B? To decide between them, you must look carefully at the adjectives modifying them. Is Wilson’s enthusiasm unconditional or unqualified? Not absolutely. His opening sentence states a basic condition that must be met before there can be a unified science of sociobiology: the same parameters and quantitative theory must be used to analyze insect and vertebrate societies. Unqualified enthusiasm seems to overstate his attitude. Choice B appears incorrect. What of Choice A? Is Wilson’s optimism cautious or guarded? Yes. He is aware that specialists may well find fault with the sociobiologist’s conclusions; he uses terms that convey values, first the negative “facile—or worse” to suggest the specialist’s negative attitude toward sociobiology, then the positive “deliberate” to suggest his more positive response. The correct answer is Choice A.

When Asked About Specific Details in the Passage, Spot Key Words in the Question and Scan the Passage to Find Them (or Their Synonyms).

In developing the main idea of a passage, a writer will make statements to support his or her point. To answer questions about such supporting details, you must find a word or group of words in the passage supporting your choice of answer. The words “according to the passage” or “according to the author” should focus your attention on what the passage explicitly states. Do not be misled into choosing an answer (even one that makes good sense) if you cannot find support for it in the text.

Detail questions often ask about a particular phrase or line. In such cases, use the following technique:

1. Look for key words (nouns or verbs) in the answer choices.
2. Run your eye down the passage, looking for those key words or their synonyms. (This is scanning. It is what you do when you look up someone’s number in the phone directory.)

3. When you find a key word or its synonym, reread the sentence to make sure the test-makers haven’t used the original wording to mislead you.

Read the following Scientific American passage from a recently published GRE and apply this tactic.

Visual recognition involves storing and retrieving memories. Neural activity, triggered by the eye, forms an image in the brain’s memory system that constitutes an internal representation of the viewed object. When an object is encountered again, it is matched with its internal representation and thereby recognized. Controversy surrounds the question of whether recognition is a parallel, one-step process or a serial, step-by-step one. Psychologists of the Gestalt school maintain that objects are recognized as wholes in a parallel procedure: the internal representation is matched with the retinal image in a single operation. Other psychologists have proposed that internal representation features are matched serially with an object’s features. Although some experiments show that, as an object becomes familiar, its internal representation becomes more holistic and the recognition process correspondingly more parallel, the weight of evidence seems to support the serial hypothesis, at least for objects that are not notably simple and familiar.

[Adapted by ETS from “Eye Movements and Visual Perception” by David Noton and Lawrence Stark, Scientific American, June, 1971]

Now look at a GRE question on a specific detail in the passage.

You can arrive at the correct answer to this question by elimination.

According to the passage, Gestalt psychologists make which of the following suppositions about visual recognition?

I. A retinal image is in exactly the same form as its internal representation.
II. An object is recognized as a whole without any need for analysis into component parts.
III. The matching of an object with its internal representation occurs in only one step.

(A) I only
(B) II only
(C) I and III only
(D) II and III only
(E) I, II, and III

First, quickly scan the passage looking for the key word Gestalt. The sentence mentioning Gestalt psychologists states they maintain that objects are recognized as wholes in a parallel procedure. The sentence immediately preceding defines a parallel procedure as one that takes only one step.

Now examine the statements. Do Gestalt psychologists maintain that a retinal image is in exactly the same form as its internal representation? Statement I is unsupported by the passage. Therefore, you can eliminate Choices C and E.

Statement II is supported by the passage: lines 8–12 indicate that Gestalt psychologists believe objects are recognized as wholes. Therefore, you can eliminate Choice B.

Statement III is supported by the passage: lines 8–12 indicate that Gestalt psychologists believe matching is a parallel process that occurs in one step. Therefore, you can eliminate Choice A.

Only Choice D is left. It is the correct answer.

Note how necessary it is to point to specific lines in the passage when you answer questions on specific details.

Tactic 9

When Asked to Make Inferences, Base Your Answers on What the Passage Implies, Not What It States Directly

Inference questions require you to use your own judgment. You must not take anything directly stated by the author as an inference. Instead, you must look for clues in the passage that you can use in deriving your own conclusion. You should choose as your answer a statement that is a logical development of the information the author has provided.

Try this relatively easy GRE inference question, based on the preceding passage about visual recognition.

It can be inferred from the passage that the matching process in visual recognition is

(A) not a neural activity
(B) not possible when an object is viewed for the very first time
(C) not possible if a feature of a familiar object is changed in some way
(D) only possible when a retinal image is received in the brain as a unitary whole
(E) now fully understood as a combination of the serial and parallel processes
Go through the answer choices, eliminating any choices that obviously contradict what the passage states or implies. Remember that in answering inference questions you must go beyond the obvious, beyond what the authors explicitly state, to look for logical implications of what they say.

Choice A is incorrect. Nothing in the passage suggests that the matching process is not a neural activity. Rather, the entire process of visual recognition, including the matching of images, should involve neural activity.

Choice D is incorrect. It can be eliminated because it directly contradicts information in the passage stating that recognition most likely is a serial or step-by-step process rather than a parallel one grasping an image as a unitary whole.

Choice E is incorrect. It is clear from the passage that the matching process is not fully understood: the weight of the evidence seems to support the serial hypothesis, but controversy still surrounds the entire question.

Choices B and C are left. Which is a possible inference? Choice B seems a possible inference. Although the author never says so, it seems logical that you could not match an object if you had never seen it before. After all, if you had never seen the object before, you would have no prior internal representation of it and would have nothing with which to match it. What of Choice C? Nothing in the passage mentions changing the features of a familiar object. Therefore, on the basis of the passage you have no way to deduce whether matching would or would not be possible if such a change took place. There is not enough information in the passage to justify Choice C as an inference. The correct answer is Choice B.

Another, more difficult GRE inference question is based on the excerpt from Wilson's *Sociobiology*, reprinted below. Review the passage briefly and see how you do with a question that only 16 percent of the examinees answered correctly.

When the same parameters and quantitative theory are used to analyze both termite colonies and troops of rhesus macaques, we will have a unified science of sociobiology. Can this ever really happen? As my own studies have advanced, I have been increasingly impressed with the functional similarities between insect and vertebrate societies and less so with the structural differences that seem, at first glance, to constitute such an immense gulf between them. Consider for a moment termites and macaques. Both form cooperative groups that occupy territories. In both kinds of society there is a well-marked division of labor. Members of both groups communicate to each other hunger, alarm, hostility, caste status or rank, and reproductive status. From the specialist's point of view, this comparison may at first seem facile—or worse. But it is out of such deliberate oversimplification that the beginnings of a general theory are made.

In discussing insect and vertebrate societies, the author suggests which of the following?

(A) A distinguishing characteristic of most insect and vertebrate societies is a well-marked division of labor.

(B) The caste structure of insect societies is similar to that of vertebrate societies.

(C) Most insect and vertebrate societies form cooperative groups in order to occupy territory.

(D) The means of communication among members of insect societies is similar to that among members of vertebrate societies.

(E) There are significant structural differences between insect and vertebrate societies.

The reason so many examinees answered this question incorrectly is simple: they confused statements made about specific insect and vertebrate societies with statements made about insect and vertebrate societies in general. They did not see that, in the fourth sentence, the author switches from talking about insect and vertebrate societies in general and considers termites and macaques in particular.

Go through the answer choices one by one. Does the author suggest that a marked division of labor distinguishes most insect and vertebrate societies? No. He merely states that it is a characteristic of termite and rhesus macaque societies. Choice A is incorrect: you cannot justify leaping from a single type of insect (*termites*) and a single type of vertebrate (*rhesus macaques*) to most insects and most vertebrates.

Does the author suggest that the caste structure of insect societies is similar to that of vertebrate societies? No. He merely states that termites and macaques both can communicate caste status or rank. Choice B is incorrect. You cannot assume that the caste structure of insect societies is similar to that of vertebrate societies just because termites and rhesus macaques both have some way to communicate caste status or rank.

Does the author suggest that *most* insect and vertebrate societies form cooperative groups in order to occupy territory? No. He merely states that termites and macaques form cooperative groups that occupy territories. Choice C is incorrect: again, you cannot justify leaping from termites and rhesus macaques to most insects and most vertebrates.

Does the author suggest that the means of communication among members of insect societies is similar to that among members of vertebrate societies? No. He merely states that communication among termites and macaques serves similar ends; he says nothing about their means of communication, or about the means of communication used by other insects and vertebrates. Choice D is incorrect.
The correct answer is Choice E. In the passage, the author states that he has grown less impressed "with the structural differences that seem, at first glance, to constitute such an immense gulf between" insect and vertebrate societies. This suggests that, even though Wilson may be unimpressed with them, these differences exist and are significant.

When Asked to Apply Ideas from the Passage to a New Situation, Put Yourself in the Author's Place

GRE application questions require you to do three things:

1. **Reason**—If X is true, then Y must also be true.

2. **Perceive Feelings**—If the author feels this way about subject A, he or she probably feels a certain way about subject B.

3. **Sense a Larger Structure**—This passage is part of an argument for a proposal, or part of a description of a process, or part of a critique of a hypothesis.

Like inference questions, application questions require you to go beyond what the author explicitly states. Application questions, however, ask you to go well beyond a simple inference, using clues in the passage to interpret possible reasons for actions and possible outcomes of events. Your concern is to comprehend how the author's ideas might apply to other situations, or be affected by them. To do so, you have to put yourself in the author's place.

Imagine you are the author. What are you arguing for? Given what you have just stated in the passage, what would you want to say next? What might hurt your argument? What might make it stronger? What kind of audience would appreciate what you have to say? Whom are you trying to convince? If you involve yourself personally with the passage, you will be better able to grasp it in its entirety and see its significance.

Answer the following application question based on the same passage from *Sociobiology*.

Which of the following statements would be most likely to begin the paragraph immediately following the passage?

(A) I have raised a problem in ethical philosophy in order to characterize the essence of the discipline of sociobiology.

(B) It may not be too much to say that sociology and the other social sciences are the last branches of biology waiting to be integrated into neo-Darwinist evolutionary theory.

(C) Although behavioral biology is traditionally spoken of as if it were a unified subject, it is now emerging as two distinct disciplines centered on neurophysiology and sociobiology, respectively.

(D) The formulation of a theory of sociobiology constitutes, in my opinion, one of the great manageable problems of biology for the next twenty or thirty years.

(E) In the past, the development of sociobiology has been slowed by too close an identification with ethnology and behavioral psychology.

As you know from answering the preceding main idea and attitude questions, Wilson's point is that students of insect and vertebrate societies may be on the verge of devising a general theory of sociobiology. He is optimistic about the likelihood of developing this unified science. At the same time, he is guarded: he does not wish to overstate his case.

Put yourself in Wilson's place. What would you be likely to say next? You have just been talking optimistically about the prospects for putting together a general theory. What would be more natural than to talk in terms of a time frame? Choice D, with its optimistic yet careful view of the formulation of a theory of sociobiology as "one of the great manageable problems of biology for the next twenty or thirty years," seems a logical extension of what Wilson has just been saying. While Choices A, B, C, and E all touch on sociobiology in some way, none of them follows as naturally from his immediate argument.
When Asked to Give the Meaning of an Unfamiliar Word, Look for Nearby Context Clues

When a question in the reading comprehension part of an examination asks for the meaning of a word, that meaning can usually be deduced from the word's context. The purpose of this kind of question is to determine how well you can extract meaning from the text, not how extensive your general vocabulary is.

Sometimes the unknown word is a common word used in one of its special or technical meanings. For example:

He threw the pot in an hour. The wheel turned busily and the shape grew quickly as his fingers worked the wet, spinning clay. (Throw here means to shape on a potter's wheel.)

At other times, the unknown word may bear a deceptive resemblance to a known word.

He fell senseless to the ground. (He was unconscious. He did not fall foolishly or nonsensically to the ground.)

Just because you know one meaning of a word, do not assume that you know its meaning as it is used in a particular passage. You must look within the passage for clues. Often authors will use an unfamiliar word and then immediately define it within the same sentence. The two words or groups of words are juxtaposed—set beside one another—to make their relationship clear. Commas, dashes, and parentheses may be used to signal this relationship.

1. The rebec, a medieval stringed instrument played with a bow, has only three strings.

2. Paleontologists—students of fossil remains—explore the earth's history.

3. Most mammals are quadrupeds (four-footed animals).

Often an unfamiliar word in one clause of a sentence will be defined or clarified in the sentence's other clause.

1. The early morning dew had frozen, and everything was covered with a thin coat of rime.

2. Cowards, we use euphemisms when we cannot bear the truth, calling our dead "the dear departed," as if they have just left the room.

Refer once more to the Scientific American passage to answer the question that follows.

Visual recognition involves storing and retrieving memories. Neural activity, triggered by the eye, forms an image in the brain's memory system that constitutes an internal representation of the viewed object. When an object is encountered again, it is matched with its internal representation and thereby recognized. Controversy surrounds the question of whether recognition is a parallel, one-step process or a serial, step-by-step one. Psychologists of the Gestalt school maintain that objects are recognized as wholes in a parallel procedure: the internal representation is matched with the retinal image in a single operation. Other psychologists have proposed that internal representation features are matched serially with an object's features. Although some experiments show that, as an object becomes familiar, its internal representation becomes more holistic and the recognition process correspondingly more parallel, the weight of evidence seems to support the serial hypothesis, at least for objects that are not notably simple and familiar.

[Adapted by ETS from “Eye Movements and Visual Perception” by David Noton and Lawrence Stark, Scientific American, June, 1971]

Which of the following phrases could best be substituted for "becomes more holistic" (line 18) without substantially changing the author's meaning?

(A) increases in complexity
(B) grows less fragmented
(C) diminishes in magnitude
(D) reflects its image
(E) becomes unclear

What words or phrases in the vicinity of “becomes more holistic” give you a clue to the phrase’s meaning? Consider the phrase immediately following, “[becomes] more parallel.” If the recognition process becomes more parallel as an object becomes more familiar, then matching takes place in one step in which all the object's features are simultaneously transformed into a single internal representation. Thus, to say that an object's internal representation becomes more holistic is to say that it becomes more integrated or whole. The correct answer is Choice B.

Look at the words in the immediate vicinity of the word or phrase you are defining. They will often give you a sense of the meaning of the unfamiliar word.
Familiarize Yourself with the Technical Terms Used to Describe a Passage's Organization

Another aspect of understanding the author's point is understanding how the author organizes what he has to say. You have to understand how the author makes his point, figure out whether he begins with his thesis or main idea or works up to it gradually. Often this means observing how the opening sentence or paragraph relates to the passage as a whole.

Here is a technique question based on the last two sentences of the passage from *Sociobiology*. Those lines are repeated here so that you can easily refer to them.

From the specialist's point of view, this comparison may at first seem facile — or worse. But it is out of such deliberate oversimplification that the beginnings of a general theory are made.

Which of the following statements best describes the organization of the author's discussion of the importance of the termite/macaque comparison in the development of a unified science of sociobiology (lines 14-17)?

(A) He provides an example of a comparison and then rejects its implications.
(B) He concedes that current data are insufficient and modifies his initial assertion of their importance.
(C) He acknowledges hypothetical objections to the comparison, but concludes by reaffirming its significance.
(D) He cites critical appraisals of the comparison, but refrains from making an appraisal of his own.
(E) He notes an ambiguity in the comparison, but finally concedes its validity.

Consider the first clause of each answer choice.

In his comment on how things may seem from the specialist's point of view, does the author provide an example of a comparison? No. He refers to a comparison he made earlier. Therefore, you can eliminate Choice A.

Does he concede the insufficiency of current data? Not quite. He states that some people may quarrel with the comparison because it seems facile to them; he does not grant that they are right or that the data are inadequate. Therefore, you can eliminate Choice B.

Does he acknowledge hypothetical objections to the comparison? Definitely. Make a note to come back later to Choice C.

Does he cite critical appraisals of the comparison? Possibly. Again, make a note of Choice D.

Does he note an ambiguity in the comparison? No. He notes an objection to the comparison; he mentions no ambiguities within it. Therefore, you can eliminate Choice E.

Now consider the second clause of Choices C and D. Does the author refrain from making an appraisal of the comparison? No. He calls it a deliberate oversimplification that may bear fruit. Choice D is incorrect. Does the author conclude by reaffirming the significance of the termite/macaque comparison? Clearly he does: his final point is that such oversimplified comparisons can provide the basis for an important general theory. The correct answer is Choice C.

Practice Exercises

Reading Comprehension Exercise A

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

One phase of the business cycle is the expansion phase. This phase is a twofold one, including recovery and prosperity. During the recovery period there is ever-growing expansion of existing facilities, and new facilities for production are created. More businesses are created and older ones expanded. Improvements of various kinds are made. There is an ever-increasing optimism about the future of economic growth. Much capital is (10) invested in machinery or "heavy" industry. More labor is employed. More raw materials are required. As one part of the economy develops, other parts are affected. For example, a great expansion in automobiles results in an expansion of the steel, glass, and rubber industries. Roads are required; thus the cement and machinery industries are stimulated. Demand for labor and materials results in greater prosperity for workers and sup-
pliers of raw materials, including farmers. This increases purchasing power and the volume of goods bought and sold. Thus prosperity is diffused among the various segments of the population. This prosperity period may continue to rise and rise without an apparent end. However, a time comes when this phase reaches a peak and stops spiralling upwards. This is the end of the expansion phase.

1. Which of the following statements is the best example of the optimism mentioned in line 8 of the passage as being part of the expansion phase?
   (A) Public funds are designated for the construction of new highways designed to stimulate tourism.
   (B) Industrial firms allocate monies for the purchase of machine tools.
   (C) The prices of agricultural commodities are increased at the producer level.
   (D) Full employment is achieved at all levels of the economy.
   (E) As technology advances, innovative businesses replace antiquated firms.

2. It can be inferred from the passage that the author believes that
   (A) when consumers lose their confidence in the market, a recession follows
   (B) cyclical ends to business expansion are normal
   (C) luxury goods such as jewelry are unaffected by industrial expansion
   (D) with sound economic policies, prosperity can become a fixed pattern
   (E) the creation of new products is essential for prosperity

3. Which of the following statements would be most likely to begin the paragraph immediately following the passage?
   (A) Union demands may also have an effect on business cycles.
   (B) Some industries are, by their very nature, cyclical, having regular phases of expansion and recession.
   (C) Inflation is a factor that must be taken into consideration in any discussion of the expansion phase.
   (D) The farmer’s role during the expansion phase is of vital importance.
   (E) The other phase of the business cycle is called the recession phase.

The history of mammals dates back at least to Triassic time. Development was retarded, however, until the sudden acceleration of evolitional change that occurred in the oldest Paleocene. This led in Eocene time to increase in average size, larger mental capacity, and special adaptations for different modes of life. In the Oligocene Epoch, there was further improvement, with appearance of some new lines and extinction of others.

(10) Miocene and Pliocene time was marked by culmination of several groups and continued approach toward modern characters. The peak of the career of mammals in variety and average large size was attained in the Miocene.

(15) The adaptation of mammals to almost all possible modes of life parallels that of the reptiles in Mesozoic time, and except for greater intelligence, the mammals do not seem to have done much better than corresponding reptilian forms. The bat is doubtless a better flying animal than the pterosaur, but the dolphin and whale are hardly more fishlike than the ichthyosaur. Many swift-running mammals of the plains, like the horse and the antelope, must excel any of the dinosaurs. The tyrannosaur was a more ponderous and powerful carnivore than any flesh-eating mammal, but the lion or tiger is probably a more efficient and dangerous beast of prey because of a superior brain. The significant point to observe is that different branches of the mammals gradually fitted themselves for all sorts of life, grazing on the plains and able to run swiftly (horse, deer, bison), living in rivers and swamps (hippopotamus, beaver), dwelling in trees (sloth, monkey), digging underground (mole, rodent), feeding on flesh in the forest (tiger) and on the plain (wolf), swimming in the sea (dolphin, whale, seal), and flying in the air (bat). Man is able by mechanical means to conquer the physical world and to adapt himself to almost any set of conditions.

(20) This adaptation produces gradual changes of form and structure. It is biologically characteristic of the youthful, plastic stage of a group. Early in its career, an animal assemblage seems to possess capacity for change, which, as the unit becomes old and fixed, disappears. The generalized types of organisms retain longest the ability to make adjustments when required, and it is from them that new, fecund stocks take origin—certainly not from any specialized end products. So, in the mammals, we witness the birth, plastic spread in many directions, increasing specialization, and in some branches, the extinction, which we have learned from observation of the geologic record of life is a characteristic of the evolution of life.

(25) 4. Which of the following would be the most appropriate title for the passage?
   (A) From Dinosaur to Man
   (B) Adaptation and Extinction
   (C) The Superiority of Mammals
   (D) The Geologic Life Span
   (E) Man, Conqueror of the Physical World

5. It can be inferred from the passage that the chronological order of the geologic periods is
   (A) Paleocene, Miocene, Triassic, Mesozoic
   (B) Paleocene, Triassic, Mesozoic, Miocene
   (C) Miocene, Paleocene, Triassic, Mesozoic
   (D) Mesozoic, Oligocene, Paleocene, Miocene
   (E) Mesozoic, Paleocene, Eocene, Miocene
6. It can be inferred from the passage that the pterosaur
   (A) resembled the bat
   (B) was a Mesozoic mammal
   (C) was a flying reptile
   (D) lived in the sea
   (E) evolved during the Miocene period

7. According to the passage, the greatest number of forms of mammalian life is found in the
   (A) Triassic period
   (B) Eocene period
   (C) Oligocene epoch
   (D) Pliocene period
   (E) Miocene period

8. Which of the following statements, if true, would weaken the statement made by the author in lines 15–19?
   (A) Tryannosaurus has been found to have a larger brain than was previously thought.
   (B) Mammals will become extinct within the next thousand years.
   (C) Forms of flying ichthysosaurs have recently been discovered.
   (D) The tiger has now been proved to be more powerful than the carnivorous reptiles.
   (E) Computers have been developed that can double human mental capacity.

9. It can be inferred from the passage that the evidence the author uses in discussing the life of past time periods
   (A) was developed by Charles Darwin
   (B) was uncovered by the author
   (C) has been negated by more recent evidence
   (D) was never definitely established
   (E) is based on fossil remains

10. With which of the following proverbial expressions about human existence would the author be most likely to agree?
    (A) It’s a cruel world.
    (B) All the world’s a stage.
    (C) The more things change, the more they remain the same.
    (D) Footprints in the sands of time.
    (E) A short life, but a merry one.

For me, scientific knowledge is divided into mathematical sciences, natural sciences or sciences dealing with the natural world (physical and biological sciences), and sciences dealing with mankind (psychology, sociology, all the sciences of cultural achievements, every kind of historical knowledge). Apart from these sciences is philosophy, about which we will talk shortly. In the first place, all this is pure or theoretical knowledge, sought only for the purpose of understanding, in order to fulfill the need to understand that is intrinsic and consubstantial to man. What distinguishes man from animal is that he knows and needs to know. If man did not know that the world existed, and that the world was of a certain kind, that he was in the world and that he himself was of a certain kind, he wouldn’t be man. The technical aspects of applications of knowledge are equally necessary for man and are of the greatest importance, because they also contribute to defining him as man and permit him to pursue a life increasingly more truly human.

But even while enjoying the results of technical progress, he must defend the primacy and autonomy of pure knowledge. Knowledge sought directly for its practical applications will have immediate and foreseeable success, but not the kind of important result whose revolutionary scope is in large part unforeseen, except by the imagination of the Utopians. Let me recall a well-known example. If the Greek mathematicians had not applied themselves to the investigation of conic sections, zealously and without the least suspicion that it might someday be useful, it would not have been possible centuries later to navigate far from shore. The first men to study the nature of electricity could not imagine that their experiments, carried on because of mere intellectual curiosity, would eventually lead to modern electrical technology, without which we can scarcely conceive of contemporary life. Pure knowledge is valuable for its own sake, because the human spirit cannot resign itself to ignorance. But, in addition, it is the foundation for practical results that would not have been reached if this knowledge had not been sought disinterestedly.

11. The author points out that the Greeks who studied conic sections
    (A) invented modern mathematical applications
    (B) were interested in navigation
    (C) were unaware of the value of their studies
    (D) worked with electricity
    (E) were forced to resign themselves to failure

12. The title below that best expresses the ideas of this passage is
    (A) Technical Progress
    (B) A Little Learning Is a Dangerous Thing
    (C) Man’s Distinguishing Characteristics
    (D) Learning for Its Own Sake
    (E) The Difference Between Science and Philosophy

13. It can be inferred from the passage that to the author man’s need to know is chiefly important in that it
    (A) allows the human race to progress technically
    (B) encompasses both the physical and social sciences
    (C) demonstrates human vulnerability
    (D) defines man’s essential humanity
    (E) has increased as our knowledge of the world has grown
When you first saw a piece of African art, it impressed you as a unit; you did not see it as a collection of shapes or forms. This, of course, means that the shapes and volumes within the sculpture itself were coordinated so successfully that the viewer was affected emotionally. It is entirely valid to ask how, from a purely artistic point of view, this unity was achieved. And we must also inquire whether there is a recurrent pattern or rules or a plastic language and vocabulary which is responsible for the powerful communication of emotion which the best African sculpture achieves. If there is such a pattern or rules, are these rules applied consciously or instinctively to obtain so many works of such high artistic quality?

It is obvious from the study of art history that an intense and unified emotional experience, such as the Christian credo of the Byzantine or 12th or 13th century Europe, when expressed in art forms, gave great unity, coherence, and power to art. But such an integrated feeling was only the inspirational element for the artist, only the starting point of the creative act. The expression of this emotion and its realization in the work could be done only with discipline and thorough knowledge of the craft. And the African sculptor was a highly trained workman. He started his apprenticeship with a master when a child, and he learned the tribal styles and the use of tools and the nature of woods so thoroughly that his carving became what Boas calls “motor action.” He carved automatically and instinctively. The African carver followed his rules without thinking of them; indeed, they never seem to have been formulated in words. But such rules existed, for accident and coincidence cannot explain the common plastic language of African sculpture. There is too great a consistency from one work to another. Yet, although the African, with amazing insight into art, used these rules, I am certain that he was not conscious of them. This is the great mystery of such a traditional art: talent, or the ability certain people have, without conscious effort, to follow the rules which later the analyst can discover only from the work of art which has already been created.

14. The author is primarily concerned with
(A) discussing how African sculptors achieved their effects
(B) listing the rules followed in African art
(C) relating African art to the art of 12th or 13th century Europe
(D) integrating emotion and realization
(E) expressing the beauty of African art

15. According to the passage, one of the outstanding features of African sculpture is
(A) its esoteric subject matter
(B) the emotional content of the work
(C) the education or training of the artists
(D) its "foreignness" when compared to Western art
(E) its high degree of conscious control

16. The author uses the phrase “plastic language” in lines 10 and 36 to refer to African art’s
(A) mass reproduction
(B) unrealistic qualities
(C) modernistic orientation
(D) sculptural symbols
(E) repetitive nature

17. The information in the passage suggests that an African carver might best be compared to a
(A) chef following a recipe
(B) fluent speaker of English who is just beginning to study French
(C) batter who hits a homerun in his or her first baseball game
(D) concert pianist performing a well-rehearsed concerto
(E) writer who is grammatically expert but stylistically uncreative

18. Which of the following does the passage imply about art?
(A) Content is more important than form.
(B) There is no room for untrained artists.
(C) Form is more important then content.
(D) Western artists are too concerned with technique.
(E) Great art must be consistent.

19. The author’s presentation of the material includes all of the following EXCEPT
(A) comparison
(B) cause and effect
(C) rhetorical questioning
(D) direct quotation
(E) concrete example

20. Which of the following titles best expresses the content of the passage?
(A) The Apprenticeship of the African Sculptor
(B) The History of African Sculpture
(C) How African Art Achieves Unity
(D) Analyzing African Art
(E) The Unconscious Rules of African Art
Reading Comprehension Exercise B

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

Both plants and animals of many sorts show remarkable changes in form, structure, growth habits, and even mode of reproduction in becoming adapted to different climatic environment, types of (5) food supply, or mode of living. This divergence in response to evolution is commonly expressed by altering the form and function of some part or parts of the organism, the original identity of which is clearly discernible. For example, the creeping foot of the snail is seen in related marine pteropods to be modified into a flapping organ useful for swimming, and is changed into prehensile arms that bear suckorial disks in the squids and other cephalopods. The limbs of various mammals are modified according to several different modes of life – for swift running (cursorial) as in the horse and antelope, for swinging in trees (arboreal) as in the monkeys, for digging ( fossorial) as in the moles and gophers, for flying (volant) as in the bats, for (10) swimming (aquatic) as in the seals, whales and dolphins, and for other adaptations. The structures or organs that show main change in connection with this adaptive divergence are commonly identified readily as homologous, in spite of great alterations. Thus, the finger and wristbones of a bat and whale, for instance, have virtually nothing in common except that they are definitely equivalent elements of the mammalian limb.

1. Which of the following is the most appropriate title for the passage, based on its content?
   (A) Adaptive Divergence
   (B) Evolution
   (C) Unusual Structures
   (D) Changes in Organs
   (E) Our Changing Bodies

2. The author provides information that would answer which of the following questions?
   I. What factors cause change in organisms?
   II. What is the theory of evolution?
   III. How are horses’ legs related to seals’ flippers?
   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III

3. Which of the following words could best be substituted for “homologous” (line 24) without substantially changing the author’s meaning?
   (A) altered
   (B) mammalian
   (C) corresponding
   (D) divergent
   (E) tactile

4. The author’s style can best be described as
   (A) humorous
   (B) objective
   (C) patronizing
   (D) esoteric
   (E) archaic

Plato — who may have understood better what forms the mind of man than do some of our contemporaries who want their children exposed only to “real” people and everyday events — knew what intellectual experiences make for true humanity. He suggested that the future citizens of his ideal republic begin their literary education with the telling of myths, rather than with mere facts or so-called rational teachings. Even Aristotle, master of pure reason, said: “The friend of wisdom is also a friend of myth.”

Modern thinkers who have studied myths and fairy tales from a philosophical or psychological viewpoint arrive at the same conclusion, regardless of their original persuasion. Mircea Eliade, for one, describes these stories as “models for human behavior [that], by that very fact, give meaning and value to life.” Drawing on anthropological parallels, he and others suggest that myths and fairy tales were derived from, or give symbolic expression to, initiation rites or rites of passage — such as metaphoric death of an old, inadequate self in order to be reborn on a higher plane of existence. He feels that this is why these tales meet a strongly felt need and are carriers of such deep meaning.

Other investigators with a depth-psychological orientation emphasize the similarities between the fantastic events in myths and fairy tales and those in adult dreams and daydreams — the fulfillment of wishes, the winning out over all competitors, the destruction of enemies — and conclude that one attraction of this literature is its expression of that which is normally prevented from coming to awareness.

There are, of course, very significant differences between fairy tales and dreams. For example, in dreams more often than not the wish fulfillment is disguised, while in fairy tales much of it is openly expressed. To a considerable degree, dreams are the result of inner pressures which have found no relief, of problems which beset a person to which he knows no solution and to which the dream finds none. The fairy tale does the opposite: it projects the relief of all pressures and not only offers ways to solve problems but promises that a “happy” solution will be found.

We cannot control what goes on in our dreams. Although our inner censorship influences what we may dream, such control occurs on an unconscious level. The fairy tale, on the other hand, is very much the result of common conscious and unconscious content having been
shaped by the conscious mind, not of one particular person, but the consensus of many in regard to what they view as universal human problems, and what they accept as desirable solutions. If all these elements were not present in a fairy tale, it would not be retold by generation after generation. Only if a fairy tale met the conscious and unconscious requirements of many people was it repeatedly retold, and listened to with great interest. No dream of a person could arouse such persistent interest unless it worked into a myth, as was the story of the pharaoh's dream as interpreted by Joseph in the Bible.

5. It can be inferred from the passage that the author's interest in fairy tales centers chiefly on their

(A) literary qualities
(B) historical background
(C) factual accuracy
(D) psychological relevance
(E) ethical weakness

6. According to the passage, fairy tales differ from dreams in which of the following characteristics?

I. The communal nature of their creation
II. Their convention of a happy ending
III. Their enduring general appeal

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

7. It can be inferred from the passage that Mircea Eliade is most likely

(A) a writer of children's literature
(B) a student of physical anthropology
(C) a twentieth-century philosopher
(D) an advocate of practical education
(E) a contemporary of Plato

8. Which of the following best describes the author's attitude toward fairy tales?

(A) Reluctant fascination
(B) Wary skepticism
(C) Scornful disapprobation
(D) Indulgent tolerance
(E) Open approval

9. The author quotes Plato and Aristotle primarily in order to

(A) define the nature of myth
(B) contrast their opposing points of view
(C) support the point that myths are valuable
(D) prove that myths originated in ancient times
(E) give an example of depth psychology

10. The author mentions all of the following as reasons for reading fairy tales EXCEPT

(A) emotional catharsis
(B) behavioral paradigm
(C) uniqueness of experience
(D) sublimation of aggression
(E) symbolic satisfaction

The stability that had marked the Iroquois Confederacy's generally pro-British position was shattered with the overthrow of James II in 1688, the colonial uprisings that followed in Massachusetts, New York, and Maryland, and the commencement of King William's War against Louis XIV of France. The increasing French threat to English hegemony in the interior of North America was signaled by French-led or French-inspired attacks on the Iroquois and on outlying colonial settlements in New York and New England. The high point of the Iroquois response was the spectacular raid of August 5, 1689, in which the Iroquois virtually wiped out the French village of Lachine, just outside Montreal. A counterraid by the French on the English village of Schenectady in March, 1690, instilled an appropriate measure of fear among the English and their Iroquois allies.

The Iroquois position at the end of the war, which was formalized by treaties made during the summer of 1701 with the British and the French, and which was maintained throughout most of the eighteenth century, was one of "aggressive neutrality" between the two competing European powers. Under the new system the Iroquois initiated a peace policy toward the "far Indians," tightened their control over the nearby tribes, and induced both English and French to support their neutrality toward the European powers by appropriate gifts and concessions.

By holding the balance of power in the sparsely settled borderlands between English and French settlements, and by their willingness to use their power against one or the other nation if not appropriately treated, the Iroquois played the game of European power politics with effectiveness. The system broke down, however, after the French became convinced that the Iroquois were compromising the system in favor of the English and launched a full-scale attempt to establish French physical and juridical presence in the Ohio Valley, the heart of the borderlands long claimed by the Iroquois. As a consequence of the ensuing Great War for Empire, in which Iroquois neutrality was dissolved and European influence moved closer, the play-off system lost its efficacy and a system of direct bargaining supplanted it.
11. The author’s primary purpose in this passage is to
(A) denounce the imperialistic policies of the
French
(B) disprove the charges of barbarism made against
the Iroquois
(C) expose the French government’s exploitation of
the Iroquois balance of power
(D) describe and assess the effect of European mili-
tary power on Iroquois policy
(E) show the inability of the Iroquois to engage in
European-style diplomacy

12. It can be inferred from the passage that the author’s
attitude toward the Iroquois leadership can best be
described as one of
(A) suspicion of their motives
(B) respect for their competence
(C) indifference to their fate
(D) dislike of their savagery
(E) pride in their heritage

13. With which of the following statements would the
author be LEAST likely to agree?
(A) The Iroquois were able to respond effectively to
French acts of aggression.
(B) James II’s removal from the throne caused dis-
sension to break out among the colonies.
(C) The French begrudged the British their alleged
high standing among the Iroquois.
(D) Iroquois negotiations involved playing one side
against the other.
(E) The Iroquois ceased to hold the balance of
power early in the eighteenth century.

14. The author attributes such success as the Iroquois
policy of aggressive neutrality had to
(A) the readiness of the Iroquois to fight either side
(B) their ties of loyalty to the British
(C) French physical presence in the borderlands
(D) the confusion of the European forces
(E) European reliance on formal treaties

Of the 197 million square miles making up the surface
of the globe, 71 percent is covered by the intercon-
necting bodies of marine water; the Pacific Ocean alone covers
half the Earth and averages nearly 14,000 feet in depth.
The continents—Eurasia, Africa, North America, South
America, Australia, and Antarctica—are the portions of
the continental masses rising above sea level. The sub-
merged borders of the continental masses are the continental shelves, beyond which lie the deep-sea basins.
The oceans attain their greatest depths not in their
central parts, but in certain elongated furrows, or long
narrow troughs, called deeps. These profound troughs
have a peripheral arrangement, notably around the bor-
ders of the Pacific and Indian oceans. The position of the
deps near the continental masses suggests that the
deps, like the highest mountains, are of recent origin,
since otherwise they would have been filled with waste
from the lands. This suggestion is strengthened by the
fact that the deeps are frequently the sites of world-shak-
ing earthquakes. For example, the “tidal wave” that in
April, 1946, caused widespread destruction along
Pacific coasts resulted from a strong earthquake on the
floor of the Aleutian Deep.
The topography of the ocean floors is none too well
known, since in great areas the available soundings are
hundreds or even thousands of miles apart. However,
the floor of the Atlantic is becoming fairly well known
as a result of special surveys since 1920. A broad, well-
defined ridge—the Mid-Atlantic ridge—runs north and
south between Africa and the two Americas, and numer-
ous other major irregularities diversify the Atlantic floor.
Closely spaced soundings show that many parts of the
oceanic floors are as rugged as mountainous regions of the
continents. Use of the recently perfected method of
echo sounding is rapidly enlarging our knowledge of
submarine topography. During World War II great
stripes were made in mapping submarine surfaces, par-
icularly in many parts of the vast Pacific basin.
The continents stand on the average 2870 feet—
slightly more than half a mile—above sea level. North
America averages 2300 feet; Europe averages only 1150
feet; and Asia, the highest of the larger continental sub-
divisions, averages 3200 feet. The highest point on the
globe, Mount Everest in the Himalayas, is 29,000 feet
above the sea; and as the greatest known depth in the sea
is over 35,000 feet, the maximum relief (that is, the dif-
ference in altitude between the lowest and highest
points) exceeds 64,000 feet, or exceeds 12 miles. The
continental masses and the deep-sea basins are relief fea-
tures of the first order; the deeps, ridges, and volcanic
cones that diversify the sea floor, as well as the plains,
plateaus, and mountains of the continents, are relief fea-
tures of the second order. The lands are unendingly sub-
ject to a complex of activities summarized in the term
erosion, which first sculptures them in great detail and
then tends to reduce them ultimately to sea level. The
modeling of the landscape by weather, running water,
and other agents is apparent to the keenly observant eye
and causes thinking people to speculate on what must be
the final result of the ceaseless wearing down of the
lands. Long before there was a science of geology,
Shakespeare wrote “the revolution of the times makes
mountains level.”

15. Which of the following would be the most appropri-
te title for the passage?
(A) Features of the Earth’s Surface
(B) Marine Topography
(C) The Causes of Earthquakes
(D) Primary Geologic Considerations
(E) How to Prevent Erosion
16. It can be inferred from the passage that the largest ocean is the
   (A) Atlantic
   (B) Pacific
   (C) Indian
   (D) Antarctic
   (E) Arctic

17. The “revolution of the times” as used in the final sentence means
   (A) the passage of years
   (B) the current rebellion
   (C) the science of geology
   (D) the action of the ocean floor
   (E) the overthrow of natural forces

18. According to the passage, the peripheral furrows or deeps are found
   (A) only in the Pacific and Indian oceans
   (B) near earthquakes
   (C) near the shore
   (D) in the center of the ocean
   (E) to be 14,000 feet in depth in the Pacific

19. The passage contains information that would answer which of the following questions?
   I. What is the highest point on North America?
   II. Which continental subdivision is, on the average, 1150 feet above sea level?
   III. How deep is the deepest part of the ocean?
   (A) I only
   (B) II only
   (C) III only
   (D) I and II only
   (E) II and III only

20. From this passage, it can be inferred that earthquakes
   (A) occur only in the peripheral furrows
   (B) occur more frequently in newly formed land or sea formations
   (C) are a prime cause of soil erosion
   (D) will ultimately “make mountains level”
   (E) are caused by the weight of the water

---

**Reading Comprehension Exercise C**

**Directions:** Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

An essay which appeals chiefly to the intellect is Francis Bacon’s “Of Studies.” His careful tripartite division of studies expressed succinctly in aphoristic prose demands the complete attention of the mind of the reader. He considers studies as they should be: for pleasure, for self-improvement, for business. He considers the evils of excess study: laziness, affectation, and preciosity. Bacon divides books into three categories; those to be read in part, those to be read cursorily, and those to be read with care. Studies should include reading, which gives depth; speaking, which adds readiness of thought; and writing, which trains in preciseness. Somewhat mistakenly, the author ascribes certain virtues to individual fields of study: wisdom to history, wit to poetry, subtility to mathematics, and depth to natural philosophy. Bacon’s four-hundred-word essay, studded with Latin phrases and highly compressed in thought, has intellectual appeal indeed.

2. Which of the following words could best be substituted for “aphoristic” (lines 3–4) without substantially changing the author’s meaning?
   (A) abstruse
   (B) pithy
   (C) tripartite
   (D) proverbial
   (E) realistic

3. The passage suggests that the author would be most likely to agree with which of the following statements?
   (A) “Of Studies” belongs in the category of works that demand to be read with care.
   (B) Scholars’ personalities are shaped by the academic discipline in which they are engaged.
   (C) It is an affectation to use foreign words in one’s writing.
   (D) An author can be more persuasive in a long work than in a shorter one.
   (E) Studies should be undertaken without thought of personal gain.

---

Rocks which have solidified directly from molten materials are called igneous rocks. Igneous rocks are commonly referred to as primary rocks because they are the original source of material found in sedimentaries and metamorphics. Igneous rocks compose the greater
part of the earth’s crust, but they are generally covered at the surface by a relatively thin layer of sedimentary or metamorphic rocks. Igneous rocks are distinguished by the following characteristics: (1) they contain no fossils; (2) they have no regular arrangement of layers; and (3) they are nearly always made up of crystals.

Sedimentary rocks are composed largely of minute fragments derived from the disintegration of existing rocks and in some instances from the remains of animals. As sediments are transported, individual fragments are assorted according to size. Distinct layers of such sediments as gravels, sand, and clay build up, as they are deposited by water and occasionally wind. These sediments vary in size with the material and the power of the eroding agent. Sedimentary materials are laid down in layers called strata.

When sediments harden into sedimentary rocks, the names applied to them change to indicate the change in physical state. Thus, small stones and gravel cemented together are known as conglomerates; cemented sand becomes sandstone; and hardened clay becomes shale. In addition to these, other sedimentary rocks such as limestone frequently result from the deposition of dissolved material. The ingredient parts are normally precipitated by organic substances, such as shells of clams or hard skeletons of other marine life.

Both igneous and sedimentary rocks may be changed by pressure, heat, solution, or cementing action. When individual grains from existing rocks tend to deform and interlock, they are called metamorphic rocks. For example, granite, an igneous rock, may be metamorphosed into a gneiss or a schist. Limestone, a sedimentary rock, when subjected to heat and pressure may become marble, a metamorphic rock. Shale under pressure becomes slate.

4. The primary purpose of the passage is to
   (A) differentiate between and characterize igneous and sedimentary rocks
   (B) explain the factors that may cause rocks to change in form
   (C) show how the scientific names of rocks reflect the rocks’ composition
   (D) define and describe several diverse kinds of rocks
   (E) explain why rocks are basic parts of the earth’s structure

5. All of the following are sedimentary rocks EXCEPT
   (A) shale
   (B) gravel
   (C) sand
   (D) limestone
   (E) schist

6. The passage would be most likely to appear in a
   (A) technical article for geologists
   (B) teaching manual accompanying an earth science text
   (C) pamphlet promoting conservation of natural resources
   (D) newspaper feature explaining how oil is found
   (E) nonfiction book explaining where to find the results of sedimentation

7. The relationship between igneous and sedimentary rocks may best be compared to the relationship between
   (A) leaves and compost
   (B) water and land
   (C) DNA and heredity
   (D) nucleus and cell wall
   (E) sand and clay

8. The passage contains information that would answer which of the following questions?
   I. Which elements form igneous rocks?
   II. What produces sufficient pressure to alter a rock?
   III. Why is marble called a metamorphic rock?
   (A) I only
   (B) III only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

9. Which of the following methods is NOT used by the author?
   (A) inclusion of concrete examples
   (B) classification and discussion
   (C) comparison and contrast
   (D) observation and hypothesis
   (E) cause and effect

10. The author’s tone in the passage can best be described as
    (A) meditative
    (B) objective
    (C) ironic
    (D) concerned
    (E) bombastic

Although vocal cords are lacking in cetaceans, phonation is undoubtedly centered in the larynx. The toothed whales or odontocetes (sperm whale and porpoises) are much more vociferous than the whalebone whales, or mysticetes. In this country observers have recorded only occasional sounds from two species of mysticetes (the humpback and right whale). A Russian cetologist reports hearing sounds from at least five species of whalebone whales but gives no details of the circumstances or descriptions of the sounds themselves. Although comparison of the sound-producing apparatus in the two whale groups cannot yet be made, it is interesting to note that the auditory centers of the brain are much more highly developed in the odontocetes than in the mysticetes, in fact, to a degree unsurpassed by any other mammalian group.
11. The passage contains information that would answer which of the following questions?

I. What are odontocetes and mysticetes?
II. In which part of the body do whales produce sounds?
III. In which animals is the auditory center of the brain most developed?

(A) I only  (B) II only  (C) I and II only  
(D) II and III only  (E) I, II, and III

12. The author’s attitude toward the observations reported by the Russian cetologist mentioned in lines 8–11 is best described as one of

(A) admiration  (B) indignation
(C) surprise  (D) skepticism  
(E) pessimism

13. It can be inferred from the passage that

(A) animals with more highly developed auditory apparatuses tend to produce more sounds  
(B) animals without vocal cords tend to produce as much sound as those with vocal cords
(C) highly intelligent animals tend to produce more sound than less intelligent species
(D) the absence of vocal cords has hindered the adaptation of cetaceans
(E) sound is an important means of communication among whales

*Like her white friends Eleanor Roosevelt and Aubrey Williams, Mary Bethune believed in the fundamental commitment of the New Deal to assist the black American’s struggle and in the need for blacks to assume responsibilities to help win that struggle. Unlike those of her white liberal associates, however, Bethune’s ideas had evolved out of a long experience as a “race leader.” Founder of a small black college in Florida, she had become widely known by 1935 as an organizer of black women’s groups and as a civil and political rights activist. Deeply religious, certain of her own capabilities, she held a relatively uncluttered view of what she felt were the New Deal’s and her own people’s obligations to the cause of racial justice. Unafraid to speak her mind to powerful whites, including the President, or to differing black factions, she combined faith in the ultimate willingness of whites to discard their prejudice and bigotry with a strong sense of racial pride and commitment to Negro self-help. More than her liberal white friends, Bethune argued for a strong and direct black voice in initiating and shaping government policy. She pursued this in her conversations with President Roosevelt, in numerous memoranda to Aubrey Williams, and in her administrative work as head of the National Youth Administration’s Office of Negro Affairs.  

With the assistance of Williams, she was successful in having blacks selected to NYA posts at the national, state, and local levels. But she also wanted a black presence throughout the federal government. At the beginning of the war she joined other black leaders in demanding appointments to the Selective Service Board and to the Department of the Army; and she was instrumental in 1941 in securing Earl Dickerson’s membership on the Fair Employment Practices Committee. By 1944, she was still making appeals for black representation in “all public programs, federal, state, and local,” and “in policy-making posts as well as rank and file jobs.” Though recognizing the weakness in the Roosevelt administration’s response to Negro needs,

Mary Bethune remained in essence a black partisan champion of the New Deal during the 1930s and 1940s. Her strong advocacy of administration policies and programs was predicated on a number of factors: her assessment of the low status of black Americans during the Depression; her faith in the willingness of some liberal whites to work for the inclusion of blacks in the government’s reform and recovery measures; her conviction that only massive federal aid could elevate the Negro economically; and her belief that the thirties and forties were producing a more self-aware and self-assured black population. Like a number of her white friends in government, Bethune assumed that the preservation of democracy and black people’s “full integration into the benefits and the responsibilities” of American life were inextricably tied together. She was convinced that, with the help of a friendly government, a militant, aggressive “New Negro” would emerge out of the devastation of depression and war, a “New Negro” who would “save America from itself,” who would lead America toward the full realization of its democratic ideas.

14. The author’s main purpose in this passage is to

(A) criticize Mary Bethune for adhering too closely to New Deal policies  
(B) argue that Mary Bethune was too optimistic in her assessment of race relations
(C) demonstrate Mary Bethune’s influence on black progress during the Roosevelt years
(D) point out the weaknesses of the white liberal approach to black needs
(E) summarize the attainments of blacks under the auspices of Roosevelt’s New Deal

15. It can be inferred from the passage that Aubrey Williams was which of the following?

I. A man with influence in the National Youth Administration
II. A white liberal
III. A man of strong religious convictions

(A) I only  (B) II only  (C) I and II only
(D) II and III only  (E) I, II, and III

*Note that this passage is representative of the time it discusses, and therefore uses the terminology commonly accepted in that period.*
16. The author mentions Earl Dickerson (line 37) primarily in order to
(A) cite an instance of Bethune’s political impact
(B) contrast his career with that of Bethune
(C) introduce the subject of a subsequent paragraph
(D) provide an example of Bethune’s “New Negro”
(E) show that Dickerson was a leader of his fellow blacks

17. It can be inferred from the passage that Bethune believed the “New Negro” would “save America from itself” (lines 65–66) by
(A) joining the army and helping America overthrow its Fascist enemies
(B) helping America accomplish its egalitarian ideals
(C) voting for administration antipoverty programs
(D) electing other blacks to government office
(E) expressing a belief in racial pride

18. The tone of the author’s discussion of Bethune is best described as
(A) depreciatory
(B) sentimental
(C) ironic
(D) objective
(E) recriminatory

19. The author uses all the following techniques in the passage EXCEPT
(A) comparison and contrast
(B) development of an extended analogy
(C) direct quotation
(D) general statement and concrete examples
(E) reiteration of central ideas

20. Which of the following statements about the New Deal does the passage best support?
(A) It was strongly committed to justice for all races.
(B) It encouraged black participation in making policy decisions.
(C) It was actively involved in military strategy.
(D) It was primarily the province of Eleanor Roosevelt.
(E) It shaped programs for economic aid and growth.

**Reading Comprehension Exercise D**

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

“The emancipation of women,” James Joyce told one of his friends, “has caused the greatest revolution in our time in the most important relationship there is—that between men and women.” Other modernists agreed: Virginia Woolf, claiming that in about 1910 “human character changed,” and, illustrating the new balance between the sexes, urged, “Read the ‘Agamemnon,’ and see whether...your sympathies are not almost entirely with Clytemnestra.” D.H. Lawrence wrote, “perhaps the deepest fight for 2000 years and more, has been the fight for women’s independence.”

But if modernist writers considered women’s revolt against men’s domination one of their “greatest” and “deepest” themes, only recently—in perhaps the past 15 years—has literary criticism begun to catch up with it. Not that the images of sexual antagonism that abound in modern literature have gone unremarked; far from it. But what we are able to see in literary works depends on the perspectives we bring to them, and now that women—enough to make a difference—are reforming canons and interpreting literature, the landscapes of literary history and the features of individual books have begun to change.

1. According to the passage, women are changing literary criticism by
(A) noting instances of hostility between men and women
(B) seeing literature from fresh points of view
(C) studying the works of early twentieth-century writers
(D) reviewing books written by feminists
(E) resisting masculine influence

2. The author quotes James Joyce, Virginia Woolf, and D.H. Lawrence primarily in order to show that
(A) these were feminist writers
(B) although well-meaning, they were ineffectual
(C) before the twentieth century, there was little interest in women’s literature
(D) modern literature is dependent on the women’s movement
(E) the interest in feminist issues is not new
3. The author’s attitude toward women’s reformation of literary canons can best be described as one of
(A) ambivalence
(B) antagonism
(C) indifference
(D) endorsement
(E) skepticism

4. Which of the following titles best describes the content of the passage?
(A) Modernistic and the Search for Equality
(B) The Meaning of Literary Works
(C) Toward a New Criticism
(D) Women in Literature, from 1910 On
(E) Transforming Literature

Ocean water plays an indispensable role in supporting life. The great ocean basins hold about 300 million cubic miles of water. From this vast amount, about 80,000 cubic miles of water are sucked into the atmosphere each year by evaporation and returned by precipitation and drainage to the ocean. More than 24,000 cubic miles of rain descend annually upon the continents. This vast amount is required to replenish the lakes and streams, springs and water tables on which all flora and fauna are dependent. Thus, the hydrosphere permits organic existence.

The hydrosphere has strange characteristics because water has properties unlike those of any other liquid. One anomaly is that water upon freezing expands by about 9 percent, whereas most liquids contract on cooling. For this reason, ice floats on water bodies instead of sinking to the bottom. If the ice sank, the hydrosphere would soon be frozen solidly, except for a thin layer of surface melt water during the summer season. Thus, all aquatic life would be destroyed and the interchange of warm and cold currents, which moderates climate, would be notably absent.

Another outstanding characteristic of water is that water has a heat capacity which is the highest of all liquids and solids except ammonia. This characteristic enables the oceans to absorb and store vast quantities of heat, thereby often preventing climatic extremes. In addition, water dissolves more substances than any other liquid. It is this characteristic which helps make oceans a great storehouse for minerals which have been washed down from the continents. In several areas of the world these minerals are being commercially exploited. Solar evaporation of salt is widely practiced, potash is extracted from the Dead Sea, and magnesium is produced from sea water along the American Gulf Coast.

5. The author’s main purpose in this passage is to
(A) describe the properties and uses of water
(B) illustrate the importance of conserving water
(C) explain how water is used in commerce and industry
(D) reveal the extent of the earth’s ocean masses
(E) compare water with other liquids

6. According to the passage, fish can survive in the oceans because
(A) they do not need oxygen
(B) ice floats
(C) evaporation and condensation create a water cycle
(D) there are currents in the oceans
(E) water absorbs heat

7. Which of the following characteristics of water does the author mention in the passage?
(I) Water expands when it is frozen.
(II) Water is a good solvent.
(III) Water can absorb heat.
(A) I only    (B) II only    (C) I and II only
(D) II and III only  (E) I, II, and III

8. According to the passage, the hydrosphere is NOT
(A) responsible for all forms of life
(B) able to modify weather
(C) a source of natural resources
(D) in danger of freezing over
(E) the part of the earth covered by water

9. The author’s tone in the passage can best be described as
(A) dogmatic
(B) dispassionate
(C) speculative
(D) biased
(E) hortatory

10. The author organizes the passage by
(A) comparison and contrast
(B) juxtaposition of true and untrue ideas
(C) general statements followed by examples
(D) hypothesis and proof
(E) definition of key terms

11. Which of the following statements would be most likely to begin the paragraph immediately following the passage?
(A) Water has the ability to erode the land.
(B) Magnesium is widely used in metallurgical processes.
(C) Now let us consider the great land masses.
(D) Another remarkable property of ice is its strength.
(E) Droughts and flooding are two types of disasters associated with water.
The opposite of adaptive divergence is an interesting and fairly common expression of evolution. Whereas related groups of organisms take on widely different characters in becoming adapted to (5) unlike environments in the case of adaptive divergence, we find that unrelated groups of organisms exhibit adaptive convergence when they adopt similar modes of life or become suited for special sorts of environments. For example, invertebrate marine (10) animals living firmly attached to the sea bottom or to some foreign object tend to develop a subcylindrical or conical form. This is illustrated by coral individuals, by many sponges, and even by the diminutive tubes of bryozoans. Adaptive con- (15) vergence in taking this coral-like form is shown by some brachiopods and pelecypods that grew in fixed position. More readily appreciated is the streamlined fitness of most fishes for moving swiftly through water; they have no neck, the con- (20) tour of the body is smoothly curved so as to give minimum resistance, and the chief propelling organ is a powerful tail fin. The fact that some fossil reptiles (ichthyosaurs) and modern mammals (whales, dolphins) are wholly fishlike in form is an expres- (25) sion of adaptive convergence, for these air-breathing reptiles and mammals, which are highly efficient swimmers, are not closely related to fishes. Unrelated or distantly related organisms that develop similarity of form are sometimes desig- (30) nated as homeomorphs (having the same form).

12. The author mentions ichthyosaurs and dolphins (lines 23 and 24) as examples of
   (A) modern mammalian life forms that are aquatic
   (B) species of slightly greater mobility than brachiopods
   (C) air-breathing reptiles closely related to fish
   (D) organisms that have evolved into fishlike forms
   (E) invertebrate and vertebrate marine animals

13. According to the passage, adaptive convergence and adaptive divergence are
   (A) manifestations of evolutionary patterns
   (B) hypotheses unsupported by biological phenomena
   (C) ways in which plants and animals adjust to a common environment
   (D) demonstrated by brachiopods and pelecypods
   (E) compensatory adjustments made in response to unlike environments

14. It can be inferred that in the paragraph immediately preceding this passage the author discussed
   (A) marine intelligence
   (B) adaptive divergence
   (C) air-breathing reptiles
   (D) environmental impacts
   (E) organisms with similar forms

15. The passage would be most likely to appear in
   (A) a journal of biblical studies
   (B) an introductory college textbook on statistics
   (C) the annual report of the American Statistical Association
   (D) a newspaper review of a recent professional festivity
   (E) the current bulletin of the census bureau

16. According to the passage, taxation in Roman times was based on
   (A) mobility
   (B) wealth
   (C) population
   (D) census takers
   (E) economic predictions
17. The author refers to the Romans primarily in order to
(A) prove the superiority of modern sampling methods to ancient ones
(B) provide a historical framework for the passage
(C) relate an unfamiliar concept to a familiar one
(D) show that statistical forecasts have not significantly deteriorated
(E) cite an authority to support the thesis of the passage

18. The author refers to the Mets primarily in order to
(A) show that sports do not depend on statistics
(B) provide an example of an unreliable statistic
(C) contrast verifiable and unverifiable methods of record keeping
(D) indicate the changes in attitudes from Roman days to the present
(E) illustrate the failure of statistical predictions

19. On the basis of the passage, it can be inferred that the author would agree with which of the following statements?
(A) Computers have significantly improved the application of statistics in business.
(B) Statistics is not, at the present time, a science.
(C) It is useless to try to predict the economy.
(D) Most mathematical systems are inexact.
(E) Statisticians should devote themselves to the study of probability.

20. The author’s tone can best be described as
(A) jocular
(B) scornful
(C) pessimistic
(D) objective
(E) humanistic

---

**Reading Comprehension Exercise E**

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

Observe the dilemma of the fungus: it is a plant, but it possesses no chlorophyll. While all other plants put the sun’s energy to work for them combining the nutrients of ground and air into the body structure, the chlorophyllless fungus must look elsewhere for an energy supply. It finds it in those other plants which, having received their energy free from the sun, relinquish it at some point in their cycle either to animals (like us humans) or to fungi.

In this search for energy the fungus has become the earth’s major source of rot and decay. Whenever you see mold forming on a piece of bread, or a pile of leaves turning to compost, or a blown-down tree becoming pulp on the ground, you are watching a fungus eating. Without fungus action the earth would be piled high with the dead plant life of past centuries. In fact, certain plants which contain resins that are toxic to fungi will last indefinitely; specimens of the redwood, for instance, can still be found resting on the forest floor centuries after having been blown down.

1. Which of the following words best describes the fungus as depicted in the passage?
   (A) Unevolved
   (B) Sporadic
   (C) Enigmatic
   (D) Parasitic
   (E) Toxic

2. The passage states all the following about fungi EXCEPT:
   (A) They are responsible for the decomposition of much plant life.
   (B) They cannot live completely apart from other plants.
   (C) They are vastly different from other plants.
   (D) They are poisonous to resin-producing plants.
   (E) They cannot produce their own store of energy.

3. The author’s statement that “you are watching a fungus eating” (lines 15–16) is best described as
   (A) figurative
   (B) ironical
   (C) parenthetical
   (D) erroneous
   (E) contradictory

4. The author is primarily concerned with
   (A) warning people of the dangers of fungi
   (B) writing a humorous essay on fungi
   (C) relating how most plants use solar energy
   (D) describing the actions of fungi
   (E) explaining the long life of some redwoods
The establishment of the Third Reich influenced events in American history by starting a chain of events which culminated in war between Germany and the United States. The complete destruction of democracy, the persecution of Jews, the war on religion, the cruelty and barbarism of the Nazis, and especially, the plans of Germany and her allies, Italy and Japan, for world conquest caused great indignation in this country and brought on fear of another world war. While speaking out against Hitler's atrocities, the American people generally favored isolationist policies and neutrality. The Neutrality Acts of 1935 and 1936 prohibited trade with any belligerents or loans to them. In 1937 the President was empowered to declare an arms embargo in wars between nations at his discretion.

American opinion began to change somewhat after President Roosevelt's "quarantine the aggressor" speech at Chicago (1937), in which he severely criticized Hitler's policies. Germany's seizure of Austria and the Munich Pact for the partition of Czechoslovakia (1938) also aroused the American people. The conquest of Czechoslovakia in March 1939 was another rude awakening to the menace of the Third Reich. In August 1939: came the shock of the Nazi-Soviet Pact and in September the attack on Poland and the outbreak of European war. The United States attempted to maintain neutrality in spite of sympathy for the democracies arrayed against the Third Reich. The Neutrality Act of 1939 repealed the arms embargo and permitted "cash and carry" exports of arms to belligerent nations. A strong national defense program was begun. A draft act was passed (1940) to strengthen the military services. A Lend-Lease Act (1941) authorized the President to sell, exchange, or lend materials to any country deemed necessary by him for the defense of the United States. Help was given to Britain by exchanging certain overage destroyers for the right to establish American bases in British territory in the Western Hemisphere. In August 1941 President Roosevelt and Prime Minister Churchill met and issued the Atlantic Charter, which proclaimed the kind of a world that should be established after the war. In December 1941 Japan launched an unprovoked attack on the United States at Pearl Harbor. Immediately thereafter, Germany declared war on the United States.

5. The author is primarily concerned with
(A) evaluating various legislative efforts to strengthen national defense
(B) summarizing the events that led up to America's involvement in the war
(C) criticizing the atrocities perpetrated by the Third Reich
(D) explaining a basic distinction between American and German policy
(E) describing the social and psychological effects of war

6. During the years 1933–36, American foreign policy may best be described as being one of
(A) overt belligerence
(B) deliberate uninvolve ment
(C) moral indignation
(D) veiled contempt
(E) reluctant admiration

7. According to the passage, the United States, while maintaining neutrality, showed its sympathy for the democracies by which of the following actions?
I. It came to the defense of Poland.
II. It conscripted recruits for the armed forces.
III. It supplied weapons to friendly countries.
(A) I only    (B) III only    (C) I and II only
(D) II and III only    (E) I, II, and III

8. According to the passage, all of the following events occurred in 1939 EXCEPT
(A) the invasion of Poland
(B) the invasion of Czechoslovakia
(C) the annexation of Austria
(D) passage of the Neutrality Act
(E) the beginning of the war in Europe

9. With which of the following statements would the author of the passage be most likely to agree?
(A) American neutrality during the 1930s was a natural consequence of the course of world events.
(B) Every nation should be free to determine its own internal policy without interference.
(C) The United States, through its aggressive actions, invited an attack on its territory.
(D) Americans were slow to realize the full danger posed by Nazi Germany.
(E) President Roosevelt showed undue sympathy for Britain.

10. Which of the following best describes the organization of the passage?
(A) The author presents a thesis and then lists events that support that thesis in chronological order.
(B) The author presents a thesis and then cites examples that support the thesis as well as evidence that tends to negate it.
(C) The author summarizes a historical study and then discusses an aspect of the study in detail.
(D) The author describes historical events and then gives a personal interpretation of them.
(E) The author cites noted authorities as a means of supporting his or her own opinion.
Not a few of Jane Austen’s personal acquaintances might have echoed Sir Samuel Egerton Brydges, who noticed that “she was fair and handsome, slight and elegant, but with cheeks a little too full,” while “never suspect[ing] she was an authoress.” For this novelist whose personal obscurity was more complete than that of any other famous writer was always quick to insist either on complete anonymity or on the propriety of her limited craft, her delight in delineating just “3 or 4 Families in a Country Village.” With her self-deprecatory remarks about her inability to join “strong manly, spirited sketches, full of Variety and Glow” with her “little bit (two Inches wide) of Ivory,” Jane Austen perpetuated the belief among her friends that her art was just an accomplishment “by a lady,” if anything “rather too light and bright and sparkling.” In this respect she resembled one of her favorite contemporaries, Mary Brunton, who would rather have “glid[ed] through the world unknown” than been “suspected of literary airs—to be shunned, as literary women are, by the more pret-

And and, as Gaston Bachelard explains, the miniature “allows us to be world conscious at slight risk.” While the creators of satirically conceiv ed diminutive landscapes seem to see everything as small because they are themselves so grand, Austen’s analogy for her art—her “little bit (two Inches wide) of Ivory”—suggests a fragility that reminds us of the risk and instability outside the fictional space. Besides seeing her art metaphorically, as her critics would too, in relation to female arts severely devalued until quite recently (for painting on ivory was traditionally a “ladylike” occupation), Austen attempted through self-imposed novelistic limitations to define a secure place, even as she seemed to admit the impossibility of actually inhabiting such a small space with any degree of comfort. And always, for Austen, it is women—because they are too vulnerable in the world at large—who must acquiesce in their own confinement, no matter how stifling it may be.

11. The passage focuses primarily on
(A) Jane Austen’s place in English literature
(B) the literary denigration of female novelists
(C) the implications of Austen’s attitude to her work
(D) critical evaluations of the novels of Jane Austen
(E) social rejection of professional women in the 18th and 19th centuries

12. According to the passage, Austen concentrated on a limited range of subjects because
(A) she had a limited degree of experience of fiction
(B) her imagination was incapable of creating other worlds
(C) women in her time were prohibited from writing about significant topics
(D) she wanted to create a safe niche for the exercise of her talents
(E) she did not wish to be acknowledged as an author

13. Which of the following best expresses the relationship of the first sentence to the rest of the passage?
(A) Specific instance followed by generalizations
(B) Assertion followed by analysis
(C) Objective statement followed by personal opinion
(D) Quotation from an authority followed by conflicting views
(E) Challenge followed by debate

The atmosphere is a mixture of several gases. There are about ten chemical elements which remain permanently in gaseous form in the atmosphere under all natural conditions. Of these permanent gases, oxygen makes up about 21 percent and nitrogen about 78 percent. Several other gases, such as argon, carbon dioxide, hydrogen, neon, krypton, and xenon, comprise the remaining 1 percent of the volume of dry air. The amount of water vapor, and its variations in amount and distribution, are of extraordinary importance in weather changes. Atmospheric gases hold in suspension great quantities of dust, pollen, smoke, and other impurities which are always present in considerable, but variable amounts.

The atmosphere has no definite upper limits but gradually thins until it becomes imperceptible. Until recently it was assumed that the air above the first few miles gradually grew thinner and colder at a constant rate. It was also assumed that upper air had little influence on weather changes. Recent studies of the upper atmosphere, currently being conducted by earth satellites and missile probing, have shown these assumptions to be incorrect. The atmosphere has three well-defined strata.

The layer of the air next to the earth, which extends upward for about 10 miles, is known as the troposphere. On the whole, it makes up about 75 percent of all the weight of the atmosphere. It is the warmest part of the atmosphere because most of the solar radiation is absorbed by the earth’s surface, which warms the air immediately surrounding it. A steady decrease of temperature with increasing elevation is a most striking characteristic. The upper layers are colder because of their greater distance from the earth’s surface and rapid radiation of heat into space. The temperatures within the
troposphere decrease about 3.5 degrees per 1.000-foot increase in altitude. Within the troposphere, winds and air currents distribute heat and moisture. Strong winds, called jet streams, are located at the upper levels of the troposphere. These jet streams are both complex and widespread in occurrence. They normally show a wave-shaped pattern and move from west to east at velocities of 150 mph, but velocities as high as 400 mph have been noted. The influences of changing locations and strengths of jet streams upon weather conditions and patterns are no doubt considerable. Current intensive research may eventually reveal their true significance.

Above the troposphere to a height of about 50 miles is a zone called the stratosphere. The stratosphere is separated from the troposphere by a zone of uniform temperatures called the tropopause. Within the lower portions of the stratosphere is a layer of ozone gases which filters out most of the ultraviolet rays from the sun. The ozone layer varies with air pressure. If this zone were not there, the full blast of the sun’s ultraviolet light would burn our skins, blind our eyes, and eventually result in our destruction. Within the stratosphere, the temperature and atmospheric composition are relatively uniform.

The layer upward of about 50 miles is the most fascinating but the least known of these three strata. It is called the ionosphere because it consists of electrically charged particles called ions, thrown from the sun. The northern lights (aurora borealis) originate within this highly charged portion of the atmosphere. Its effect upon weather conditions, if any, is as yet unknown.

14. Which of the following titles best summarizes the content of the passage?
   (A) New Methods for Calculating the Composition of the Atmosphere
   (B) New Evidence Concerning the Stratification of the Atmosphere
   (C) The Atmosphere: Its Nature and Importance to Our Weather
   (D) The Underlying Causes of Atmospheric Turbulence
   (E) Stratosphere, Troposphere, Ionosphere: Three Similar Zones

15. The passage supplies information that would answer which of the following questions?
   I. How do the troposphere and the stratosphere differ?
   II. How does the ionosphere affect the weather?
   III. How do earth satellites study the atmosphere?
   (A) I only  (B) III only  (C) I and II only
   (D) I and III only  (E) I, II, and III

16. According to the passage, life as we know it exists on the earth because the atmosphere
   (A) contains a layer of ozone gases
   (B) contains electrically charged particles
   (C) is warmest at the bottom
   (D) carries the ultraviolet rays of the sun
   (E) provides the changes in weather

17. It can be inferred from the passage that a jet plane will usually have its best average rate of speed on its run from
   (A) New York to San Francisco
   (B) Los Angeles to New York
   (C) Boston to Miami
   (D) Bermuda to New York
   (E) London to Washington, D.C.

18. It can be inferred from the passage that at the top of Jungfraujoch, which is 12,000 feet above the town of Interlaken in Switzerland, the temperature is usually
   (A) below freezing
   (B) about 42 degrees colder than on the ground
   (C) warmer than in Interlaken
   (D) affected by the ionosphere
   (E) about 75 degrees colder than in Interlaken

19. The passage states that the troposphere is the warmest part of the atmosphere because it
   (A) is closest to the sun
   (B) contains electrically charged particles
   (C) radiates heat into space
   (D) has winds and air current that distribute the heat
   (E) is warmed by the earth’s heat

20. According to the passage, the atmosphere consists of all of the following EXCEPT
   (A) 21 percent oxygen
   (B) a definite amount of water vapor
   (C) ten permanent elements
   (D) less than 1 percent of xenon
   (E) considerable waste products
Answer Key

Reading Comprehension Exercise A

Reading Comprehension Exercise B

Reading Comprehension Exercise C

Reading Comprehension Exercise D

Reading Comprehension Exercise E

Your task in answering antonym questions is straightforward: you are given a word and must choose, from the five choices that follow it, the best antonym (opposite). Antonym questions range from relatively easy ones at the beginning of a set to extremely difficult ones at the set’s end. Do not expect to recognize every word—not even professional writers would be familiar with all of them.

On the written GRE, the eleven antonym questions always make up the last group of questions in a verbal section. Do not, however, answer them last. Right after you have finished answering the analogy questions, skip to the antonyms and go through them quickly. Answer them all, but do not linger too long on any given one. The time you save by answering the antonym questions quickly will help you when you get to the time-consuming reading comprehension questions.

**Testing Tactics**

**Tactic 1**

**Think of a Context for the Capitalized Word**

Take a quick look at the word in capital letters. If you don’t recollect its meaning right away, try to think of a phrase or sentence in which you have heard it used. The context may help you come up with the word’s meaning. For example:

| MAGNIFY: (A) forgive (B) comprehend (C) extract (D) diminish (E) electrify |

The term “magnifying glass” should immediately come to mind. A magnifying glass enlarges things. The opposite of enlarging something is to make it smaller or diminish it. The correct answer is Choice D.

Now apply this tactic to a question from a recent GRE.

| ABERRANT: (A) attractive (B) predictive (C) blissful (D) normal (E) precise |

What phrase comes to your mind? “Aberrant behavior.” “Aberrant data.” In both cases you should have an impression of something deviating from what is expected, an impression of something abnormal, in fact. Aberrant behavior strays from the norm; aberrant, thus, is an antonym for normal. The correct answer is Choice D.

**Tactic 2**

**Before You Look at the Choices, Think Of Antonyms for the Capitalized Word**

Suppose your word is industrious, hard-working. What opposites come to your mind? You might come up with lazy, idle, slothful, inactive—all words that mean lacking industry and energy.

Now look at the choices:

| INDUSTRIOUS: (A) stupid (B) harsh (C) indolent (D) complex (E) inexpensive |
Lazy, idle, and slothful all are synonyms for indolent. Your correct answer is Choice C.

This tactic will help you even when you have to deal with unfamiliar words among your answer choices. Suppose you do not know the meaning of the word *indolent*. You know that one antonym for your key word *industrious* is lazy. Therefore, you know that you are looking for a word that means the same as lazy. At this point you can go through the answer choices eliminating answers that don’t work. Does stupid mean the same as lazy? No, smart people can be lazy, too. Does harsh mean the same as lazy? No, harsh means cruel or rough. Does indolent mean the same as lazy? You don’t know; you should check the other choices and then come back. Does complex mean the same as lazy? No, complex means complicated or intricate. Does inexpensive mean the same as lazy? No. So what is left? *Indolent*. Once again, your correct answer is Choice C.

Apply this tactic to a question from a recent GRE:

GARRULITY: (A) servility (B) forbearance (C) peacefulness (D) constancy (E) taciturnity

Garrulity means talkativeness. In thinking of possible antonyms for garrulity, you may have come up with words like untalkativeness, curtness, and reticence, words signifying briefness of speech. Untalkativeness, curtness, and reticence are all synonyms for taciturnity. The correct answer is Choice E.

**Tactic 3**

Read All the Choices Before You Decide Which Is Best

On the GRE you are working under time pressure. You may be tempted to mark down the first answer that seems right and ignore the other choices given. Don’t do it. Consider each answer. Only in this way can you be sure to distinguish between two possible answers and come up with the best answer for the question.

Words have shades of meaning. In matching a word with its opposite, you must pay attention to these shades of meaning. Try this example from an actual GRE test to see how this rule works.

TRACTABLE: (A) distraught (B) irritating (C) ruthless (D) headstrong (E) lazy

Suppose you have only a vague sense of the meaning of tractable. You associate it with such vaguely positive terms as gentle, docile, amiable. For this reason, you stop short when you come to Choice C. Reasoning that someone gentle and docile is not ruthless or merciless, you look no further and mark down Choice C.

Choice C, however, is incorrect. True, a tractable person is docile and easily guided, even mild. Someone who lacks docility, however, is not necessarily ruthless. Such a person is difficult to guide, obstinate, in fact headstrong. The correct answer is Choice D.

Now try a second example from a recent GRE.

PERFIDY: (A) thoroughness (B) generosity (C) gratitude (D) tact (E) loyalty

Perfidy means treachery; someone perfidious betrays those who have faith in him. Choice C has an immediate appeal: someone perfidious is ungrateful for the trust shown him; in committing perfidy, he lacks gratitude. However, strictly speaking, in committing perfidy, the traitor’s crime is not thanklessness but disloyalty. The best antonym for perfidy is Choice E, loyalty.

**Tactic 4**

Look at the Answer Choices to Determine the Main Word’s Part Of Speech

Look at the capitalized word. What part of speech is it? Words often exist in several forms. You may think of run as a verb, for example, but in the phrases “a run in her stocking” and “hit a home run” run is a noun.

The GRE plays on this confusion in testing your verbal ability. When you look at a particular capitalized word, you may not know whether you are dealing with a noun, a verb, or an adjective. Harbor, for example, is a very common noun; in “to harbor a fugitive,” to give refuge to a runaway, it is a much less common verb.

If you suspect that a capitalized word may have more than one part of speech, don’t worry. Just look at the first couple of answer choices and see what part of speech they are. That part of speech will be the capitalized word’s part of speech.

In GRE Antonym Questions, all the answer choices have the same part of speech. You can always tell what that part of speech is by a quick glance at the first answer choice or two.
See how this tactic works in answering a relatively simple question from a published GRE.

**TACTIC 5**

**Consider Secondary Meanings of the Capitalized Word as Well as Its Primary Meaning**

If none of the answer choices seems right to you, take another look at the capitalized word. It may have more than one meaning. The GRE often constructs questions that make use of secondary, less well-known meanings of deceptively familiar words. Take, for example, this typical GRE question.

**LIST:** (A) be upside down (B) be upright (C) slide backward (D) sway to and fro (E) lie flat

List here has nothing to do with making lists or enumerating. It has to do with moving. When it lists to starboard, a ship simply leans to one side or tilts. The best antonym for this meaning of list is Choice B, be upright.

Try a second, more difficult GRE question involving a less familiar meaning of a familiar word.

**TACTIC 6**

**Break Down Unfamiliar Words into Recognizable Parts**

When you come upon a totally unfamiliar word, don’t give up. Break it down and see if you recognize any of its parts. Pay particular attention to prefixes—word parts added to the beginning of a word—and to roots, the building blocks of the language.

Look once more at the following question from the GRE.

**ABERRANT:** (A) attractive (B) predictive (C) blissful (D) normal (E) precise

Suppose you had never seen aberrant before. You have seen dozens of other words beginning with ab-: absent, abnormal, abduct. Take abduct. What do you do when you abduct someone? You Kidnap him, or steal him away. Ab- means away.

What about the root, err? To err is to be wrong or to wander, as in wandering from the right path. Thus, aberrant means wandering away, straying from what is right or normal, and its opposite is of course Choice D, normal.
Now try a second example from a recently published GRE.

SYNONYMOUS:
(A) off-key
(B) out-of-shape
(C) without pity
(D) out-of-phase
(E) without difficulty

Syn- means together. Chron- means time. Something synchronous must have to do with occurring together in time, like the synchronous movements of swimmers keeping time with one another. The antonym for synchronous thus is Choice D, out-of-phase.

The word part approach can help you interpret new words you encounter. However, apply it cautiously. In many words the roots, prefixes, and suffixes have lost their original meanings. In others, the same root occurs, but with markedly differing effects. It would not do to call a philanthropist a philanderer, for instance, though both words contain the root for love.

If you find the word part approach appealing, try to spend some time working with the Basic Word Parts List in Chapter 7. Remember, however, there is no substitute for learning the exact meaning of a word as it is used today.

In Eliminating Answer Choices, Test Words for Their Positive or Negative Connotations

When you are dealing with a partially unfamiliar word, a word that you cannot define or use in a sentence but that you know you have seen previously, try to remember in what sort of context you have seen that word. Did it have positive connotations, or did it have a negative feel? If you are certain the capitalized word has positive connotations, then, since you are looking for its antonym, you know the correct answer must have negative ones. Thus, you can eliminate any answer choices that have positive connotations and guess among the answer choices that are negative in tone.

See how this approach applies in the following example from a recent GRE.

CHARY: (A) brisk  (B) bold  (C) untidy  (D) ungenerous  (E) unfriendly

You cannot define chary. You would hesitate to use it in a sentence of your own. And yet, you are sure the word has a slightly negative feel to it. A person is chary about something. You have a sense of someone holding back.

Look at the answer choices. Which of them have negative connotations? Untidy? Ungenerous? Unfriendly? Eliminate all three. You have narrowed down your choices to brisk and bold, both words that have a positive feel. You are in an excellent position to guess. As it turns out, chary means hesitant or reluctant to proceed. Its opposite is Choice B, bold.

Watch Out for Errors Caused by Eye-Catchers

When you look at answer choices, do you find that certain ones seem to leap right off the page? These words are eye-catchers. They look good—but be sure to take a second look.

Try these next GRE antonym questions to see just how an eye-catcher works. First, an easy one.

GAUCHENESS: (A) probity  (B) sophistry  (C) acumen  (D) polish  (E) vigor

What comes to mind when you think of synonyms for gauche (socially awkward)? Unsophisticated? This common association of gaucheness with lack of sophistication can hurt you here, for it may cause your eye to be attracted by Choice B, sophistry, the eye-catcher here.

Sophistry (superficially plausible, but actually specious reasoning) is not a synonym for sophistication or worldliness. Both words share a common root, however, and resemble one another enough that someone unsure of
the correct answer might select sophistry as a sort of “educated guess.” The only way to avoid this error is to read all the answer choices carefully and note that sophistication’s true synonym here is polish.

Here’s a more difficult GRE example. See if you can spot the eye-catcher.

**DISEMBLE: (A) act conventionally (B) put together (C) appear promptly (D) behave honestly (E) obtain readily**

Only 10 percent of the test-takers who attempted this question (the last in its set) answered it correctly. Why? Once more an early answer choice has been set up to tempt the hasty reader. In this case, the resemblance of the unfamiliar word dissemble to the familiar word disas-

semble sets up the confusion. Hurried, the reader glances at dissemble and thinks disassemble. What’s the opposite of disassemble? Why, to assemble or put together — that’s Choice B! Choice B seems like a quick and easy answer. Too quick and easy — it’s wrong.

To dissemble is to present a false appearance, to try to seem what one is not, like the child accused of stealing cookies who tries to appear innocent even though she’s got cookie crumbs on her face. A dissembler lies or dissimulates: she does not behave honestly. The opposite of dissemble is Choice D.

A word of warning: when you reach the final antonyms of a set, be wary. Suspect questions whose answers seem too easy. There are no easy answers when you get to the last questions of a set.

## Practice Exercises

### Antonym Exercise A

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

1. **MOUHFUL:** (A) informal (B) sympathetic (C) private (D) appropriate (E) joyous

2. **SCAD:** (A) parsimony (B) allocation (C) death (D) restraint (E) provision

3. **GRANDIOSE:** (A) docile (B) unlikely to occur (C) simple and unimposing (D) light in weight (E) uncommunicative

4. **ENTRENCH:** (A) defy (B) outst (C) extinguish (D) sunder (E) intercede

5. **LACKLUSTER:** (A) superficial (B) courteous (C) vibrant (D) complex (E) abundant

6. **CENSURE:** (A) augment (B) eradicate (C) enthral (D) commend (E) reform

7. **TRANSIENCE:** (A) slowness (B) permanence (C) lack of caution (D) desire for perfection (E) original nature

8. **DESICCATE:** (A) lengthen (B) hallow (C) exonerate (D) saturate (E) anesthetize

9. **PROTRUSION:** (A) deep recess (B) strong dislike (C) growing scarcity (D) illusion (E) chaos

10. **ENTICE:** (A) repel (B) authorize (C) baffle (D) misplace (E) diminish

11. **ORTHODOXY:** (A) renown (B) trepidation (C) unconventionality (D) inquisitiveness (E) remoteness

12. **SUMPTUOUS:** (A) dank (B) frequent (C) partial (D) restrained (E) open

13. **DISSOLUTION:** (A) retribution (B) compliance (C) futility (D) persuasion (E) establishment

14. **IRK:** (A) pry (B) tinge (C) beguile (D) convince (E) soothe

15. **LIMBER:** (A) sturdy (B) orderly (C) durable (D) stiff (E) gloomy

16. **OBLIQUITY:** (A) praise (B) straightforwardness (C) conformity (D) self-righteousness (E) depreciation

17. **SLUR:** (A) sensitivity (B) sacrifice (C) understatement (D) challenge (E) commendation

18. **APOTHEOSIS:** (A) departure from tradition (B) impatience with stupidity (C) demotion from glory (D) surrender to impulse (E) cause for grief
13. STILTED: (A) informal          (B) verbose (C) secretive         (D) senseless (E) tentative
               (B) graceful (C) restrained (D) inaccurate (E) unnoticed
14. UNGAINLY: (A) slender            (B) abstemious (C) pragmatic    (D) benevolent (E) grave
15. QUIXOTIC: (A) slow               (B) abstemious (C) pragmatic      (D) benevolent (E) grave
16. DISPARITY: (A) timidity          (B) complacency (C) bigotry       (D) likeness (E) influence
17. CRITICAL: (A) unimportant        (B) uncertain (C) silent         (D) coherent (E) destructive
18. SOBRIETY: (A) influence          (B) nonchallenge (C) holiness      (D) civility (E) mirth
19. RESTIVENESS: (A) completeness     (B) conviction (C) concern       (D) docility (E) petulance
20. HALLOW: (A) keep silence         (B) prove incorrect (C) accuse openly (D) desecrate (E) instigate

Antonym Exercise C

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

1. HARBINGER: (A) ascetic (B) miser (C) counselor (D) follower (E) braggart
2. SPUR: (A) embitter (B) discourage (C) impress (D) mislead (E) ignore
3. DISJOINTED: (A) responsible (B) connected (C) implied (D) useful (E) imprecise
4. MEALYMOUTHED: (A) hungry (B) indefinite (C) tightlipped (D) sincere (E) apathetic
5. PREVARICATE: (A) postulate (B) emphasize (C) support in theory (D) consider thoughtfully (E) state truthfully
6. LUMINARY: (A) impostor (B) nonentity (C) pilgrim (D) braggart (E) mutineer

Antonym Exercise B

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

1. HEDGE:
   (A) act on impulse          (B) refuse to represent (C) state without qualification (D) make a foolish comment (E) establish a connection
2. ABROGATE:
   (A) transgress          (B) signify (C) alleviate (D) question (E) ratify
3. INDUSTRY:
   (A) cleanliness          (B) pragmatism (C) sloth (D) promptness (E) basement
4. SPUNK:
   (A) success          (B) timidity (C) growing awareness (D) lack of intelligence (E) loss of prestige
5. SAGE:
   (A) zealot          (B) miser (C) braggart (D) fool (E) tyrant
6. ADMONITION:
   (A) premonition          (B) hallucination (C) escape (D) commendation (E) trepidation
7. CHARY:
   (A) lugubrious          (B) brash (C) indifferent (D) graceful (E) scornful
8. STUPEFY:
   (A) lie          (B) bend (C) enliven (D) talk nonsense (E) consider thoughtfully
9. COGENT:
   (A) contemplative          (B) unpersuasive (C) expository (D) stable (E) inconceivable
10. FICKLE:
    (A) spotless          (B) industrious (C) welcome (D) urgent (E) loyal
11. COMPLY:
    (A) simplify          (B) strive (C) rebel (D) unite (E) appreciate
12. CREDIT:
    (A) believe false          (B) treat as equal (C) make more difficult (D) underemphasize (E) forget
19. ENERVATE:
    (A) narrate          (B) enrage (C) accomplish (D) invigorate (E) acquiesce
20. PARSIMONIOUS:
    (A) appropriate          (B) generous (C) complete (D) radiant (E) ongoing
7. TESTY: (A) erroneous (B) uncommunicative (C) even-tempered (D) quick-witted (E) industrious
8. NEFARIOUS: (A) lackadaisical (B) eccentric (C) exemplary (D) corrigeble (E) hypocritical
9. BEGRUDGE: (A) mourn silently (B) grant freely (C) hunger for (D) advance rapidly (E) fight back
10. BILK: (A) reduce in size (B) make famous (C) roughen (D) renovate (E) pay in full
11. COMPOSE: (A) disturb (B) reveal (C) strengthen (D) isolate (E) prevent
12. OCCLUDE: (A) determine (B) transcend (C) surround (D) open (E) regulate
13. AMBIGUITY: (A) extent (B) success (C) clarity (D) normality (E) expression
14. AMELIORATION: (A) prevention (B) aggravation (C) distraction (D) indifference (E) dissuasion
15. CAVIL: (A) discern (B) disclose (C) introduce (D) flatter (E) commend
16. SKEPTICAL: (A) theoretical (B) indifferent (C) ready to believe (D) eager for change (E) lost in thought
17. FLEDGLING: (A) experienced person (B) shy onlooker (C) social outcast (D) fugitive (E) adversary
18. CRASS: (A) boastful (B) temporary (C) cheerful (D) refined (E) extensive
19. RECALCITRANT: (A) tractable (B) erratic (C) intuitive (D) vigorous (E) rambling
20. PROTRACT: (A) defy (B) supplement (C) postpone (D) shorten (E) design

Antonym Exercise D

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

1. PRIM: (A) rare (B) careful (C) unnecessary (D) improper (E) decisive
2. REPUGNANCE: (A) attraction (B) lethargy (C) blame (D) virtue (E) awe
3. NETTLE: (A) disentangle (B) mollify (C) magnify (D) muffle (E) recompense
4. REPLETE: (A) unwrinkled (B) devoid (C) vulgar (D) matchless (E) unsympathetic
5. UNASSUAGED: (A) presumed (B) deceptive (C) singular (D) faulty (E) soothed
6. PALTRY: (A) munificent (B) improvident (C) random (D) cautious (E) obsolete
7. CONCLUSIVE: (A) difficult to express (B) bringing bad luck (C) easy to solve (D) lacking merit (E) open to question
8. RESOURCEFULNESS: (A) wealth (B) gratitude (C) melancholy (D) incompetence (E) frustration
9. DISSUADE: (A) extol (B) exhort (C) intensify (D) complicate (E) precede
10. SPLENETIC: (A) lackluster (B) heartless (C) diffident (D) constant (E) cordial
11. VIRULENCE: (A) pallor (B) orderliness (C) femininity (D) harmlessness (E) cowardice
12. ADHERENT: (A) fugitive (B) dissembler (C) opponent (D) educator (E) witness
13. OSCILLATE: (A) entreat (B) intensify (C) remain fixed (D) expand gradually (E) wither away
14. ASPERITY: (A) gentility (B) superiority (C) kindness (D) clarity (E) vagueness
15. UNSCATHEO: (A) honest (B) gathered (C) injured (D) cleansed (E) forgiven
16. FETTER: (A) diminish (B) enervate (C) liberate (D) return (E) cure
17. AUTONOMY: (A) dependence (B) animation (C) renown (D) altruism (E) antipathy
18. SLACK: (A) rough (B) active (C) liberal (D) dependent (E) familiar
19. RECOIL: (A) plunge forward (B) cease firing (C) skirt an issue (D) facilitate (E) surrender
20. ENCUMBER: (A) disburden (B) perform easily (C) challenge boldly (D) observe with care (E) suppress
Antonym Exercise E

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

1. OPACITY: (A) iridescence (B) firmness (C) transparency (D) poverty (E) slum

2. PREDILECTION: (A) postponement (B) afterthought (C) lamentation (D) reoccurrence (E) aversion

3. SEEDY: (A) elegant (B) intricate (C) tranquil (D) irregular (E) slow

4. BOGGLE: (A) disentangle (B) repudiate (C) ascertain (D) remain unruffled (E) lack planning

5. HIDEBOUND: (A) strong-willed (B) open-minded (C) thin-skinned (D) tenderhearted (E) scatterbrained

6. CASTIGATE: (A) diminish (B) imitate (C) compare (D) reward (E) misjudge

7. GAMBOL: (A) dodge (B) masquerade (C) digress (D) plod (E) vex

8. RAUCOUS: (A) orderly (B) absorbent (C) mellifluous (D) contentious (E) buoyant

9. TAPER: (A) emphasize (B) restore (C) split (D) broaden (E) modify

10. HIGH-HANDED: (A) dejected (B) reasonable (C) hard-handed (D) short-handed (E) dynamic

11. DIMINUTION: (A) measurement (B) proximity (C) augmentation (D) orderliness (E) inclination

12. DISTEND: (A) tell the truth (B) respond as expected (C) approximate (D) collect (E) shrink

13. EMBROIL: (A) disengage (B) remonstrate (C) refute thoroughly (D) answer hypothetically (E) consider genuinely

14. VOUCHSAFE: (A) postpone (B) dissemble (C) endanger (D) prohibit (E) justify

15. JETTISON: (A) salvage (B) decelerate (C) muffle (D) distract (E) anchor

16. STOIC: (A) savant (B) herald (C) whiner (D) victor (E) bystander

17. GAMELY: (A) fearfully (B) diligently (C) clumsily (D) gloomily (E) respectfully

18. CRESTFALLEN: (A) haughty (B) impolite (C) frivolous (D) tentative (E) rough

19. DESULTORY: (A) apologetic (B) independent (C) laudatory (D) questionable (E) methodical

20. PULCHRITUDE: (A) antipathy (B) unsightliness (C) inexperience (D) languor (E) rancor

Now that you have mastered the appropriate strategies for dealing with the four basic types of questions on the Graduate Record Examination that test your verbal ability, you have the opportunity to spend some time refining your vocabulary and acquainting yourself with the fine shades of meaning that words possess. Studies show that, where the average high school graduate recognizes about 50,000 words, the average college graduate recognizes around 70,000. The increase indicates that during your four years of college you have rapidly acquired about 20,000 new words (many of them technical terms from a variety of disciplines), some of which may have connotations and nuances that still escape you.

The best way to develop a powerful vocabulary is to read extensively and well. However, it is possible to fine-tune your vocabulary by exploring unabridged dictionaries, in which usage notes make clear the fine distinctions between related words, and by studying high-level vocabulary lists, such as our 3,500-word Master Word List.

This chapter presents the Master Word List and a Basic Word Parts List, a chart of prefixes, roots, and suffixes that may provide you with clues to the meanings of unfamiliar words. The chapter begins with the GRE High-Frequency Word List, 333 words that have occurred and reoccurred on GREs published in the 1980s and 1990s.

How many of the following words do you think you know? Half? Even more? First, check off those words that you recognize. Then, look up all 333 words and their definitions in our Master Word List. Pay particular attention to the following:

1. Words you recognize but cannot use in a sentence or define. You have a feel for these words—you are on the brink of knowing them. Effort you put into mastering these "borderline" words will pay off soon.

2. Words you thought you knew—but didn't. See whether any of them are defined in an unexpected way. If they are, make a special note of them. As you know from the preceding chapters, the GRE often stumps students with questions based on unfamiliar meanings of familiar-looking words.

In the course of your undergraduate career, you have undoubtedly developed your own techniques for building your vocabulary. One familiar technique—flash cards—is often used less than effectively. Students either try to cram too much information onto a flash card or try to cram too many flash cards into a practice session. If you wish to work with flash cards, try following these suggestions:

*Writing the Flash Card*  Be brief—but include all the information you need. On one side write the word. On the other side write a *concise* definition—two or three words at most—for each major meaning of the word you want to learn. Include an antonym, too: the synonym-antonym associations can help you remember both words. To fix the word in your mind, use it in a short phrase. Then write that phrase down.

*Memorizing the Flash Card*  Carry a few of your flash cards with you every day. Look them over whenever you have a spare moment or two. Work in short bursts. Try going through five flash cards at a time, shuffling through them quickly so that you can build up your rapid sight recognition of the words for the test. You want these words and their antonyms to spring to your mind instantaneously.

Test your memory: don't look at the back of the card unless you must. Go through your five cards several times a day. Then, when you have mastered two or three of the cards and have them down pat, set those cards aside and add a couple of new ones to your working pile. That way you will always be working with a limited group, but you won't be wasting time reviewing words you already recognize on sight.

*Never* try to master a whole stack of flash cards in one long cram session. It won't work.

The 3,500 Master Word List

The 3,500-word Master Word List begins on the following page. As a graduate student you should be familiar with the majority of these words. You do not, however, need to memorize every word.

The best way to enlarge your vocabulary is to read extensively in a variety of fields. You can, however, assess the extent of your vocabulary by exploring specialized word lists such as this one.

For those of you who wish to work your way through the word list and feel the need for a plan, we recommend that you follow the procedure described below in order to use the lists and the exercises most profitably:

1. Allot a definite time each day for the study of a list.
2. Devote at least one hour to each list.
3. First go through the list looking at the short, simple-looking words (seven letters at most). Mark those you don’t know. In studying, pay particular attention to them.
4. Go through the list again looking at the longer words. Pay particular attention to words with more than one meaning and familiar-looking words with unusual definitions that come as a surprise to you. Many tests make use of these secondary definitions.
5. List unusual words on index cards, which you can shuffle and review from time to time. (Use the flash card technique described earlier in this chapter.)

6. Using the illustrative sentences in the list as models, make up new sentences of your own.
7. Take the test that follows each list at least one day after studying the words. In this way, you will check your ability to remember what you have studied.
8. If you can answer correctly 12 of the 15 questions in the test, you may proceed to the next list; if you cannot answer this number, restudy the list.
9. Keep a record of your guesses and of your success as a guesser.

For each word, the following is provided:

1. The word (printed in heavy type).
2. Its part of speech (abbreviated).
3. A brief definition.
4. A sentence or sentences illustrating the word’s use.
5. Whenever appropriate, related words together with their parts of speech.

The word lists are arranged in strict alphabetical order. In each list, words that appear also on the High-Frequency GRE Word List are marked with a square bullet (■).
Word List 1  abase-adroit

abase v. lower; degrade; humiliate. Anna expected to have to curtsy to the King of Siam; when told to cast herself down on the ground before him, however, she refused to abase herself. abasement, n.

abash v. embarrass. He was not at all abashed by her open admiration.

■ abate v. subside or moderate. Rather than leaving immediately, they waited for the storm to abate.

abbreviate v. shorten. Because we were running out of time, the lecturer had to abbreviate her speech.

abdicate v. renounce; give up. When Edward VII abdicated the British throne, he surprised the entire world.

■ aberrant ADJ. abnormal or deviant. Given the aberrant nature of the data, we came to doubt the validity of the entire experiment.

aberration N. deviation from the expected or the normal; mental irregularity or disorder. Survivors of a major catastrophe are likely to exhibit aberrations of behavior because of the trauma they have experienced.

abet v. assist, usually in doing something wrong; encourage. She was unwilling to abet him in the swindle he had planned.

■ abeyance N. suspended action. The deal was held in abeyance until her arrival.

abhor v. detest; hate. She abhorred all forms of bigotry. abhorrence, n.

abject ADJ. wretched; lacking pride. On the streets of New York the homeless live in abject poverty, huddling in doorways to find shelter from the wind.

abjure v. renounce upon oath. He abjured his allegiance to the king. abjuration, n.

ablution N. washing. His daily ablutions were accompanied by loud noises that he humorously labeled "Opera in the Bath."

abnegation N. renunciation; self-sacrifice. Though Rudolph and Duchess Flavia loved one another, their love was doomed, for she had to wed the king; their act of abnegation was necessary to preserve the kingdom.

abolish v. cancel; put an end to. The president of the college refused to abolish the physical education requirement. abolition, n.

abominable ADJ. detestable; extremely unpleasant; very bad. Mary liked John until she learned he was also dating Susan; then she called him an abominable young man, with abominable taste in women.

abominable v. loathe; hate. Moses scolded the idol worshippers in the tribe because he abominated the custom.

aboriginal ADJ. N. being the first of its kind in a region; primitive; native. Her studies of the primitive art forms of the aboriginal Indians were widely reported in the scientific journals. aborigine, N.

abortive ADJ. unsuccessful; fruitless. Attacked by armed troops, the Chinese students had to abandon their abortive attempt to democratize Beijing peacefully. abort, v.

abrasive ADJ. rubbing away; tending to grind down. Just as abrasive cleaning powders can wear away a shiny finish, abrasive remarks can wear away a listener's patience. abrade, v.

abridge v. condense or shorten. Because the publishers felt the public wanted a shorter version of War and Peace, they proceeded to abridge the novel.

abrogate v. abolish. The king intended to abrogate the decree issued by his predecessor.

abscession N. cutting off; separation. When a flower or leaf separates naturally from the parent plant, this process is called abscession.

■ abscond v. depart secretly and hide. The teller who absconded with the bonds went uncaptured until someone recognized him from his photograph on America's Most Wanted.

absolute ADJ. complete; totally unlimited; certain. Although the King of Siam was an absolute monarch, he did not want to behead his unfaithful wife without absolute evidence of her infidelity.

absolve v. pardon (an offense). The father confessor absolved him of his sins. absolution, N.

abstain v. refrain; withhold from participation. After considering the effect of alcohol on his athletic performance, he decided to abstain from drinking while he trained for the race.

■ abstemious ADJ. sparing in eating and drinking; temperate. Concerned whether her vegetarian son's abstemious diet provided him with sufficient protein, the worried mother pressed food on him.

abstinence N. restraint from eating or drinking. The doctor recommended total abstinence from salted foods. abstain, v.

abstract ADJ. theoretical; not concrete; nonrepresentational. To him, hunger was an abstract concept; he had never missed a meal.

abstruse ADJ. obscure; profound; difficult to understand. Baffled by the abstruse philosophical texts assigned in class, Dave asked Lexy to explain Kant's Critique of Pure Reason.

abusive ADJ. coarsely insulting; physically harmful. An abusive parent damages a child both mentally and physically.
abut v. border upon; adjoin. Where our estates abut, we must build a fence.
abysmal ADJ. bottomless. His arrogance is exceeded only by his abysmal ignorance.
abyss N. enormous chasm; vast, bottomless pit. Darth Vader seized the evil emperor and hurled him into the abyss.
academic ADJ. related to a school; not practical or directly useful. The dean’s talk about reforming academic policies was only an academic discussion: we knew little, if anything, would change.
accede v. agree. If I accede to this demand for blackmail, I am afraid that I will be the victim of future demands.
accelerate v. move faster. In our science class, we learn how falling bodies accelerate.
accessible ADJ. easy to approach; obtainable. We asked our guide whether the ruins were accessible on foot.
accessory N. additional object; useful but not essential thing. She bought an attractive handbag as an accessory for her dress. Also ADJ.
acclaim v. applaud; announce with great approval. The sportscasters acclaimed every American victory in the Olympics and decried every American defeat. Acclamation.
acclimate v. adjust to climate or environment; adapt. One of the difficulties of our present air age is the need of travelers to acclimate themselves to their new and often strange environments.
acclivity N. sharp upslope of a hill. The car could not go up the acclivity in high gear.
accolade N. award of merit. In Hollywood, an “Oscar” is the highest accolade.
accommodate v. oblige or help someone; adjust or bring into harmony; adapt. Mitch always did everything possible to accommodate his elderly relatives, from driving them to medical appointments to helping them with paperwork. (secondary meaning)
accomplice N. partner in crime. Because he had provided the criminal with the lethal weapon, he was arrested as an accomplice in the murder.
accord N. agreement. She was in complete accord with the verdict.
accost v. approach and speak first to a person. When the two young men accosted me, I was frightened because I thought they were going to attack me.
accoutre v. equip. The fisherman was accoutred with the best that the sporting goods store could supply. Accoutrement.
accretion N. growth; increase. Over the years Bob put on weight; because of this accretion of flesh, he went from size M to size XL.
accrete v. come about by addition. You must pay the interest that has accrued on your debt as well as the principal sum.
acruel v. come about by addition. You must pay the interest that has accrued on your debt as well as the principal sum.
acerbity N. bitterness of speech and temper. The meeting of the United Nations Assembly was marked with such acerbity that observers held little hope of reaching any useful settlement of the problem. Acardic, ADJ.
acetic ADJ. vinegary. The salad had an exceedingly acetic flavor.
acidulous ADJ. slightly sour; sharp; caustic. James was unpopular because of his sarcastic and acidulous remarks.
acknowledge v. recognize; admit. Although I acknowledge that the Beatles’ tunes sound pretty dated nowadays, I still prefer them to the gangsta rap songs my brothers play.
acme N. peak; pinnacle; highest point. Welles’s success in Citizen Kane marked the acme of his career as an actor; never again did he achieve such popular acclaim.
acoustics N. science of sound; quality that makes a room easy or hard to hear in. Carnegie Hall is liked by music lovers because of its fine acoustics.
acquiesce v. assent; agree passively. Although she appeared to acquiesce to her employer’s suggestions, I could tell she had reservations about the changes he wanted made. Acquiescence.
acquittal N. deliverance from a charge. His acquittal by the jury surprised those who had thought him guilty.
acquit, v.
acrid ADJ. sharp; bitterly pungent. The acrid odor of burnt gunpowder filled the room after the pistol had been fired.
acrimonious ADJ. bitter in words or manner. The candidate attacked his opponent in highly acrimonious terms. Acrimony.
acrophobia N. fear of heights. A born salesman, he could convince someone with a bad case of acrophobia to sign up for a life membership in a sky-diving club.
actuarial ADJ. calculating; pertaining to insurance statistics. According to recent actuarial tables, life expectancy is greater today than it was a century ago.
actuate v. motivate. I fail to understand what actuated you to reply to this letter so nastily.
acuity N. sharpness. In time his youthful acuity of vision failed him, and he needed glasses.
acumen N. mental keenness. Her business acumen helped her to succeed where others had failed.
acute ADJ. quickly perceptive; keen; brief and severe. The acute young doctor realized immediately that the gradual deterioration of her patient’s once-acute hearing was due to a chronic illness, not an acute one.
adage N. wise saying; proverb. There is much truth in the old adage about fools and their money.
adament ADJ. hard; inflexible. In this movie Bronson played the part of a revenge-driven man, adamant in his determination to punish the criminals who destroyed his family.
adamancy, N.
adapt v. alter; modify. Some species of animals have become extinct because they could not adapt to a changing environment.
addendum N. addition; appendix to book. Jane's editor
approved her new comparative literature text but
thought it would be even better with an addendum
on recent developments in literary criticism.
addiction N. compulsive, habitual need. His addiction
to drugs caused his friends much grief.
addle v. muddle; drive crazy; become rotten. This idiotic
plan is confusing enough to addle anyone. addled ADJ.
address v. direct a speech to; deal with or discuss. Due to
address the convention in July, Brown planned to
address the issue of low-income housing in his speech.
adapt ADJ. expert at. She was adept at the fine art of irri-
titating people. also N.
adhere v. stick fast. I will adhere to this opinion until proof
that I am wrong is presented. adhesion, N.; adherence, N.
adherent N. supporter; follower. In the wake of the scandal,
the senator's one-time adherents quietly deserted him.
adjacent ADJ. adjoining; neighboring; close by. Philip's best
friend Jason lived only four houses down the block, near
but not immediately adjacent.
adjunct N. something (generally nonessential or inferior)
added on or attached. Although I don't absolutely need a
second computer, I plan to buy a laptop to serve as an
adjunct to my desktop model. also ADJ.
adjudication N. solemn urging. Her adjudication to tell the
truth did not change the witnesses' testimony. adjure, v.
adjudant N. staff officer assisting the commander, assistant.
Although Wellington delegated many tasks to his chief adju-
tant, Lord Fitzroy Somerset, Somerset was in no doubt as
to who made all major decisions.

admonish v. warn; reprove. He admonished his listeners
to change their wicked ways. admonition, N.
adorn v. decorate. Wall paintings and carved statues
adorned the temple. adornment, N.
adroit ADJ. skillful. Her adroit handling of the delicate situa-
tion pleased her employers.

Test

Word List 1  Synonyms

Each of the questions below consists of a word in capi-
tal letters, followed by five lettered words or phrases.
Choose the lettered word or phrase that is most nearly
similar in meaning to the word in capital letters and write
the letter of your choice on your answer paper.

1. ABASE (A) incur (B) tax (C) estimate (D) elope (E) humiliate
2. ABERRATION (A) deviation (B) abhorrence (C) dislike (D) absence (E) anecdote
3. ABET (A) conceive (B) wager (C) encourage (D) evade (E) protect
4. ABEYANCE (A) obedience (B) discussion (C) excitement (D) suspended action (E) editorial
5. ABJURE (A) discuss (B) renounce (C) run off secretly (D) perjure (E) project
6. ABLUTION (A) censure (B) forgiveness (C) mutiny (D) survival (E) washing
7. ABNATIVE (A) blackness (B) self-denial (C) selfishness (D) cause (E) effectiveness

8. ABORIGINE (A) first design (B) absolution (C) finale (D) concept (E) primitive inhabitant
9. ABORTIVE (A) unsuccessful (B) consuming (C) financing (D) familiar (E) fruitful
10. ABSTINENCE (A) restrained eating or drinking (B) vulgar display (C) deportment (D) reluctance (E) population
11. ABSTRUSE (A) profound (B) irreverent (C) suspended (D) protesting (E) not thorough
12. ABUT (A) stimulate (B) grasp (C) oppose (D) widen (E) adjoin
13. ABYSMAL (A) bottomless (B) eternal (C) meteoric (D) diabolic (E) internal
14. ACCEDE (A) fail (B) compromise (C) correct (D) consent (E) mollify
15. ACCLIVITY (A) index (B) report (C) upslope of a hill (D) character (E) negotiator

Word List 2  adulation-amend

adulation N. flattery; admiration. The rock star thrilled on the
adulation of his groupies and yes-men. adulate, v.

■ adulterate v. make impure by adding inferior or tainted
substances. It is a crime to adulterate foods without
informing the buyer; when consumers learned that Beech-
nut had adulterated its apple juice by mixing the juice with
water, they protested vigorously. adulteration, N.

advent N. arrival. Most Americans were unaware of the
advent of the Nuclear Age until the news of Hiroshima
reached them.

adventitious ADJ. accidental; casual. She found this advent-
titious meeting with her friend extremely fortunate.

adversary N. opponent; enemy. Batman struggled to save
Gotham City from the machinations of his wicked adver-
sary, the Joker.

adverse ADJ. unfavorable; hostile. The recession had a
highly adverse effect on Father's investment portfolio; he
lost so much money that he could no longer afford the
butler and the upstairs maid.

■ adversity N. poverty; misfortune. We must learn to meet
adversity gracefully.

adver v. refer to. Since you adver to this matter so fre-
frequently, you must regard it as important.
advocacy n. support; active pleading on behalf of someone or something. No threats could dissuade Bishop Desmond Tutu from his advocacy of the human rights of black South Africans.

advocate v. urge; plead for. The abolitionists advocated freedom for the slaves. Also n.

aegis n. shield; defense. Under the aegis of the Bill of Rights, we enjoy our most treasured freedoms.

aerie n. nest of a large bird of prey (eagle, hawk). The mother eagle swooped down on the rabbit and bore it off to her aerie high in the Rocky Mountains.

aesthetic adj. artistic; dealing with or capable of appreciating the beautiful. The beauty of Tiffany’s stained glass appealed to Alice’s aesthetic sense.

affable adj. easily approachable; warmly friendly. Accustomed to cold, aloof supervisors, Nicholas was amazed at how affable his new employer was.

affable n. written statement made under oath. The court refused to accept her statement unless she presented it in the form of an affidavit.

affiliation n. joining; associating with. His affiliation with the political party was of short duration for he soon disagreed with his colleagues.

affinity n. kinship. She felt an affinity with all who suffered; their pains were her pains.

affirmation n. positive assertion; confirmation; solemn pledge by one who refuses to take an oath. Despite Tom’s affirmations of innocence, Aunt Polly still suspected he had eaten the pie.

affix v. attach or add on; fasten. First the registrar had to affix his signature to the license; then he had to affix his official seal.

affliction n. state of distress; cause of suffering. Even in the midst of her affliction, Elizabeth tried to keep up the spirits of those around her.

affluence n. abundance; wealth. Foreigners are amazed by the affluence and luxury of the American way of life.

affront n. insult; offense; intentional act of disrespect. When Mrs. Proud was not seated beside the Archdeacon at the head table, she took it as a personal affront and refused to speak to her hosts for a week. Also v.

agape adj. openmouthed. She stared. agape. at the many strange animals in the zoo.

agenda n. items of business at a meeting. We had so much difficulty agreeing upon an agenda that there was very little time for the meeting.

agglomeration n. collection; heap. It took weeks to assort the agglomeration of miscellaneous items she had collected on her trip.

aggrandize v. increase or intensify; raise in power, wealth, rank or honor. The history of the past quarter century illustrates how a President may aggrandize his power to act aggressively in international affairs without considering the wishes of Congress.

aggregate v. gather; accumulate. Before the Wall Street scandals, dealers in so-called junk bonds managed to aggregate great wealth in short periods of time. Also adj. aggregation, n.

aggressor n. attacker. Before you punish both boys for fighting, see whether you can determine which one was the aggressor.

aghast adj. horrified; dumbfounded. Miss Manners was agast at the crude behavior of the fraternity brothers at the annual toga party.

agility n. nimbleness. The agility of the acrobat amazed and thrilled the audience.

agitator v. stir up; disturb. Her fiery remarks agitated the already angry mob.

agnostic n. one who is skeptical of the existence of a god or any ultimate reality. Agnostics say we can neither prove nor disprove the existence of god; we simply have no way to know. Also adj.

agogo adj. highly excited; intensely curious. We were all agogo at the news that the celebrated movie star was giving up his career in order to enter a monastery.

agrarian adj. pertaining to land or its cultivation. As a result of its recent industrialization, the country is gradually losing its agrarian traditions.

alacrity n. cheerful promptness; eagerness. Phil and Dave were raring to get off to the mountains; they packed up their ski gear and climbed into the van with alacrity.

alchemy n. medieval chemistry. The changing of baser metals into gold was the goal of the students of alchemy. Alchemist, n.

alcove n. nook; recess. Though their apartment lacked a full-scale dining room, an alcove adjacent to the living room made an adequate breakfast nook for the young couple.

alias n. an assumed name. John Smith’s alias was Bob Jones. Also adj.

alienate v. make hostile; separate. Her attempts to alienate the two friends failed because they had complete faith in each other.

alimentary adj. supplying nourishment. The alimentary canal in our bodies is so named because digestion of foods occurs there. When asked for the name of the digestive tract, Sherlock Holmes replied, “Alimentary, my dear Watson.”

alimony n. payments made to an ex-spouse after divorce. Because Tony had supported Tina through medical school, on their divorce he asked the court to award him $500 a month in alimony.
alay v. calm; pacify. The crew tried to alay the fears of the passengers by announcing that the fire had been controlled.
allege v. state without proof. Although it is alleged that she has worked for the enemy, she denies the allegation and, legally, we can take no action against her without proof.
allegation N. N. loyalty. Not even a term in prison could shake Lech Walesa’s allegiance to Solidarity, the Polish trade union he had helped to found.
allegory N. story in which characters are used as symbols; fable. Pilgrim’s Progress is an allegory of the temptations and victories of the human soul. allegorical ADJ.
alleviate v. relieve. This should alleviate the pain; if it does not, we shall have to use stronger drugs.
alliteration N. repetition of beginning sound in poetry. “The furrow followed free” is an example of alliteration.
alloge v. assign. Even though the Red Cross had allocated a large sum for the relief of the sufferers of the disaster, many people perished.
alloy N. a mixture as of metals. Alloys of gold are used more frequently than the pure metal.
alloy v. mix; make less pure; lessen or moderate. Our delight at the Mets’ victory was alloyed by our concern for Dwight Gooden, who injured his pitching arm in the game.
allude v. refer indirectly. Try not to mention divorce in Jack’s presence because he will think you are alluding to his marital problems with Jill.
allure v. entice; attract. Allured by the song of the sirens, the helmsman steered the ship toward the reef. also N.
allusion N. indirect reference. When Amanda said to the ticket scalper, “One hundred bucks? What do you want, a pound of flesh?” she was making an allusion to Shakespeare’s Merchant of Venice.
alluvial ADJ. pertaining to soil deposits left by running water. The farmers found the alluvial deposits at the mouth of the river very fertile.
a loft ADJ. apart; reserved. Shy by nature, she remained aloof while all the rest conversed.
altof ADV. upward. The sailor climbed aloft into the rigging.
altercation N. noisy quarrel; heated dispute. In that hot-tempered household, no meal ever came to a peaceful conclusion; the inevitable altercation sometimes even ended in blows.
altruistic ADJ. unselfishly generous; concerned for others. In providing tutorial assistance and college scholarships for hundreds of economically disadvantaged youths, Eugene Lang performed a truly altruistic deed.
amalgamate v. combine; unite in one body. The unions will attempt to amalgamate their groups into one national body.
amass v. collect. The miser’s aim is to amass and hoard as much gold as possible.
amazon N. female warrior. Ever since the days of Greek mythology we refer to strong and aggressive women as amazons.
ambidextrous ADJ. capable of using either hand with equal ease. A switch-hitter in baseball should be naturally ambidextrous.
ambience N. environment; atmosphere. She went to the restaurant not for the food but for the ambience.
ambiguous ADJ. unclear or doubtful in meaning. His ambiguous instructions misled us; we did not know which road to take. ambiguity, N.
ambivalence N. the state of having contradictory or conflicting emotional attitudes. Torn between loving her parents one minute and hating them the next, she was confused by the ambivalence of her feelings. ambivalent, ADJ.
amble N. moving at an easy pace. When she first mounted the horse, she was afraid to urge the animal to go faster than a gentle amble. also v.
ambrosia N. food of the gods. Ambrosia was supposed to give immortality to any human who ate it.
ambulatory ADJ. able to walk; not bedridden. Calvin was a highly ambulatory patient; not only did he refuse to be confined to bed, but also he insisted on riding his skateboard up and down the halls.
ameliorate v. improve. Many social workers have attempted to ameliorate the conditions of people living in the slums.
amenable ADJ. readily managed or willing to be led; answerable or accountable legally. Although the ambassador was usually amenable to friendly suggestions, he balked when we hinted he should pay his parking tickets. As a foreign diplomat, he claimed he was not amenable to minor local laws.
amend v. correct; change, generally for the better. Hoping to amend his condition, he left Vietnam for the United States.

Word List 3

amenities N. convenient features; courtesies. In addition to the customary amenities for the business traveler—fax machines, modems, a health club—the hotel offers the services of a butler versed in the social amenities.

amiable ADJ. agreeable; lovable; warmly friendly. In Little Women, Beth is the amiable daughter whose loving disposition endears her to all who know her.

amicable ADJ. politely friendly; not quarrelsome. Beth’s sister Jo is the hot-tempered tomboy who has a hard time maintaining amicable relationships with those around her. Jo’s quarrel with her friend Laurie finally reaches an amicable settlement, but not because Jo turns amiable overnight.

amiss ADJ. wrong; faulty. Seeing her frown, he wondered if anything were amiss. Also ADV.

amity N. friendship. Student exchange programs such as the Experiment in International Living were established to promote international amity.

amnesia N. loss of memory. Because she was suffering from amnesia, the police could not get the young girl to identify herself.

amnesty N. pardon. When his first child was born, the king granted amnesty to all in prison.

amoral ADJ. nonmoral. The amoral individual lacks a code of ethics; he cannot tell right from wrong. The immoral person can tell right from wrong; he chooses to do something he knows is wrong.

amorous ADJ. moved by sexual love; loving. “Love them and leave them” was the motto of the amorous Don Juan.

amorphous ADJ. formless; lacking shape or definition. As soon as we have decided on our itinerary, we shall send you a copy; right now, our plans are still amorphous.

amphibian ADJ. able to live both on land and in water. Frogs are classified as amphibian. Also N.

amphitheater N. oval building with tiers of seats. The spectators in the amphitheater cheered the gladiators.

ample ADJ. abundant. Bond had ample opportunity to escape. Why, then, did he let us capture him?

amplify v. broaden or clarify by expanding; intensify; make stronger. Charlie Brown tried to amplify his remarks, but he was drowned out by jeers from the audience. Lucy was smarter: she used a loudspeaker to amplify her voice.

amputate v. cut off part of body; prune. When the doctors had to amputate Ted Kennedy’s leg to prevent the spread of cancer, he did not let the loss of his leg keep him from participating in sports.

amok (also amuck) ADV. in a state of rage. The police had to be called in to restrain him after he ran amok in the department store.

amulet N. charm; talisman. Around her neck she wore the amulet that the witch doctor had given her.

anachronism N. something or someone misplaced in time. Shakespeare’s reference to clocks in Julius Caesar is an anachronism; no clocks existed in Caesar’s time. Anachronistic, ADJ.

analgesic ADJ. causing insensitivity to pain. The analgesic qualities of this lotion will provide temporary relief.

analogous ADJ. comparable. She called our attention to the things that had been done in an analogous situation and recommended that we do the same.

anatomy N. similarity; parallelism. A well-known anatomy compares the body’s immune system with an army whose defending troops are the lymphocytes or white blood cells.

anarchist N. person who seeks to overturn the established government; advocate of abolishing authority. Denying she was an anarchist, Katya maintained she wished only to make changes in our government, not to destroy it entirely.

anarchy N. absence of governing body; state of disorder. The assassination of the leaders led to a period of anarchy.

anathema N. solemn curse; someone or something regarded as a curse. The Ayatolla Khomeini heaped anathema upon “the Great Satan,” that is, the United States. To the Ayatolla, America and the West were anathema; he loathed the democratic nations, cursing them in his dying words. Anathematize, v.

ancestry N. family descent. David can trace his ancestry as far back as the seventeenth century, when one of his ancestors was a court trumpeter somewhere in Germany.

ancestral ADJ.

anchor v. secure or fasten firmly; be fixed in place. We set the post in concrete to anchor it in place. Anchorage, N.
ancillary adj. serving as an aid or accessory; auxiliary. In an ancillary capacity Doctor Watson was helpful; however, Holmes could not trust the good doctor to solve a perplexing case on his own. Also n.

anecdote n. short account of an amusing or interesting event. Rather than make concrete proposals for welfare reform, President Reagan told anecdotes about poor people who became wealthy despite their impoverished backgrounds.

anemia n. condition in which blood lacks red corpuscles. The doctor ascribes her tiredness to anemia. Anemic, adj.

anesthetic n. substance that removes sensation with or without loss of consciousness. His monotonous voice acted like an anesthetic; his audience was soon asleep.

anesthesia, n.

anguish n. acute pain; extreme suffering. Visiting the site of the explosion, the president wept to see the anguish of the victims and their families.

angular adj. sharp-cornered; stiff in manner. Mr. Spock’s features, though angular, were curiously attractive, in a Vulcan way.

animadversion n. critical remark. He resented the animadversions of his critics, particularly because he realized they were true.

animated adj. lively; spirited. Jim Carrey’s facial expressions are highly animated: when he played Ace Ventura, he was practically rubber-faced.

animosity n. active enmity. He incurred the animosity of the ruling class because he advocated limitations of their power.

animus n. hostile feeling or intent. The animus of the speaker became obvious to all when he began to indulge in sarcastic and insulting remarks.

annals n. records; history. In the annals of this period, we find no mention of democratic movements.

anneal v. reduce brittleness and improve toughness by heating and cooling. After the glass is annealed, it will be less subject to chipping and cracking.

annex v. attach; take possession of. Mexico objected to the United States’ attempts to annex the territory that later became the state of Texas.

annihilate v. destroy. The enemy in its revenge tried to annihilate the entire population.

annotate v. comment; make explanatory notes. In the appendix to the novel, the critic sought to annotate many of the more esoteric references.

annuity n. yearly allowance. The annuity she set up with the insurance company supplements her social security benefits so that she can live very comfortably without working.

annul v. make void. The parents of the eloped couple tried to annul the marriage.

anodyne n. drug that relieves pain, opiate. His pain was so great that no anodyne could relieve it.

anoint v. consecrate. The prophet Samuel anointed David with oil, crowning him king of Israel.

anomalous adj. abnormal; irregular. She was placed in the anomalous position of seeming to approve procedures that she despised.

anomaly n. irregularity. A bird that cannot fly is an anomaly.

anonymity n. state of being nameless; anonymity. The donor of the gift asked the college not to mention her by name; the dean readily agreed to respect her anonymity. Anonymous, adj.

antagonism n. hostility; active resistance. Barry showed his antagonism toward his new stepmother by ignoring her whenever she tried talking to him. Antagonistic, adj.

antecedent v. precede. The invention of the radiotelegraph anteceded the development of television by a quarter of a century.

antecedents n. preceding events or circumstances that influence what comes later; ancestors or early background. Susi Bechhofer’s ignorance of her Jewish background had its antecedents in the chaos of World War II. Smuggled out of Germany and adopted by a Christian family, she knew nothing of her birth and antecedents until she was reunited with her Jewish family in 1989.

antediluvian adj. antiquated; extremely ancient. Looking at his great-aunt’s antique furniture, which must have been cluttering up her attic since before Noah’s flood, the young heir exclaimed, “Heavens! How positively antediluvian!”

anthem n. song of praise or patriotism. Let us now all join in singing the national anthem.

anthology n. book of literary selections by various authors. This anthology of science fiction was compiled by the late Isaac Asimov. Anthologize, v.

anthropoid adj. manlike. The gorilla is the strongest of the anthropoid animals. Also n.

anthropologist n. student of the history and science of humankind. Anthropologists have discovered several relics of prehistoric humans in this area.

anthropomorphic adj. having human form or characteristics. Primitive religions often have deities with anthropomorphic characteristics.

anticyclonic n. letdown in thought or emotion. After the fine performance in the first act, the rest of the play was an anticlimax. Anticyclonic, adj.

antidote n. remedy to counteract a poison or disease. When Marge’s child accidentally swallowed some cleaning fluid, the local poison control hotline instructed Marge how to administer the antidote.

antipathy n. aversion; dislike. Tom’s extreme antipathy for disputes keeps him from getting into arguments with his temperamental wife. Noise in any form is antipathetic to him. Among his other antipathies are honking cars, boom boxes, and heavy metal rock.

antiquated adj. obsolete; outdated. Accustomed to editing his papers on word processors, Philip thought typewriters were too antiquated for him to use.

anti-septic n. substance that prevents infection. It is advisable to apply an antiseptic to any wound, no matter how slight or insignificant. Also adj.
antithesis N. contrast; direct opposite of or to. This tyranny was the antithesis of all that he had hoped for, and he fought with all his strength. antithetical or antithetic, ADJ.

anvil N. iron block used in hammering out metals. After beating the iron horseshoe in the forge, the blacksmith picked it up with his tongs and set it on the anvil.

apathy N. lack of caring; indifference. A firm believer in democratic government, she could not understand the apathy of people who never bothered to vote. apathetic, ADJ.

ape v. imitate or mimic. In the comedy Young Frankenstein, when the servant Igor limps off, saying, “Walk this way,” the hero apes him, hobbling after Igor in an imitation of his walk.

aperture N. opening; hole. She discovered a small aperture in the wall, through which the insects had entered the room.

apex N. tip; summit; climax. At the apex of his career, the star received offers of leading roles daily; two years later, he was reduced to taking bit parts in B-movies.

aphasia N. loss of speech due to injury or illness. After the automobile accident, the victim had periods of aphasia when he could not speak at all or could only mumble incoherently.

aphorism N. pithy maxim or saying. An aphorism is usually philosophic or scientific, as compared to an adage, which is usually more homely and concrete. “Absolute power corrupts absolutely” is an aphorism. “You can lead a horse to water, but you can’t make him drink” is an adage. aphoristic, ADJ.

apiary N. a place where bees are kept. Although he spent many hours daily in the apiary, he was very seldom stung by a bee.

aplomb N. poise; assurance. Gwen’s aplomb in handling potentially embarrassing moments was legendary around the office; when one of her clients broke a piece of her best crystal, she coolly picked up her own goblet and hurled it into the fireplace.

apocalyptic ADJ. prophetic; pertaining to revelations. The crowd jeered at the street preacher’s apocalyptic predictions of doom. The Apocalypse or Book of Revelations of Saint John prophesies the end of the world as we know it and foretells marvels and prodigies that signal the coming doom. apocalypse, N.

apocryphal ADJ. untrue; made up. To impress his friends, Tom invented apocryphal tales of his adventures in the big city.

apogee N. highest point. When the moon in its orbit is furthest away from the earth, it is at its apogee.

apologetic ADJ. having an aversion or lack of concern for political affairs. It was hard to remain apologetic during the Vietnam War; even people who generally ignored public issues felt they had to take political stands.

apologist N. one who writes in defense of a cause or institution. Rather than act as an apologist for the current regime in Beijing and defend its brutal actions, the young diplomat decided to defect to the West.

apostate N. one who abandons his religious faith or political beliefs. Because he switched from one party to another, his former friends shunned him as an apostate. apostasy, N.

apothecary N. druggist. In Holland, apothecaries still sell spices as well as ointments and pills.

Test

argot  N. slang. In the argot of the underworld, she "was taken for a ride."

aria  N. operatic solo. At her Metropolitan Opera audition, Marian Anderson sang an aria from Norma.

ard  ADJ. dry; barren. The cactus has adapted to survive in an arid environment.

aristocracy  N. hereditary nobility; privileged class. Americans have mixed feelings about hereditary aristocracy: we say all men are created equal, but we describe particularly outstanding people as natural aristocrats.

armada  N. fleet of warships. Queen Elizabeth's navy was able to defeat the mighty armada that threatened the English coast.

aromatic  ADJ. fragrant. Medieval sailing vessels brought aromatic herbs from China to Europe.

arrest  v. charge in court; indict. After his indictment by the Grand Jury, the accused man was arrested in the County Criminal Court.

array  v. marshal; draw up in order. His actions were bound to array public sentiment against him. Also N.

array  v. cloth; adorn. She liked to watch her mother array herself in her finest clothes before going out for the evening. Also N.

arrears  N. being in debt. He was in arrears with his payments on the car.

arrhythmic  ADJ. lacking rhythm or regularity. The doctors feared his arrhythmic heartbeat might be the first symptom of an imminent heart attack. Arrhythmia, N.

arrogance  N. pride; haughtiness. Convinced that Emma thought she was better than anyone else in the class, Ed rebuked her for her arrogance.

arroyo  N. gully. Until the heavy rains of the past spring, this arroyo had been a dry bed.

arsenal  N. storage place for military equipment. People are forbidden to smoke in the arsenal lest a stray spark set off the munitions stored there.

articulate  ADJ. effective; distinct. Her articulate presentation of the advertising campaign impressed her employers. Also v.

artifact  N. object made by human beings, either handmade or mass-produced. Archaeologists debated the significance of the artifacts discovered in the ruins of Asia Minor but came to no conclusion about the culture they represented.

artifice  N. deception; trickery. The Trojan War proved to the Greeks that cunning and artifice were often more effective than military might.

artisan  N. a manually skilled worker. Artists and artisans alike are necessary to the development of a culture.

artless  ADJ. without guile; open and honest. Red Riding Hood's artless comment, "Grandma, what big eyes you have!" indicates the child's innocent surprise at her "grandmother's" changed appearance.

ascendancy  N. controlling influence. President Marcos failed to maintain his ascendancy over the Philippines.

ascertain  v. find out for certain. Please ascertain her present address.

ascetic  ADJ. practicing self-denial; austere. The wealthy, self-indulgent young man felt oddly drawn to the strict, ascetic life led by members of some monastic orders. Also N. asceticism, N.

ascribe  v. refer; attribute; assign. I can ascribe no motive for her acts.

aseptic  ADJ. preventing infection; having a cleansing effect. Hospitals succeeded in lowering the mortality rate as soon as they introduced aseptic conditions.

ashen  ADJ. ash-colored; deadly pale. Her face was ashen with fear.

asinine  ADJ. stupid. Your asinine remarks prove that you have not given this problem any serious consideration.

askance  ADJ. with a sideways or indirect look. Looking askance at her提问者，她露出了她的痛苦。

askew  ADJ. crookedly; slanted; at an angle. When the clown placed his hat askew upon his head, the children in the audience laughed.

asperity  N. sharpness (of temper). These remarks, spoken with asperity, stung the boys to whom they had been directed.

aspersion  N. slanderous remark. Do not cast aspersions on her character.

aspirant  N. seeker after position or status. Although I am an aspirant for public office, I am not willing to accept the dictates of the party bosses. Also ADJ.

aspire  v. seek to attain; long for. Because he aspired to a career in professional sports, Philip enrolled in a graduate program in sports management. Aspiration, N.

assail  v. assault. He was assailed with questions after his lecture.

assay  v. analyze; evaluate. When they assayed the ore, they found that they had discovered a very rich vein. Also N.

assent  v. agree; accept. It gives me great pleasure to assent to your request. Also N.

assert  v. state strongly or positively; insist on or demand recognition of (rights, claims, etc.). When Jill asserted that nobody else in the junior class had such an early curfew, her parents asserted themselves, telling her that if she didn't get home by nine o'clock she would be grounded for the week. Assertion, N.

assessment  N. estimation; appraisal. I would like to have your assessment of the situation in South Africa.

assiduous  ADJ. diligent. It took Rembrandt weeks of assiduous labor before he was satisfied with his portrait of his son.

assimilate  v. absorb; cause to become homogeneous. The manner in which the United States was able to assimilate the hordes of immigrants during the nineteenth and early part of the twentieth centuries will always be a source of pride.

assuage  v. ease or lessen (pain); satisfy (hunger); soothe (anger). Jilted by Jane, Dick tried to assuage his heartache by indulging in ice cream. One gallon later, he had assuaged his appetite but not his grief. Assuagement, N.
assumption N. something taken for granted; the taking over or taking possession of. The young princess made the foolish assumption that the regent would not object to her assumption of power. assume, v.

assurance N. promise or pledge; certainty; self-confidence. When Guthrie gave Guinness his assurance that rehearsals were going well, he spoke with such assurance that Guinness was convinced. assure, v. assured, ADJ.

asteroid N. small planet. Asteroids have become commonplace to the readers of interstellar travel stories in science fiction magazines.

astigmatism N. eye defect that prevents proper focus. As soon as his parents discovered that the boy suffered from astigmatism, they took him to the optometrist for corrective glasses.

Word List 5 astral-barb

astral ADJ. relating to the stars. She was amazed at the number of astral bodies the new telescope revealed.

astringent ADJ. binding; causing contraction; harsh or severe. The astringent quality of the unsweetened lemon juice made swallowing difficult. also N.

astronomical ADJ. enormously large or extensive. The government seemed willing to spend astronomical sums on weapons development.

astute ADJ. wise; shrewd; keen. The painter was an astute observer, noticing every tiny detail of her model’s appearance and knowing exactly how important each one was.

asunder ADV. into parts; apart. A fierce quarrel split the partnership asunder: the two partners finally sundered their connections because their points of view were poles asunder.

asylum N. place of refuge or shelter; protection. The refugees sought asylum from religious persecution in a new land.

asymmetric ADJ. not identical on both sides of a dividing central line. Because one eyebrow was set markedly higher than the other, William’s face had a particularly asymmetric appearance. asymmetry, N.

atavism N. resemblance to remote ancestors rather than to parents; reversion to an earlier type; throwback. In his love for gardening, Martin seemed an atavism to his Tuscan ancestors who lavished great care on their small plots of soil. atavistic, ADJ.

atheist ADJ. denying the existence of God. His atheistic remarks shocked the religious worshippers.

atone v. make amends for; pay for. He knew no way in which he could atone for his brutal crime.

atrocity N. brutal deed. In time of war, many atrocities are committed by invading armies.

atrophy N. wasting away. Polio victims need physiotherapy to prevent the atrophy of affected limbs. also v.

attentive ADJ. alert and watchful; considerate; thoughtful. Spellbound, the attentive audience watched the final game of the tennis match, never taking their eyes from the ball. A cold wind sprang up; Stan’s attentive daughter slipped a sweater over his shoulders without distracting his attention from the game.

attenuate v. make thin; weaken. By withdrawing their forces, the generals hoped to attenuate the enemy lines.
attest v. testify; bear witness. Having served as a member of a grand jury, I can attest that our system of indicting individuals is in need of improvement.

attribute n. essential quality. His outstanding attribute was his kindness.

attribute v. ascribe; explain. I attribute her success in science to the encouragement she received from her parents.

attrition n. gradual decrease in numbers; reduction in the work force without firing employees; wearing away of opposition by means of harassment. In the 1960s urban churches suffered from attrition as members moved from the cities to the suburbs. Rather than fire staff members, church leaders followed a policy of attrition, allowing elderly workers to retire without replacing them.

atypical adj. not normal. The child psychiatrist reassured Mrs. Keaton that playing doctor was not atypical behavior for a child of young Alex's age. "Perhaps not," she replied, "but charging for house calls is!"

audacious adj. daring; bold. Audiences cheered as Luke Skywalker and Princess Leia made their audacious, death-defying leap to freedom and escaped Darth Vader's troops. audacity, n.

audit n. examination of accounts. When the bank examiners arrived to hold their annual audit, they discovered the embezzlements of the chief cashier. also v.

augment v. increase; add to. Armies augment their forces by calling up reinforcements; teachers augment their salaries by taking odd jobs.

augury n. omen; prophecy. He interpreted the departure of the birds as an augury of evil. augur, v.

august adj. impressive; majestic. Visiting the palace at Versailles, she was impressed by the august surroundings in which she found herself.

aureole n. sun's corona; halo. Many medieval paintings depict saintly characters with aureoles around their heads.

auroral adj. pertaining to the aurora borealis. The auroral display was particularly spectacular that evening.

auspicious adj. favoring success. With favorable weather conditions, it was an auspicious moment to set sail. Thomas, however, had doubts about sailing: a paranoid, he became suspicious whenever conditions seemed auspicious.

austere adj. forbiddingly stern; severely simple and unornamented. The headmaster's austere demeanor tended to scare off the more timid students, who never visited his study willingly. The room reflected the man, austere and bare, like a monk's cell, with no touches of luxury to moderate its austerity.

authenticate v. prove genuine. An expert was needed to authenticate the original Van Gogh painting, distinguishing it from its imitation.

authoritarian adj. subordinating the individual to the state; completely dominating another's will. The leaders of the authoritarian regime ordered the suppression of the democratic protest movement. After years of submitting to the will of her authoritarian father, Elizabeth Barrett ran away from home with the poet Robert Browning.

authoritative adj. having the weight of authority; peremptory and dictatorial. Impressed by the young researcher's well-documented presentation, we accepted her analysis of the experiment as authoritative.

autocratic adj. having absolute, unchecked power; dictatorial. A person accustomed to exercising authority may become autocratic if his or her power is unchecked. Dictators by definition are autocrats. Bosses who dictate behavior as well as letters can be autocrats too. autocracy, n.

automaton n. mechanism that imitates actions of humans. Long before science fiction readers became aware of robots, writers were creating stories of automatas who could outperform humans.

autonomous adj. self-governing. Although the University of California at Berkeley is just one part of the state university system, in many ways Cal Berkeley is autonomous, for it runs several programs that are not subject to outside control. autonomy, n.

autopsy n. examination of a dead body; postmortem. The medical examiner ordered an autopsy to determine the cause of death. also v.

auxiliary adj. offering or providing help; additional or subsidiary. To prepare for the emergency, they built an auxiliary power station. also n.

avalanche n. great mass of falling snow and ice. The park ranger warned the skiers to stay on the main trails, where they would be in no danger of being buried beneath a sudden avalanche.

avarice n. greediness for wealth. King Midas is a perfect example of avarice; he was so greedy that he wished everything he touched would turn to gold.

avenger v. take vengeance for something (or on behalf of someone). Hamlet vowed he would avenge his father's murder and punish Claudius for his horrible crime.

avarice v. state confidently. I wish to aver that I am certain of success.

averse adj. reluctant; disinclined. The reporter was averse to revealing the sources of his information.

aversion n. firm dislike. Bert had an aversion to yuppies; Alex had an aversion to punks. Their mutual aversion was so great that they refused to speak to one another.

avert v. prevent; turn away. She averted her eyes from the dead cat on the highway.

aviary n. enclosure for birds. The aviary at the zoo held nearly 300 birds.

avid adj. greedy; eager for. He was avid for learning and read everything he could get. avidity, n.

avocation n. secondary or minor occupation. His hobby proved to be so fascinating and profitable that gradually he abandoned his regular occupation and concentrated on his avocation.

avow v. declare openly. Lana avowed that she never meant to steal Debbie's boyfriend, but no one believed her avowal of innocence.

avuncular adj. like an uncle. Avuncular pride did not prevent him from noticing his nephew's shortcomings.
awe N. solemn wonder. The tourists gazed with awe at the tremendous expanse of the Grand Canyon.

awl N. pointed tool used for piercing. She used an awl to punch additional holes in the leather belt she had bought.

awry ADJ. distorted; crooked. He held his head awry, giving the impression that he had caught cold in his neck during the night. also ADJ.

axiom N. self-evident truth requiring no proof. Before a student can begin to think along the lines of Euclidean geometry, he must accept certain principles or axioms.

axiomatic ADJ.

azure ADJ. sky blue. Azure skies are indicative of good weather.

babble v. chatter idly. The little girl babbled about her doll. also N.

bacchanalian ADJ. drunken. Emperor Nero attended the bacchanalian orgy.

badger v. pester; annoy. She was forced to change her telephone number because she was badgered by obscene phone calls.

badinage N. teasing conversation. Her friends at work greeted the news of her engagement with cheerful badinage.

baffle v. frustrate; perplex. The new code baffled the enemy agents.

bait v. harass; tease. The school bully baited the smaller children, terrorizing them.

baleful ADJ. deadly; having a malign influence; ominous. The fortune teller made baleful predictions of terrible things to come.

balk v. stop short, as if faced with an obstacle, and refuse to continue. The chief of police balked at sending his officers into the riot-torn area.

balk v. fail. When the warden learned that several inmates were planning to escape, he took steps to balk their attempt.

ballast N. heavy substance used to add stability or weight. The ship was listing badly to one side; it was necessary to shift the ballast in the hold to get her back on an even keel. also v.

balm N. something that relieves pain. Friendship is the finest balm for the pangs of disappointed love.

balmv ADJ. mild; fragrant. A balmy breeze refreshed us after the sultry blast.

banal ADJ. hackneyed; commonplace; trite; lacking originality. The hack writer's worn-out cliches made his comic sketch seem banal. He even resorted to the banality of having someone slip on a banana peel.

bandy v. discuss lightly or glibly; exchange (words) heatedly. While the president was happy to bandy patriotic generalizations with anyone who would listen to him, he refused to bandy words with unfriendly reporters at the press conference.

bane N. cause of ruin; curse. Lucy's little brother was the bane of her existence; his attempts to make her life miserable worked so well that she could have poisoned him with ratsbane for having such a baneful effect.

bantering ADJ. good-naturedly ridiculing. They resented his bantering remarks because they misinterpreted his teasing as sarcasm.

barb N. sharp projection from fishhook or other object; openly cutting remark. If you were a politician, which would you prefer, being caught on the barb of a fishhook or being subjected to malicious verbal barbs? Who can blame the president if he's happier fishing in Maine than being back in Washington listening to his critics' barbed remarks?

bard  N. poet. The ancient bard Homer sang of the fall of Troy.

barefaced  ADJ. shameless; bold; unconcealed. Shocked by Huck Finn’s barefaced lies, Miss Watson prayed the good Lord would give him a sense of his unregenerate wickedness.

baroque  ADJ. highly ornate. Accustomed to the severe, angular lines of modern skyscrapers, they found the flamboyance of baroque architecture amusing.

barrage  N. barrier laid down by artillery fire; overwhelming profusion. The company was forced to retreat through the barrage of heavy cannons.

barrister  N. counselor-at-law. Galsworthy started as a barrister, but, when he found the practice of law boring, turned to writing.

barterer  N. trader. The barterer exchanged trinkets for the natives’ furs.

bask  V. luxuritate; take pleasure in warmth. Basking on the beach, she relaxed so completely that she fell asleep.

bastion  N. stronghold; something seen as a source of protection. The villagers fortified the town hall, hoping this improvised bastion could protect them from the guerilla raids.

bate  V. let down; restrain. Until it was time to open the presents, the children had to bate their curiosity bated, ADJ.

bauble  N. trinket; trifle. The child was delighted with the bauble she had won in the grab bag.

bawdy  ADJ. indecent; obscene. Jack took offense at Jill’s bawdy remarks. What kind of young man did she think he was?

beatific  ADJ. giving bliss; blissful. The beatific smile on the child’s face made us very happy.

beatitude  N. blessedness; state of bliss. Growing closer to God each day, the mystic achieved a state of inscrutable beatitude.

bedizen  V. dress with vulgar finery. The witch doctors were bedizened in their gaudiest costumes.

bedraggle  V. wet thoroughly. We were so bedraggled by the severe storm that we had to change into dry clothing. bedraggled, ADJ.

beeline  N. direct, quick route. As soon as the movie was over, Jim made a beeline for the exit.

befuddle  V. confuse thoroughly. His attempts to clarify the situation succeeded only in befuddling her further.

beg  V. father; produce; give rise to. One good turn may deserve another; it does not necessarily beg another.

beg  V. resent; I begrudge every minute I have to spend attending meetings.

beguil  V. mislead or delude; cheat; pass time. With flattery and big talk of easy money, the con man beguiled Kyle into betting his allowance on the shell game. The men quickly beguiled poor Kyle of his money. Broke, he beguiled himself during the long hours by playing solitaire.

beheath  N. huge creature; something of monstrous size or power. Sportscasters nicknamed the linebacker “The Behemoth.”

beholden  ADJ. obligated; indebted. Since I do not wish to be beholden to anyone, I cannot accept this favor.

behoove  V. be suited to; be incumbent upon. In this time of crisis, it behooves all of us to remain calm and await the instructions of our superiors.

belabor  V. explain or go over excessively or to a ridiculous degree; assail verbally. The debate coach warned her student not to bore the audience by belaboring his point.

belated  ADJ. delayed. He apologized for his belated note of condolence to the widow of his friend and explained that he had just learned of her husband’s untimely death.

beleaguer  V. besiege or attack; harass. The babysitter was surrounded by a crowd of unmanageable brats who relentlessly beleaguered her.

believe  V. contradict; give a false impression. His coarse, hard-bitten exterior belied his innate sensitivity.

belittle  V. disparage; depreciate. Parents should not belittle their children’s early attempts at drawing, but should encourage their efforts.

bellicose  ADJ. warlike. His bellicose disposition alienated his friends. bellicosity, N.

belligerent  ADJ. quarrelsome. Whenever he had too much to drink, he became belligerent and tried to pick fights with strangers. belligerence, N.

bemoan  V. lament; express disapproval of. The widow bemoaned the death of her beloved husband. Although critics bemoaned the serious flaws in the author’s novels, each year his latest book topped the best-seller list.

bemused  ADJ. confused; lost in thought; preoccupied. Jill studied the garbled instructions with a bemused look on her face.

benediction  N. blessing. The appearance of the sun after the many rainy days was like a benediction.

benefactor  N. gift giver; patron. Scrooge later became Tiny Tim’s benefactor and gave him gifts.

beneficent  ADJ. kindly; doing good. The overgenerous philanthropist had to curb his beneficent impulses before he gave away all his money and left himself with nothing.

beneficial  ADJ. helpful; useful. Tiny Tim’s cheerful good nature had a beneficial influence on Scrooge’s once-uncharitable disposition.

beneficiary  N. person entitled to benefits or proceeds of an insurance policy or will. In Scrooge’s will, he made Tiny Tim his beneficiary: everything he left would go to young Tim.

benevolent  ADJ. generous; charitable. Mr. Fezzig was a benevolent employer who wished to make Christmas merrier for young Scrooge and his other employees. benevolence, N.
benign adj. kind; favorable; not malignant. Though her benign smile and gentle bearing made Miss Marple seem a sweet little old lady, in reality she was a tough-minded, shrewd observer of human nature. benignity, n.

benison n. blessing. Let us pray that the benison of peace once more shall prevail among the nations of the world.

bent adj.; n. determined; natural talent or inclination. Bent on advancing in the business world, the secretary-heroine of Working Girl had a true bent for high finance.

bequeath v. leave to someone by a will; hand down. In his will, Father bequeathed his watch to Philip; the bequest meant a great deal to the boy. bequest, n.

berate v. scold strongly. He feared she would berate him for his forgetfulness.

bereavement n. state of being deprived of something valuable or beloved. His friends gathered to console him upon his sudden bereavement.

bereft adj. deprived of; lacking. The foolish gambler soon found himself bereft of funds.

berserk adv. frenzied. Angered, he went berserk and began to wreck the room.

beseech v. beg; plead with. The workaholic executive's wife beseeched him to spend more time with their son.

beset v. harass or trouble; hem in. Many vexing problems beset the American public school system. Sleeping Beauty's castle was beset on all sides by dense thicketts that hid it from view.

besiege v. surround with armed forces; harass (with requests). When the bandits besieged the village, the villagers holed up in the town hall and prepared to withstand a long siege. Members of the new administration were besieged with job applications from people who had worked on the campaign.

besmirch v. soil, defile. The scandalous remarks in the newspaper besmirch the reputations of every member of the society.

bestial adj. beastlike; brutal; inhuman. According to legend, the werewolf was able to abandon its human shape and assume a bestial form. The Red Cross sought to put an end to the bestial treatment of prisoners of war.

bestow v. confer. He wished to bestow great honors upon the hero.

betoken v. signify; indicate. The well-equipped docks, tall piles of cargo containers, and numerous vessels being loaded all betoken Oakland's importance as a port.

Word List 7  blunder-canter

blunder n. error. The criminal's fatal blunder led to his capture. also v.

blurt v. utter impulsively. Before she could stop him, he blurted out the news.

bluster v. blow in heavy gusts; threaten emptily; bully. "Let the stormy winds bluster," cried Jack, "we'll set sail tonight." Jill let Jack bluster: she wasn't going anywhere, no matter what he said. also n.

bode v. foreshadow; portend. The gloomy skies and the sulfurous odors from the mineral springs seemed to bode evil to those who settled in the area.

bogus A. counterfeit; not authentic. The police quickly found the distributors of the bogus twenty-dollar bills.

bohemian A. unconventional (in an artistic way). Gertrude Stein ran off to Paris to live an eccentric, bohemian life with her writer friends. Oakland was not bohemian: it was too bourgeois, too middle-class.

boisterous A. violent; rough; noisy. The unruly crowd became even more boisterous when he tried to quiet them.

bolster v. support; reinforce. The debaters amassed file boxes full of evidence to bolster their arguments.

bolt n. door bar; fastening pin or screw; length of fabric. The carpenter shut the workshop door, sliding the heavy metal bolt into place. He sorted through his toolbox for the nuts and bolts and nails required for the job. Before he cut into the bolt of canvas, he measured how much fabric he would need.

bowl v. dash or dart off; fasten (a door); gobble down. Jack was set to bolt out the front door, but Jill bolted the door. "Eat your breakfast," she said, "don't bolt your food."

bombardment n. attack (as with missiles). The enemy bombardment demolished the town. Members of the opposition party bombarded the prime minister with questions about the enemy attack.

bombastic A. pompous; using inflated language. Puffed up with conceit, the orator spoke in such a bombastic manner that we longed to deflate him. bombast, n.

boon n. blessing; benefit. The recent rains that filled our empty reservoirs were a boon to the whole community.

boorish A. rude; insensitive. Though Mr. Potts constantly interrupted his wife, she ignored his boorish behavior, for she had lost hope of teaching him courtesy.

bouillon n. clear beef soup. The cup of bouillon served by the stewards was welcomed by those who had been chilled by the cold ocean breezes.
bountiful adj. abundant; graciously generous. Thanks to the good harvest, we had a bountiful supply of food and we could be as bountiful as we liked in distributing food to the needy.
bourgeois adj. middle class; selfishly materialistic; dully conventional. Technically, anyone who belongs to the middle class is bourgeois, but, given the word's connotations, most people resist it if you call them that.
bovine adj. cowlike; placid and dull. Nothing excites Esther; even when she won the state lottery, she still preserved her air of bovine calm.
bowdlerize v. expurgate. After the film editors had bowdlerized the language in the script, the motion picture's rating was changed from "R" to "PG."
boycott v. refrain from buying or using. To put pressure on grape growers to stop using pesticides that harmed the farm workers' health, Cesar Chavez called for consumers to boycott grapes. also n.
brackish adj. somewhat saline. He found the only wells in the area were brackish; drinking the water made him nauseous.
braggadocio n. boasting. He was disliked because his manner was always full of braggadocio.
braggart n. boaster. Modest by nature, she was no bragart; preferring to let her accomplishments speak for themselves.
brandish v. wave around; flourish. Alarmed, Doctor Watson wildly brandished his gun until Holmes told him to put the thing away before he shot himself.
bravado n. swagger; assumed air of defiance. The bravado of the young criminal disappeared when he was confronted by the victims of his brutal attack.
brawn n. muscular strength; sturdiness. It takes brawn to become a champion weight-lifter. brawny, adj.
brazen adj. insolent. Her brazen contempt for authority angered the officials.
brach n. breaking of contract or duty; fissure or gap. Jill sued Jack for breach of promise, claiming he had broken their engagement. The attackers found a breach in the enemy's fortifications and penetrated their lines. also v.
breadth n. width; extent. We were impressed by the breadth of her knowledge.
brevity n. conciseness. Brevity is essential when you send a telegram or cablegram; you are charged for every word.
brindled adj. tawny or grayish with streaks or spots. He was disappointed in the litter because the puppies were brindled; he had hoped for animals of a uniform color.
bristling adj. rising like bristles; showing irritation. The dog stood there, bristling with anger.
brittle adj. easily broken; difficult. My employer's brittle personality made it difficult for me to get along with her.
broach v. introduce; open up. Jack did not even try to broach the subject of religion with his in-laws. If you broach a touchy subject, the result may be a breach.
brocade n. rich, figured fabric. The sofa was covered with expensive brocade.
brochure n. pamphlet. This brochure on farming was issued by the Department of Agriculture.
brooch n. ornamental clasp. She treasured the brooch because it was an heirloom.
brook v. tolerate; endure. The dean would brook no interference with his disciplinary actions. (secondary meaning) browbeat v. bully; intimidate. Billy resisted Ted's attempts to browbeat him into handing over his lunch money.
browse v. graze; skim or glance at casually. "How now, brown cow, browsing in the green, green grass." I remember lines of verse that I came across while browsing through the poetry section of the local bookstore.
brunt n. main impact or shock. Tom Sawyer claimed credit for painting the fence, but the brunt of the work fell on others. However, Tom bore the brunt of Aunt Polly's complaints when the paint began to peel.
brusque adj. blunt; abrupt. She was offended by his brusque reply.
buccaneer n. pirate. At Disneyland the Pirates of the Caribbean sing a song about their lives as bloody buccaneers.
bucolic adj. rustic; pastoral. Filled with browsing cows and bleating sheep, the meadow was a charmingly bucolic sight.
buffet n. table with food set out for people to serve themselves; meal at which people help themselves to food that's been set out. (Buffet rhymes with tray.) Please convey the soufflé on the tray to the buffet.
buffet v. slap; batter; knock about. To buffet something is to rough it up. (Buffet rhymes with Muffett.) Was Miss Muffett buffeted by the crowd on the way to the buffet tray?
buffoonery n. clowning. In the Ace Ventura movies, Jim Carrey's buffoonery was hilarious: like Bozo the Clown, he's a natural buffoon.
bugaboo n. bugbear; object of baseless terror. If we become frightened by such bugaboos, we are no wiser than the birds who fear scarecrows.
bullion n. gold and silver in the form of bars. Much bullion is stored in the vaults at Fort Knox.
bulwark n. earthwork or other strong defense; person who defends. The navy is our principal bulwark against invasion.
bungle v. mismanage; blunder. Don't botch this assignment, Burnstead; if you bungle the job, you're fired.
buoyant adj. able to float; cheerful and optimistic. When the boat capsized, her buoyant life jacket kept Jody afloat. Scrambling back on board, she was still in a buoyant mood, certain that despite the delay she'd win the race.
buoyancy, n.
bureaucracy n. overregulated administrative system marked by red tape. The Internal Revenue Service is the ultimate bureaucracy: taxpayers wasted so much paper filling out IRS forms that the IRS bureaucrats printed up a new set of rules requiring taxpayers to comply with the Paperwork Reduction Act. bureaucratic, adj.
burgeon v. grow forth; send out buds. In the spring, the plants that *burgeon* are a promise of the beauty that is to come.

burlesque v. give an imitation that ridicules. In *Spaceballs*, Rick Moranis burlesques Darth Vader of *Star Wars*, outrageously parodying Vader’s stiff walk and hollow voice. also N.

burnish v. make shiny by rubbing; polish. The maid *burnished* the brass fixtures until they reflected the lamplight.

buttress v. support; prop up. Just as architects *buttress* the walls of cathedrals with flying *buttresses*, debaters *buttress* their arguments with facts. also N.

buxom adj. full-bosomed; plump; jolly. High-fashion models usually are slender rather than *buxom*.

cabal N. small group of persons secretly united to promote their own interests. The *cabal* was defeated when its scheme was discovered.

cache N. hiding place. The detectives followed the suspect until he led them to the *cache* where he had stored his loot. also V.

cacophonous adj. discordant; inharmonious. Do the students in the orchestra enjoy the *cacophonous* sounds they make when they’re tuning up? I don’t know how they can stand the racket. *cacophonous*, N.

cadaver N. corpse. In some states, it is illegal to dissect *cadavers*.

cadaverous adj. like a corpse; pale. From his *cadaverous* appearance, we could see how the disease had ravaged him.

cadence N. rhythmic rise and fall (of words or sounds); beat. Marching down the road, the troops sang out, following the *cadence* set by the sergeant.

cajole v. coax; wheedle. Cher tried to cajole her father into letting her drive the family car. *cajolery*, N.

calamity N. disaster; misery. As news of the *calamity* spread, offers of relief poured in to the stricken community. *calculated* adj. deliberately planned; likely. Lexy’s choice of clothes to wear to the debate tournament was carefully calculated. Her conventional suit was calculated to appeal to the conservative judges.

caldron N. large kettle. “Why, Mr. Crusoe,” said the savage heating the giant *caldron*, “we’d love to have you for dinner!”

caliber N. ability; quality. Einstein’s cleaning the blackboards again? Albert, quit it! A man of your *caliber* shouldn’t have to do such menial tasks.

calligraphy N. beautiful writing; excellent penmanship. As we examine ancient manuscripts, we become impressed with the *calligraphy* of the scribes.

callous adj. hardened; unfeeling. He had worked in the hospital for so many years that he was *callous* to the suffering in the wards. *callus*, N.

callow adj. youthful; immature; inexperienced. As a freshman, Jack was sure he was a man of the world; as a sophomore, he made fun of freshmen as *callow* youths. In both cases, his judgment showed just how callow he was.

calorific adj. heat-producing. Coal is much more *calorific* than green wood.

calumny N. malicious misrepresentation; slander. He could endure his financial failure, but he could not bear the *calumny* that his foes heaped upon him.

camaraderie N. good-fellowship. What he loved best about his job was the sense of *camaraderie* he and his coworkers shared.

cameo N. shell or jewel carved in relief; star’s special appearance in a minor role in a film. Don’t bother buying *cameos* from the street peddlers in Rome: the carvings they sell are clumsy jobs. Did you enjoy Bill Murray’s *cameo* in *Little Shop of Horrors*? He was onscreen for only a minute, but he cracked me up.

camouflage v. disguise; conceal. In order to rescue Han Solo, Princess Leia *camouflaged* herself in the helmet and cloak of a space bandit. also N.

canard N. unfounded rumor; exaggerated report. It is almost impossible to protect oneself from such a base *canard*.

candor N. frankness; open honesty. Jack can carry *candor* too far: when he told Jill his honest opinion of her, she nearly slapped his face. *candid*, adj.

canine adj. related to dogs; doglike. Some days the *canine* population of Berkeley seems almost to outnumber the human population.

canker N. any ulcerous sore; any evil. Poverty is a *canker* in the body politic; it must be cured.

canny adj. shrewd; thrifty. The *canny* Scotsman was more than a match for the swindlers.

canon N. collection or authoritative list of books (e.g., by an author, or accepted as scripture); rule or standard set by ecclesiastical authority. Scholars hotly debated whether the newly discovered sonnet should be accepted as part of the Shakespearean *canon*.

cant N. insincere expressions of piety; jargon of thieves. Shocked by news of the minister’s extramarital love affairs, the worshippers dismissed his talk about the sacredness of marriage as mere *cant*. *Cant* is a form of hypocrisy: those who can, pray; those who *cant*, pretend.

cantankerous adj. ill-humored; irritable. Constantly complaining about his treatment and refusing to cooperate with the hospital staff, he was a *cantankerous* patient.

cantata N. story set to music, to be sung by a chorus. The choral society sang the new *cantata* composed by its leader.

canter n. slow gallop. Because the racehorse had outdistanced its competition so easily, the reporter wrote that the race was won in a *canter*. also V.

dapper ADJ. neat and trim. In “The Odd Couple,” Tony Randall played Felix Unger, an excessively dapper soul who could not stand to have a hair out of place.

dappled ADJ. spotted. The sunlight filtering through the screens created a dappled effect on the wall.

daub v. smear (as with paint). From the way he daubed his paint on the canvas, I could tell he knew nothing of oils. also N.

■ daunt v. intimidate; frighten. “Boast all you like of your prowess. Mere words cannot daunt me,” the hero answered the villain.

dauntless ADJ. bold. Despite the dangerous nature of the undertaking, the dauntless soldier volunteered for the assignment.

dawdle v. loiter; waste time. We have to meet a deadline: don’t dawdle; just get down to work.

deadlock N. standstill; stalemate. Because negotiations had reached a deadlock, some of the delegates had begun to mutter about breaking off the talks. also v.

deadpan ADJ. wooden; impassive. We wanted to see how long he could maintain his deadpan expression.

dearth N. scarcity. The dearth of skilled labor compelled the employers to open trade schools.

debacle N. sudden downfall; complete disaster. In the Airplane movies, every flight turns into a debacle, with passengers and crew members collapsing, engines falling apart, and carry-on baggage popping out of the overhead bins.

debase v. reduce in quality or value; lower in esteem; degrade. In The King and I, Anna refuses to kneel down and prostrate herself before the king; she feels that to do so would debase her position, and she will not submit to such debasement.

■ debauch v. corrupt; seduce from virtue. Did Socrates’ teachings lead the young men of Athens to be virtuous citizens, or did they debauch the young men, causing them to question the customs of their fathers? Clearly, Socrates’ philosophical talks were nothing like the wild debauchery of the toga parties in Animal House.

debilitate v. weaken; enfeeble. Michael’s severe bout of the flu debilitated him so much that he was too tired to go to work for a week.

■ debonair ADJ. friendly; aiming to please. The debonair youth was liked by all who met him, because of his cheerful and obliging manner.

debri N. rubble. A full year after the earthquake in Mexico City, workers were still carting away the debri.

debunk v. expose as false, exaggerated, worthless, etc.; ridicule. Pointing out that he consistently had voted against strengthening antipollution legislation, reporters debunked the candidate’s claim that he was a fervent environmentalist.

■ debutante N. young woman making formal entrance into society. As a debutante, she was often mentioned in the society columns of the newspapers.

decadence N. decay. The moral decadence of the people was rejected in the lewd literature of the period.

decant v. pour off gently. Be sure to decant this wine before serving it.

decapitate v. behead. They did not hang Lady Jane Grey; they decapitated her. “Off with her head!” cried the Duchess, eager to decapitate poor Alice.

■ decelerate v. slow down. Seeing the emergency blinkers in the road ahead, he decelerated quickly.

derogatory adj. expressing a low opinion. I resent your derogatory remarks.
descry v. catch sight of. In the distance, we could barely descry the enemy vessels.
descrate v. profane; violate the sanctity of. Shattering the altar and trampling the holy objects underfoot, the invaders desecrated the sanctuary.
desiccate v. dry up. A tour of this smokehouse will give you an idea of how the pioneers used to desiccate food in order to preserve it.
desolate adj. unpopulated; joyless. After six months in the crowded, bustling metropolis, David was so sick of people that he was ready to head for the most desolate patch of wilderness he could find.
desolate v. rob of joy; lay waste to; forsake. The bandits desolated the countryside, burning farms and carrying off the harvest.

desperado N. reckless outlaw. Butch Cassidy was a bold desperado with a price on his head.

despise v. look on with scorn; regard as worthless or dis-tasteful. Mr. Bond, I despise spies; I look down on them as mean, despicable, honorless men, whom I would wipe from the face of the earth with as little concern as I would scrape dog droppings from the bottom of my shoe.

despoil v. plunder. If you do not yield, I am afraid the enemy will despoil the countryside.

despondent adj. depressed; gloomy. To the distress of his parents, William became seriously despondent after he broke up with Jan. despondency, N.

despot N. tyrant; harsh, authoritarian ruler. How could a benevolent king turn overnight into a despot? despotism, N.

destitute adj. extremely poor. Because they had no health insurance, the father's costly illness left the family destitute.

destitution, N.

■ desultory adj. aimless; haphazard; digressing at random. In prison Malcolm X set himself the task of reading straight through the dictionary; to him, reading was purposeful, not desultory.

detached adj. emotionally removed; calm and objective; physically separate. A psychoanalyst must maintain a detached point of view and stay uninvolved with her patients' personal lives. To a child growing up in an apartment or a row house, to live in a detached house was an unattainable dream. detachment, N. (secondary meaning)

determinate adj. having a fixed order of procedure; invan-

able. At the royal wedding, the procession of the nobles followed a determinate order of precedence.

determination N. resolve; measurement or calculation; de-

cision. Nothing could shake his determination that his chil-
dren would get the best education that money could buy.
Thanks to my pocket calculator, my determination of the
answer to the problem took only seconds of my time.

■ deterrent N. something that discourages; hindrance.
Does the threat of capital punishment serve as a deterrent to potential killers? also ADJ.

detonation N. explosion. The detonation of the bomb could be heard miles away.

detraction N. slandering; aspersions. He is offended by your frequent detractions of his ability as a leader.

detrimental adj. harmful; damaging. The candidate's acceptance of major financial contributions from a well-

known racist ultimately proved detrimental to his cam-
paign, for he lost the backing of many of his early grass-
roots supporters. detriment, N.

deviate v. turn away from (a principle, norm); depart;
diverge. Richard never deviated from his daily routine: every day he set off for work at eight o'clock, had his sack lunch at noon, and headed home at the stroke of five.

devious adj. roundabout; erratic; not straightforward. The

Joker's plan was so devious that it was only with great dif-

culty we could follow its shifts and dodges.

device v. think up; invent; plan. How clever he must be to have devised such a devious plan! What ingenious inventions might he have devised if he had turned his mind to science rather than crime.

devoid adj. lacking. You may think Cher's mind is a total void, but she's actually not devoid of intelligence. She just sounds like an airhead.

devolve v. depute; pass to others. It devolved upon us the survivors, to arrange peace terms with the enemy.

devotee N. enthusiastic follower. A devotee of the opera, she bought season tickets every year.

devout adj. pious. The devout man prayed daily.

dexterous adj. skillful. The magician was so dexterous that we could not follow his movements as he performed his tricks.

diadem N. crown. The king's diadem was on display at the museum.

dialectical adj. relating to the art of debate; mutual or recip-

rocal. The debate coach's students grew to develop great forensic and dialectical skill. Teaching, however, is inher-
ently a dialectical situation: the coach learned at least as much from her students as they learned from her. dialect-
ics, N.

diaphanous adj. sheer; transparent. They saw the burglar clearly through the diaphanous curtain.

■ diatribe N. bitter scolding; invective. During the lengthy diatribe delivered by his opponent he remained calm and self-controlled.

■ dichotomy N. split; branching into two parts (especially contradictory ones). Willie didn't know how to resolve the dichotomy between his ambition to go to college and his childhood longing to run away and join the circus. Then he heard about Ringling Brothers Circus College, and he knew he'd found his school.

dictum N. authoritative and weighty statement; saying; maxi-
mum. University administrations still follow the old dictum "Publish or perish." They don't care how good a teacher you are; if you don't publish enough papers, you're out of a job.

didactic adj. teaching; instructional. Pope's lengthy poem An Essay on Man is too didactic for my taste: I dislike it when poets turn preachy and moralize. didacticism, N.

die N. device for stamping or impressing; mold. In coining pennies, workers at the old mint squeezed sheets of softened copper between two dies.

■ diffidence N. shyness. You must overcome your diffi-
cidence if you intend to become a salesperson.

■ diffuse adj. wordy; rambling; spread out (like a gas). If you pay authors by the word, you tempt them to produce diffuse manuscripts rather than brief ones. also v. diffusion, N.
digression N. wandering away from the subject. Nobody minded when Professor Renoir’s lectures wandered away from their official theme; his digressions were always more fascinating than the topic of the day. digress, v.
dilapidated ADJ. ruined because of neglect. The dilapidated old building needed far more work than just a new coat of paint. dilapidation, N.
dilate v. expand. In the dark, the pupils of your eyes dilate.
dilatory ADJ. delaying. Your dilatory tactics may compel me to cancel the contract.
dilemma N. problem; choice of two unsatisfactory alternatives. In this dilemma, he knew no one to whom he could turn for advice.
dilettante N. aimless follower of the arts; amateur; dabbler. He was not serious in his painting; he was rather a dilettante.
diligence N. steadiness of effort; persistent hard work. Her employers were greatly impressed by her diligence and offered her a partnership in the firm.
dilute v. make less concentrated; reduce in strength. She preferred her coffee diluted with milk.
diminution N. lessening; reduction in size. Old Jack was as sharp at eighty as he had been at fifty; increasing age led to no diminution of his mental acuity.
din N. continued loud noise. The din of the jackhammers outside the classroom window drowned out the lecturer’s voice. Also V.
dingy N. small boat (often ship’s boat). In the film Lifeboat, an ill-assorted group of passengers from a sunken ocean liner are marooned at sea in a dinghy.
dingy ADJ. dull; not fresh; cheerless. Refusing to be depressed by her dingy studio apartment, Bea spent the weekend polishing the floors and windows and hanging bright posters on the walls.
dint N. means; effort. By dint of much hard work, the volunteers were able to control the raging forest fire.
diorama N. life-size, three-dimensional scene from nature or history. Because they dramatically pose actual stuffed animals against realistic painted landscapes, the dioramas at the Museum of Natural History particularly impress high school biology students.
dire ADJ. disastrous. People ignored her dire predictions of an approaching depression.
dirge N. lament with music. The funeral dirge stirred us to tears.
disabuse v. correct a false impression; undeceive. I will attempt to disabuse you of your impression of my client’s guilt; I know he is innocent.

dismember v. cut into small parts. When the Austrian Empire was dismembered, several new countries were established.

■ dismiss v. eliminate from consideration; reject. Believing in John’s love for her, she dismissed the notion that he might be unfaithful. (secondary meaning)

■ disparage v. belittle. A doting mother, Emma was more likely to praise her son’s crude attempts at art than to disparage them.
disparate ADJ. basically different; unrelated. Unfortunately, Tony and Tina have disparate notions of marriage: Tony sees it as a carefree extended love affair, while Tina sees it as a solemn commitment to build a family and a home.

disparity N. difference; condition of inequality. Their disparity in rank made no difference at all to the prince and Cinderella.

dissipate v. squander; waste; scatter. He is a fine artist, but I fear he may dissipate his gifts if he keeps wasting his time playing Trivial Pursuit.

dissolution N. disintegration; looseness in morals. The profligacy and dissolution of life in Caligula’s Rome appall some historians. Dissolute, ADJ.

dissuade v. persuade not to do; discourage. Since Tom could not dissuade Huck from running away from home, he decided to run away with his friend. Dissuasion, N.

distinct ADJ. reserved or aloof; cold in manner. Her distinct greeting made me feel unwelcome from the start. (Secondary Meaning)

distend v. expand; swell out. I can tell when he is under stress by the way the veins distend on his forehead.

distill v. purify; refine; concentrate. A moonshiner distills mash into whiskey; an epigrammatist distills thoughts into quips.

dissatisfaction N. honor; contrast; discrimination. A holder of the Medal of Honor, George served with great distinction in World War II. He made a distinction, however, between World War II and Vietnam, which he considered an immoral conflict.

disquiety N. uneasiness; anxiety. When Holmes had been gone for a day, Watson felt only a slight sense of disquietude, but after a week with no word, Watson’s uneasiness about his missing friend had grown into a deep fear for Holmes’s safety. Disquiet, v., N.

disquisition N. a formal systematic inquiry; an explanation of the results of a formal inquiry. In his disquisition, he outlined the steps he had taken in reaching his conclusions.

dissertation N. formal essay. In order to earn a graduate degree from many of our universities, a candidate is frequently required to prepare a dissertation on some scholarly subject.
dolorous adj. sorrowful. He found the dolorous lamentations of the bereaved family emotionally disturbing and he left as quickly as he could.
dolt n. stupid person. I thought I was talking to a mature audience; instead, I find myself addressing a pack of dolts.
domicile n. home. Although his legal domicile was in New York City, his work kept him away from his residence for many years. Also v.
domineer v. rule tyrannically. Students prefer teachers who guide, not ones who domineer.
don v. put on. When Clark Kent had to don his Superman outfit, he changed clothes in a convenient phone booth.
dormant adj. sleeping; lethargic; latent. At fifty her long-dormant ambition to write flared up once more; within a year she had completed the first of her great historical novels. dormancy, n.
dormer n. window projecting from roof. In remodeling the attic into a bedroom, we decided that we needed to put in dormers to provide sufficient ventilation for the new room.
dorsal adj. relating to the back of an animal. A shark may be identified by its dorsal fin, which projects above the surface of the ocean.
dossier n. file of documents on a subject. Ordered by J. Edgar Hoover to investigate the senator, the FBI compiled a complete dossier on him.
dotage n. senility. In his dotage, the old man bored us with long tales of events in his childhood.
dote v. be excessively fond of; show signs of mental decline. Not only grandmothers bore you with stories about their brilliant grandchildren; grandfathers dote on the little rascals, too.
dour adj. sullen; stubborn. The man was dour and taciturn.
douse v. plunge into water; drench; extinguish. They doused each other with hoses and water balloons.
dowdy adj. slovenly; untidy. She tried to change her dowdy image by buying a fashionable new wardrobe.
downcast adj. disheartened; sad. Cheerful and optimistic by nature, Beth was never downcast despite the difficulties she faced.
drab adj. dull; lacking color; cheerless. The Dutch woman's drab winter coat contrasted with the distinctive, colorful native costume she wore beneath it.
draconian adj. extremely severe. When the principal canceled the senior prom because some seniors had been late to school that week, we thought the draconian punishment was far too harsh for such a minor violation of the rules.
dregs n. sediment; worthless residue. David poured the wine carefully to avoid stirring up the dregs.
driel n. nonsense; foolishness. Why do I have to spend my days listening to such idiotic driel? Drive! is related to dribble; think of a dribbling, drive-ing idiot.
droll ADJ. queer and amusing. He was a popular guest because his droll anecdotes were always entertaining.
drone N. idle person; male bee. Content to let his wife support him, the would-be writer was in reality nothing but a drone.
drone v. talk dully; buzz or murmur like a bee. On a gorgeous day, who wants to be stuck in a classroom listening to the teacher drone?
dross N. waste matter; worthless impurities. Many methods have been devised to separate the valuable metal from the dross.
drudgery N. menial work. Cinderella's fairy godmother rescued her from a life of drudgery.
dubious ADJ. questionable; filled with doubt. Some critics of the GRE contend the test is of dubious worth. Tony claimed he could get a perfect score on the test, but Tina was dubious: she knew he hadn't cracked a book in three years. dubiety, N.
ductile ADJ. malleable; flexible; pliable. Copper is an extremely ductile material: you can stretch it into the thinnest of wires, bend it, even wind it into loops.
ductile N. sweet sounding. The dulcet sounds of the birds at dawn were soon drowned out by the roar of traffic passing our motel.
dumbfound v. astonish. Egbert's perfect score on the GRE dumbfounded his classmates, who had always considered him to be utterly dumb.
dupe N. someone easily fooled. While the gullible Watson often was made a dupe by unscrupulous parties, Sherlock Holmes was far more difficult to fool.
duplicity N. double-dealing; hypocrisy. When Tanya learned that Mark had been two-timing her, she was furious at his duplicity. duplicitous, ADJ.

entrance v. put under a spell; carry away with emotion. Shafts of sunlight on a wall could entrance her and leave her spellbound.

entreat v. plead; ask earnestly. She entreated her father to let her stay out till midnight.

entree N. entrance; a way in. Because of his wealth and social position, he had entree into the most exclusive circles.

entrepreneur N. businessperson; contractor. Opponents of our present tax program argue that it discourages entrepreneurs from trying new fields of business activity.

enumerate v. list; mention one by one. Huck hung his head in shame as Miss Watson enumerated his many flaws.

enunciate v. utter or speak, especially distinctly. Stop mumbling! How will people understand you if you do not enunciate clearly?

environ v. enclose; surround. In medieval days, Paris was enveloped by a wall. environs, N.

eon N. long period of time; an age. It has taken eons for our civilization to develop.

epaulet N. ornament worn on the shoulder (of a uniform, etc.). The shoulder loops on Sam Spade's trench coat are the nonmilitary counterparts of the fringed epaulets on George Washington's uniform.

ephemeral ADJ. short-lived; fleeting. The mayfly is an ephemeral creature: its adult life lasts little more than a day.

epic N. long heroic poem, novel, or similar work of art. Kurosawa's film Seven Samurai is an epic portraying the struggle of seven warriors to destroy a band of robbers. Also ADJ.

epicure N. connoisseur of food and drink. Epicures frequent this restaurant because it features exotic wines and dishes. epicurean, ADJ.

epigram N. witty thought or saying, usually short. Poor Richard's epigrams made Benjamin Franklin famous.

epilogue N. short speech at conclusion of dramatic work. The audience was so disappointed in the play that many did not remain to hear the epilogue.

episcopic ADJ. loosely connected. Though he tried to follow the plot of Gravity's Rainbow, John found the novel too episodic.

epistemologist N. philosopher who studies the nature of knowledge. "What is more important, a knowledge of nature or the nature of knowledge?" the epistemologist asked the naturalist.

epitaph N. inscription in a memory of a dead person. In his will, he dictated the epitaph he wanted placed on his tombstone.

epithet N. word or phrase characteristically used to describe a person or thing. So many kings of France were named Charles that modern students need epithets to tell them apart: Charles the Wise, for example, was someone far different from Charles the Fat.

epitome N. perfect example or embodiment. Singing "I am the very model of a modern Major-General" in The Pirates of Penzance, Major-General Stanley proclaimed himself the epitome of an officer and a gentleman. epitomize, v.

epoch N. period of time. The glacial epoch lasted for thousands of years.

equable ADJ. tranquil; steady; uniform. After the hot summers and cold winters of New England, she found the climate of the West Indies equable and pleasant.

equanimity N. calmness of temperament; composure. Even the inevitable strains of caring for an ailing mother did not disturb Bea's equanimity.

equestrian N. rider on horseback. These paths in the park are reserved for equestrians and their steeds. Also ADJ.

equilibrium N. balance. After the divorce, he needed some time to regain his equilibrium.

equine ADJ. resembling a horse. Her long, bony face had an equine look to it.

equinox N. period of equal days and nights; the beginning of spring and autumn. The vernal equinox is usually marked by heavy rainstorms.

equipment N. balance; balancing force. Equilibrium. The high-wire acrobat used his pole as an equipoise to overcome the swaying caused by the wind.

equitable ADJ. fair; impartial. I am seeking an equitable solution to this dispute, one that will be fair and acceptable to both sides.

equity N. fairness; justice. Our courts guarantee equity to all.

equivocal ADJ. ambiguous; intentionally misleading. Rejecting the candidate's equivocal comments on tax reform, the reporters pressed him to state clearly where he stood on the issue. equivocation, N.

equivocate v. lie; mislead; attempt to conceal the truth. The audience saw through his attempts to equivocate on the subject under discussion and ridiculed his remarks.
erode v. eat away. The limestone was eroded by the dripping water until only a thin shell remained. erosion, n.
erotic adj. pertaining to passionate love. The erotic passages in this novel should be removed as they are merely pornographic.
errant adj. wandering. Many a charming tale has been written about the knights-errant who helped the weak and punished the guilty during the Age of Chivalry.
erratic adj. odd; unpredictable. Investors become anxious when the stock market appears erratic.
erroneous adj. mistaken; wrong. I thought my answer was correct, but it was erroneous.
erudite adj. learned; scholarly. Though his fellow students thought him erudite, Paul knew he would have to spend many years in serious study before he could consider himself a scholar. erudition, n.
escape n. prank; flighty conduct. The headmaster could not regard this latest escapade as a boyish joke and expelled the young man.
eschew v. avoid. Hoping to present himself to his girlfriend as a totally reformed character, he tried to eschew all the vices, especially chewing tobacco and drinking bathtub gin.
esoteric adj. hard to understand; known only to the chosen few. New Yorker short stories often include esoteric allusions to obscure people and events: the implication is, if you are in the in-crowd, you'll get the reference; if you come from Cleveland, you won't. esotericism, n.
espionage n. spying. In order to maintain its power, the government developed a system of espionage that penetrated every household.
espouse v. adopt; support. She was always ready to espouse a worthy cause.
estee v. respect; value. Jill esteemed Jack's taste in music, but she deplored his taste in clothes. Also n.
estraged adj. separated; alienated. The estranged wife sought a divorce. estrangement, n.
etheal adj. light; heavenly; unusually refined. In Shakespeare's The Tempest, the spirit Ariel is an ethereal creature, too airy and unearthly for our mortal world.
ethnic adj. relating to races. Intolerance between ethnic groups is deplorable and usually is based on lack of information.
etnology n. study of humankind. Sociology is one aspect of the science of ethnology.
ethos n. underlying character of a culture, group, etc. Seeing how tenderly Spaniards treated her small daughter made author Barbara Kingsolver aware of how greatly children were valued in the Spanish ethos.
etymology n. study of word parts. A knowledge of etymology can help you on many English tests: if you know what the roots and prefixes mean, you can determine the meanings of unfamiliar words.
eugenetic adj. pertaining to the improvement of race. It is easier to apply eugenic principles to the raising of racehorses or prize cattle than to the development of human beings.
eulogistic adj. praising. To everyone's surprise, the speech was eulogistic rather than critical in tone.

Word List 18  eulogy-faculty

- **eulogy**  N. expression of praise, often on the occasion of someone's death. Instead of delivering a spoken eulogy at Genny's memorial service, Jeff sang a song he had written in her honor. eulogize, v.
- **euphemism**  N. mild expression in place of an unpleasant one. The expression "he passed away" is a euphemism for "he died."
- **euphony**  N. sweet sound. Noted for its euphony even when it is spoken, the Italian language is particularly pleasing to the ear when sung. euphonious, ADJ.
- **euphoria**  N. feeling of exaggerated (or unfounded) well-being. "Jill's been on cloud nine ever since Jack asked her out," said Betty, dismissing her friend's euphoria.
- **euthanasia**  N. mercy killing. Many people support euthanasia for terminally ill patients who wish to die.
- **evanescent**  ADJ. fleeting; vanishing. For a brief moment, the entire skyline was bathed in an orange-red hue in the evanescent rays of the sunset.
- **evasive**  ADJ. not frank; eluding. Your evasive answers convinced the judge that you were withholding important evidence. evade, v.
- **evince**  v. show clearly. When he tried to answer the questions, he evinced his ignorance of the subject matter.
- **evenhanded**  ADJ. impartial; fair. Do men and women receive evenhanded treatment from their teachers, or, as recent studies suggest, do teachers pay more attention to male students than to females?
- **evocative**  ADJ. tending to call up (emotions, memories). Scent can be remarkably evocative: the aroma of pipe tobacco evokes the memory of my father; a whiff of lal-cum powder calls up images of my daughter as a child.
- **evoke**  v. call forth. He evoked much criticism by his hostile manner. evocation, N.
- **ewe**  N. female sheep. The flock of sheep was made up of dozens of ewes, together with only a handful of rams.
- **exacerbate**  v. worsen; embitter. The latest bombing exacerbated England's already existing bitterness against the IRA, causing the Prime Minister to break off the peace talks abruptly. exacerbation, N.
- **exacting**  ADJ. extremely demanding. Cleaning the ceiling of the Sistine Chapel was an exacting task, one that demanded extremely meticulous care on the part of the restorers. exaction, N.
- **exalt**  v. raise in rank or dignity; praise. The actor Alec Guinness was exalted to the rank of knighthood by the Queen; he now is known as Sir Alec Guinness.
- **exasperate**  v. vex. Johnny often exasperates his mother with his pranks.
- **exceptionable**  ADJ. objectionable. Do you find the punk rock band Green Day a highly exceptionable, thoroughly distasteful group, or do you think they are exceptionally talented performers?
- **excerpt**  N. selected passage (written or musical). The cinematic equivalent of an excerpt from a novel is a clip from a film. also v.
- **exchequer**  N. treasury. He had been Chancellor of the Exchequer before his promotion to the office he now holds.
- **excise**  v. cut away; cut out. When you excise the dead and dying limbs of a tree, you not only improve its appearance but also enhance its chances of bearing fruit. excision, N.
- **exclaim**  v. cry out suddenly. "Watson! Behind you!" Holmes exclaimed, seeing the assassin hurl himself on his friend. exclamation, N. exclamatory, ADJ.
- **excoriates**  v. scold with biting harshness; strip the skin off. Seeing the rips in Bill's new pants, his mother furiously excoriates him for ruining his good clothes. The tight, starched collar chafed and excoriates his neck, rubbing it raw.
- **exculpate**  v. clear from blame. She was excused of the crime when the real criminal confessed.
- **execrable**  ADJ. very bad. The anecdote was in such execrable taste that the audience was revolted.
- **execute**  v. curse; express abhorrence for. The world executes the memory of Hitler and hopes that genocide will never again be the policy of any nation.
- **executive**  v. put into effect; carry out. The choreographer wanted to see how well she could execute a pirouette. (secondary meaning) execution, N.
- **exegesis**  N. explanation, especially of biblical passages. I can follow your exegesis of this passage to a limited degree; some of your reasoning eludes me.
- **exemplary**  ADJ. serving as a model; outstanding. At commencement the dean praised Ellen for her exemplary behavior as class president.
- **exemplify**  v. show by example; furnish an example. Three-time winner of the Super Bowl, Joe Montana exemplifies the ideal quarterback.
- **exempt**  ADJ. not subject to a duty or obligation. Because of his flat feet, Foster was exempt from serving in the armed forces. also v.
- **exertion**  N. effort; expenditure of much physical work. The exertion involved in unscrewing the rusty bolt left her exhausted.
- **exhilarating**  ADJ. invigorating and refreshing; cheering. Though some of the hikers found tramping through the snow tiring, Jeffrey found the walk on the cold, crisp day exhilarating. His exhilaration was so great that, at the hike's end, he wanted to walk another five miles.
- **exhort**  v. urge. The evangelist exhorted all the sinners in the audience to reform. exhortation, N.
- **exhume**  v. dig out of the ground; remove from the grave. Could evidence that might identify the serial killer have been buried with his victim? To answer this question, the police asked the authorities for permission to exhume the victim's body.
exigency  N. urgent situation. In this exigency, we must look for aid from our allies. exigent, ADJ.

exiguous  ADJ. small; minute. Grass grew there, an exiguous outcropping among the rocks.

existential  ADJ. pertaining to existence; pertaining to the philosophy of existentialism. To the existential philosopher, human reason is inadequate to explain an irrational, meaningless universe.

exodus  N. departure. The exodus from the hot and stuffy city was particularly noticeable on Friday evenings.

exonerate  v. acquit; exculpate. The defense team feverishly sought fresh evidence that might exonerate their client.

exorbitant  ADJ. excessive. The people grumbled at his exorbitant prices but paid them because he had a monopoly.

exorcise  v. drive out evil spirits. By incantation and prayer, the medicine man sought to exorcise the evil spirits that had taken possession of the young warrior.

exotic  ADJ. not native; strange. Because of his exotic headaddress, he was followed in the streets by small children who laughed at his strange appearance.

expansive  ADJ. outgoing and sociable; broad and extensive; able to increase in size. Mr. Fezziwig was in an expansive humor, cheerfully urging his guests to join in the Christmas feast. Looking down on his expansive paunch, he sighed: if his belly expanded any further, he’d need an expansive waistline for his pants.

expatiate  v. talk at length. At this time, please give us a brief résumé of your work; we shall permit you to expatiate later.

expatriate  N. exile; someone who has withdrawn from his native land. Henry James was an American expatriate who settled in England.

expedient  ADJ. suitable; practical; politic. A pragmatic politician, she was guided by what was expedient rather than by what was ethical. expediency, N.

expedite  v. hasten. Because we are on a tight schedule, we hope you will be able to expedite the delivery of our order. The more expedient your response is, the happier we’ll be.

expenditure  N. payment or expense; output. When you are operating on an expense account, you must keep receipts for all your expenditures. If you don’t save your receipts, you won’t get repaid without the expenditure of a lot of energy arguing with the firm’s accountants.

expertise  N. specialized knowledge; expert skill. Although she was knowledgeable in a number of fields, she was hired for her particular expertise in computer programming.

expiate  v. make amends for (a sin). He tried to expiate his crimes by a full confession to the authorities.

explicative  N. interjection; profane oath. The sergeant’s remarks were filled with expletives that offended the new recruits.

explicate  v. explain; interpret; clarify. Harry Levin explicated James Joyce’s novels with such clarity that even Finnegans Wake seemed comprehensible to his students.

explicit  ADJ. totally clear; definite; outspoken. Don’t just hint around that you’re dissatisfied: be explicit about what’s bugging you.

exploit  v. deed or action, particularly a brave deed. Raoul Wallenberg was noted for his exploits in rescuing Jews from Hitler’s forces.

exploit  v. make use of, sometimes unjustly. Cesar Chavez fought attempts to exploit migrant farmworkers in California. exploitation, N.

expository  ADJ. explanatory; serving to explain. The manual that came with my VCR was no masterpiece of expository prose: its explanations were so garbled that I couldn’t even figure out how to rewind a tape.

expostulation  N. protest; remonstrance. Despite the teacher’s scoldings and expostulations, the class remained unruly.

exposure  N. risk, particularly of being exposed to disease or to the elements; unmasking; act of laying something open. Exposure to sun and wind had dried out her hair and weathered her face. She looked so changed that she no longer feared exposure as the notorious Irene Adler, one-time antagonist of Sherlock Holmes.

expropriate  v. take possession of. He questioned the government’s right to expropriate his land to create a wildlife preserve.

expunge  v. cancel; remove. If you behave, I will expunge this notation from your record.

expurgate  v. clean; remove offensive parts of a book. The editors felt that certain passages in the book had to be expurgated before it could be used in the classroom.

extend  v. still in existence. Although the book is out of print, some copies are still extant. Unfortunately, all of them are in libraries or private collections; none is for sale.

extemporaneous  ADJ. not planned; impromptu. Because her extemporaneous remarks were misinterpreted, she decided to write all her speeches in advance.

extenuate  v. weaken; mitigate. It is easier for us to extenuate our own shortcomings than those of others.

extirpate  v. root up. The Salem witch trials were a misguided attempt to extirpate superstition and heresy.

extol  v. praise; glorify. The president extolled the astronauts, calling them the pioneers of the Space Age.

extort  v. wring from; get money by threats, etc. The blackmailer extorted money from his victim.

extradition  N. surrender of prisoner by one state to another. The lawyers opposed the extradition of their client on the grounds that for more than five years he had been a model citizen.

extraneous  ADJ. not essential; superfluous. No wonder Ted can’t think straight! His mind is so cluttered up with extraneous details, he can’t concentrate on the essentials.
extrapolation  N. projection; conjecture. Based on their extrapolation from the results of the primaries on Super Tuesday, the networks predicted that George Bush would be the Republican candidate for the presidency. extrapolate, v.

extricate  v. free; disentangle. Icebreakers were needed to extricate the trapped whales from the icy floes that closed them in.

eextrinsic  adj. external; not essential; extraneous. A critically acclaimed extrinsic feature of the Chrysler Building is its ornate spire. The judge would not admit the testimony, ruling that it was extrinsic to the matter at hand.

extravert  N. person interested mostly in external objects and actions. A good salesperson is usually an extravert who likes to mingle with people.

extrude  v. force or push out. Much pressure is required to extrude these plastics.

exuberance  N. overflowing abundance; joyful enthusiasm; flamboyance; lavishness. I was bowled over by the exuberance of Amy's welcome. Cheeks glowing, she was the picture of exuberant good health.

exude  v. discharge; give forth. The maple syrup is obtained from the sap that the trees exude in early spring. exudation, N.

exit  v. rejoice. We exulted when our team won the victory.

fabricate  v. build; lie. If we fabricate the buildings in this project out of standardized sections, we can reduce construction costs considerably. Because of Jack's tendency to fabricate, Jill had trouble believing a word he said.

facade  N. front (of building); superficial or false appearance. The ornate facade of the church was often photographed by tourists, who never bothered to walk around the building to view its other sides. Cher's outward show of confidence was just a facade she assumed to hide her insecurity.

facet  N. small plane surface (of a gem); a side. The stonecutter decided to improve the rough diamond by providing it with several facets.

facetious  adj. joking (often inappropriately); humorous. I'm serious about this project; I don't need any facetious, smart-alecky cracks about do-good little rich girls.

facile  adj. easily accomplished; ready or fluent; superficial. Words came easily to Jonathan; he was a facile speaker and prided himself on being ready to make a speech at a moment's notice. facility, N.

facilitate  v. help bring about; make less difficult. Rest and proper nourishment should facilitate the patient's recovery.

facsimile  N. copy. Many museums sell facsimiles of the works of art on display.

faction  N. party; clique; dissension. The quarrels and bickering of the two small factions within the club disturbed the majority of the members.

factious  adj. inclined to form factions; causing dissension. Your statement is factious and will upset the harmony that now exists.

factitious  adj. artificial; sham. Hollywood actresses often create factitious tears by using glycerine.

factotum  N. handyman; person who does all kinds of work. Although we had hired him as a messenger, we soon began to use him as a general factotum around the office.

faculty  N. mental or bodily powers; teaching staff. As he grew old, Professor Twiggly feared he might lose his faculties and become unfit to teach. However, while he was in full possession of his faculties, the school couldn't kick him off the faculty.

Test

Word List 20

flippant ADJ. lacking proper seriousness. When Mark told Mona he loved her, she dismissed his earnest declaration with a flippant “Oh, you say that to all the girls!” flippancy, n.
flit v. fly; dart lightly; pass swiftly by. Like a bee flitting from flower to flower, Rose flitted from one boyfriend to the next.
floe n. mass of floating ice. The ship made slow progress as it batted its way through the ice floes.
flora n. plants of a region or era. Because she was a botanist, she spent most of her time studying the flora of the desert.
florid ADJ. ruddy; reddish; flowery. If you go to Florida and get a sunburn, your complexion will look florid. If your postcards about your trip praise it in flowery words, your prose will be florid, too.
flotsam n. drifting wreckage. Beachcombers eke out a living by salvaging the flotsam and jetsam of the sea.
flounder v. struggle and thrash about; proceed clumsily or falter. Up to his knees in the bog, Floyd floundered about, trying to regain his footing. Bewildered by the new software, Flo floundered until Jan showed her how to get started.
flourish v. grow well; prosper; make sweeping gestures. The orange trees flourished in the sun.
flout v. reject; mock. The headstrong youth flouted all authority; he refused to be curbed.
fluctuate v. waver; shift. The water pressure in our shower fluctuates wildly; you start rinsing yourself off with a trickle, and two minutes later a blast of water nearly knocks you off your feet. I’ll never get used to these fluctuations.
fluency n. smoothness of speech. She spoke French with fluency and ease.
fluke n. unlikely occurrence; stroke of fortune. When Douglas defeated Tyson for the heavyweight champi-onship, some sportscasters dismissed his victory as a fluke.
fluster v. confuse. The teacher’s sudden question flustered him and he stammered his reply.
fluted ADJ. having vertical parallel grooves (as in a pillar). All that remained of the ancient building were the fluted columns.
flux n. flowing; series of changes. While conditions are in such a state of flux, I do not wish to commit myself too deeply in this affair.
fodder n. coarse food for cattle, horses, etc. One of Nancy’s chores at the ranch was to put fresh supplies of fodder in the horses’ stalls.
foible n. weakness; slight fault. We can overlook the foibles of our friends; no one is perfect.
foil n. contrast. In Star Wars, dark, evil Darth Vader is a perfect foil for fair-haired, naive Luke Skywalker.
foil v. defeat; frustrate. In the end, Skywalker is able to foil Vader’s diabolical schemes.
foist v. insert improperly; palm off. I will not permit you to foist such ridiculous ideas upon the membership of this group.
foliage n. masses of leaves. Every autumn before the leaves fell he promised himself he would drive through New England to admire the colorful fall foliage.
foist v. stir up; instigate. Cher’s archenemy Heather spread some nasty rumors that fomented trouble in the club. Do you think Cher’s foe meant to foment such discord? foolhardy ADJ. rash. Don’t be foolhardy. Get the advice of experienced people before undertaking this venture.
foppish ADJ. vain about dress and appearance. He tried to imitate the foppish manner of the young men of the court.
foray n. raid. The company staged a midnight foray against the enemy outpost.
forbearance n. patience. We must use forbearance in dealing with him because he is still weak from his illness.
ford n. place where a river can be crossed on foot. Rather than risk using the shaky rope bridge, David walked a half-mile downstream until he came to the nearest ford. also v.
forebears n. ancestors. Reverence for one’s forebears (sometimes referred to as ancestor worship) plays an important part in many Oriental cultures.
foreboding n. premonition of evil. Suspecting no conspiracies against him, Caesar gently ridiculed his wife’s forebodings about the Ides of March.
forensic adj. suitable to debate or courts of law. In her best forensic manner, the lawyer addressed the jury.
foreshadow v. give an indication beforehand; portend; prefigure. In retrospect, political analysts realized that Yeltsin’s defiance of the attempted coup forecasted his emergence as the dominant figure of the new Russian republic.
foresight n. ability to foresee future happenings; prudence. A wise investor, she had the foresight to buy land just before the current real estate boom.
forestall v. prevent by taking action in advance. By setting up a prenuptial agreement, the prospective bride and groom hoped to forestall any potential arguments about money in the event of a divorce.
forgo v. give up; do without. Determined to lose weight for the summer, Ida decided to forgo dessert until she could fit into a size eight again.
forlorn adj. sad and lonely; wretched. Deserted by her big sisters and her friends, the forlorn child sat sadly on the steps awaiting their return.
formality n. ceremonious quality; something done just for form’s sake. The president received the visiting heads of state with due formality: flags waving, honor guards standing at attention, bands playing anthems at full blast. Signing this petition is a mere formality; it does not obligate you in any way.
formidable adj. menacing; threatening. We must not treat the battle lightly for we are facing a formidable foe.
forsake v. desert; abandon; renounce. No one expected Foster to forsake his wife and children and run off with another woman.
forswear v. renounce; abandon. The captured knight could escape death only if he agreed to forswear Christianity and embrace Islam as the one true faith.
forte n. strong point or special talent. I am not eager to play this rather serious role, for my forte is comedy.
forthright adj. straightforward; direct; frank. I prefer Jill’s forthright approach to Jack’s tendency to beat around the bush.
fortitude n. bravery; courage. He was awarded the medal for his fortitude in the battle.
fortuitous adj. accidental; by chance. Though he pretended their encounter was fortuitous, he’d actually been hanging around her usual haunts for the past two weeks, hoping she’d turn up.
foster v. rear; encourage. According to the legend, Romulus and Remus were fostered by a she-wolf that raised the abandoned infants as her own. Also adj.
founder v. fail completely; sink. After hitting the submerged iceberg, the Titanic started taking in water rapidly and soon founded.
founder n. person who establishes (an organization, business). Among those drowned when the Titanic sank was the founder of the Abraham & Straus chain.

Word List 22  gouge-hiatus

gouge  v. tear out. In that fight, all the rules were forgotten; the adversaries bit, kicked, and tried to gouge each other’s eyes out.

■ gouge  v. overcharge. During the World Series, ticket scalpers tried to gouge the public, asking astronomical prices even for beer seat seats.

gourmet  n. epicure; person who takes excessive pleasure in food and drink. *Gourmands* lack self-restraint; if they enjoy a particular cuisine, they eat far too much of it.

■ grapple  v. wrestle; come to grips with. He grappled with the burglar and overwhelmed him.

grate  v. make a harsh noise; have an unpleasant effect; shred. The screams of the quarreling children grated on her nerves.

■ gratify  v. please. Lori’s parents were gratified by her successful performance on the GRE.

granulate  v. form into grains. Sugar that has been granulated dissolves more readily than lump sugar. granule, n.

graphic  adj. pertaining to the art of delineating; vividly described. I was particularly impressed by the graphic presentation of the storm.

grandiose  adj. pretentious; high-flown; ridiculously exaggerated; impressive. The aged matinee idol still had grandiose notions of his supposed importance in the theatrical world.

grandeur  n. impressiveness; stateliness; majesty. No matter how often he hiked through the mountains, David never failed to be struck by the grandeur of the Sierra Nevada range.

■ grandiloquent  adj. pompous; bombastic; using high-sounding language. The politician could never speak simply; she was always grandiloquent.

granary  n. storehouse for grain. We have reason to be thankful, for our crops were good and our granaries are full.

■ gravity  n. tip. Many service employees rely more on gratuities than on salaries for their livelihood.

■ gregarious  adj. sociable. Typically, party-throwers are gregarious; hermits are not.
grievance N. cause of complaint. When her supervisor ignored her complaint, she took her grievance to the union.

grill v. question severely. In violation of the Miranda law, the police grilled the suspect for several hours before reading him his rights. (secondary meaning)

grimace N. a facial distortion to show feeling such as pain, disgust, etc. Even though he remained silent, his grimace indicated his displeasure. also v.

grisly adj. ghastly. She shuddered at the grisly sight.

grotesque adj. fantastic; comically hideous. On Halloween people enjoy wearing grotesque costumes.

grotto N. small cavern. The Blue Grotto in Capri can be entered only by small boats rowed by natives through a natural opening in the rocks.

grouch v. complain; fuss. Students traditionally grouch about the abysmal quality of "mystery meat" and similar dormitory food.

grovel v. crawl or creep on ground; remain prostrate. Even though we have been defeated, we do not have to grovel before our conquerors.

grudging adj. unwilling; reluctant; stingy. We received only grudging support from the mayor despite his earlier promises of aid.

gruel N. thin, liquid porridge. Our daily allotment of gruel made the meal not only monotonous but also unpalatable.

grueling adj. exhausting. The marathon is a grueling race.

gruesome adj. grisly; horrible. His face was the stuff of nightmares: all the children in the audience screamed when Freddy Kruger's gruesome countenance was flashed on the screen.

guff adj. rough-mannered. Although he was blunt and guff with most people, he was always gentle with children.

guffaw N. boisterous laughter. The loud guffaws that came from the closed room indicated that the members of the committee had not yet settled down to serious business. also v.

guile N. deceit; duplicity; wiliness; cunning. Iago uses considerable guile to trick Othello into believing that Desdemona has been unfaithful.

■ guileless adj. without deceit. He is naive, simple, and guileless; he cannot be guilty of fraud.

guise N. appearance; costume. In the guise of a plumber, the detective investigated the murder case.

gull v. trick; hoodwink. Confident no one could gull him, Paul prided himself on his skeptical disposition.

■ gullible adj. easily deceived. Gullible people have only themselves to blame if they fall for con artists repeatedly. As the saying goes, "Fool me once, shame on you. Fool me twice, shame on me."

gustatory adj. affecting the sense of taste. The Thai restaurant offered an unusual gustatory experience for those used to a bland cuisine.

gusto N. enjoyment; enthusiasm. He accepted the assignment with such gusto that I feel he would have been satisfied with a smaller salary.

gusty adj. windy. The gusty weather made sailing precarious.

guy N. cable or chain attached to something that needs to be braced or steadied. If the guys holding up the mast on that derrick snap, the mast will topple.

gyroscope N. apparatus used to maintain balance, ascertain direction, etc. By using a rotating gyroscope, they were able to stabilize the vessel, counteracting the rolling movements of the sea.

habituate v. accustom or familiarize; addict. Macbeth gradually habituated himself to murder, shedding his scruples as he grew accustomed to his bloody deeds.

hackles N. hairs on back and neck, especially of a dog. The dog's hackles rose and he began to growl as the sound of footsteps grew louder.

hackneyed adj. commonplace; trite. When the reviewer criticized the movie for its hackneyed plot, we agreed; we had seen similar stories hundreds of times before.

haggard adj. wasted away; gaunt. After his long illness, he was pale and haggard.

haggle v. argue about prices. I prefer to shop in a store that has a one-price policy because, whenever I haggle with a shopkeeper, I am never certain that I paid a fair price for the articles I purchased.

halcyon adj. calm; peaceful. In those halcyon days, people were not worried about sneak attacks and bombings.

hale adj. healthy. After a brief illness, he was soon hale.

hallowed adj. blessed; consecrated. Although the dead girl's parents had never been active churchgoers, they insisted that their daughter be buried in hallowed ground.

hallucination N. delusion. I think you were frightened by a hallucination that you created in your own mind.

halting adj. hesitant; faltering. Novice extemporaneous speakers often talk in a halting fashion as they grope for the right words.

hamper v. obstruct. The new mother hadn't realized how much the effort of caring for an infant would hamper her ability to keep an immaculate house.

hap N. chance; luck. In his poem Hap, Thomas Hardy objects to the part chance plays in our lives. also v.

hap hazard adj. random; by chance. His haphazard reading left him unacquainted with many classic books.

hapless adj. unfortunate. This hapless creature had never known a moment's pleasure.

■ harangue N. long, passionate, and vehement speech. In her lengthy harangue, the principal berated the offenders. also v.

Word List 26  infringe–invert

infringe  v. violate; encroach. I think your machine infringes on my patent and I intend to sue.
inventious  ADJ. clever; resourceful. Kit admired the ingenuity way that her computer keyboard opened up to reveal the built-in CD-ROM below. ingenuity, n.

ingenious  ADJ. naive and trusting; young; unsophisticated. The woodsman did not realize how ingenuous Little Red Riding Hood was until he heard that she had gone off for a walk in the woods with the Big Bad Wolf.
ingenuity, n.
ingrained  ADJ. deeply established; firmly rooted. Try as they would, the missionaries were unable to uproot the ingrained superstitions of the natives.
ingrate  N. ungrateful person. That ingrate Bob sneered at the tie I gave him.
ingratiate  v. become popular with. He tried to ingratiate himself into her parents' good graces.
inherent  ADJ. firmly established by nature or habit. Katy's inherent love of justice caused her to champion anyone she considered to be treated unfairly by society.
inhibit  v. restrain; retard or prevent. Only two things inhibited him from taking a punch at Mike Tyson: Tyson's left hook, and Tyson's right jab. The protective undercoating on my car inhibits the formation of rust. inhibition, n.
inimical  ADJ. unfriendly; hostile; harmful; detrimental. I've always been friendly to Martha. Why is she so inimical to me?
inimitable  ADJ. matchless; not able to be imitated. We admire Auden for his inimitable use of language; he is one of a kind.
iniquitous  ADJ. wicked; immoral; unrighteous. Whether or not King Richard III was responsible for the murder of the two young princes in the Tower, it was an iniquitous deed. iniquity, n.
initiate  v. begin; originate; receive into a group. The college is about to initiate a program for reducing math anxiety among students.
injurious  ADJ. harmful. Smoking cigarettes can be injurious to your health.
ingling  N. hint. This came as a complete surprise to me as I did not have the slightest inkling of your plans.
inname  ADJ. inborn. Mozart's parents soon recognized young Wolfgang's innate talent for music.
inocuous  ADJ. harmless. An occasional glass of wine with dinner is relatively innocuous and should have no ill effect on most people.
inovation  N. change; introduction of something new. Although Richard liked to keep up with all the latest technological innovations, he didn't always abandon tried and true techniques in favor of something new. innovate, v. innovative, ADJ.
innuendo  N. hint; insinuation. I can defend myself against direct accusations; innuendos and oblique attacks on my character are what trouble me.
inopportune ADJ. untimely; poorly chosen. A rock concert is an inopportune setting for a quiet conversation.

inordinate ADJ. unrestrained; excessive. She had an inordinate fondness for candy, eating two or three boxes in a single day.

inquisitor N. questioner (especially harsh); investigator. Fearing being grilled ruthlessly by the secret police, Marsha faced her inquisitors with trepidation.

insalubrious ADJ. unwholesome; not healthful. The mosquito-ridden swamp was an insalubrious place, a breeding ground for malarial contagion.

insatiable ADJ. not easily satisfied; unquenchable; greedy. The young writer's thirst for knowledge was insatiable: she was always in the library.

inscrutable ADJ. impenetrable; not readily understood; mysterious. Experienced poker players try to keep their expressions inscrutable, hiding their reactions to the cards behind a so-called poker face.

insensate ADJ. without feeling. She lay there as insensate as a log.

insensible ADJ. unconscious; unresponsive. Sherry and I are very different; at times when I would be covered with embarrassment, it seems insensible to shame.

insidious ADJ. treacherous; stealthy; sly. The fifth column is insidious because it works secretly within our territory for our defeat.

insightful ADJ. discerning; perceptive. Sol thought he was very insightful about human behavior, but actually he was clueless as to why people acted the way they did.

insinuate v. hint; imply; creep in. When you said I looked robust, did you mean to insinuate that I'm getting fat?

insipid ADJ. lacking in flavor; dull. Flat prose and flat ginger ale are equally insipid: both lack sparkle.

insolence N. impudent disrespect; haughtiness. How dare you treat me so rudely! The manager will hear of your insolence. insolent, ADJ.

insolvent ADJ. bankrupt; lacking money to pay. When rumors that he was insolvent reached his creditors, they began to press him for payment of the money due them.

insomnia N. wakefulness; inability to sleep. She refused to join us in a midnight cup of coffee because she claimed it gave her insomnia.

insouciant ADJ. indifferent; without concern or care. Your insouciant attitude at such a critical moment indicates that you do not understand the gravity of the situation.

instigate v. urge; start; provoke. Delighting in making mischief, Sir Toby sets out to instigate a quarrel between Sir Andrew and Cesario.

insubordination N. disobedience; rebelliousness. At the slightest hint of insubordination from the sailors on the Bounty, Captain Bligh had them flogged; finally, they mutinied. insubordinate, ADJ.

insubstantial ADJ. lacking substance; insignificant; frail. His hopes for a career in acting proved insubstantial; no one would cast him, even in an insubstantial role.

insularity N. narrow-mindedness; isolation. The insularity of the islanders manifested itself in their suspicion of anything foreign. insular, ADJ.

insuperable ADJ. insurmountable; unbeatable. Though the odds against their survival seemed insuperable, the Apollo 13 astronauts reached Earth safely.

insurgent ADJ. rebellious. Because the insurgent forces had occupied the capital and had gained control of the railway lines, several of the war correspondents covering the uprising predicted a rebel victory. Also N. insurgency, N.

insurmountable ADJ. overwhelming; unbeatable; insuperable. Facing almost insurmountable obstacles, the members of the underground maintained their courage and will to resist.

insurrection N. rebellion; uprising. In retrospect, given how badly the British treated the American colonists, the eventual insurrection seems inevitable.

intangible ADJ. not able to be perceived by touch; vague. Though the financial benefits of his Oxford post were meager, Lewis was drawn to it by its intangible rewards: prestige, intellectual freedom, the fellowship of his peers.

integral ADJ. complete; necessary for completeness. Physical education is an integral part of our curriculum; a sound mind and a sound body are complementary.

integrate v. make whole; combine; make into one unit. She tried to integrate all their activities into one program.

integrity N. uprightness; wholeness. Lincoln, whose personal integrity has inspired millions, fought a civil war to maintain the integrity of the republic, that these United States might remain undivided for all time.

intellect N. higher mental powers. He thought college would develop his intellect.

intelligentsia N. intellectuals; members of the educated elite [often used derogatorily]. She preferred discussions about sports and politics to the literary conversations of the intelligentsia.

inter v. bury. They are going to inter the body tomorrow at Broadlawny Cemetery. interment, N.

interdict v. prohibit; forbid. Civilized nations must interdict the use of nuclear weapons if we expect our society to live.

interim N. meantime. The company will not consider our proposal until next week; in the interim, let us proceed as we have in the past.

interloper N. intruder. The merchant thought of his competitors as interlopers who were stealing away his trade.

interminable ADJ. endless. Although his speech lasted for only twenty minutes, it seemed interminable to his bored audience.

intermittent ADJ. periodic; on and off. The outdoor wedding reception had to be moved indoors to avoid the intermittent showers that fell on and off all afternoon.

internece ADJ. mutually destructive. The rising death toll on both sides indicates the internece nature of this conflict.

interpolate v. insert between. She talked so much that I could not interpolate a single remark.
interregnum N. period between two reigns. Henry VIII desperately sought a male heir because he feared the civil strife that might occur if any prolonged interregnum succeeded his death.

interrogate V. question closely; cross-examine. Knowing that the Nazis would interrogate him about his background, the secret agent invented a cover story that would help him meet their questions.

intervene V. come between. When two close friends get into a fight, be careful if you try to intervene; they may join forces and gang up on you. intervention, N.

intimate V. hint. She was intimately rather than stated her preferences.

intimidate V. frighten. I'll learn karate and then those big bullies won't be able to intimidate me anymore. intimidation, N.

intractable ADJ. unruly; stubborn; unyielding. Charlie Brown's friend Pigpen was intractable: he absolutely refused to take a bath.

intransigence N. refusal of any compromise; stubbornness. The negotiating board had not expected such intransigence from the striking workers, who rejected any hint of a compromise. intransigent, ADJ.

intrepid ADJ. fearless. For her intrepid conduct nursing the wounded during the war, Florence Nightingale was honored by Queen Victoria.

intrinsic ADJ. essential; inherent; built-in. Although my grandmother's china has little intrinsic value, I shall always cherish it for the memories it evokes.

introspective ADJ. looking within oneself. Though young Francis of Assisi led a wild and worldly life, even he had introspective moments during which he examined his soul. introspection, N.

introvert N. one who is introspective; inclined to think more about oneself. In his poetry, he reveals that he is an introvert by his intense interest in his own problems.

intrude V. trespass; enter as an uninvited person. She hesitated to intrude on their conversation.

intuition N. immediate insight; power of knowing without reasoning. Even though Tony denied that anything was wrong, Tina trusted her intuition that something was bothering him. intuitive, ADJ. intuit, V.

inundate V. overwhelm; flood; submerge. This semester I am inundated with work: you should see the piles of paperwork flooding my desk. Until the great dam was built, the waters of the Nile used to inundate the river valley every year.

inured ADJ. accustomed; hardened. She became inured to the Alaskan cold.

invalidate V. weaken; destroy. The relatives who received little or nothing sought to invalidate the will by claiming that the deceased had not been in his right mind when he signed the document.

inventive N. abuse. He had expected criticism but not the inventive that greeted his proposal.

inveigh V. denounce; utter censure or invective. He inveighed against the demagoguery of the previous speaker and urged that the audience reject his philosophy as dangerous.

inveigle V. lead astray; wheedle. She was inveigled into joining the club after an initial reluctance.

inverse ADJ. opposite. There is an inverse ratio between the strength of light and its distance.

invert V. turn upside down or inside out. When he inverted his body in a hand stand, he felt the blood rush to his head.

Word List 27

inveterate ADJ. deep-rooted; habitual. She is an inveterate smoker and cannot break the habit.

invidious ADJ. designed to create ill will or envy. We disregarded her invidious remarks because we realized how jealous she was.

invincible ADJ. unbreakable. Superman is invincible.

inviolable ADJ. secure from corruption, attack, or violation; unassailable. Batman considered his oath to keep the people of Gotham City safe inviolable: nothing on earth could make him break this promise. inviolability, N.

invocation N. prayer for help; calling upon as a reference or support. The service of Morning Prayer opens with an invocation during which we ask God to hear our prayers.

invoke V. call upon; ask for. She invoked her advisor’s aid in filling out her financial aid forms.

invulnerable ADJ. incapable of injury. Achilles was invulnerable except in his heel.

iota N. very small quantity. She hadn’t an iota of common sense.

irascible ADJ. irritable; easily angered. Miss Minchin’s irascible temper intimidated the younger schoolgirls, who feared she’d burst into a rage at any moment.

irate ADJ. angry. When John’s mother found out that he had had drawn his checking account for the third month in a row, she was so irate that she could scarcely speak to him.

iridescent ADJ. exhibiting rainbowlike colors. She admired the iridescent hues of the oil that floated on the surface of the water. iridescence, N.

irksome ADJ. annoying; tedious. He found working on the assembly line irksome because of the monotony of the operation he had to perform. irk, V.

ironic ADJ. occurring in an unexpected and contrary manner. It is ironic that his success came when he least wanted it.

irony N. hidden sarcasm or satire; use of words that seem to mean the opposite of what they actually mean. Gradually his listeners began to realize that the excessive praise he was lavishing on his opponent was actually irony; he was, in fact, ridiculing the poor fool.

irreconcilable ADJ. incompatible; not able to be resolved. Because the separated couple were irreconcilable, the marriage counselor recommended a divorce.

irrefutable ADJ. indisputable; incontrovertible; undeniable. No matter how hard I tried to find a good comeback for her argument, I couldn’t think of one; her logic was irrefutable.

irrelevant ADJ. not applicable; unrelated. No matter how irrelevant the patient’s musings may seem, they give us some indications of what is on his mind. irrelevancy, N.

irremediable ADJ. incurable; uncorrectable. The error she made was irremediable; she could see no way to repair it.

irreparable ADJ. not able to be corrected or repaired. Your apology cannot alone for the irreparable damage you have done to her reputation.

irrepressible ADJ. unable to be restrained or held back. My friend Kitty’s curiosity was irrepressible: she poked her nose into everybody’s business and just laughed when I warned her that curiosity killed the cat.

irreproachable ADJ. blameless; impeccable. Homer’s conduct at the office party was irreproachable; even Marge had nothing bad to say about how he behaved.

irresolute ADJ. uncertain how to act; weak. Once you have made your decision, don’t waver; a leader should never appear irresolute.

irretrievable ADJ. impossible to recover or regain; irreparable. The left fielder tried to retrieve the ball, but it flew over the fence, bounced off a wall, and fell into the sewer: it was irretrievable.

irreverence N. lack of proper respect. Some people in the audience were amused by the irreverence of the comedian’s jokes about the Pope; others felt offended by his lack of respect for their faith. irreverent, ADJ.

irrevocable ADJ. unalterable; irreversible. As Sue dropped the “Dear John” letter into the mailbox, she suddenly had second thoughts and wanted to take it back, but she could not: her action was irrevocable.

isotope N. varying form of an element. The study of the isotopes of uranium led to the development of the nuclear bomb.

isthmus N. narrow neck of land connecting two larger bodies of land. In a magnificent feat of engineering, Goethals and his men cut through the isthmus of Panama in constructing the Panama Canal.

itinerant ADJ. wandering; traveling. He was an itinerant peddler and traveled through Pennsylvania and Virginia selling his wares. Also N.

itinerary N. plan of a trip. Disliking sudden changes in plans when she traveled abroad, Ethel refused to make any alterations in her itinerary.

jabber V. chatter rapidly or unintelligibly. Why does the fellow insist on jabbering away in French when I can’t understand a word he says?

jaded ADJ. fatigued; surfeited. He looked for exotic foods to stimulate his jaded appetite.
jargon N. language used by a special group; technical terminology; gibberish. The computer salesmen at the store used a jargon of their own that we simply couldn’t follow; we had no idea what they were jabbering about.
judged ADJ. prejudiced (envious, hostile, or resentful); yellowed. Because Sue disliked Carolyn, she looked at Carolyn’s paintings with a jaundiced eye, calling them formless smears. Newborn infants afflicted with jaundice look slightly yellow: they have jaundiced skin.
jaunt N. trip; short journey. He took a quick jaunt to Atlantic City.
jaunty ADJ. lighthearted; animated; easy and carefree. In Singing in the Rain, Gene Kelly sang and danced his way through the lighthearted title number in a properly jaunty style.
jeopardize V. endanger; imperil; put at risk. You can’t give me a D in chemistry: you’ll jeopardize my chances of being admitted to M.I.T. jeopardy, N.
jettison V. throw overboard. In order to enable the ship to ride safely through the storm, the captain had to jettison much of his cargo.
jibe V. agree; be in harmony with. Moe says Curly started the fight; Curly insists it was Moe. Their stories just don’t jibe.
jingoist N. extremely aggressive and militant patriot; warlike chauvinist. Always bellowing “America first!,” the congressman was such a jingoist you could almost hear the sabers rattling as he marched down the halls. jingoism, N.
jocose ADJ. given to joking. The salesman was so jocose that many of his customers suggested that he become a stand-up comic.
jocular ADJ. said or done in jest. Although Bill knew the boss hated jokes, he couldn’t resist making one jocular remark; his jocularity cost him the job.
jocund ADJ. merry. Santa Claus is always cheerful and jocund.
jollity N. gaiety; cheerfulness. The festive Christmas dinner was a merry one, and old and young alike joined in the general jollity.
jostle V. shove; bump. In the subway he was jostled by the crowds.
jovial ADJ. good-natured; merry. A frown seemed out of place on his invariably jovial face.
jubilation N. rejoicing. There was great jubilation when the armistice was announced.
judicious ADJ. sound in judgment; wise. At a key moment in his life, he made a judicious investment that was the foundation of his later wealth.
juggernaut N. irresistible crushing force. Nothing could survive in the path of the juggernaut.
juncture N. crisis; joining point. At this critical juncture, let us think carefully before determining the course we shall follow.
junket N. trip, especially one taken for pleasure by an official at public expense. Though she maintained she had gone abroad to collect firsthand data on the Common Market, the opposition claimed that her trip was merely a political junket.
junta N. group of persons joined in political intrigue; cabal. As soon as he learned of its existence, the dictator ordered the execution of all of the members of the junta.
jurisprudence N. science of law. She was more a student of jurisprudence than a practitioner of the law.
justification N. good or just reason; defense; excuse. The jury found him guilty of the more serious charge because they could see no possible justification for his actions.
juxtapose V. place side by side. Comparison will be easier if you juxtapose the two objects.
kaleidoscope N. tube in which patterns made by the reflection in mirrors of colored pieces of glass, etc., produce interesting symmetrical effects. People found a new source of entertainment while peering through the kaleidoscope; they found the ever-changing patterns fascinating.
ken N. range of knowledge. I cannot answer your question since this matter is beyond my ken.
kernel N. central or vital part; whole seed (as of corn). “Watson, buried within this tissue of lies there is a kernel of truth; when I find it, the mystery will be solved.”
killjoy N. grouch; spoilsport. At breakfast we had all been enjoying our bacon and eggs until that killjoy John started talking about how bad animal fats and cholesterol were for our health.
kindle V. start a fire; inspire. One of the first things Ben learned in the Boy Scouts was how to kindle a fire by rubbing two dry sticks together. Her teacher’s praise for her poetry kindled a spark of hope inside Maya.
kindred ADJ. related; similar in nature or character. Tom Sawyer and Huck Finn were two kindred spirits. Also N.
kinektic ADJ. producing motion. Designers of the electric automobile find that their greatest obstacle lies in the development of light and efficient storage batteries, the source of the kinetic energy needed to propel the vehicle.
kismet N. fate. Kismet is the Arabic word for “fate.”
kleptomaniac N. person who has a compulsive desire to steal. They discovered that the wealthy customer was a kleptomaniac when they caught her stealing some cheap trinkets.
knavy N. untrustworthy person; rogue; scoundrel. Any politician nicknamed Tricky Dick clearly has the reputation of a knave. knavery, N.
knead V. mix; work dough. Her hands grew strong from kneading bread.
knell N. tolling of a bell, especially to indicate a funeral, disaster, etc.: sound of the funeral bell. “The curfew tolls the knell of parting day.” Also V.
knot V. contract into wrinkles; grow together. Whenever David worries, his brow knits in a frown. When he broke his leg, he sat around the house all day waiting for the bones to knit.
knohl N. little, round hill. Robert Louis Stevenson’s grave is on a knoll in Samoa; to reach the grave site, you must climb uphill and walk a short distance along a marked path.
knotty ADJ. intricate; difficult; tangled. What to Watson had been a knotty problem to Sherlock Holmes was simplicity itself.

kudos N. honor; glory; praise. The singer complacently received kudos on his performance from his entourage.

labile ADJ. likely to change; unstable. Because the hormonal changes they undergo affect their spirits, adolescents may become emotionally labile and experience sudden shifts of mood. lability, N.

laborious ADJ. demanding much work or care; tedious. In putting together his dictionary of the English language, Doctor Johnson undertook a laborious task.

labyrinth N. maze. Hiding from Indian Joe, Tom and Becky soon lost themselves in the labyrinth of secret underground caves.

laceration N. torn, ragged wound. The stock-car driver needed stitches to close the lacerations he received in the car crash. lacerate, v.

lachrymose ADJ. producing tears. His voice has a lachrymose quality that is more appropriate at a funeral than a class reunion.

lackadaisical ADJ. lacking purpose or zest; halfhearted; languid. Because Gatsby had his mind more on his love life than on his finances, he did a very lackadaisical job of managing his money.

lackluster ADJ. dull. We were disappointed by the lackluster performance.

laconic ADJ. brief and to the point. Many of the characters portrayed by Clint Eastwood are laconic types: strong men of few words.

laggard ADJ. slow; sluggish. The sailor had been taught not to be laggard in carrying out orders. lag, N., v.

Test

450. MISDEMEANOR (A) felony (B) peccadillo (C) indignity (D) fait (E) illiteracy

Word List 31  misogamy-nascent

misogamy  N. hatred of marriage. He remained a bachelor not because of misogamy but because of ill fate: his fiancée died before the wedding.

misogynist  N. hater of women. She accused him of being a misogynist because he had been a bachelor all his life.

missile  N. object to be thrown or projected. After carefully folding his book report into a paper airplane, Beavis threw the missile across the classroom at Butthead. Rocket scientists are building guided missiles; Beavis and Butthead can barely make unguided ones.

missive  N. letter. The ambassador received a missive from the Secretary of State.

mite  N. very small object or creature; small coin. Gnats are annoying mites that sting.

mitigate  v. appease; moderate. Nothing Jason did could mitigate Medea’s anger; she refused to forgive him for betraying her.

mnemonic  ADJ. pertaining to memory. She used mnemonic tricks to master new words.

mobile  ADJ. movable; not fixed. The mobile blood bank operated by the Red Cross visited our neighborhood today.

mock  v. ridicule; imitate, often in derision. It is unkind to mock anyone; it is stupid to mock anyone significantly bigger than you. mockery, N.

mode  N. prevailing style; manner; way of doing something. The rock star had to have her hair done in the latest mode: frizzed, with occasional moussed spikes for variety. Henry plans to adopt a simpler mode of life: he is going to become a mushroom hunter and live off the land.

modicum  N. limited quantity. Although his story is based on a modicum of truth, most of the events he describes are fictitious.

modish  ADJ. fashionable. She always discarded all garments that were no longer modish.

modulate  v. tone down in intensity; regulate; change from one key to another. Always singing at the top of her lungs, the budding Brunhilde never learned to modulate her voice. modulation, N.

mogul  N. powerful person. The oil moguls made great profits when the price of gasoline rose.

molecule  N. the smallest particle (one or more atoms) of a substance that has all the properties of that substance. In chemistry, we study how atoms and molecules react to form new substances.

mollify  v. soothe. The airline customer service representative tried to mollify the angry passenger by offering her a seat in first class.

mollycoddle  v. pamper; indulge excessively. Don’t mollycoddle the boy, Maud! You’ll spoil him.

molt  v. shed or cast off hair or feathers. When Molly’s canary molted, she shed feathers all over the house.

molten  ADJ. melted. The city of Pompeii was destroyed
by volcanic ash rather than by molten lava flowing from Mount Vesuvius.

momentous ADJ. very important. When Marie and Pierre Curie discovered radium, they had no idea of the momentous impact their discovery would have upon society.

momentum N. quantity of motion of a moving body; impetus. The car lost momentum as it tried to ascend the steep hill.

monarchy N. government under a single ruler. Though England today is a monarchy, there is some question whether it will be one in 20 years, given the present discontent at the prospect of Prince Charles as king.

monastic ADJ. related to monks or monasteries; removed from worldly concerns. Withdrawing from the world, Thomas Merton joined a contemplative religious order and adopted the monastic life.

monetary ADJ. pertaining to money. Jane held the family purse strings; she made all monetary decisions affecting the household.

monochromatic ADJ. having only one color. Most people who are color blind actually can distinguish several colors; some, however, have a truly monochromatic view of a world all in shades of gray.

monolithic ADJ. solidly uniform; unyielding. Knowing the importance of appearing resolute, the patriots sought to present a monolithic front.

monotheism N. belief in one God. Abraham was the first to proclaim his belief in monotheism.

monotony N. sameness leading to boredom. What could be more deadly dull than the monotony of punching numbers into a computer hour after hour? monotonous, ADJ.

monumental ADJ. massive. Writing a dictionary is a monumental task.

moodiness N. fits of depression or gloom. We could not discover the cause of her recurrent moodiness.

mortuary N. legal delay of payment. If we declare a moratorium and delay collection of debts for six months, I am sure the farmers will be able to meet their bills.

morbid ADJ. given to unwholesome thought; moody; characteristic of disease. People who come to disaster sites just to peer at the grisly wreckage are indulging their morbid curiosity. morbidity, N.

mordant ADJ. biting; sarcastic; stinging. Actors feared the critic’s mordant pen.

mores N. conventions; moral standards; customs. In America, Benazir Bhutto dressed as Western women did; in Pakistan, however, she followed the mores of her people, dressing in traditional veil and robes.

moribund ADJ. dying. Hearst took a moribund, failing weekly newspaper and transformed it into one of the liveliest, most profitable daily papers around.

morose ADJ. ill-humored; sullen; melancholy. Forced to take early retirement, Bill acted morose for months; then, all of a sudden, he shook off his gloom and was his usual cheerful self.

mortician N. undertaker. The mortician prepared the corpse for burial.

mortify V. humiliate; punish the flesh. She was so mortified by her blunder that she ran to her room in tears.

mosaic N. picture made of small, colorful inlaid tiles. The mayor compared the city to a beautiful mosaic made up of people of every race and religion on earth. Also ADJ. mote N. small speck. The tiniest mote in the eye is very painful.

motif N. theme. This simple motif runs throughout the score.

motility N. ability to move spontaneously. Certain organisms exhibit remarkable motility; motile spores, for example, may travel for miles before coming to rest. motile, ADJ.

motley ADJ. multicolored; mixed. The jester wore a motley tunic, red and green and blue and gold all patched together haphazardly. Captain Ahab had gathered a motley crew to sail the vessel: old sea dogs and runaway boys, pillars of the church and drunkards, even a tattooed islander who terrified the rest of the crew.

mottled ADJ. blotched in coloring; spotted. When old Falstaff blushed, his face became mottled, all pink and purple and red.

mountebank N. charlatan; boastful pretender. The patent medicine man was a mountebank.

muddle V. confuse; mix up. Her thoughts were muddled and chaotic. Also N.

muggy ADJ. warm and damp. August in New York City is often muggy.

mulct V. defraud a person of something. The lawyer was accused of trying to mulct the boy of his legacy.

multifarious ADJ. varied; greatly diversified. A career woman and mother, she was constantly busy with the multifarious activities of her daily life.

multiform ADJ. having many forms. Snowflakes are multiform but always hexagonal.

multilingual ADJ. having many languages. Because they are bordered by so many countries, the Swiss people are multilingual.

multiplicity N. state of being numerous. She was appalled by the multiplicity of details she had to complete before setting out on her mission.

mundane ADJ. worldly as opposed to spiritual; everyday. Uninterested in philosophical or spiritual discussions, Tom talked only of mundane matters such as the daily weather forecast or the latest basketball results.

munificent ADJ. very generous. Shamelessly fawning over a particularly generous donor, the dean kept referring to her as “our munificent benefactor.” munificence, N.

mural N. wall painting. The walls of the Chicano Community Center are covered with murals painted in the style of Diego Rivera, the great Mexican artist.

murky ADJ. dark and gloomy; thick with fog; vague. The murky depths of the swamp were so dark that you couldn’t tell the vines and branches from the snakes. murkiness, N.
muse v. ponder. For a moment he mused about the beauty of the scene, but his thoughts soon changed as he recalled his own personal problems. also n.
musky adj. having the odor of musk. She left a trace of musky perfume behind her.
muster v. gather; assemble. Washington mustered his forces at Trenton.
musty adj. stale; spoiled by age. The attic was dark and musty.
mutability n. ability to change in form; fickleness. Going from rags to riches, and then back to rags again, the bankrupt financier was a victim of the mutability of fortune. mutable, adj.
muted adj. silent; muffled; toned down. Thanks to the thick, sound-absorbing walls of the cathedral, only muted traffic noise reached the worshippers within. mute, v., n.
mutilate v. maim. The torturer threatened to mutilate his victim.
mutinous adj. unruly; rebellious. The captain had to use force to quiet his mutinous crew. mutiny, n.
myopic adj. nearsighted; lacking foresight. Stumbling into doors despite the coke-bottle lenses on his glasses, the nearsighted Mr. Magoo is markedly myopic. In playing all summer long and failing to store up food for winter, the grasshopper in Aesop's fable was myopic as well.
myopia n.
myriad adj. very large number. Myriads of mosquitoes from the swamps invaded our village every twilight. also adj.
nadir n. lowest point. Although few people realized it, the Dow-Jones averages had reached their nadir and would soon begin an upward surge.
naiveté n. quality of being unsophisticated; simplicity; artlessness; gullibility. Touched by the naiveté of sweet, convent-trained Cosette, Marius pledges himself to protect her innocence. naïve, adj.
narcissist n. conceited person. A narcissist is his own best friend.
narrative adj. related to telling a story. A born teller of tales, Olsen used her impressive narrative skills to advantage in her story "I Stand Here Ironing." also n.
narration, n.
nascent adj. incipient; coming into being. If we could identify these revolutionary movements in their nascent state, we would be able to eliminate serious trouble in later years.

**Word List 32** natation-obsidian

natation n. swimming. The Red Cross emphasizes the need for courses in natation.
natty adj. neatly or smartly dressed. Priding himself on being a natty dresser, the gangster Bugsy Siegel collected a wardrobe of imported suits and ties.
nauseate v. cause to become sick; fill with disgust. The
foul smells began to nauseate her.

nautical ADJ. pertaining to ships or navigation. The Maritime Museum contains many models of clipper ships, logbooks, anchors and many other items of a nautical nature.

navigable ADJ. wide and deep enough to allow ships to pass through; able to be steered. So much sand has built up at the bottom of the canal that the waterway was barely navigable.

nebulous ADJ. vague; hazy; cloudy. Phil and Dave tried to come up with a clear, intelligible business plan, not some hazy, nebulous proposal.

necromancy N. black magic; dealings with the dead. The evil sorcerer performed feats of necromancy, calling on the spirits of the dead to tell the future. necromancer, N.

nefarious ADJ. very wicked. The villain's crimes, though various, were one and all nefarious.

negate v. cancel out; nullify; deny. A sudden surge of adrenaline can negate the effects of fatigue: there's nothing like a good shock to wake you up. negation, N.

negligence N. neglect; failure to take reasonable care. Tommy failed to put back the cover on the well after he fetched his pail of water; because of his negligence, Kitty fell in. negligent, ADJ.

negligible ADJ. so small, trifling, or unimportant as to be easily disregarded. Because the damage to his car had been negligible, Michael decided he wouldn't bother to report the matter to his insurance company.

nemesis N. someone seeking revenge. Abandoned at sea in a small boat, the vengeful Captain Bligh vowed to be the nemesis of Fletcher Christian and his fellow mutineers.

neologism N. new or newly coined word or phrase. As we invent new techniques and professions, we must also invent neologisms such as "microcomputer" and "astronaut" to describe them.

neophyte N. recent convert; beginner. This mountain slope contains slides that will challenge experts as well as neophytes.

neoplasia N. favoritism (to a relative). John left his position with the company because he felt that advancement was based on nepotism rather than ability.

nether ADJ. lower. Tradition locates hell in the nether regions.

nettle v. annoy; vex. Do not let her nettle you with her sarcastic remarks.

nexus N. connection. I fail to see the nexus that binds these two widely separated events.

nib N. beak; pen point. The nibs of fountain pens often become clogged and corroded.

nicety N. precision; minute distinction. I cannot distinguish between such niceties of reasoning, nice, ADJ. (secondary meaning)

niggardly ADJ. meanly stingy; parsimonious. The niggardly pittance the widow receives from the government cannot keep her from poverty.

niggle v. spend too much time on minor points; carp.

Let's not niggle over details. niggling, ADJ.

nihilist N. one who considers traditional beliefs to be groundless and existence meaningless; absolute skeptic; revolutionary terrorist. In his final days, Hitler revealed himself a power-mad nihilist, ready to annihilate all of Western Europe, even to destroy Germany itself, in order that his will might prevail. The root of the word nihilist is nihil, Latin for "nothing." nihilism, N.

nip v. stop something's growth or development; nip off; bite; make numb with cold. The twins were plotting mischief, but Mother intervened and nipped their plan in the bud. The gardener nipped off a lovely rose and gave it to me. Last week a guard dog nipped the postman in the leg; this week the extreme chill nipped his fingers till he could barely hold the mail.

nirvana N. in Buddhist teachings, the ideal state in which the individual loses himself in the attainment of an impersonal beatitude. Despite his desire to achieve nirvana, the young Buddhist found that even the buzzing of a fly could distract him from his meditation.

nocturnal ADJ. done at night. Mr. Jones obtained a watchdog to prevent the nocturnal raids on his chicken coops.

noisome ADJ. foul-smelling; unwholesome. The noisome atmosphere downwind of the oil refinery not only stank but also damaged the lungs of everyone living in the area.

nomadic ADJ. wandering. Several nomadic tribes of Indians would hunt in this area each year. nomad. N.

nomenclature N. terminology; system of names. Sharon found Latin word parts useful in translating medical nomenclature: when her son had to have a bilateral myringotomy, she figured out that he needed a hole in each of his eardrums to end his earaches.

nominal ADJ. in name only; trifling. He offered to drive her to the airport for only a nominal fee.

nonchalant ADJ. unconcerned; indifferent; lack of concern; composure. Cool, calm, and collected under fire, James Bond shows remarkable nonchalance in the face of danger. nonchalant, ADJ.

noncommittal ADJ. neutral; undecided. We were annoyed by his noncommittal reply for we had been led to expect definite assurances of his approval.

nondescript ADJ. undistinguishable; ordinary. The private detective was a short, nondescript fellow with no outstanding features, the sort of person one would never notice in a crowd.

nonentity N. person of no importance; nonexistence. Because the two older princes dismissed their youngest brother as a nonentity, they did not realize that he was quietly plotting to seize the throne.

nonplus v. bring to a halt by confusion; perplex. Jack's uncharacteristic rudeness nonplussed Jill, leaving her uncertain how to react.

nostalgia N. homesickness; longing for the past. My grandfather seldom spoke of life in the old country; he had little patience with nostalgia. nostalgic, ADJ.
nostum N. questionable medicine. No quack selling nostrums is going to cheat me.

notable ADJ. conspicuous; important; distinguished. Normally notable for his calm in the kitchen, today the head cook was shaking, for the notable chef Julia Child was coming to dinner. also N.

notoriety N. disrepute; ill fame. To the starlet, any publicity was good publicity: if she couldn’t have a good reputation, she’d settle for notoriety. notorious, ADJ.

novelty N. something new; newness. The computer is no longer a novelty around the office. novel, ADJ.

novice N. beginner. Even a novice at working with computers can install Barron’s Computer Study Program for the SAT by following the easy steps outlined in the user’s manual.

noxious ADJ. harmful. We must trace the source of these noxious gases before they asphyxiate us.

nuance N. shade of difference in meaning or color; subtle distinction. Jody gazed at the Monet landscape for an hour, appreciating every subtle nuance of color in the painting.

nubile ADJ. marriageable. Mrs. Bennet, in Pride and Prejudice by Jane Austen, was worried about finding suitable husbands for her five nubile daughters.

nugatory ADJ. futile; worthless. This agreement is nugatory for no court will enforce it.

nullify V. to make invalid. Once the contract was nullified, it no longer had any legal force.

numismatist N. person who collects coins. The numismatist had a splendid collection of antique coins.

nuptial ADJ. related to marriage. Reluctant to be married in a traditional setting, they decided to hold their nuptial ceremony at the carousel in Golden Gate Park. also N. PL. nuture V. nourish; educate; foster. The Head Start program attempts to nurture prekindergarten children so that they will do well when they enter public school. also N.

nutrient N. nourishing substance. As a budding nutritionist, Kim has learned to design diets that contain foods rich in important basic nutrients. also ADJ.

oaf N. stupid, awkward person. “Watch what you’re doing, you clumsy oaf!” Bill shouted at the waiter who had drenched him with iced coffee.

obdurate ADJ. stubborn. He was obdurate in his refusal to listen to our complaints.

obeisance N. bow. She made an obeisance as the king and queen entered the room.

obelisk N. tall column tapering and ending in a pyramid. Cleopatra’s Needle is an obelisk in New York City’s Central Park.

obese ADJ. excessively fat. It is advisable that obese people try to lose weight. obesity, N.

obfuscate v. confuse; muddle; cause confusion; make needlessly complex. Was the President’s spokesman trying to clarify the Whitewater mystery, or was he trying to obfuscate the issue so the voters would never figure out what went on?

obituary N. death notice. I first learned of her death when I read the obituary in the newspaper. also ADJ.

objective ADJ. not influenced by emotions; fair. Even though he was her son, she tried to be objective about his behavior.

objective N. goal; aim. A degree in medicine was her ultimate objective.

obligatory ADJ. binding; required. It is obligatory that books borrowed from the library be returned within two weeks.

oblique ADJ. indirect; slanting (deviating from the perpendicular or from a straight line). Casting a quick, oblique glance at the viewing stand, the sergeant ordered the company to march “Oblique Right.”

obliterate v. destroy completely. The tidal wave obliterated several island villages.

oblivion N. obscurity; forgetfulness. After a decade of popularity, Hurston’s works had fallen into oblivion; no one bothered to read them any more.

oblivious ADJ. inattentive or unmindful; wholly absorbed. Deep in her book, Nancy was oblivious of the noisy squabbles of her brother and his friends.

obloquy N. slander; disgrace; infamy. I resent the obloquy that you are casting upon my reputation.

obnoxious ADJ. offensive. I find your behavior obnoxious; please mend your ways.

obscure ADJ. dark; vague; unclear. Even after I read the poem a fourth time, its meaning was still obscure. obscurity, N.

obscure v. darken; make unclear. At times he seemed purposely to obscure his meaning, preferring mystery to clarity.

obsequious ADJ. slavishly attentive; servile; sycophantic. Helen valued people who behaved as if they respected themselves; nothing irritated her more than an excessively obsequious waiter or a fawning salesclerk.

obsequy N. funeral ceremony. Hundreds paid their last respects at his obsequies.

obsessive ADJ. related to thinking about something constantly; preoccupying. Ballet, which had been a hobby, began to dominate his life; his love of dancing became obsessive. obsession, N.

obsidian N. black volcanic rock. The deposits of obsidian on the mountain slopes were an indication that the volcano had erupted in ancient times.

Word List 33  
obsolete-overweening

obsolete ADJ. outmoded. "Hip" is an obsolete expression; it went out with love beads and tie-dye shirts.

obstetrician N. physician specializing in delivery of babies. Unlike midwives, who care for women giving birth at home, obstetricians generally work in a hospital setting.

obstinate ADJ. stubborn; hard to control or treat. We tried to persuade him to give up smoking, but he was obstinate and refused to change. Blackberry stickers are the most obstinate weeds I know: once established in a yard, they're extremely hard to root out. Obstinacy, n.

obstreperous ADJ. boisterous; noisy. What do you do when an obstreperous horde of drunken policemen carouses through your hotel, crashing into potted plants and singing vulgar songs?

oblude V. push (oneself or one's ideas) forward or intrude; butt in; stick out or extrude. Because Fanny was reluctant to obtrude her opinions about child-raising upon her daughter-in-law, she kept a close watch on her tongue. Obtrusive, ADJ. Obstruction, N.

obuse ADJ. blunt; stupid. What can you do with somebody who's so obtuse that he can't even tell you that you're insulting him?

obviate V. make unnecessary; get rid of. I hope this contribution will obviate any need for further collections of funds.

Occident N. the West. It will take time for the Occident to understand the ways and customs of the Orient.

occlude V. shut; close. A blood clot occluded an artery to the heart. Occlusion, N.

occult ADJ. mysterious; secret; supernatural. The occult rites of the organization were revealed only to members. Also N.

oculist N. physician who specializes in treatment of the eyes. In many states, an oculist is the only one who may apply medicinal drops to the eyes for the purpose of examining them.

odious ADJ. hateful; vile. Cinderella's ugly stepsisters had the odious habit of popping their zits in public.

odium N. detestation; hatefulness; disrepute. Prince Charming could not express the odium he felt toward Cinderella's stepsisters because of their mistreatment of poor Cinderella.

odoriferous ADJ. giving off an odor. The odoriferous spices stimulated her jaded appetite.

odorous ADJ. having an odor. This variety of hybrid tea rose is more odorous than the one you have in your garden.

odyssey N. long, eventful journey. The refugee's journey from Cambodia was a terrifying odyssey.

offensive ADJ. attacking; insulting; distasteful. Getting into street brawls is no minor offense for professional boxers, who are required by law to restrict their offensive impulses to the ring.

offhand ADJ. casual; done without prior thought. Expecting to be treated with due propriety by her hosts, Great-Aunt Maud was offended by their offhand manner.
officious ADJ. meddlesome; excessively pushy in offering one's services. After her long flight, Jill just wanted to nap, but the officious bellboy was intent on showing her all the special features of the deluxe suite.

ogle V. look at amorously; make eyes at. At the coffee house, Walter was too shy to ogle the pretty girls openly; instead, he peeked out at them from behind a rubber plant.

olfactory ADJ. concerning the sense of smell. A wine taster must have a discriminating palate and a keen olfactory sense, for a good wine appeals both to the taste buds and to the nose.

oligarchy N. government by a privileged few. One small clique ran the student council; what had been intended as a democratic governing body had turned into an oligarchy.

ominous ADJ. threatening. Those clouds are ominous; they suggest that a severe storm is on the way.

omnipotent ADJ. all-powerful. The monarch regarded himself as omnipotent and responsible to no one for his acts.

omnipresent ADJ. universally present; ubiquitous. On Christmas Eve, Santa Claus is omnipresent.

 Omniscient ADJ. all-knowing. I do not pretend to be omniscient, but I am positive about this fact.

omnivorous ADJ. eating both plant and animal food; devouring everything. Some animals, including humans, are omnivorous and eat both meat and vegetables; others are either carnivorous or herbivorous.

onerosus ADJ. burdensome. She asked for an assistant because her work load was too onerosus.

onomatopoeia N. words formed in imitation of natural sounds. Words like "rustle" and "gargle" are illustrations of onomatopoeia.

onslaught N. vicious assault. We suffered many casualties during the unexpected onslaught of the enemy troops.

onus N. burden; responsibility. The emperor was spared the onus of signing the surrender papers; instead, he relegated the assignment to his generals.

opalescent ADJ. iridescent; lustrous. The oil slick on the water had an opalescent, rainbowlike sheen. opalescence, N.

opaque ADJ. dark; not transparent. The opaque window kept the sunlight out of the room. opacity, N.

opiate N. medicine to induce sleep or deaden pain; something that relieves emotions or causes inaction. To say that religion is the opiate of the people is to condemn religion as a drug that keeps the people quiet and submissive to those in power.

opportune ADJ. timely; well-chosen. Cher looked at her father struggling to balance his checkbook; clearly this would not be an opportune moment to ask him for an increase in her allowance.

opportunist N. individual who sacrifices principles for expediency by taking advantage of circumstances. Forget about ethics! He's such an opportunist that he'll vote in favor of any deal that will give him a break.

opprobrium N. infamy; vilification. He refused to defend himself against the slander and opprobrium hurled against him by the newspapers; he preferred to rely on his record.

optician N. maker and seller of eyeglasses. The patient took the prescription given him by his oculist to the optician.

optimist N. person who looks on the bright side. The pessimist says the glass is half-empty; the optimist says it is half-full.

optimum ADJ. most favorable. If you wait for the optimum moment to act, you may never begin your project. also N.

optional ADJ. not compulsory; left to one's choice. I was impressed by the range of optional accessories for my microcomputer that were available, option, N.

optometrist N. one who fits glasses to remedy visual defects. Although an optometrist is qualified to treat many eye disorders, she may not use medicines or surgery in her examinations.

opulence N. extreme wealth; luxuriousness; abundance. The glitter and opulence of the ballroom took Cinderella's breath away, opulent, ADJ.

opus N. work. Although many critics hailed his Fifth Symphony, he did not regard it as his major opus.

oracular ADJ. prophetic; uttered as if with divine authority; mysterious or ambiguous. Like many others who sought divine guidance from the oracle at Delphi, Oedipus could not understand the enigmatic oracular warning he received; oracle, N.

orator N. public speaker. The abolitionist Frederick Douglass was a brilliant orator whose speeches brought home to his audience the evils of slavery.

oratorio N. dramatic poem set to music. The Glee Club decided to present an oratorio during their recital.

ordain V. decree or command; grant holy orders; predestine. The king ordained that no foreigner should be allowed to enter the city. The Bishop of Michigan ordained David a deacon in the Episcopal Church. The young lovers felt that fate had ordained their meeting.

ordeal N. severe trial or affliction. June was so painfully shy that it was an ordeal for her to speak up when the teacher called on her in class.

ordinance N. decree. Passing a red light is a violation of a city ordinance.

ordination N. ceremony conferring holy orders. The candidate for ordination had to meet with the bishop and the diocesan officers before being judged ready to be ordained a deacon.

orgy N. wild, drunken revelry; unrestrained indulgence. The Roman emperor's orgies were far wilder than the toga party in the movie Animal House. When her income tax refund check finally arrived, Sally indulged in an orgy of shopping.

orient V. get one's bearings; adjust. Philip spent his first day in Denver orienting himself to the city.

orientation N. act of finding oneself in society. Freshman orientation provides the incoming students with an
opportunity to learn about their new environment and their place in it.

orifice N. mouthlike opening; small opening. The Howe Caverns were discovered when someone observed that a cold wind was issuing from an orifice in the hillside.

ornate ADJ. excessively or elaborately decorated. With its elaborately carved, convoluted lines, furniture of the Baroque period was highly ornate.

ornithologist N. scientific student of birds. Audubon's drawings of American bird life have been of interest not only to the ornithologists but also to the general public.

orthodox ADJ. traditional; conservative in belief. Faced with a problem, she preferred to take an orthodox approach rather than shock anyone. orthodoxy, N.

orthography N. correct spelling. Many of us find English orthography difficult to master because so many of our words are not written phonetically.

oscillate v. vibrate pendulumlike; waver. It is interesting to note how public opinion oscillates between the extremes of optimism and pessimism.

ossaceous ADJ. made of bone; bony. The hollow "soft spot" found at the top of the infant's skull gradually closes as new ossaceous tissue fills in the gap.

ossify v. change or harden into bane. When he called his opponent a "bonehead," he implied that his adversary's brain had ossified and that he was not capable of clear thinking.

ostensible ADJ. apparent; professed; pretended. Although the ostensible purpose of this expedition is to discover new lands, we are really interested in finding new markets for our products.

ostentatious ADJ. showy; pretentious; trying to attract attention. Trump's latest casino in Atlantic City is the most ostentatious gambling palace in the East: it easily out-glitters its competitors. ostentation, N.

ostracize v. exclude from public favor; ban. As soon as the newspapers carried the story of his connection with the criminals, his friends began to ostracize him. ostracism, N.

oust v. expel; drive out. The world wondered if Aquino would be able to oust Marcos from office.

oultradosh ADJ. bizarre; peculiar; unconventional. The eccentric professor who engages in markedlyoultradosh behavior is a stock figure in novels with an academic setting.

outmoded ADJ. no longer stylish; old-fashioned. Unconcerned about keeping in style, Lenore was perfectly happy to wear outmoded clothes as long as they were clean and unfrayed.

outskirts N. fringes; outer borders. Living on the outskirts of Boston, Sarah sometimes felt as if she were cut off from the cultural heart of the city.

outspoken ADJ. candid; blunt. The candidate was too outspoken to be a successful politician; he had not yet learned to weigh his words carefully.

outstrip v. surpass; outdo. Jesse Owens easily outstripped his competitors to win the gold medal at the Olympic Games.

outwit v. outsmart; trick. By disguising himself as an old woman, Holmes was able to outwit his pursuers and escape capture.

ovation N. enthusiastic applause. When Placido Domingo came on stage in the first act of La Boheme, he was greeted by a tremendousovation.

overbearing ADJ. bossy; arrogant; decisively important. Certain of her own importance and of the unimportance of everyone else, Lady Bracknell was intolerably overbearing in manner. "In choosing a husband," she said, "good birth is of overbearing importance; compared to that, neither wealth nor talent signifies."

overt ADJ. open to view. According to the United States Constitution, a person must commit an overt act before he may be tried for treason.

overweening ADJ. presumptuous; arrogant. His overweening pride in his accomplishments was not justified.

palatial  ADJ. magnificent. He proudly showed us through his palatial home.

palaeontology  N. study of prehistoric life. The professor of palaeontology had a superb collection of fossils.

palette  N. board on which a painter mixes pigments. At the present time, art supply stores are selling a paper palette that may be discarded after use.

palmcipset  N. parchment used for second time after original writing has been erased. Using chemical reagents, scientists have been able to restore the original writings on many palimpsests.

pall  V. grow tiresome. The study of word lists can eventually pall and put one to sleep.

pallet  N. small, poor bed. The weary traveler went to sleep on his straw pallet.

palliate  V. ease pain; make less severe or offensive. If we cannot cure this disease at present, we can, at least, try to palliate the symptoms. Palliation, N.

pallid  ADJ. pale; wan. Because his occupation required that he work at night and sleep during the day, he had an exceptionally pallid complexion.

palpable  ADJ. tangible; easily perceptible. I cannot understand how you could overlook such a palpable blunder.

palpitate  V. throb; flutter. As she became excited, her heart began to palpitate more and more erratically.

paltry  ADJ. insignificant; petty; trifling. “One hundred dollars for a genuine imitation Rolex watch! Lady, this is a paltry sum to pay for such a high-class piece of jewelry.”

pan  V. criticize harshly. Hoping for a rave review of his new show, the playwright was miserable when the critics panned it unanimously.

panacea  N. cure-all; remedy for all diseases. There is no easy panacea that will solve our complicated international situation.

panache  N. flair; flamboyance. Many performers imitate Noel Coward, but few have his panache and sense of style.

pandemic  ADJ. widespread; affecting the majority of people. They feared the AIDS epidemic would soon reach pandemic proportions.

pandemonium  N. wild turmoil. When the ships collided in the harbor, pandemonium broke out among the passengers.

pander  V. cater to the low desires of others. The reviewer accused the makers of Lethal Weapon of pandering to the masses’ taste for violence.

panegyric  N. formal praise. Blushing at all the praise heaped upon him by the speakers, the modest hero said, "I don’t deserve such panegyrics."

panoramic  ADJ. denoting an unobstructed and comprehensive view. On a clear day, from the top of the World Trade Center you can get a panoramic view of New York City and neighboring stretches of New Jersey and Long Island. Panorama, N.

pantomime  N. acting without dialogue. Because he worked in pantomime, the clown could be understood wherever he appeared. Also V.

papyrus  N. ancient paper made from stem of papyrus plant. The ancient Egyptians were among the first to write on papyrus.

parable  N. short, simple story teaching a moral. Let us apply to our own conduct the lesson that this parable teaches.
paradigm N. model; example; pattern. Pavlov's experiment in which he trains a dog to salivate on hearing a bell is a paradigm of the conditioned-response experiment in behavioral psychology. paradigmatic, ADJ.

paradox N. something apparently contradictory in nature; statement that looks false but is actually correct. Richard presents a bit of a paradox, for he is a card-carrying member of both the National Rifle Association and the relatively pacifist American Civil Liberties Union. paradoxical, ADJ.

paragon N. model of perfection. Her fellow students disliked Lavinia because Miss Minchin always pointed her out as a paragon of virtue.

parallelism N. state of being parallel; similarity. Although the twins were separated at birth and grew up in different adoptive families, a striking parallelism exists between their lives.

parameter N. limit; independent variable. We need to define the parameters of the problem.

paramount ADJ. foremost in importance; supreme. Proper nutrition and hygiene are of paramount importance in adolescent development and growth.

paramour N. illicit lover. She sought a divorce on the grounds that her husband had a paramour in another town.

paranoia N. psychosis marked by delusions of grandeur or persecution. Suffering from paranoia, he claimed everyone was out to get him; ironically, his claim was accurate: even paranoids have enemies. paranoid, paranoiac, N. and ADJ.

paraphernalia N. equipment; odds and ends. Her desk was cluttered with paper, pen, ink, dictionary and other paraphernalia of the writing craft.

paraphrase v. restate a passage in one's own words while retaining thought of author. In 250 words or less, paraphrase this article. also N.

parasite N. animal or plant living on another; toady; syco-phant. The tapeworm is an example of the kind of parasite that may infest the human body.

 parched ADJ. extremely dry; very thirsty. The parched desert landscape seemed hostile to life.

pariah N. social outcast. If everyone ostracized singer Mariah Carey, would she then be Mariah the pariah?

parity N. equality; close resemblance. I find your analogy inaccurate because I do not see the parity between the two illustrations.

parlance N. language; idiom. All this legal parlance confuses me; I need an interpreter.

parley N. conference. The peace parley has not produced the anticipated truce. also v.

parochial ADJ. narrow in outlook; provincial; related to parishes. Although Jane Austen writes novels set in small rural communities, her concerns are universal, not parochial.

parody N. humorous imitation; spoof; takeoff; travesty. The show Forbidden Broadway presents parodies spoofing the year's new productions playing on Broadway. also v.

paroxysm N. fit or attack of pain, laughter, rage. When he heard of his son's misdeeds, he was seized by a paroxysm of rage.

parquet N. floor made of wood strips inlaid in a mosaic-like pattern. In laying the floor, the carpenters combined redwood and oak in an elegant parquet.

parry v. ward off a blow; deflect. Unwilling to injure his opponent in such a pointless clash, D'Artagnan simply tried to parry his rival's thrusts. What fun it was to watch Katherine Hepburn and Spencer Tracy parry each other's verbal thrusts in their classic screwball comedies! also N.

parsimony N. stinginess; excessive frugality. Silas Marner's parsimony did not allow him to indulge in any luxuries. parsimonious, ADJ.

partial ADJ. incomplete; having a liking for something. In this issue we have published only a partial list of contributors because we lack space to acknowledge everyone. I am extremely partial to chocolate eclairs. partiality, N.

partition v. divide into parts. Before their second daughter was born, Jason and Lizzie decided each child needed a room of her own, and so they partitioned a large bedroom into two small but separate rooms. also N.

passé ADJ. old-fashioned; past the prime. Her style is passé and reminiscent of the Victorian era.

passive ADJ. not active; acted upon. Mahatma Gandhi urged his followers to pursue a program of passive resistance as he felt that it was more effective than violence and acts of terrorism.

pastiche N. imitation of another's style in musical composition or in writing. We cannot even say that her music is a pastiche of this or that composer; it is, rather, reminiscent of many musicians.

pastoral ADJ. rural. In these stories of pastoral life, we find an understanding of the daily tasks of country folk.

patent ADJ. open for the public to read; obvious. It was patent to everyone that the witness spoke the truth.

pathetic ADJ. causing sadness, compassion, pity; touching. Everyone in the auditorium was weeping by the time she finished her pathetic tale about the orphaned boy.

pathological ADJ. pertaining to disease. As we study the pathological aspects of this disease, we must not overlook the psychological elements.

pathos N. tender sorrow; pity; quality in art or literature that produces these feelings. The quiet tone of pathos that ran through the novel never degenerated into the maudlin or the overly sentimental.

patina N. green crust on old bronze works; tone slowly taken by varnished painting. Judging by the patina on this bronze statue, we can conclude that this is the work of a medieval artist.
patois N. local or provincial dialect. His years of study of
the language at the university did not enable him to
understand the patois of the natives.
patriarch N. father and ruler of a family or tribe. In many
primitive tribes, the leader and lawmaker was the patri-
arch.
patrician ADJ. noble; aristocratic. We greatly admired her
well-bred, patrician elegance. Also N.
patronize v. support; act superior toward; be a customer
of. Penniless artists hope to find some wealthy art lover
who will patronize them. If some condescending wine
steward patronized me because he saw I knew nothing
about fine wine, I'd refuse to patronize his restaurant.

paucity N. scarcity. They closed the restaurant
because the paucity of customers made it uneconomical
to operate.
pauper N. very poor person. Though Widow Brown was
living on a reduced income, she was by no means a pau-
per.
peccadillo N. slight offense. Whenever Huck wiped a
cookie from the jar, Miss Watson reacted as if he were
guilty of armed robbery, not of some mere peccadillo.

Word List 35  pecuniary-philanderer

pecuniary ADJ. pertaining to money. Seldom earning
enough to cover their expenses, folk-dance teachers
work because they love dancing, not because they
expect any pecuniary reward.
pedagogue N. teacher. He could never be a stuffy peda-
gogue; his classes were always lively and filled with
humor.
pedagogy N. teaching; art of education. Though Maria
Montessori gained fame for her innovations in pedagogy,
it took years before her teaching techniques became
common practice in American schools.
pedant N. scholar who overemphasizes book learning or
technicalities. Her insistence that the book be memorized
marked the teacher as a pedant rather than a scholar.

pedantic ADJ. showing off learning; bookish.
Leavening his decisions with humorous, down-to-earth
anecdotes, Judge Walker was not at all the pedantic
legal scholar, pedantry, N.
pedestrian ADJ. ordinary; unimaginative. Unintentionally
boring, he wrote page after page of pedestrian prose.
pediatrician N. physician specializing in children's dis-
eases. The family doctor advised the parents to consult a
pediatrician about their child's ailment.

peerless ADJ. having no equal; incomparable. The reign-
ing operatic tenor of his generation, to his admirers
Luciano Pavarotti was peerless: no one could compare
with him.

pejorative ADJ. negative in connotation; having a belittling
effect. Instead of criticizing Clinton's policies, the
Republicans made pejorative remarks about his character.
pell-mell ADJ. in confusion; disorderly. The excited stu-
dents dashed pell-mell into the stadium to celebrate the
victory.
pellucid ADJ. transparent; limpid: easy to understand. After reading these stodgy philosophers, I find his pellucid style very enjoyable.

penance N. self-imposed punishment for sin. The Ancient Mariner said, “I have penance done and penance more will do,” to atone for the sin of killing the albatross.

penchant N. strong inclination; liking. Dave has a penchant for taking risks: one semester he went steady with three girls, two of whom were stars on the school karate team.

pendant ADJ. hanging down from something. Her pendant earrings glistened in the light.

pendant N. ornament (hanging from a necklace, etc.). The grateful team presented the coach with a silver chain and pendant engraved with the school's motto.

pendulous ADJ. hanging; suspended. The pendulous chandeliers swayed in the breeze as if they were about to fall from the ceiling.

penitent ADJ. repentant. When he realized the enormity of his crime, he became remorseful and penitent. Also N. penitent.

pensive ADJ. dreamily thoughtful; thoughtful with a hint of sadness; contemplative. The pensive lover gazed at the portrait of his beloved and sighed deeply.

penumbra N. partial shadow (in an eclipse). During an eclipse, we can see an area of total darkness and a lighter area, which is the penumbra.

penury N. severe poverty; stinginess. When his pension fund failed, George feared he would end his days in penury. He became such a penny-pincher that he turned into a closefisted, penurious miser.

peon N. landless agricultural worker; bond servant. The land reformers sought to liberate the peons and establish them as independent farmers. Peonage, N.

perceptive ADJ. insightful; aware; wise. Although Maud was a generally perceptive critic, she had her blind spots: she could never see flaws in the work of her friends.

percussion ADJ. striking one object against another sharply. The drum is a percussion instrument. Also N.

perdition N. damnation; complete ruin. Praying for salvation, young Daedalus feared he was damned to eternal perdition.

peregrination N. journey. Auntie Mame was a world traveler whose peregrinations took her from Tijuana to Timbuctoo.

peremptory ADJ. demanding and leaving no choice. From Jack's peremptory knock on the door, Jill could tell he would not give up until she let him in.

perennial N. something long-lasting. These plants are hardy perennials and will bloom for many years. Also ADJ.

perfidious ADJ. treacherous; disloyal. When Caesar realized that Brutus had betrayed him, he reproached his perfidious friend. Perfidy, N.

perforate v. pierce; put a hole through. Before you can open the aspirin bottle, you must first perforate the plastic safety seal that covers the cap.

perfunctory ADJ. superficial; not thorough; lacking interest, care, or enthusiasm. The auditor's perfunctory inspection of the books overlooked many errors.

perigee N. point of moon's orbit when it is nearest the earth. The rocket which was designed to take photographs of the moon was launched as the moon approached its perigee.

perimeter N. outer boundary. To find the perimeter of any quadrilateral, we add the lengths of the four sides.

peripatetic ADJ. walking about; moving. The peripatetic school of philosophy derives its name from the fact that Aristotle walked with his pupils while discussing philosophy with them.

peripheral ADJ. marginal; outer. We lived, not in central London, but in one of those peripheral suburbs that spring up on the outskirts of a great city.

periphery N. edge, especially of a round surface. He sensed that there was something just beyond the periphery of his vision.

perjury N. false testimony while under oath. Rather than lie under oath and perhaps be indicted for perjury, the witness chose to take the Fifth Amendment, refusing to answer any questions on the grounds that he might incriminate himself.

permeable ADJ. penetrable; porous: allowing liquids or gas to pass through. If your jogging clothes weren't made out of permeable fabric, you'd drown in your own sweat (figuratively speaking). Permeate, v.

pernicious ADJ. very destructive. The Athenians argued that Socrates's teachings had a pernicious effect on young and susceptible minds; therefore, they condemned him to death.

peroration N. conclusion of an oration. The peroration was largely hortatory and brought the audience to its feet clamoring for action at its close.

perpetrate v. commit an offense. Only an insane person could perpetrate such a horrible crime.

perpetual ADJ. everlasting. Ponce de Leon hoped to find the legendary fountain of perpetual youth.

perpetuate v. make something last; preserve from extinction. Some critics attack the Adventures of Huckleberry Finn because they believe Twain's book perpetuates a false image of blacks in this country. Perpetuity, N.

perquisite N. any gain above stipulated salary. The perquisites attached to this job make it even more attractive than the salary indicates.

personable ADJ. attractive. The individual I am seeking to fill this position must be personable since he or she will be representing us before the public.

perspicacious ADJ. having insight; penetrating; astute. The brilliant lawyer was known for his perspicacious deductions.

perspicuity N. clearness of expression; freedom from ambiguity. One of the outstanding features of this book is the perspicuity of its author; her meaning is always clear.
perspicuous ADJ. plainly expressed. Her perspicuous comments eliminated all possibility of misinterpretation.

pert ADJ. impertinent; forward. I think your pert and impudent remarks call for an apology.

pertinacious ADJ. stubborn; persistent. She is bound to succeed because her pertinacious nature will not permit her to quit.

pertinent ADJ. suitable; to the point. The lawyer wanted to know all the pertinent details.

perturb v. disturb greatly. The thought that electricity might be leaking out of the empty light-bulb sockets perturbed my aunt so much that at night she crept about the house screwing fresh bulbs in the vacant spots. perturbation, N.

peruse v. read with care. After the conflagration that burned down her house, Joan closely perused her home insurance policy to discover exactly what benefits her coverage provided. perusal, N.

pervasive ADJ. spread throughout. Despite airing them for several hours, she could not rid her clothes of the pervasive odor of mothballs that clung to them. pervade, v.

derring ADJ. stubbornly wrongheaded; wicked and unacceptable. When Jack was in a perverse mood, he would do the opposite of whatever Jill asked him. When Hannibal Lecter was in a perverse mood, he ate the flesh of his victims. perversity, N.

perversion N. corruption; turning from right to wrong. Inasmuch as he had no motive for his crimes, we could not understand his perversion.

pessimism N. belief that life is basically bad or evil; gloominess. Considering how well you have done in the course so far, you have no real reason for such pessimism about your final grade. pessimistic, ADJ.

pestilential ADJ. causing plague; baneful. People were afraid to explore the pestilential swamp. pestilence, N.

pestle N. tool for mashing or grinding substances in a hard bowl. From the way in which the elderly pharmacist pounded the drug with his pestle, young George could tell that his employer was agitated about something.

petrify v. turn to stone. His sudden and unexpected appearance seemed to petrify her.

petty ADJ. trivial; unimportant; very small. She had no major complaints to make about his work, only a few petty quibbles that were almost too minor to state.

petulant ADJ. touchy; peevish. If you'd had hardly any sleep for three nights and people kept on phoning and waking you up, you'd sound petulant, too. petulance, N.

pharisaical ADJ. pertaining to the Pharisees, who paid scrupulous attention to tradition; self-righteous; hypocritical. Walter Lippmann has pointed out that moralists who do not attempt to explain the moral code they advocate are often regarded as pharisaical and ignored.

phenomena N. pl. observable facts; subjects of scientific investigation. We kept careful records of the phenomena we noted in the course of these experiments. phenomenon, sg.

philanderer n. faithless lover; flirt. Swearing he had never so much as looked at another woman, Jack assured Jill he was no philanderer.

plaintive ADJ. mournful. The dove has a plaintive and melancholy call.
plait v. braid; intertwine. The maypole dancers plaited bright green ribbons in their hair. Also n.

plasticity N. ability to be molded. When clay dries out, it loses its plasticity and becomes less malleable.

platitude N. trite remark; commonplace statement. In giving advice to his son, old Polonius expressed himself only in platitudes; every word out of his mouth was a truism.

platonic adj. purely spiritual; theoretical; without sensual desire. Accused of impropriety in his dealings with female students, the professor maintained he had only a platonic interest in the women involved.

plaudit N. enthusiastic approval; round of applause. The theatrical company reprinted the plaudits of the critics in its advertisements; plauditory, adj.

plausible adj. having a show of truth but open to doubt; specious. Your mother made you stay home from school because she needed you to program the VCR? I'm sorry, you'll have to come up with a more plausible excuse than that.

plebeian adj. common; pertaining to the common people. His speeches were aimed at the plebeian minds and emotions, they disgusted the more refined.

plenary adj. complete; full. The union leader was given plenary power to negotiate a new contract with the employers.

plenitude N. abundance; completeness. Looking in the pantry, we admired the plenitude of fruits and pickles we had preserved during the summer.

plthora N. excess; overabundance. She offered a plethora of excuses for her shortcomings.

pliable adj. flexible; yielding; adaptable. In remodeling the bathroom, we replaced all the old, rigid lead pipes with new, pliable copper tubing.

pliant adj. flexible; easily influenced. Pinocchio's disposition was pliant; he was like putty in his tempters' hands.

plight N. condition, state (especially a bad state or condition); predicament. Loggers, unmove by the plight of the spotted owl, plan to keep on felling trees whether or not they ruin the bird's habitat.

pluck N. courage. Even the adversaries of young Indiana Jones were impressed by the boy's pluck in trying to rescue the archeological treasure they had stolen.

plumage N. feathers of a bird. Bird watchers identify different species of birds by their characteristic songs and distinctive plumage.

plumb v. examine critically in order to understand; measure depth (by sounding). Try as he would, Watson could never fully plumb the depths of Holmes's thought processes.

plumb adj. vertical. Before hanging wallpaper it is advisable to drop a plumb line from the ceiling as a guide. Also n.

plummet v. fall sharply. Stock prices plummeted as Wall Street reacted to the rise in interest rates.

plutocracy N. society ruled by the wealthy. From the way the government caters to the rich, you might think our society is a plutocracy rather than a democracy.

podiatrist N. doctor who treats ailments of the feet. He consulted a podiatrist about his fallen arches.

podium N. pedestal; raised platform. The audience applauded as the conductor made her way to the podium.

poignancy N. quality of being deeply moving; keenness of emotion. Watching the tearful reunion of the long-separated mother and child, the social worker was touched by the poignancy of the scene. Poignant, adj.

polarize v. split into opposite extremes or camps. The abortion issue has polarized the country into pro-choice and anti-abortion camps.

polemic N. controversy; argument in support of point of view. Her essays were, for the main part, polemics for the party's policy.

polemical adj. aggressive in verbal attack; disputatious. Lexy was a master of polemical rhetoric; she should have worn a T-shirt with the slogan "Born to Debate."

politic adj. expedient; prudent; well devised. Even though he was disappointed, he did not think it politic to refuse this offer.

polity N. form of government of nation or state. Our polity should be devoted to the concept that the government should strive for the good of all citizens.

polygamist N. one who has more than one spouse at a time. He was arrested as a polygamist when his two wives filed complaints about him.

polyglot adj. speaking several languages. New York City is a polyglot community because of the thousands of immigrants who settle there.

pompous adj. self-important behavior; acting like a stuffed shirt. Although the commencement speaker had some good things to say, we had to laugh at his pomposity and general air of parodying his own dignity.

ponderous adj. weighty; unwieldy. His humor lacked the light touch; his jokes were always ponderous.

pontifical adj. pertaining to a bishop or pope; pompous or pretentious. From the very beginning of his ministry it was clear from his pontifical pronouncements that John was destined for a high pontifical office.

pore v. study industriously; ponder; scrutinize. Determined to become a physician, Beth spends hours poring over her anatomy text.

porous adj. full of pores; like a sieve. Dancers like to wear porous clothing because it allows the ready passage of water and air.

portend v. foretell; presage. The king did not know what these omens might portend and asked his soothsayers to interpret them.

portent N. sign; omen; forewarning. He regarded the black cloud as a portent of evil.

portly adj. stout; corpulent. The salesclerk tactfully referred to the overweight customer as portly rather than fat.
poseur  N. person who pretends to be sophisticated, elegant, etc., to impress others. Some thought Dali was a brilliant painter; others dismissed him as a poseur.

posterity  N. descendants; future generations. We hope to leave a better world to posterity.

posthumous  A.D.J. after death (as of child born after father’s death or book published after author’s death). The critics ignored his works during his lifetime; it was only after the posthumous publication of his last novel that they recognized his great talent.

postulate  N. self-evident truth. We must accept these statements as postulates before pursuing our discussions any further, also v.

posture  v. assume an affected pose; act artificially. No matter how much Arnold boasted or postured, I could not believe he was as important as he pretended to be.

potable  A.D.J. suitable for drinking. The recent drought in the Middle Atlantic States has emphasized the need for extensive research in ways of making sea water potable. Also N.

potent  A.D.J. powerful; persuasive; greatly influential. Looking at the expiration date on the cough syrup bottle, we wondered whether the medication would still be potent, potency, n.

potentate  N. monarch; sovereign. The potentate spent more time at Monte Carlo than he did at home on his throne.

potential  A.D.J. expressing possibility; latent. This juvenile delinquent is a potential murderer. Also N.

potion  N. dose (of liquid). Tristan and Isolde drink a love potion in the first act of the opera.

potpourri  N. heterogeneous mixture; medley. The folk singer offered a potpourri of songs from many lands.

poutice  N. soothing application applied to sore and inflamed portions of the body. She was advised to apply a flaxseed poultice to the inflammation.

practicable  A.D.J. feasible. The board of directors decided that the plan was practicable and agreed to undertake the project.

practical  A.D.J. based on experience; useful. He was a practical man, opposed to theory.

pragmatic  A.D.J. practical (as opposed to idealistic); concerned with the practical worth or impact of something. This coming trip to France should provide me with a pragmatic test of the value of my conversational French class.

pragmatist  N. practical person. No pragmatist enjoys becoming involved in a game that he can never win.

prate  v. speak foolishly; boast idly. Let us not prate about our qualities; rather, let our virtues speak for themselves.

prattle  v. babble. Baby John prattled on and on about the cats and his ball and the Cookie Monster. Also N.

preamble  N. introductory statement. In the Preamble to the Constitution, the purpose of the document is set forth.

precarious  A.D.J. uncertain; risky. Saying the stock was currently overpriced and would be a precarious investment, the broker advised her client against purchasing it.

precedent  N. something preceding in time that may be used as an authority or guide for future action; an earlier occurrence. The law professor asked Jill to state which famous case served as a precedent for the court’s decision in Brown v. Board of Education.

precedent  A.D.J. preceding in time, rank, etc. Our discussions, precedent to this event, certainly did not give you any reason to believe that we would adopt your proposal.

Word List 37  precept-propitiate

precept  n. practical rule guiding conduct. "Love thy neighbor as thyself" is a worthwhile precept.

precipice  n. cliff; dangerous position. Suddenly Indiana Jones found himself dangling from the edge of a precipice.

precipitant  n. something that causes a substance in a chemical solution to separate out in solid form. Solvents by definition dissolve; precipitants, however, cause solids to precipitate or form. precipitate, v.

- precipitate  adj. rash; premature; hasty; sudden. Though I was angry enough to resign on the spot, I had enough sense to keep myself from quitting a job in such a precipitate fashion.

- precipitate  v. throw headlong; hasten. The removal of American political support appeared to have precipitated the downfall of the Marcos regime.

precipitous  adj. steep; overhasty. This hill is difficult to climb because it is so precipitous; one slip, and our descent will be precipitous as well.

précis  n. concise summation of main points. Before making her presentation at the conference, Ellen wrote a neat précis of the major elements she would cover.

precise  adj. exact. If you don’t give me precise directions and a map, I’ll never find your place.

preclude v. make impossible; eliminate. The fact that the band was already booked to play in Hollywood on New Year’s Eve precluded their accepting the offer of a New Year’s Eve gig in London.

precocious  adj. advanced in development. Listening to the grown-up way the child discussed serious topics, we couldn’t help remarking how precocious she was. precocity, n.

- precursor  n. forerunner. Though Gray and Burns share many traits with the Romantic poets who followed them, most critics consider them precursors of the Romantic Movement, not true Romantics.

predator  n. creature that seizes and devours another animal; person who robs or exploits others. Not just cats, but a wide variety of predators—owls, hawks, weasels, foxes—catch mice for dinner. A carnivore is by definition predatory, for he preys on weaker creatures. predation, n.

predecessor  n. former occupant of a post. I hope I can live up to the fine example set by my late predecessor in this office.

predetermine  v. predetermine; settled or decide beforehand; influence markedly. Romeo and Juliet believed that Fate had predetermined their meeting. Bea gathered estimates from caterers, florists, and stationers so that she could predetermine the costs of holding a catered buffet. Philip’s love of athletics predetermined his choice of a career in sports marketing.

predicament  n. tricky or dangerous situation; dilemma. Tied to the railroad tracks by the villain, Pauline strained against her bonds. How would she escape from this terrible predicament?

predilection  n. partiality; preference. Although the artist used various media from time to time, she had a predilection for watercolors.

predispone  v. give an inclination toward; make susceptible to. Oleg’s love of dressing up his big sister’s Barbie doll may have predisposed him to become a fashion designer. Genetic influences apparently predispose people to certain forms of cancer. predisposition, n.

preeminent  adj. outstanding; superior. The king traveled to Boston because he wanted the preeminent surgeon in the field to perform the operation.

preempt  v. head off; forestall by acting first; appropriate for oneself; supplant. Hoping to preempt any attempts by the opposition to make educational reform a hot political issue, the candidate set out her own plan to revitalize the public schools. preemptive, adj.

reen  v. make oneself tidy in appearance; feel self-satisfaction. As Kitty preened before the mirror, carefully smoothing her shining hair, she couldn’t help preening herself on her good looks.

prefatory  adj. introductory. The chairman made a few prefatory remarks before he called on the first speaker.

prehensile  adj. capable of grasping or holding. Monkeys use not only their arms and legs but also their prehensile tails in traveling through the trees.

prelate  n. church dignitary. The archbishop of Moscow and other high-ranking prelates visited the Russian Orthodox seminary.

prelude  n. introduction; forerunner. I am afraid that this border raid is the prelude to more serious attacks.

premeditate  v. plan in advance. She had premeditated the murder for months, reading about common poisons and buying weed killer that contained arsenic.

premise  n. assumption; postulate. On the premise that there’s no fool like an old fool, P. T. Barnum hired a 90-year-old clown for his circus.

premonition  n. forewarning. We ignored these premonitions of disaster because they appeared to be based on childish fears.

premonitory  adj. serving to warn. You should have visited a doctor as soon as you felt these premonitory chest pains.
preponderance n. superiority of power, quantity, etc. The rebels sought to overcome the preponderance of strength of the government forces by engaging in guerilla tactics. preponderate, v. preponderant, adj.

preposterous adj. absurd; ridiculous. When the candidate tried to downplay his youthful experiments with marijuana by saying he hadn’t inhaled, we all thought, “What a preposterous excuse!”

prerogative n. privilege; unquestionable right. The President cannot levy taxes; that is the prerogative of the legislative branch of government.

presage v. foretell. The vultures flying overhead presaged the discovery of the corpse in the desert.

prescience n. ability to foretell the future. Given the current wave of Japan-bashing, it does not take prescience for me to foresee problems in our future trade relations with Japan.

presentiment n. feeling something will happen; anticipatory fear; premonition. Saying goodbye at the airport, Jack had a sudden presentiment that this was the last time he would see Jill.

prestige n. impression produced by achievements or reputation. Many students want to go to Harvard University, not for the education offered, but for the prestige of Harvard’s name. prestigious, adj.

presumptuous adj. arrogant; taking liberties. It seems presumptuous for one so relatively new to the field to challenge the conclusions of its leading experts. presumption, n.

pretentious adj. ostentatious; pompous; making unjustified claims; overambitious. The other prize winner isn’t wearing her medal, isn’t it a bit pretentious of you to wear yours?

preternatural adj. beyond that which is normal in nature. John’s mother’s total ability to tell when he was lying struck him as almost preternatural.

preface n. excuse. She looked for a good pretext to get out of paying a visit to her aunt.

prevail v. induce; triumph over. He tried to prevail on her to type his essay for him.

prevalent adj. widespread; generally accepted. A radical committed to social change, Reed had no patience with the conservative views prevalent in the America of his day.

prevail v. lie. Some people believe that to prevail in a good cause is justifiable and regard the statement as a “white lie.”

prey n. target of a hunt; victim. In Stalking the Wild Asparagus, Euell Gibbons has as his prey not wild beasts but wild plants. also v.

prim adj. very precise and formal; exceedingly proper. Many people commented on the contrast between the prim attire of the young lady and the inappropriate clothing worn by her escort.

primogeniture n. seniority by birth. By virtue of primogeniture, in some cultures the first-born child has many privileges denied his brothers and sisters.

primordial adj. existing at the beginning (of time); rudimentary. The Neanderthal Man is one of our primordial ancestors.

primp v. groom oneself with care; adorn oneself. The groom stood by idly while his nervous bride-to-be primped one last time before the mirror.

pristine adj. characteristic of earlier times; primitive, unspoiled. This area has been preserved in all its pristine wilderness.

privation n. hardship; want. In his youth, he knew hunger and privation.

privacy n. secret; hidden; not public. We do not care for privacy chamber government.

probe v. explore with tools. The surgeon probed the wound for foreign matter before suturing it. also n.

probity n. uprightness; incorruptibility. Everyone took his probity for granted; his defalcations, therefore, shocked us all.

problematic adj. doubtful; unsettled; questionable; perplexing. Given the way building costs have exceeded estimates for the job, whether the arena will ever be completed is problematic.

procclivity n. inclination; natural tendency. Watching the two-year-old voluntarily put away his toys, I was amazed by his proclivity for neatness.

procrastinate v. postpone; delay or put off. Looking at four years of receipts and checks he still had to sort through, Bob was truly sorry he had procrastinated for so long and had not finished filing his taxes long ago.

procurement n. obtaining. The personnel department handles the procurement of new employees.

prod v. poke; stir up; urge. If you prod him hard enough, he’ll eventually clean his room.

prodigal adj. wasteful; reckless with money. Don’t be so prodigal spending my money; when you’ve earned some money, you can waste as much of it as you want! also n.

prodigious adj. marvelous; enormous. Watching the champion weight lifter heave the weighty barbell to shoulder height and then boost it overhead, we marveled at his prodigious strength.

prodigy n. highly gifted child; marvel. Menuhin was a prodigy, performing wonders on his violin when he was barely eight years old.

profane v. violate; desecrate; treat unworthily. The members of the mysterious Far Eastern cult sought to kill the British explorer because he had profaned the sanctity of their holy goblet by using it as an ashtray. also adj.

profligate adj. dissipated; wasteful; wildly immoral. Although surrounded by wild and profligate companions, she managed to retain some sense of decency. also n.

profligacy n.

profound adj. deep; not superficial; complete. Freud’s remarkable insights into human behavior caused his fellow scientists to honor him as a profound thinker. profundity, n.
profusion N. overabundance; lavish expenditure; excess. Freddy was so overwhelmed by the profusion of choices on the menu that he knocked over his wine glass and soaked his host. He made profuse apologies to his host, the waiter, the bus boy, the people at the next table, and the man in the men’s room giving out paper towels.

progenitor N. ancestor. The Roth family, whose progenitors emigrated from Germany early in the nineteenth century, settled in Peru, Illinois.

progeny N. children; offspring. He was proud of his progeny but regarded George as the most promising of all his children.

prognosis N. forecasted course of a disease; prediction. If the doctor’s prognosis is correct, the patient will be in a coma for at least twenty-four hours.

prognosticate v. predict. I prognosticate disaster unless we change our wasteful ways.

prohibit ADJ. prohibitive ADJ. tending to prevent the purchase or use of something; inclined to prevent or forbid. Susie wanted to buy a new Volvo but had to settle for a used Dodge because the new car’s price was prohibitive. prohibition, N.

projectile N. missile. Man has always hurled projectiles at his enemy whether in the form of stones or of highly explosive shells.

proletarian N. member of the working class; blue collar guy. “Workers of the world, unite! You have nothing to lose but your chains” is addressed to proletarians, not preppies. also ADJ. proletarian, N.

proliferate v. grow rapidly; spread; multiply. Times of economic hardship inevitably encourage countless get-rich-quick schemes to proliferate. proliferation, N.

prolific ADJ. abundantly fruitful. She was a prolific writer who produced as many as three books a year.

proximity N. tedious wordiness; verbosity. A writer who suffers from proximity tells his readers everything they never wanted to know about his subject (or were too bored to ask). proxil, ADJ.

prologue N. introduction (to a poem or play). In the prologue to Romeo and Juliet, Shakespeare introduces the audience to the feud between the Montagues and the Capulets.

prolong v. extend; draw out; lengthen. In their determination to discover ways to prolong human life, doctors fail to take into account that longer lives are not always happier ones.

prominent ADJ. conspicuous; notable; protruding. Have you ever noticed that Prince Charles’s prominent ears make him resemble the big-eared character in Mad comics?

promiscuous ADJ. mixed indiscriminately; haphazard; irregular, particularly sexually. In the opera La Boheme, we get a picture of the promiscuous life led by the young artists of Paris. promiscuity, N.

promontory N. headland. They erected a lighthouse on the promontory to warn approaching ships of their nearness to the shore.

promote v. help to flourish; advance in rank; publicize. Founder of the Children’s Defense Fund, Marian Wright Edelman ceaselessly promotes the welfare of young people everywhere.

prompt v. cause; provoke; provide a cue for an actor. Whatever prompted you to ask for such a big piece of cake when you’re on a diet?

promulgate v. proclaim a doctrine or law; make known by official publication. When Moses came down from the mountaintop prepared to promulgate God’s commandments, he was appalled to discover his followers worshipping a golden calf.

prone ADJ. inclined to; prostrate. She was prone to sudden fits of anger during which she would lie prone on the floor, screaming and kicking her heels.

propagate v. multiply; spread. Since bacteria propagate more quickly in unsanitary environments, it is important to keep hospital rooms clean.

propellant N. substance that propels or drives forward. The development of our missile program has forced our scientists to seek more powerful propellants. also ADJ.

propensity N. natural inclination. Convinced of his own talent, Sol has an unfortunate propensity to belittle the talents of others.

prophetic ADJ. having to do with predicting the future. In interpreting Pharaoh’s prophetic dream, Joseph said that the seven fat cows eaten by the seven lean cows represented seven years of plenty followed by seven years of famine. prophecy, N.

prophylactic ADJ. used to prevent disease. Despite all prophylactic measures introduced by the authorities, the epidemic raged until cool weather set in. prophylaxis, N.

propinquity N. nearness; kinship. Their relationship could not be explained as being based on mere propinquity: they were more than relatives; they were true friends.

propitiate v. appease. The natives offered sacrifices to propitiate the gods.

Word List 38  propitious-quarry

propitious  adj. favorable; fortunate; advantageous. Chloe consulted her horoscope to see whether Tuesday would be a *propitious* day to dump her boyfriend.
proponent  n. supporter; backer; opposite of *opponent*. In the Senate, *proponents* of the universal health care measure lobbied to gain additional support for the controversy legislation.
propound  v. put forth for analysis. In your discussion, you have *propounded* several questions; let us consider each one separately.
propriety  n. fitness; correct conduct. Miss Manns counsels her readers so that they may behave with *propriety* in any social situation and not embarrass themselves.
propulsive  adj. driving forward. The jet plane has a greater *propulsive* power than the engine-driven plane.
prosaic  adj. dull and unimaginative; matter-of-fact; factual. Though the ad writers had come up with a highly creative campaign to publicize the company’s newest product, the head office rejected it for a more *prosaic*, down-to-earth approach.
proscenium  n. part of stage in front of curtain. In the theater-in-the-round there can be no *proscenium* or *proscenium* arch. also *pro*. 
proscribe  v. ostracize; banish; outlaw. Antony, Octavius, and Lepidus were *proscribed* all those who had conspired against Julius Caesar.
proselytize  v. induce someone to convert to a religion or belief. In these interfaith meetings, there must be no attempt to *proselytize*; we must respect all points of view.
prosody  n. the art of versification. This book on *prosody* contains a rhyming dictionary as well as samples of the various verse forms.
prosperity  n. good fortune; financial success; physical well-being. Promising to stay together “for richer, for poorer,” the newlyweds vowed to be true to one another in *prosperity* and hardship alike.
prostrate  v. stretch out full on ground. He prostrated himself before the idol. also adj.
protean  adj. versatile; able to take on many forms. A remarkably *protean* actor, Alec Guinness could take on any role.
protégé  n. person receiving protection and support from a patron. Born with an independent spirit, Cyrano de Bergerac refused to be a *protégé* of Cardinal Richelieu.
protocol  n. diplomatic etiquette. We must run this state dinner according to *protocol* if we are to avoid offending any of our guests.
prototype  n. original work used as a model by others. The crude typewriter on display in this museum is the *prototype* of the elaborate machines in use today.
protract  v. prolong. Seeking to delay the union members’ vote, the management team tried to *protract* the negotiations endlessly, but the union representatives saw through their strategy.
protrude  v. stick out. His fingers protruded from the holes in his gloves.
protuberance  n. protrusion; bulge. A ganglionic cyst is a fluid-filled tumor (generally benign) that develops near a joint membrane or tendon sheath, and that bulges beneath the skin, forming a *protuberance*.
provenance  n. origin or source of something. I am not interested in its *provenance*; I am more concerned with its usefulness than with its source.
provender  n. dry food; fodder. I am not afraid of a severe winter because I have stored a large quantity of *provender* for the cattle.
provident adj. displaying foresight; thrifty; preparing for emergencies. In his usual provident manner, he had insured himself against this type of loss.

provincial adj. pertaining to a province; limited in outlook; unsophisticated. As provincial governor, Sir Henry administered the Queen’s law in his remote corner of Canada. Caught up in local problems, out of touch with London news, he became sadly provincial.

provisional adj. tentative. Kim’s acceptance as an American Express cardholder was provisional: before issuing her a card, American Express wanted to check her employment record and credit history.

proviso n. stipulation. I am ready to accept your proposal with the proviso that you meet your obligations within the next two weeks.

provocative adj. arousing anger or interest; annoying. In a typically provocative act, the bully kicked sand into the weaker man’s face. provoke, v. provocation, n.

prowess n. extraordinary ability; military bravery. Performing triple axels and double lutzes at the age of six, the young figure skater was world famous for her prowess on the ice.

proximity n. nearness. Blind people sometimes develop a compensatory ability to sense the proximity of objects around them.

proxy n. authorized agent. Please act as my proxy and vote for this slate of candidates in my absence.

prude n. excessively modest or proper person. The X-rated film was definitely not for prudes.

prudent adj. cautious; careful. A miser hoards money not because he is prudent but because he is greedy. prudence, n.

prune v. cut away; trim. With the help of her editor, she was able to prune her manuscript into publishable form.

prurient adj. having or causing lustful thoughts and desires. Aroused by his prurient impulses, the dirty old man leered at the sweet young thing and offered to give her a sample of his “prowess”; his prurience appalled her.

pry v. inquire impertinently; use leverage to raise or open something. Though Nora claimed she didn’t mean to pry, everyone knew she was just plain nosy. With a crowbar Long John Silver pried up the lid of the treasure chest.

pseudonym n. pen name. Samuel Clemens’ pseudonym was Mark Twain.

psyche n. soul; mind. It is difficult to delve into the psyche of a human being.

psychiatrist n. a doctor who treats mental diseases. A psychiatrist often needs long conferences with his patient before a diagnosis can be made.

psychopathic adj. pertaining to mental derangement. The psychopathic patient suffers more frequently from a disorder of the nervous system than from a diseased brain.

psychosis n. mental disorder. We must endeavor to find an outlet for the patient’s repressed desires if we hope to combat this psychosis. psychotic, adj.

pterodactyl n. extinct flying reptile. The remains of pterodactyls indicate that these flying reptiles had a wingspan of as much as twenty feet.

puerile adj. childish. His puerile pranks sometimes offended his more mature friends.

puglist n. boxer. The famous puglist Cassius Clay changed his name to Muhammad Ali.

pugnacity n. combative ness; disposition to fight. “Put up your dukes!” he cried, making a fist to show his pugnacity. pugnacious, adj.

puissant adj. powerful; strong; potent. We must keep his friendship for he will make a puissant ally.

pulchritude n. beauty; comeliness. I do not envy the judges who have to select this year’s Miss America from this collection of female pulchritude.

pulmonary adj. pertaining to the lungs. In his researches on pulmonary diseases, he discovered many facts about the lungs of animals and human beings.

pulsate v. throb. We could see the blood vessels in his temple pulsate as he became more angry.

pulverize v. crush or grind into very small particles. Before sprinkling the dried herbs into the stew, Michael first pulverized them into a fine powder.

pummel v. beat or pound with fists. Swinging wildly, Pammy pummeled her brother around the head and shoulders.

punctilious adj. stressing niceties of conduct or form; minutely attentive (perhaps too much so) to fine points. Percy is punctilious about observing the rules of etiquette whenever Miss Manners invites him to stay. punctiliousness, n.

pundit n. authority on a subject; learned person; expert. Some authors who write about SAT-I as if they are pundits actually know very little about the test.

pungent adj. stinging; sharp in taste or smell; caustic. The pungent odor of ripe Limburger cheese appealed to Simone but made Stanley gag. pungency, n.

punitive adj. punishing. He asked for punitive measures against the offender.

raconteur  n. story-teller. My father was a gifted raconteur with an unlimited supply of anecdotes.

ragamuffin  n. person wearing tattered clothes. He felt sorry for the ragamuffin who was begging for food and gave him money to buy a meal.

rail  v. scold; rant. You may rail at him all you want; you will never change him.

raiment  n. clothing. “How can I go to the ball?” asked Cinderella. “I have no raiment fit to wear.”

rakish  adj. stylish; sporty. He wore his hat at a rakish and jaunty angle.

rally  v. call up or summon (forces, vital powers, etc.); revive or recuperate. Washington quickly rallied his troops to fight off the British attack. The patient had been sinking throughout the night, but at dawn she rallied and made a complete recovery. Also n.

ramble  v. wander aimlessly (physically or mentally). Listening to the teacher ramble, Judy wondered whether he’d ever get to his point. Also n.

ramification  n. branching out; subdivision. We must examine all the ramifications of this problem.

ramify  v. divide into branches or subdivisions. When the plant begins to ramify, it is advisable to nip off most of the new branches.

ramp  n. slope; inclined plane. The house was built with ramps instead of stairs in order to enable the man in the wheelchair to move easily from room to room and floor to floor.

rampant  adj. growing in profusion; unrestrained. The rampant weeds in the garden choked the asters and marigolds until the flowers died. rampancy, n.

rampart  n. defensive mound of earth. “From the ramparts we watched” as the fighting continued.

ramshackle  adj. rickety; falling apart. The boys propped up the ramshackle clubhouse with a couple of boards.

rancid  adj. having the odor of stale fat. A rancid odor
filled the ship’s galley and nauseated the crew.

rancor N. bitterness; hatred. Thirty years after the war, she could not let go of the past but was still consumed with rancor against the foe. rancorous, ADJ.

random ADJ. without definite purpose, plan, or aim; hap-hazard. Although the sponsor of the raffle claimed all winners were chosen at random, people had their suspicions when the grand prize went to the sponsor’s brother-in-law.

rankle v. irritate; fester. The memory of having been jilted rankled him for years.

rant v. rave; talk excitedly; scold; make a grandiloquent speech. When he heard that I’d totaled the family car, Dad began to rant at me like a complete madman.

rapacious ADJ. excessively grasping; plundering. Hawks and other rapacious birds prey on a variety of small animals.

rapport N. emotional closeness; harmony. In team teaching, it is important that all teachers in the group have good rapport with one another.

rapt ADJ. absorbed; enchanted. Caught up in the wonder of the storyteller’s tale, the rapt listeners sat motionless, hanging on his every word.

rarefied ADJ. made less dense [of a gas]. The mountain climbers had difficulty breathing in the rarefied atmosphere. rarely, v. rarefaction, N.

raspy ADJ. grating; harsh. The sergeant’s raspy voice grated on the recruits’ ears.

ratify v. approve formally; confirm; verify. Party leaders doubted that they had enough votes in both houses of Congress to ratify the constitutional amendment.

rationale N. fundamental reason or justification; grounds for an action. Her need for a vehicle large enough to accommodate five children and a Saint Bernard was Judy’s rationale for buying a minivan.

rationalize v. give a plausible reason for an action in place of a true, less admirable one; offer an excuse. When David refused gabby Gabrielle a ride to the dance because he said, he had no room in the car, he was rationalizing; actually, he couldn’t stand being cooped up in a car with anyone who talked as much as she did. rationalization, N.

raucous ADJ. harsh and shrill; disorderly and boisterous. The raucous crowd of New Year’s Eve revelers grew progressively noisier as midnight drew near.

ravage v. plunder; despoil. The marauding army ravaged the countryside.

rave N. overwhelmingly favorable review. Though critic John Simon seldom has a good word to say about contemporary plays, his review of All in the Timing was a total rave.

ravel v. fall apart into tangles; unravel or untwist; entangle. A single thread pulled loose, and the entire scarf started to ravel.

ravenous ADJ. extremely hungry. The ravenous dog upset several garbage pails in its search for food.

ravine N. narrow valley with steep sides. Steeper than a gully, less precipitous than a canyon, a ravine is, like them, the product of years of erosion.

raze v. destroy completely. Spelling matters: to raise a building is to put it up; to raze a building is to tear it down.

reactor ADJ. opposing progress; politically ultraconservative. Opposing the use of English in worship services, reactionary forces in the church fought to reinstate the mass in Latin. also N.

realm N. kingdom; field or sphere. In the animal realm, the lion is the king of beasts.

reaper N. one who harvests grain. Death, the Grim Reaper, cuts down mortal men and women, just as a farmer cuts down the ripened grain.

rebate N. discount. We offer a rebate of ten percent to those who pay cash.

rebuff v. snub; beat back. She rebuffed his invitation so smoothly that he did not realize he had been snubbed. also N.

rebuke v. scold harshly; criticize severely. No matter how sharply Miss Watson rebuked Huck for his misconduct, he never talked back but just stood there like a stump. also N.

rebus N. puzzle in which pictures stand for words. A coven of witches beside a tree is a possible rebus for the town Coventry.

rebuffal N. refutation; response with contrary evidence. The defense lawyer confidently listened to the prosecutor sum up his case, sure that she could answer his arguments in her rebuttal.

recalcitrant ADJ. obstinately stubborn; determined to resist authority; unruly. Which animal do you think is more recalcitrant, a pig or a mule?

recant v. disclaim or disavow; retract a previous statement; openly confess error. Hoping to make Joan of Arc recant her sworn testimony, her English captors tried to convince her that her visions had been sent to her by the Devil.

recapitulate v. summarize. Let us recapitulate what has been said thus far before going ahead.

recast v. reconstruct (a sentence, story, etc.); fashion again. Let me recast this sentence in terms your feeble brain can grasp: in words of one syllable, you are a fool. receptive ADJ. quick or willing to receive ideas, suggestions, etc. Adventure-loving Huck Finn proved a receptive audience for Tom’s tales of buried treasure and piracy.

recession N. withdrawal; retreat; time of low economic activity. The slow recession of the flood waters created problems for the crews working to restore power to the area.

recidivism N. habitual return to crime. Prison reformers in the United States are disturbed by the high rate of recidivism; the number of persons serving second and third terms indicates the failure of the prisons to rehabilitate the inmates.
recipient  n. receiver. Although he had been the recipient of many favors, he was not grateful to his benefactor.

reciprocal  adj. mutual; exchangeable; interacting. The two nations signed a reciprocal trade agreement.

reciprocate  v. repay in kind. If they attack us, we shall be compelled to reciprocate and bomb their territory. reciprocity, n.

recline  n. hermit; loner. Disappointed in love, Miss Emily became a recluse; she shut herself away in her empty mansion and refused to see another living soul.

reclusive, adj.

reconcile  v. correct inconsistencies, become friendly after a quarrel. Every time we try to reconcile our checkbook with the bank statement, we quarrel. However, despite these monthly lovers’ quarrels, we always manage to reconcile.

recondite  adj. abstruse; profound; secret. He read many recondite books in order to obtain the material for his scholarly thesis.

reconnaissance  n. survey of enemy by soldiers; reconnoitering. If you encounter any enemy soldiers during your reconnaissance, capture them for questioning.

recount  v. narrate or tell; count over again. About to recount the latest adventure of Sherlock Holmes, Watson lost track of exactly how many cases Holmes had solved and refused to begin his tale until he’d recounted them one by one.

recourse  n. resorting to help when in trouble. The boy’s only recourse was to appeal to his father for aid.

recrimination  n. countercharges. Loud and angry recriminations were her answer to his accusations.

rectify  v. set right; correct. You had better send a check to rectify your account before American Express cancels your credit card.

rectitude  n. uprightness; moral virtue; correctness of judgment. The Eagle Scout was a model of rectitude; smugness was the only flaw he needed to correct.

recumbent  adj. reclining; lying down completely or in part. The command “AT EASE” does not permit you to take a recumbent position.

recoverate  v. recover. The doctors were worried because the patient did not recoverate as rapidly as they had expected.

recurrent  adj. occurring again and again. These recurrent attacks disturbed us and we consulted a physician.

sleight N. dexterity. The magician amazed the audience with his sleight of hand.

slew N. large quantity or number. Although Ellen had checked off a number of items on her “To Do” list, she still had a whole slew of errands left.

slight N. insult to one’s dignity; snub. Hypersensitive and ready to take offense at any discourtesy, Bertha was always on the lookout for real or imaginary slights. Also v.

slipshod ADJ. untidy or slovenly; shabby. As a master craftsman, the carpenter prided himself on never doing slipshod work.

slither v. slip or slide. During the recent ice storm, many people slithered down this hill as they walked to the station.

sloth N. slow-moving tree-dwelling mammal. Note how well the somewhat greenish coat of the sloth enables it to blend in with its arboreal surroundings. (secondary meaning)

slothy ADJ. lazy. The British word “layabout” is a splendid descriptive term for someone slothful: What did the lazy bum do? He lay about the house all day. Sloth, N.

slough v. cast off. Each spring, the snake sloughs off its skin; also N.
slovenly  ADJ. untidy; careless in work habits. Unshaven, sitting around in his bathrobe all afternoon, Gus didn’t care about the slovenly appearance he presented. sloven, N.

sluggard  N. lazy person. “You are a sluggard, a drone, a parasite,” the angry father shouted at his lazy son.

sluggish  ADJ. slow; lazy; lethargic. After two nights without sleep, she felt sluggish and incapable of exertion.

sluice  N. artificial channel for directing or controlling the flow of water. In times of drought, this sluice enables farmers to obtain water for irrigation.

slur  N. insult to one’s character or reputation; slander. Polls revealed that the front-runner’s standing had been damaged by the slurs and innuendoes circulated by his opponent’s staff. Also v. (secondary meaning)

slur  v. speak indistinctly; mumble. When Sol has too much to drink, he starts to slur his words: “Washamatter? Cansh you undershtand what I shay?”

smattering  N. slight knowledge. I don’t know whether it is better to be ignorant of a subject or to have a mere smattering of information about it.

smelt  v. melt or blend ores, changing their chemical composition. The furnaceman smelts tin with copper to create a special alloy used in making bells.

smirk  N. conceited smile. Wipe that smirk off your face! Also v.

smolder v. burn without flame; be liable to break out at any moment. The rags smoldered for hours before they burst into flame.

snicker  N. half-stifled laugh. The boy could not suppress a snicker when the teacher sat on the tack. Also v.

snivel  v. run at the nose; snuffle; whine. Don’t you come sniveling to me complaining about your big brother.

sobriety  N. moderation (especially regarding indulgence in alcohol); seriousness. Neither falling-down drunk nor stand-up comics are noted for sobriety. sober, ADJ.

sodden  ADJ. soaked; drenched as if from drink. He set his sodden overcoat near the radiator to dry.

sojourn  N. temporary stay. After his sojourn in Florida, he began to long for the colder climate of his native New England home.

solace  N. comfort in trouble. I hope you will find solace in the thought that all of us share your loss.

solder  v. repair or make whole by using a metal alloy. The plumber fixed the leak in the pipes by soldering a couple of joints from which water had been oozing.

solecism  N. construction that is flagrantly incorrect grammatically. I must give this paper a failing mark because it contains many solecisms.

solemnity  N. seriousness; gravity. The minister was concerned that nothing should disturb the solemnity of the marriage service.

solicit  v. request earnestly; seek. Knowing she needed to have a solid majority for the budget to pass, the mayor telephoned all the members of the city council to solicit their votes.

solicitous  ADJ. worried, concerned. The employer was very solicitous about the health of her employees as replacements were difficult to get. solicit, N.

soliloquy  N. talking to oneself. The soliloquy is a device used by the dramatist to reveal a character’s innermost thoughts and emotions.

solitude  N. state of being alone; seclusion. Much depends on how much you like your own company. What to one person seems fearful isolation to another is blessed solitude. solitary, ADJ.

solstice  N. point at which the sun is farthest from the equator. The winter solstice usually occurs on December 21.

soluble  ADJ. able to be dissolved; able to be worked out. Sugar is soluble in water; put a sugar cube in water and it will quickly dissolve. Because the test-maker had left out some necessary data, the problem was not soluble.

solvent  ADJ. able to pay all debts. By dint of very frugal living, he was finally able to become solvent and avoid bankruptcy proceedings. solvency, N.

somber  N. substance that dissolves another. Dip a cube of sugar into a cup of water; note how the water acts as a solvent, causing the cube to break down.

somatic  ADJ. pertaining to the body; physical. Why do you ignore the spiritual aspects and emphasize only the corporeal and the somatic ones?

Word List 44 somber-sublime

somber ADJ. gloomy; depressing. From the doctor's grim expression, I could tell he had somber news.
somnambulist N. sleepwalker. The most famous somnambulist in literature is Lady Macbeth; her monologue in the sleepwalking scene is one of the highlights of Shakespeare's play.
somnolent ADJ. half asleep. The heavy meal and the overheated room made us all somnolent and indifferent to the speaker. Somnolence, N.
sonorous ADJ. resonant. His sonorous voice resounded through the hall.
sophist N. teacher of philosophy; quibbler; employer of fallacious reasoning. You are using all the devices of a sophist in trying to prove your case; your argument is specious.
sophisticated ADJ. worldly wise and urbane; complex. When Sophy makes wisecracks, she thinks she sounds sophisticated, but instead she sounds sophomoric. The new IBM laptop with the butterfly keyboard and the built-in fax modem is a pretty sophisticated machine. Sophistication, N.
sophistry N. seemingly plausible but fallacious reasoning. Instead of advancing valid arguments, he tried to overwhelm his audience with a flood of sophistries.
sophomoric ADJ. immature; half-baked, like a sophomore. Even if you're only a freshman, it's no compliment to be told your humor is sophomoric. The humor in Dumb and Dumber is sophomoric at best.
soporific ADJ. sleep-causing; marked by sleepiness. Professor Pringle's lectures were so soporific that even he fell asleep in class. Also N.
sordid ADJ. filthy; base; vile. The social worker was angered by the sordid housing provided for the homeless.
spangle N. small metallic piece sewn to clothing for ornamentation. The thousands of spangles on her dress sparkled in the glare of the stage lights.
spare ADJ. not thick; thinly scattered; scanty. No matter how carefully Albert combed his hair to make it appear as full as possible, it still looked spare.
spartan ADJ. lacking luxury and comfort; sternly disciplined. Looking over the bare, unheated room with its hard cot, he wondered what he was doing in such spartan quarters. Only his spartan sense of duty kept him at his post.

spasmodic ADJ. fitful; periodic. The spasmodic coughing in the auditorium annoyed the performers.
spat N. squabble; minor dispute. What had started out as a mere spat escalated into a full-blown argument.
splate N. sudden flood. I am worried about the possibility of a splate if the rains do not diminish soon.
spatial ADJ. relating to space. Certain exercises test your sense of spatial relations by asking you to identify two views of an object seen from different points in space.
spatula N. broad-bladed instrument used for spreading or mixing. The manufacturers of this frying pan recommend the use of a rubber spatula to avoid scratching the specially treated surface.
spawn v. lay eggs. Fish ladders had to be built in the dams to assist the salmon returning to spawn in their native streams. Also N.
• specious ADJ. seemingly reasonable but incorrect; misleading (often intentionally). To claim that, because houses and birds both have wings, both can fly is extremely specious reasoning.
spectral ADJ. ghostly. We were frightened by the spectral glow that filled the room.
• spectrum N. colored band produced when a beam of light passes through a prism. The visible portion of the spectrum includes red at one end and violet at the other.
spendthrift N. someone who wastes money. Easy access to credit encourages people to turn into spendthrifts who shop till they drop.
sphinx-like ADJ. enigmatic; mysterious. The Mona Lisa's sphinx-like expression has puzzled art lovers for centuries.
splice v. fasten together; unite. Before you splice two strips of tape together, be sure to line them up evenly. Also N.
spontaneity N. lack of premeditation; naturalness; freedom from constraint. The cast overrehearsed the play so much that the eventual performance lacked any spontaneity. Spontaneous, ADJ.
spoonering N. accidental transposition of sounds in successive words. When the radio announcer introduced the President as Hoobert Herver, he was guilty of a spoonering.
soporadic adj. occurring irregularly. Although you can still hear sporadic outbursts of laughter and singing outside, the big Halloween parade has passed; the party’s over till next year.

sportive adj. playful. Such a sportive attitude is surprising in a person as serious as you usually are.

spruce adj. neat and trim. Every button buttoned, tie firmly in place, young Alex Keaton looked spruce and tidy for his job interview at the bank. Also v.

spy adj. vigorously active; nimble. She was eighty years old, yet still spy and alert.

spurious adj. false; counterfeit; forged; illogical. The hero of Jonathan Gash’s mystery novels is an antique dealer who gives the reader advice on how to tell spurious antiques from the real thing.

spurn v. reject; scorn. The heroine spurned the villain’s advances.

squabble n. minor quarrel; bickering. Children invariably get involved in petty squabbles; wise parents know when to interfere and when to let the children work things out on their own.

squalor n. filth; degradation; dirty, neglected state. Rusted, broken-down cars in the yard, trash piled on the porch, tar paper peeling from the roof—the shack was the picture of squalor. Squalid. adj.

squander v. waste. If you squander your allowance on candy and comic books, you won’t have any money left to buy the new box of crayons you want.

squat adj. stocky; short and thick. Tolkien’s hobbits are somewhat squat, sturdy little creatures, fond of good ale, good music, and good food.

staccato adj. played in an abrupt manner; marked by abrupt, sharp sound. His staccato speech reminded one of the sound of a machine gun.

stagnant adj. motionless; stale; dull. Mosquitoes commonly breed in ponds of stagnant water. Mike’s career was stagnant; it wasn’t going anywhere, and neither was he! stagnate. v.

staid adj. sober; sedate. Her conduct during the funeral ceremony was staid and solemn.

stalemate n. deadlock. Negotiations between the union and the employers have reached a stalemate; neither side is willing to budge from previously stated positions.

stalwart adj. strong, brawny; steadfast. His consistent support of the party has proved that he is a stalwart and loyal member. Also n.

stamina n. strength; staying power. I doubt that she has the stamina to run the full distance of the marathon race.

stanch v. check flow of blood. It is imperative that we stanch the gushing wound before we attend to the other injuries.

stanza n. division of a poem. Do you know the last stanza of “The Star-Spangled Banner”?

static adj. unchanging; lacking development. Why do you watch chess on TV? I like watching a game with action, not something static where nothing seems to be going on. Stasis. n.

statute n. law enacted by the legislature. The statute of limitations sets limits on how long you have to take legal action in specific cases.

statutory adj. created by statute or legislative action. The judicial courts review and try statutory crimes.

steadfast adj. loyal; unswerving. Penelope was steadfast in her affections, faithfully waiting for Ulysses to return from his wanderings.

stealth n. slyness; sneakiness; secretiveness. Fearing detection by the sentries on duty, the scout inched his way toward the enemy camp with great stealth.

steep v. soak; saturate. Be sure to steep the fabric in the dye bath for the full time prescribed.

stellar adj. pertaining to the stars. He was the stellar attraction of the entire performance.

stem v. check the flow. The paramedic used a tourniquet to stem the bleeding from the slashed artery.

stem from v. arise from. Milton’s problems in school stemmed from his poor study habits.

stentorian adj. extremely loud. The town crier had a stentorian voice.

stereotype n. fixed and unvarying representation; standardized mental picture, often reflecting prejudice. Critics object to the character of Jim in The Adventures of Huckleberry Finn because he seems to reflect the stereotype of the happy, ignorant slave. Also v.

stickler n. perfectionist; person who insists things be exactly right. The Internal Revenue Service agent was a stickler for accuracy; no approximations or rough estimates would satisfy him.

stifle v. suppress; extinguish; inhibit. Halfway through the boring lecture, Laura gave up trying to stifle her yawns.

stigma n. token of disgrace; brand. I do not attach any stigma to the fact that you were accused of this crime; the fact that you were acquitted clears you completely. Stigmatize. n.

stilted adj. bombastic; stiffly pompous. His stilted rhetoric did not impress the college audience; they were immune to bombastic utterances.

stint v. be thrifty; set limits. “Spare no expense,” the bride’s father said, refusing to stint on the wedding arrangements.

stint n. supply; allotted amount; assigned portion of work. She performed her daily stint cheerfully and willingly.

stipend n. pay for services. There is a nominal stipend for this position.

stipple v. paint or draw with dots. Seurat carefully stippled dabs of pure color on the canvas, juxtaposing dabs of blue and yellow that the viewer’s eye would interpret as green.

stipulate v. make express conditions, specify. Before agreeing to reduce American military forces in Europe, the president stipulated that NATO teams be allowed to inspect Soviet bases.
stock  adj. typical; standard; kept regularly in supply. Victorian melodramas portrayed stock characters—the rich but wicked villain, the sweet young ingénue, the poor but honest young man—in exaggerated situations. Although the stationery store kept only stock sizes of paper on hand, the staff would special-order any items not regularly in stock.

stockade n. wooden enclosure or pen; fixed line of posts used as defensive barrier. The Indians are coming! Quick! Round up the horses and drive them into the stockade.

stodgy adj. stuffy; boringly conservative. For a young person, Winston seems remarkably stodgy: you'd expect someone his age to have a little more life.

stoic adj. impassive; unmoved by joy or grief. I wasn't particularly stotic when I had my flu shot; I squealed like a stuck pig. Also n. stoicism, n.

stoke v. stir up a fire; feed plentifully. As a Scout, Marisa learned how to light a fire, how to stoke it if it started to die down, and how to extinguish it completely.

stolid adj. dull; impassive. The earthquake shattered Stuart's usual stolid demeanor; trembling, he crouched on the no longer stable ground. Stolidity, n.

stratagem n. clever trick; deceptive scheme. What a gem of a stratagem! Watson, I have the perfect plan to trick Moriarty into revealing himself.

stratified adj. divided into classes; arranged into strata. As the economic gap between the rich and the poor increased, Roman society grew increasingly stratified. Stratify, v.

stratum n. layer of earth's surface; layer of society. Unless we alleviate conditions in the lowest stratum of our society, we may expect grumbling and revolt. Strata, pl.

strew v. spread randomly; sprinkle; scatter. Preceding the bride to the altar, the flower girl will strew rose petals along the aisle.

striated adj. marked with parallel bands; grooved. The glacier left many striated rocks. Striate, v.

striction n. critical comments; severe and adverse criticism. His strictures on the author's style are prejudiced and unwarranted.

strident adj. loud and harsh; insistent. We could barely hear the speaker over the strident cries of the hecklers. Stridency, n.

stringent adj. binding; rigid. I think these regulations are too stringent.

strut n. pompous walk. His strut as he marched about the parade ground revealed him for what he was: a pompous buffoon. Also v.

strut n. supporting bar. The engineer calculated that the strut supporting the rafter needed to be reinforced. (secondary meaning)

studied adj. unspontaneous; deliberate, thoughtful. Given Jill's previous slights, Jack felt that the omission of his name from the guest list was a studied insult.

stultify v. cause to appear or become stupid or inconsistent; frustrate or hinder. His long hours in the blacking factory left young Dickens numb and incurious, as if the menial labor had stultified his mind.

stupify v. make numb; stun; amaze. Disapproving of drugs in general, Laura refused to take sleeping pills or any other medicine that might stupify her.

stupor n. state of apathy; daze; lack of awareness. In his stupor, the addict was unaware of the events taking place around him.

stygian adj. gloomy; hellish; deathly. Shielding the flickering candle from any threatening draft, Tom and Becky descended into the stygian darkness of the underground cavern. Stygian derives from Styx, the chief river in the subterranean land of the dead.

stymie v. present an obstacle; stump. The detective was stymied by the contradictory evidence in the robbery investigation.

suavity n. urbanity; polish. He is particularly good in roles that require suavity and sophistication. Suave, adj.

subaltern n. subordinate. The captain treated his subalterns as though they were children rather than commissioned officers.

subdued adj. less intense; quieter. Bob liked the subdued lighting at the restaurant because he thought it was romantic. I just thought the place was dimly lit.

subjective adj. occurring or taking place within the mind; unreal. Your analysis is highly subjective; you have permitted your emotions and your opinions to color your thinking.

subjugate v. conquer; bring under control. It is not our aim to subjugate our foe; we are interested only in establishing peaceful relations.

sublimate v. refine; purify. We must strive to sublimate these desires and emotions into worthwhile activities.

sublime adj. exalted; noble and uplifting; utter. Lucy was in awe of Desi's sublime musicianship, while he was in awe of her sublime naïveté.

surrogate  N. substitute. For a fatherless child, a male teacher may become a father surrogate.
surveillance  N. watching; guarding. The FBI kept the house under constant surveillance in the hope of capturing all the criminals at one time.
susceptible  ADJ. impressionable; easily influenced; having little resistance, as to a disease; receptive to. Said the patent medicine man to his very susceptible customer: "Buy this new miracle drug, and you will no longer be susceptible to the common cold." susceptibility, N.
sustain  v. experience; support; nourish. He sustained such a severe injury that the doctors feared he would be unable to work to sustain his growing family.
sustenance  N. means of support, food, nourishment. In the tropics, the natives find sustenance easy to obtain because of all the fruit trees.
suture  N. stitches sewn to hold the cut edges of a wound or incision; material used in sewing. We will remove the sutures as soon as the wound heals. also v.
swarthy  ADJ. dark; dusky. Despite the stereotype, not all Italians are swarthy; many are fair and blond.
wathe  v. wrap around; bandage. When I visited him in
the hospital, I found him swathed in bandages.

swelter v. be oppressed by heat. I am going to buy an air conditioning unit for my apartment as I do not intend to swelter through another hot and humid summer.

swerve v. deviate; turn aside sharply. The car swerved wildly as the driver struggled to regain control of the wheel.

swill v. drink greedily. Singing “Yo, ho, ho, and a bottle of rum,” Long John Silver and his fellow pirates swilled their grog.

swindler n. cheat. She was gullible and trusting, an easy victim for the first swindler who came along.

sybarite n. lover of luxury. Rich people are not always sybarites; some of them have little taste for a life of luxury.

sycophant n. servile flatterer; bootlicker; yes man. Fed up with the toadies and brownnoses who made up his entourage, the star cried, “Get out, all of you! I’m sick of sycophants!” sycophantic, adj.

syllogism n. logical formula consisting of a major premise, a minor premise and a conclusion; deceptive or specious argument. There must be a fallacy in this syllogism; I cannot accept its conclusion.

sylvan adj. pertaining to the woods; rustic. His paintings of nymphs in sylvan backgrounds were criticized as oversentimental.

symbiosis n. interdependent relationship (between groups, species), often mutually beneficial. Both the crocodile bird and the crocodile derive benefit from their symbiosis; pecking away at food particles embedded in the crocodile’s teeth, the bird derives nourishment; the crocodile, meanwhile, derives proper dental hygiene.

symbiotic, adj.

symmetry n. arrangement of parts so that balance is obtained; congruity. By definition, something lopsided lacks symmetry. symmetrical, adj.

synchronous adj. similarly timed; simultaneous with. We have many examples of scientists in different parts of the world who have made synchronous discoveries.

synoptic adj. providing a general overview; summary. The professor turned to the latest issue of Dissertation Abstracts for a synoptic account of what was new in the field. synopsis, n.

synthesis n. combining parts into a whole. Now that we have succeeded in isolating this drug, our next problem is to plan its synthesis in the laboratory. synthesizes, pl., synthesize, v.

synthetic adj. artificial; resulting from synthesis. During the twentieth century, many synthetic products have replaced the natural products. also n.

tacit adj. understood; not put into words. We have a tacit agreement based on only a handshake.

taciturn adj. habitually silent; talking little. The stereotypical cowboy is a taciturn soul, answering lengthy questions with a “Yep” or “Nope.”

tactile adj. pertaining to the organs or sense of touch. His calloused hands had lost their tactile sensitivity.

taint v. contaminate; cause to lose purity; modify with a trace of something bad. One speck of dirt on your utensils may contain enough germs to taint an entire batch of preserves. also n.

talisman n. charm. She wore the talisman to ward off evil.

talon n. claw of bird. The falconer wore a leather gauntlet to avoid being clawed by the hawk’s talons.

tangential adj. peripheral; only slightly connected; digressing. Despite Clark’s attempts to distract her with tangential remarks, Lois kept on coming back to her main question: why couldn’t he come out to dinner with Superman and her?

tangible adj. able to be touched; real; palpable. Although Tom did not own a house, he had several tangible assets—a car, a television, a PC—that he could sell if he needed cash.

tanner n. person who turns animal hides into leather. Using a solution of tanbark, the tanner treated the cowhide, transforming it into supple leather.

tantalize v. tease; torture with disappointment. Tom loved to tantalize his younger brother with candy; he knew the boy was forbidden to have it.

tantamount adj. equivalent in effect or value. Because so few Southern blacks could afford to pay the poll tax, the imposition of this tax on prospective voters was tantamount to disenfranchisement for black voters.

## Basic Word Parts

Words are made up of word parts: prefixes, suffixes and roots. A knowledge of these word parts and their meanings can help you determine the meanings of unfamiliar words.

### Common Prefixes

A prefix is a syllable that precedes the root or stem and changes or refines its meaning.

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Meaning</th>

**Common Suffixes**

A suffix is a syllable that is added to a word. Occasionally, it changes the meaning of the word; more frequently, it serves to change the grammatical form of the word (noun to adjective, adjective to noun, noun to verb).

<table>

Quantitative Comparison Questions

■ Testing Tactics
■ Practice Exercises
■ Answer Key

One-half of the questions on the quantitative sections of the GRE General Test are of the quantitative comparison type. These 15 questions are designed to test your ability to reason quickly about the magnitudes of two quantities. Some questions require simple computation; others ask you to reason more and to consider special cases. In this type of question you are given two quantities, with information regarding either or both, and are asked to decide which, if either, is the greater quantity. Actually, these questions require the same basic knowledge of high school level arithmetic, plane geometry, and algebra that you need for the other types of multiple-choice math questions. However, these questions involve less reading and less computation than the other types.

TESTING TACTICS

Tactic 1
Memorize the Directions to Save Time in the Examination Room

You may expect to find the following directions:

Directions: Each of the Questions 1–15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A. if the quantity in Column A is greater;
B. if the quantity in Column B is greater;
C. if the two quantities are equal;
D. if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.
Quantitative comparison questions require less time than the other types of math questions. Do not spend more than 30 seconds on any one question. The following question is typical.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>$3^2$</td>
<td>$2^3$</td>

</tbody>
</table>

In about 30 seconds or less you should realize that you are not asked to multiply $3 \times 2$ or $2 \times 3$ but that the value in Column A is $3 \times 3$ (9) and in Column B is $2 \times 2 \times 2$ (8). The correct answer is (A).

Expect the Early Questions to Be Relatively Easy

These are warm-up questions. If you find you cannot reach an answer quickly, perhaps you missed a point. You may expect to find relatively easy questions in the first segment of any section of the test. For example, the question discussed above under Tactic 2 is actually a warm-up question. Be prepared for these questions, and don’t begin wondering whether you were given the correct examination booklet. The questions that follow further illustrate the point.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>$x$</td>
<td>$y$</td>
</tr>
</tbody>
</table>

The first question, answered correctly by 93% of the people taking the test, can be done quickly by realizing that, since the product of $x$ and $y$ is negative (less than 0), either $x$ is negative and $y$ is positive, or $x$ is positive and $y$ is negative. The correct answer is (D).

Compare that with the next question, which appeared near the end of the quantitative comparison questions and gave trouble to more than half of those who took this test.

The solution: Average $\times$ Number of cases = Sum.
The original sum $= (52) (10)$, or 520.
The resulting sum $= (53) (9)$, or 477.
The difference that results from discarding a number is 43, which is less than 51. The correct answer is (B).

Do Not Spend Time on Unnecessary Computations

Consider the following question:

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>$\frac{n + a}{a}$</td>
<td>$\frac{n}{a} + 1$</td>
</tr>
</tbody>
</table>

There is no need for lengthy computation.

$$\frac{n + a}{a} = \frac{n}{a} + 1,$$

which is the value also in Column B. The correct answer is (C).
Eliminate from Consideration Any Quantity That Appears in Both Columns

Column A  Column B
(7)(8)(9)(10)  (8)(4)(10)

In this example note that 63 appears in both columns, for (7)(9) = 63. Consider only (5)(8) in Column A and (10)(4) in Column B. The correct answer is (C).

Do Not Choose (D) If the Quantities in Both Columns Have No Variables

If the quantities in both columns have no variables, (D) is not possible. Therefore in such cases you have only three choices. See explanations under Tactics 2 and 5.

Consider All Types of Numbers as Possible Values for Variables

If you find that the relationship between the quantities depends upon the kind of numbers you use, the correct answer is (D). You must consider whether the relationship is affected by using positive or negative values, zero, 1, fractions less than 1, etc. Consider this example, which was troublesome to only 28% of those who took this test.

Column A  Column B
s + t = 6
s + 2t
2s + t

Note that various values for s and t may yield a sum of 6. Therefore s + t and 2s + t may have many possible values. The correct answer is (D).

Do Not Hesitate to Mark Up a Given Diagram in Your Test Booklet

Column A  Column B
s
3

The perimeter of the rectangle is 16.

The area of the rectangular region

Evidently 53% of those taking the test correctly applied the formulas required:

Perimeter = 2(s) + 2\(\frac{s}{3}\) = 16

\[2s + 2\frac{s}{3} = 16\]

\[6s + 2s = 48\]

Therefore s = 6.

Area = (s)\(\frac{s}{3}\) or (6)\(\frac{6}{3}\) or 12

The correct answer is (C).
The following example can best be done by making a rough sketch.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>In triangle $ABC$, the measure of $\angle A$ is greater than that of $\angle B$, and $\angle C$ has a measure of 60 degrees.</td>
<td>The circumference of circle $P$ is greater than the circumference of circle $Q$.</td>
</tr>
<tr>
<td>Length of $AC$</td>
<td>The radius of circle $P$</td>
</tr>
<tr>
<td>Length of $AB$</td>
<td>The diameter of circle $Q$</td>
</tr>
</tbody>
</table>

![Diagram showing a triangle with a 60-degree angle and circles labeled P and Q.]

The information given tells us that the measure of $\angle A$ is greater than the measure of $\angle B$. Since $A + B = 120$, the measure in degrees of $\angle A$ is greater than 60 and $\angle B$ has a measure of less than 60. Since $\angle C > \angle B$, $AB$ (side opposite $\angle C$) $> AC$ (side opposite $\angle B$). The correct answer is (B).

This example, answered correctly by 74% of those taking the test, can also best be done by making a rough sketch. The sketch shows that, if circle $P$ is larger than circle $Q$, then its radius can be longer or shorter than the diameter of circle $Q$. The correct answer is (D).
## Practice Exercise

### Quantitative Comparison Exercise A

**Directions:** Each of the Questions 1–50 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

- A if the quantity in Column A is greater;
- B if the quantity in Column B is greater;
- C if the two quantities are equal;
- D if the relationship cannot be determined from the information given.

**Note:** Since there are only four choices, NEVER MARK (E).

**Common Information:** In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>
</thead>
<tbody>
<tr>
<td>In triangle $ABC$, the measure of $\angle ACB = 60^\circ$.</td>
<td></td>
</tr>
</tbody>
</table>

#### 1.

| $\angle B$ | $\angle A$ |

#### 2.

| Michael has 5 green marbles and the same number of red marbles. The number of red marbles in his collection is $\frac{1}{2}$ the number of white marbles and $\frac{1}{3}$ the number of blue ones. | Philip has 35 marbles in his collection. |

#### 3.

| The number of posts needed by Mr. A to hold a wire fence 120 feet long if he places posts 12 feet apart in a straight line | The 10 posts used by Mr. B to support a similar wire fence |

| $0 < x < 10$ | $0 < y < 12$ |

#### 4.

| $x$ | $y$ |

| $a = 1$ and $b = -1$ |

#### 5.

| $\frac{x(a + b)}{v}$ | $\frac{2x(a + b)}{v}$ |

| Triangle $ABC$ |

#### 6.

| $AB + BC$ | $AC$ |

<p>| $\angle 4$ | $\angle 3$ |</p>
<table>
<thead>

9 Discrete Quantitative Questions

Testing Tactics  Practice Exercises  Answer Key  Answer Explanations

The discrete quantitative questions are like the standard multiple-choice questions you have encountered in math classes and on other standardized tests. They cover basic arithmetic operations, elementary algebra, and plane geometry. They test your knowledge of basic mathematical concepts and also, in some cases, your ability to apply that knowledge, as in questions that ask you to solve a problem involving an actual or an abstract situation. The arithmetic questions deal with operations on numbers and finding powers, roots of powers, percents, and averages. The algebra questions include linear equations, factorization, inequalities, exponents, and radicals. Also, some questions test the ability to set up an equation in order to solve a problem. The topics in geometry include properties of lines, circles, triangles, rectangles, and other polygons. Also, some questions test knowledge of measurement-related concepts, the Pythagorean theorem, and coordinate geometry.

There are 10 discrete quantitative questions in each quantitative section of the test—usually questions 16–20 and 26–30, with a set of 5 data interpretation questions in between. Generally, the first 5 discrete quantitative questions are easier than the last 5. The tactics and practice exercises that follow will help you answer these questions.

TESTING TACTICS

Tactic 1

Use Your Time Wisely

You have 30 minutes for 30 questions. The 15 quantitative comparison questions should be done in 10 minutes. That leaves 20 minutes to do 5 data interpretation questions and 10 discrete quantitative questions. Thus, it is logical to expect to allow a minute or a minute and a half for each question. If you find that you are spending as much as two minutes on a question, you must come to some decision about your answer right then and there. However, mark the question in some way so that you can return to it when you have completed the section. At that time the question may read differently or perhaps some item that came up since you left the question will help you answer it. In any event do not leave it blank. There is no penalty for guessing on the GRE.

Expect to encounter relatively easy questions in the early part of the test. Don’t be surprised to find a beginning question such as the following:

If \( 2x - 3 = 2 \), then \( x - \frac{1}{2} = \)

(A) 2  (B) \( 2\frac{1}{2} \)  (C) 3  (D) \( 4\frac{1}{2} \)  (E) \( 5\frac{1}{2} \)

This is a warm-up question and should be done in a few seconds.

If \( 2x = 2 + 3 \), then

\[ x = 2\frac{1}{2} \text{ and } 2\frac{1}{2} - \frac{1}{2} = 2. \]

Choose (A).
The example that follows was question 30 on a recent test, and only 22% of the people who took the test chose the correct answer. The solution uses a time-saving strategy of representing variable quantities by convenient numbers of your own choice.

If the length of each of the sides of three square garden plots is increased by 50 percent, by what percent is the sum of the areas of the three plots increased?

(A) 375%  
(B) 200%  
(C) 150%  
(D) 125%  
(E) 50%

Let the sides of the original three squares be 4, 6, and 8, respectively. The enlarged squares would have sides 6, 9, and 12, respectively. The sum of the areas of the original squares would be 16 + 36 + 64 for a total of 116 square units. The sum of the areas of the three enlarged squares would be 36 + 81 + 144 for a total of 261 square units, which is an increase of 145 square units:

Percent Increase = \[ \frac{\text{Amount of increase}}{\text{Original amount}} \times 100\% \]

\[ = \frac{145}{116} \times 100\% \]

\[ = 1.25 \times 100\% \]

\[ = 125\% \]

Choose (D).

**Tactic**

**Avoid Lengthy Computations**

Time saved on a question permits more time for the challenging questions. Remember that all questions carry the same weight. In general, GRE questions do not involve lengthy, time-consuming computation. Therefore, if you come to a question that seems to require straightforward but complex computation, look for a shortcut; there almost always is one. Consider this question. Can you arrive at the answer in less than 30 seconds, including time to read the question?

In a question such as this one, your ability to do complicated division is not being tested. Since the question indicates that the quotient is exactly one of the answers, the correct answer must obviously have, as its last digit, 7, which when multiplied by 9 (the last digit of the denominator) will yield 3 (the last digit of the numerator). Choose (E).

Here’s another question on which you can save time:

\[ 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} = \]

(A) 3.023  
(B) 3.024  
(C) 3.025  
(D) 3.026  
(E) 3.027

This question was answered correctly by 81% of those who recently took this test. Observe that in adding the fractions the least common denominator is 60. Do you see that as a clue that the correct answer is (B) or (E)?

\[ \frac{60}{60} \cdot \frac{1}{2} = \frac{30}{60} \cdot \frac{1}{3} = \frac{20}{60} \cdot \frac{1}{4} = \frac{15}{60} \cdot \frac{1}{5} = \frac{12}{60} \]

the sum is equal to \[ \frac{137}{60} \].

Choose (E).
Read the Questions Carefully

Read each question carefully to make sure you answer the question that was asked and not the one you expected to be asked. Also, make sure you take all relevant information into consideration and that you work with the correct units.

A dresser drawer contains 15 garments. If 40 percent of those garments are blouses, how many are NOT blouses?

(A) 6  
(B) 8  
(C) 9  
(D) 10  
(E) 12

This is a relatively easy question but the 82% that did not choose (C) carelessly overlooked the word NOT.

Visualize the Situation Presented; make Sketches

Here is the type of question that can be solved easily if you make a pictorial representation of the facts.

The length of a rectangular floor is 16 feet and its width is 12 feet. If each dimension were reduced by s feet to make the ratio of length to width 3 to 2, what would be the value of s?

(A) 0  
(B) 2  
(C) 4  
(D) 6  
(E) 8

Caution: The sketches you make need not be works of art. Don't spend time showing off; your test booklet will not be inspected.

Here is another question that requires you to visualize a situation.

Point B is on line segment AC, and point E is on line segment DF. If AB > DE and BC = EF, then

(A) AC < DF  
(B) AC = DF  
(C) AC > DF  
(D) DF > AC  
(E) EF > DF

To obtain the correct answer quickly, use the following solution and sketch:

If equal quantities are added to unequal quantities, the sums are unequal in the same order.

SOLUTION:  \[
\frac{\text{Length}}{\text{Width}} = \frac{16-s}{12-s} = \frac{3}{2}
\]

\[
32 - 2s = 36 - 3s
\]

\[
s = 4
\]

Choose (C).
Mark Up Diagrams Given in the Test Booklet

See how this tactic works with a former, very challenging GRE question.

\[
\begin{array}{c}
A \quad 2 \\
2 \sqrt{3} \\
\end{array}
\]

What is the area of the quadrilateral shown above?

(A) \(2\sqrt{3}\)  
(B) \(3\sqrt{3}\)  
(C) \(6\sqrt{3}\)  
(D) \(6\)  
(E) \(8\)

SOLUTION: On the marked-up diagram, \(AE \perp FC\) and \(BD \perp FC\).

\[(AE)^2 + (FE)^2 = (AF)^2\]
\[(AE)^2 + 1 = 4\]
\[(AE)^2 = 3\]
\[AE = \sqrt{3}\] = height

Since \(ABCF\) is an isosceles trapezoid;
its area = (average of bases) \(\times\) height

\[
= \frac{2 + 4}{2} \times \sqrt{3}
\]
\[
= 3\sqrt{3}
\]

Choose (B).

Be Prepared to Apply Basic Rules, Formulas, and Concepts

Examinees are expected to have basic mathematical knowledge of arithmetic, algebra, and geometry, and to be able to apply that knowledge in some cases. In the problem discussed under Tactic 5 the Pythagorean theorem was applied, as well as the formula for the area of an isosceles trapezoid.

Look at the Answer Choices Before Attempting to Answer Complex Problems

This tactic is important for several reasons.

1. Looking at the answer choices may show you a quick way of solving the problem, as in the first example for Tactic 1.

2. The answer choices give you an idea of how exact your figuring has to be. For example, if the choices are 3, 4, 5, 6, 7, you know you have to get a pretty exact answer, whereas if the choices are 9, 18, 40, 80, 90, you do not. This should alert you to several possibilities; you may be able to save time by estimating, there is a good chance that a shortcut is involved, and you may be able to get the correct answer by eliminating choices that just are not reasonable.

3. The answer choices show you the form that is required. This information will keep you from wasting time putting your answer in a form that is not given. For example, if the answers are all decimals, you do not want to compute your answer in terms of fractions.
If You Can’t Answer a Question, Try to Work Back from the Answer Choices

Sometimes this is easier and faster than trying to solve the problem through other means. For example, in the following question the best way to do this is to start with answer choice (A) and substitute the values of the table in each of the possible answers.

<table>
<thead>
<tr>
<th>R</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>
<td>2</td>
<td>5</td>
<td>8</td>
<td>11</td>
<td>14</td>
<td>17</td>
</tr>
</tbody>
</table>

Which of the following equations gives the relationship between $R$ and $S$ in the table above?

- (A) $S = 2R$
- (B) $S = R^2 + 1$
- (C) $S = R^2 - 1$
- (D) $S = 3R - 1$
- (E) $S = 2R + 5$

Choice (A) is not correct because, when $R = 2$, $S$ does not = 5. Choice (B) is not correct because, when $R = 3$, $S$ does not = 8. Choice (C) is not correct because, when $R = 1$, $S$ does not = 2. Choice (D), $S = 3R - 1$, is satisfied by all values in the table: $(3 \times 1) - 1 = 2$, $(3 \times 2) - 1 = 5$, $(3 \times 3) - 1 = 8$, $(4 \times 3) - 1 = 11$, $(5 \times 3) - 1 = 14$, and $(6 \times 3) - 17$. Choice (E) is not correct because, when $R = 1$, $S$ does not = 2. Choose (D).
Practice Exercises

Discrete Quantitative Exercise A

Directions: Each of the Questions 1–25 has five answer choices. For each of these questions, select the best of the answer choices given.

1. In 1970, it cost $12 to purchase 100 pounds of fertilizer. In 1990, it cost $34 to purchase 100 pounds of fertilizer. The price of 100 pounds of fertilizer increased how many dollars between 1970 and 1990?
   (A) 1.20
   (B) 2.20
   (C) 3.40
   (D) 22
   (E) 34

2. A house cost Ms. Jones C dollars in 1989. Three years later she sold the house for 25% more than she paid for it. She has to pay a tax of 50% of the gain. (The gain is the selling price minus the cost.) How much tax must Ms. Jones pay?
   (A) \( \frac{1}{24}C \)
   (B) \( \frac{C}{8} \)
   (C) \( \frac{C}{4} \)
   (D) \( \frac{C}{2} \)
   (E) 0.6C

3. If the length of a rectangle is increased by 20%, and the width of the same rectangle is decreased by 20%, then the area of the rectangle
   (A) decreases by 20%
   (B) decreases by 4%
   (C) is unchanged
   (D) increases by 20%
   (E) increases by 40%

4. Eight percent of the people eligible to vote are between 18 and 21. In an election, 85% of those eligible to vote who were between 18 and 21 actually voted. In that election, people between 18 and 21 who actually voted were what percent of those people eligible to vote?
   (A) 4.2
   (B) 6.4
   (C) 6.8
   (D) 8
   (E) 8.5

5. If \( n \) and \( p \) are both odd numbers, which of the following numbers must be an even number?
   (A) \( n + p \)
   (B) \( np \)
   (C) \( np + 2 \)
   (D) \( n + p + 1 \)
   (E) \( 2n + p \)

6. It costs \( g \) cents a mile for gasoline and \( m \) cents a mile for all other costs to run a car. How many dollars will it cost to run the car for 100 miles?
   (A) \( \frac{g + m}{100} \)
   (B) \( 100g + 100m \)
   (C) \( g + m \)
   (D) \( g + 0.1m \)
   (E) \( g \)

7. In the figure above, what is the length of the line segment that connects \( A \) to \( B \)?
   (A) \( \sqrt{3} \)
   (B) 2
   (C) \( 2\sqrt{2} \)
   (D) 4
   (E) 8

8. A cab driver’s income consists of his salary and tips. His salary is $50 a week. During one week his tips were \( \frac{5}{4} \) of his salary. What fraction of his income for the week came from tips?
   (A) \( \frac{4}{9} \)
   (B) \( \frac{1}{2} \)
   (C) \( \frac{5}{9} \)
   (D) \( \frac{5}{8} \)
   (E) \( \frac{5}{4} \)
9. Given that \( x \) and \( y \) are real numbers, let \( S(x,y) = x^2 - y^2 \). Then \( S(3, S(3,4)) = \)

(A) \(-40\)  
(B) \(-7\)  
(C) \(40\)  
(D) \(49\)  
(E) \(56\)

10. Eggs cost 90¢ a dozen. Peppers cost 20¢ each. An omelet consists of 3 eggs and \(\frac{1}{4}\) of a pepper. How much will the ingredients for 8 omelets cost?

(A) $0.90  
(B) $1.30  
(C) $1.80  
(D) $2.20  
(E) $2.70

11. It is 185 miles from Binghamton to New York City. If a bus takes 2 hours to travel the first 85 miles, how many minutes must the bus take to travel the final 100 miles in order to average 50 miles an hour for the entire trip?

(A) 60  
(B) 75  
(C) 94  
(D) 102  
(E) 112

12. What is the area of the figure above, if \( ABDC \) is a rectangle and \( BDE \) is an isosceles right triangle?

(A) \( ab \)  
(B) \( ab^2 \)  
(C) \( b\left( a + \frac{b}{2} \right) \)  
(D) \( cab \)  
(E) \( \frac{1}{2}bc \)

13. If \( 2x + y = 5 \), then \( 4x + 2y = \)

(A) 5  
(B) 8  
(C) 9  
(D) 10  
(E) none of these

4. In 1967, a new boat cost $2,500; in 1992, the same type of boat cost $4,800. The cost of that type of boat increased by what percent between 1967 and 1992?

(A) 48  
(B) 52  
(C) 92  
(D) 152  
(E) 192

15. What is the area of the square \( ABCD \) in the figure above?

(A) 10  
(B) 18  
(C) 24  
(D) 36  
(E) 48

16. If \( x + y = 6 \) and \( 3x - y = 4 \), then \( x - y = \)

(A) -1  
(B) 0  
(C) 2  
(D) 4  
(E) 6

17. If \( \frac{x}{y} = \frac{2}{3} \) then \( \frac{y^2}{x^2} \) is equal to

(A) \( \frac{4}{9} \)  
(B) \( \frac{2}{3} \)  
(C) \( \frac{3}{2} \)  
(D) \( \frac{9}{4} \)  
(E) \( \frac{5}{2} \)

18. In the figure above, \( BD \) is perpendicular to \( AC \). \( BA \) and \( BC \) have length \( a \). What is the area of the triangle \( ABC \)?

(A) \( 2x\sqrt{a^2 - x^2} \)  
(B) \( x\sqrt{a^2 - x^2} \)  
(C) \( a\sqrt{a^2 - x^2} \)  
(D) \( 2a\sqrt{x^2 - a^2} \)  
(E) \( x\sqrt{x^2 - a^2} \)

19. If two places are one inch apart on a map, then they are actually 160 miles apart. (The scale on the map is one inch equals 160 miles). If Seton is \( \frac{7}{8} \) inches from Monroe on the map, how many miles is it from Seton to Monroe?

(A) 3  
(B) 27  
(C) 300  
(D) 360  
(E) 460
20. In the figure above, \(ABCD\) is a rectangle. The area of isosceles right triangle \(ABE = 7\), \(EC = 3(BE)\). The area of \(ABCD\) is
(A) 21  (B) 28  (C) 42  (D) 56  (E) 84

21. An automobile tire has two punctures. The first puncture by itself would make the tire flat in 9 minutes. The second puncture by itself would make the tire flat in 6 minutes. How long will it take for both punctures together to make the tire flat? (Assume the air leaks out at a constant rate.)
(A) \(3\frac{3}{5}\) minutes
(B) 4 minutes
(C) \(5\frac{1}{4}\) minutes
(D) \(7\frac{1}{2}\) minutes
(E) 15 minutes

22. For the integer \(n\), if \(n^2\) is odd, which of the following statements is (are) true?
I. \(n\) is odd.
II. \(n^2\) is odd.
III. \(n^2\) is even.
(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I and III only

23. There are 50 students enrolled in Business 100. Of the enrolled students, 90% took the final exam. Two-thirds of the students who took the final exam passed the final exam. How many students passed the final exam?
(A) 30  (B) 33  (C) 34  (D) 35  (E) 45

24. If \(a\) is less than \(b\), which of the following numbers is greater than \(a\) and less than \(b\)?
(A) \(\frac{a + b}{2}\)
(B) \(\frac{ab}{2}\)
(C) \(b^2 - a^2\)
(D) \(ab\)
(E) \(b - a\)

25. In the figure above, \(OR\) and \(PR\) are radii of circles. \(PR\) is tangent to the circle with center \(O\). The length of \(OP\) is 4. If \(OR\) = 2. what is the length of \(PR\)?
(A) 2
(B) \(\frac{5}{2}\)
(C) 3
(D) \(2\sqrt{3}\)
(E) \(3\sqrt{2}\)

### Discrete Quantitative Exercise B

Directions: Each of the Questions 1–25 has five answer choices. For each of these questions, select the best of the answer choices given.

1. A bus uses one gallon of gasoline to travel 15 miles. After a tune-up, the bus travels 15% farther on one gallon. How many gallons of gasoline (to the nearest tenth) will it take for the bus to travel 150 miles after a tune-up?
(A) 8.5  (B) 8.7  (C) 8.9  (D) 9.0  (E) 10.0

2. If \(x + 2y = 4\) and \(\frac{x}{3} = 2\), then \(x =
(A) 0  (B) \frac{1}{2}  (C) 1  (D) \frac{3}{2}  (E) 2

3. It costs $1,000 to make the first thousand copies of a book and \(x\) dollars to make each subsequent copy. If it costs a total of $7,230 to make the first 8,000 copies of a book, what is \(x\)?
(A) 0.89
(B) 0.90375
(C) 1.00
(D) 89
(E) 90.375
4. If 16 workers can finish a job in 3 hours, how long should it take 5 workers to finish the same job?

(A) $3\frac{1}{2}$ hours
(B) 4 hours
(C) 5 hours
(D) $7\frac{1}{16}$ hours
(E) $9\frac{3}{5}$ hours

5. A box contains 12 poles and 7 pieces of net. Each piece of net weighs 0.2 pound; each pole weighs 1.1 pounds. The box and its contents together weigh 16.25 pounds. How much does the empty box weigh?

(A) 1.2 pounds
(B) 1.65 pounds
(C) 2.75 pounds
(D) 6.15 pounds
(E) 16 pounds

6. If $a + b + c + d$ is a positive number, a minimum of $x$ of the numbers $a$, $b$, $c$, and $d$ must be positive where $x$ is equal to

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

9. In a survey of the town of Waso, it was found that 65% of the people polled watched the news on television, 40% read a newspaper, and 25% read a newspaper and watched the news on television. What percent of the people surveyed neither watched the news on television nor read a newspaper?

(A) 0%
(B) 5%
(C) 10%
(D) 15%
(E) 20%

10. A worker is paid $d$ dollars an hour for the first 8 hours she works in a day. For every hour after the first 8 hours, she is paid $c$ dollars an hour. If she works 12 hours in one day, what is her average hourly wage for that day?

(A) \( \frac{2d + c}{3} \)
(B) \( 8d + 4c \)
(C) \( \frac{8d + 12c}{12} \)
(D) \( \frac{4d + 8c}{12} \)
(E) \( d + \left( \frac{1}{3} \right)c \)

11. A screwdriver and a hammer currently have the same price. If the price of a screwdriver rises by 5% and the price of a hammer goes up by 3%, by what percent will the cost of 3 screwdrivers and 3 hammers rise?

(A) 3%
(B) 4%
(C) 5%
(D) 8%
(E) 24%

12. If the radius of a circle is increased by 6%, then the area of the circle is increased by

(A) 0.36%
(B) 3.6%
(C) 6%
(D) 12.36%
(E) 36%

13. Given that $a$ and $b$ are real numbers, let $f(a, b) = ab$ and let $g(a) = a^2 + 2$. Then $f[3, g(3)] =$

(A) $3a^2 + 2$
(B) $3a^2 + 6$
(C) 27
(D) 29
(E) 33
14. A share of stock in Ace Enterprises cost $D$ dollars on Jan. 1, 1992. One year later, a share increased to $Q$ dollars. The fraction by which the cost of a share of stock has increased in the year is

(A) $\frac{Q - D}{D}$
(B) $\frac{D - Q}{Q}$
(C) $\frac{D}{Q}$
(D) $\frac{Q}{D}$
(E) $\frac{Q - D}{Q}$

15. In the figure above, $ABCD$ is a square, $EFGH$ is a rectangle. $AB = 3$, $EF = 4$, $FG = 6$. The area of the region outside of $ABCD$ and inside $EFGH$ is

(A) 6
(B) 9
(C) 12
(D) 15
(E) 24

16. In the triangle above, $DC$ is parallel to $FE$. $AD = DF$, $DC = 4$, and $DF = 3$. What is $FE$?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

17. Which of the following fractions is the largest?

(A) $\frac{5}{6}$  (B) $\frac{11}{14}$  (C) $\frac{12}{15}$  (D) $\frac{17}{21}$  (E) $\frac{29}{35}$

18. How much simple interest will $2,000 earn in 18 months at an annual rate of 6%?

(A) $120$
(B) $180$
(C) $216$
(D) $1,800$
(E) $2,160$

19. If $x + y > 5$ and $x - y > 3$, then which of the following gives all possible values of $x$ and only possible values of $x$?

(A) $x > 3$
(B) $x > 4$
(C) $x > 5$
(D) $x < 5$
(E) $x < 3$

20. If the average (or arithmetic mean) of 6 numbers is 4.5, what is the sum of the numbers?

(A) 4.5
(B) 24
(C) 27
(D) 30
(E) cannot be determined

21. A silo is filled to capacity with $W$ pounds of wheat. Rats eat $r$ pounds a day. After 25 days, what percent of the silo’s capacity have the rats eaten?

(A) $\frac{25r}{W}$
(B) $\frac{25r}{100W}$
(C) $2,500 \left( \frac{r}{W} \right)$
(D) $\frac{r}{W}$
(E) $\frac{r}{25W}$

22. If $x^2 + 2x - 8 = 0$, then $x$ is either $-4$ or

(A) $-2$
(B) $-1$
(C) 0
(D) 2
(E) 8

23. The interest charged on a loan is $p$ dollars per $1,000 for the first month and $q$ dollars per $1,000 for each month after the first month. How much interest will be charged during the first three months on a loan of $10,000?

(A) $30p$
(B) $30q$
(C) $p + 2q$
(D) $20p + 10p$
(E) $10p + 20q$
24. In rectangle $ACDF$, $AB = BC$ and $FE = ED$. $G$ is any point on $AF$. The ratio of the area of $BCDE$ to the area of triangle $GCD$ is

(A) 2:1  (B) 1:2  (C) 1:1  (D) 2:3  (E) 3:2

25. If $3x = \frac{5}{6}y$, then $5y =$

(A) $\frac{1}{2}x$  (B) $2x$  (C) $3.6x$  (D) $5x$  (E) $18x$

Answer Key

The letter following each question number is the correct answer. The numbers in parentheses refer to the sections of Chapter 11: Mathematics Review that explain the necessary mathematics principles. A more detailed explanation of all answers follows.

Discrete Quantitative Exercise A

7. C (III-H, I-H)

Discrete Quantitative Exercise B

7. E (III-D)

Answer Explanations

Discrete Quantitative Exercise A

1. D. The price increased by $34 - 12 = 22$ dollars.

2. B. Ms. Jones sold the house for 125% of $C$ or $\frac{5}{4}C$.
   Thus, the gain is $\frac{5}{4}C - C = \frac{C}{4}$. She must pay a tax of 50% of $\frac{C}{4}$ or $\frac{1}{2}$ of $\frac{C}{4}$. Therefore, the tax is $\frac{C}{8}$.
   Notice that the three years has nothing to do with the problem. Sometimes a question contains unnecessary information.

3. B. The area of a rectangle is length times width. Let $L$ and $W$ denote the original length and width. Then the new length is $1.2L$ and the new width is $0.8W$. Therefore, the new area is $(1.2L)(0.8W) = 0.96LW$ or 96% of the original area. So the area has decreased by 4%.

4. C. Voters between 18 and 21 who voted were 85% of the 8% of eligible voters. Thus, $(0.08)(0.85) = 0.068$, so people between 18 and 21 who actually voted were 6.8% of the eligible voters.
5. A. Odd numbers are of the form \(2x + 1\) where \(x\) is an integer. Thus if \(n = 2x + 1\) and \(p = 2k + 1\), then \(n + p = 2x + 1 + 2k + 1 = 2x + 2k + 2\), which is even. Using \(n = 3\) and \(p = 5\), all the other choices give an odd number. In general, if a problem involves odd or even numbers, try using the fact that odd numbers are of the form \(2x + 1\) and even numbers of the form \(2y\) where \(x\) and \(y\) are integers.

6. C. To run a car 100 miles will cost \(100(g + m)\) cents. Divide by 100 to convert to dollars. The result is \(g + m\).

7. C. Using the distance formula, the distance from \(A\) to \(B\) is 
\[
\sqrt{(1 - (-1))^2 + (3 - 5)^2} = \sqrt{4 + 4} = \sqrt{8} = \sqrt{4 \times 2} = \sqrt{4\sqrt{2}} = 2\sqrt{2}.
\]
You have to be able to simplify \(\sqrt{8}\) in order to obtain the correct answer.

8. C. Tips for the week were \(\frac{5}{4} \times 50\), so the driver’s total income was \(\frac{5}{4}(50) = \frac{250}{4} = 62.5\) dollars. Therefore, 
\[
\frac{5}{4}(50) = \frac{4}{9}(50) = \frac{9}{4}(50).
\]
Tips made up \(\frac{5}{4}(50) = \frac{9}{4}(50)\) of his income.

Don’t waste time figuring out the total income and the tip income. You can use the time saved to answer other questions.

9. A. \(S(3, 4) = 3^2 - 4^2 = 9 - 16 = -7\). Therefore, \(S(3, 3, 4) = S(3, -7) = 3^2 - (-7)^2 = 9 - 49 = -40\).

10. D. 8 omelets will use \(8 \times 3 = 24\) eggs and \(8 \times \frac{1}{4} = 2\) peppers. Since 24 is two dozen, the cost will be \((2)(90\theta) + (2)(20\theta) = 220\theta\) or \$2.20.

11. D. In order to average 50 mph for the trip, the bus must make the trip in \(\frac{185}{50} = 3\frac{7}{10}\) hours, which is 222 minutes. Since 2 hours or 120 minutes were needed for the first 85 miles, the final 100 miles must be completed in 222 – 120, which is 102 minutes.

12. C. The area of a rectangle is length times width so the area of \(ABDC\) is \(ab\). The area of a triangle is one-half of the height times the base. Since \(BDE\) is an isosceles right triangle, the base and height both are equal to \(b\). Thus, the area of \(BDE\) is \(\frac{1}{2}b^2\). Therefore, the area of the figure is 
\[
ab + \frac{1}{2}b^2,
\]
which is equal to \(b\left(a + \frac{b}{2}\right)\). You have to express your answer as one of the possible answers, so you need to be able to simplify.

13. D. Since \(4x + 2y\) is equal to \(2(2x + y)\) and \(2x + y = 5\), \(4x + 2y\) is equal to \(2(5)\) or 10.

14. C. The cost increased by \$4,800 minus \$2,500 or \$2,300 between 1967 and 1975. So the cost increased by \(\frac{2,300}{2,500}\) or 0.92 or 92%. Answer (E) is incorrect. The price in 1975 is 192% of the price in 1967, but the increase is 92%.

15. D. The distance from \((-1, 2)\) to \((5, 2)\) is 6. (You can use the distance formula or just count the blocks in this case.) The area of a square is the length of a side squared, so the area is \(6^2\) or 36.

16. A. Since \(x + y = 6\) and \(3x - y = 4\), we may add the two equations to obtain \(4x = 10\), or \(x = 2.5\). Then, because \(x + y = 6\), \(y\) must be 3.5. Therefore, \(x - y = -1\).

17. D. If \(\frac{x}{y} = \frac{2}{3}\), then \(\frac{y}{x} = \frac{3}{2}\). Since \(\frac{y^2}{x^2} - \frac{y^2}{x^2} = \left(\frac{3}{2}\right)^2 - \frac{9}{4}\).

18. B. The area of a triangle is \(\frac{1}{2}\) altitude times base. Since \(BD\) is perpendicular to \(AC\), \(x\) is the altitude. Using the Pythagorean theorem, \(x^2 + (AD)^2 = a^2\) and \(x^2 + (DC)^2 = a^2\). Thus, \(AD = DC\), and \(AD = \sqrt{a^2 - x^2}\). So the base is \(2\sqrt{a^2 - x^2}\). Therefore, the area is \(\frac{1}{2}(x)(2\sqrt{a^2 - x^2})\), which is choice B.

19. E. \(1 : 160 :: \frac{27}{8} : x\). \(x = \frac{27}{8}(160)\). \(\frac{27}{8}\) is \(\frac{23}{8}\) so the distance from Seton to Monroe is \(\frac{23}{8}(160) = 460\) miles.

20. D. Let \(EF = FG = GC\). Therefore, \(BE = EF = FG = GC\). Draw perpendiculars \(EH, FI, GJ\). Draw diagonals \(HF, IG, JC\). The 8 triangles are equal in area since they each have the same altitude \((AB\) or \(DC)\) and equal bases \((BE, EF, FG, GC, AH, HI, IJ, JD)\). Since the area of \(ABE = 7\), the area of \(ABCD = 8(7)\) or 56.
21. A. In each minute the first puncture will leak \( \frac{1}{9} \) of the air and the second puncture will leak \( \frac{1}{6} \) of the air. Together \( \frac{1}{9} + \frac{1}{6} = \frac{5}{18} \). So \( \frac{5}{18} \) of the air will leak out in each minute. In \( \frac{18}{5} \) or \( 3\frac{3}{5} \) minutes the tire will be flat.

22. D. Since an even number times any number is even, and \( n \) times \( n^2 \) is odd, neither \( n \) nor \( n^2 \) can be even. Therefore, \( n \) and \( n^2 \) must both be odd for \( n^3 \) to be odd. I and II are true, and III is false.

23. A. 90% of 50 is 45, so 45 students took the final. \( \frac{2}{3} \) of 45 is 30. Therefore, 30 students passed the final.

Discrete Quantitative Exercise B

1. B. After the tune-up, the bus will travel \((1.15)(15) = 17.25\) miles on a gallon of gas. Therefore, it will take \(150 / 17.25 = 8.7\) (to the nearest tenth) gallons of gasoline to travel 150 miles.

2. E. If \( \frac{x}{y} = 2 \), then \( x = 2y \), so \( x + 2y = 2y + 2y = 4y \). But \( x + 2y = 4 \), so \( 4y = 4 \), or \( y = 1 \). Since \( x = 2y \), \( x \) must be 2.

3. A. The cost of producing the first 8,000 copies is \( 1,000 + 7,000x \). 1,000 + 7,000x = $7,230. Therefore, 7,000x = 6,230 and \( x = 0.89 \).

4. E. Assume all workers work at the same rate unless given different information. Since 16 workers take 3 hours, each worker does \( \frac{1}{48} \) of the job an hour. Thus, the 5 workers will finish \( \frac{5}{48} \) of the job each hour. \( \frac{5}{48}x = \frac{48}{48} \) It will take \( \frac{48}{5} = 9\frac{3}{5} \) hours for them to finish the job.

5. B. The 12 poles weigh \((12)(1.1) = 13.2\) pounds and the 7 pieces of net weigh \(7(0.2) = 1.4\) pounds, so the contents of the box weigh 13.2 + 1.4 = 14.6 pounds. Therefore, the box by itself must weigh \(16.25 - 14.6 = 1.65\) pounds.

6. B. If all the numbers were not positive, then the sum could not be positive so A is incorrect. If \( a, b, \) and \( c \) were all \(-1\) and \( d \) were 5, then \( a + b + c + d \) would be positive so C, D, and E are incorrect.

24. A. The average of two different numbers is always between the two. If \( a = 2 \) and \( b = 3 \), then \( b^2 - a^2 = 5 \), \( ab = 6 \), and \( b - a = 1 \) so C, \( D \), and E must be false. If \( a = \frac{1}{2} \) and \( b = 1 \), then \( \frac{ab}{2} = \frac{1}{4} \), so B is also false.

25. D. Since the radius to the point of tangency is perpendicular to the tangent, \( OR \) must be perpendicular to \( PR \). Therefore, \( ORP \) is a right triangle, and \((PO)^2 = (OR)^2 + (PR)^2\). Then, \((PR)^2 = (PO)^2 - (OR)^2\). Thus, \((PR)^2 = 4^2 - 2^2 \), and \( PR = \sqrt{16 - 4} = \sqrt{12} = \sqrt{4\sqrt{3}} = 2\sqrt{3} \).

7. E. Since the measure of angle \( M \) is \( 55^\circ \), the measure of angle \( K \) is \( 35^\circ \). Therefore, \( KL > LM \) since the larger side is opposite the larger angle.

8. B. Choice A gives \( 6^2 \) or 36. Choice B gives \( 4^4 \) or 256. Choice C is \( 8^2 \) or 64. Choice D is \( 2 + 4 + 16 = 22 \). Choice E is \( 4^3 \) or 64.

9. E. Since 25% read the newspaper and watched the news on television and 40% read the newspaper, 40% - 25% or 15% read the newspaper but did not watch the news on television. Thus 65% + 15% or 80% read the newspaper or watched the news on television, so 100% - 80% or 20% neither read the newspaper nor watched the news on television.
10. A. For the first 8 hours, the worker is paid a total of 8$d\). For the final 4 hours (12 − 8), she is paid 4$c\). Therefore, her total pay is 8$d + 4$c\). To find the average hourly pay, divide by 12. To find the correct answer among the choices, you have to reduce the fraction. Divide the numerator by 4 and the denominator by 4.

11. B. If the price of one screwdriver increases by 5%, then the price of three screwdrivers increases by 5% (not 15%). The percentage change is the same regardless of the number sold. Since a screwdriver and a hammer currently cost the same, the screwdrivers and the hammers each cost one-half of the total price. So one-half of the total is increased by 5%. The other half is increased by 3%. Therefore, the total price is increased by \(\frac{1}{2} (5\%) + \frac{1}{2} (3\%) = 4\%\).

12. D. After the radius is increased by 6%, the radius will be 1.06 times the original radius. Since the area of a circle is \(\pi r^2\), the new area will be \(\pi (1.06r)^2 = \pi (1.06^2 r^2)\) or 1.1236\(\pi r^2\). Thus, the area has been increased by 0.1236 or by 12.36%.

13. E. Since \(g(a) = a^2 + 2\), \(g(3) = 3^2 + 2\) or 11. So \(f[3, g(3)] = f(3, 11) = 3 \times 11 = 33\) or 33.

14. A. The difference in the price is \(Q - D\). So the fraction by which it has increased is \(\frac{Q - D}{D}\). Note that the denominator is the original price.

15. D. Since \(ABCD\) is a square, the area of \(ABCD\) is \(3^2\) or 9. The area of the rectangle \(EFGH\) is \(\text{length times width}\) or \(4 \times 6 = 24\). Thus, the area outside the square and inside the rectangle is \(24 − 9 = 15\).

16. E. Since \(CD\) is parallel to \(EF\), the triangles \(ACD\) and \(AEF\) are similar. Therefore, corresponding sides are proportional. So \(CD\) is to \(EF\) as \(AD\) is to \(AF\). Since \(AD = DF\), \(\frac{AD}{AF} = \frac{1}{2}\). Therefore, \(EF\) is twice \(CD\) or 8.

17. A. You need to find a common denominator for the fractions. One method is to multiply all the denominators. A quicker method is to find the least common multiple of the denominators. Since \(6 = 3 \times 2\), \(14 = 2 \times 7\), \(15 = 3 \times 5\), \(21 = 3 \times 7\), and \(35 = 5 \times 7\), the least common multiple is \(2 \times 3 \times 5 \times 7 = 210\). \(\frac{5}{6}\) is \(\frac{175}{210}\), \(\frac{11}{14}\) is \(\frac{165}{210}\), \(\frac{12}{15}\) is \(\frac{168}{210}\), \(\frac{17}{21}\) is \(\frac{170}{210}\), and \(\frac{29}{35}\) is \(\frac{174}{210}\). \(\frac{5}{6}\), written as \(\frac{175}{210}\), has the largest numerator.

18. B. 18 months is \(\frac{3}{2}\) of a year. Interest = Amount \(\times\) Time \(\times\) Rate. \((\$2,000) \left(\frac{3}{2}\right) (0.06) = 180\).

19. B. If \(x + y > 5\) and \(x - y > 3\), then, since both inequalities are of the same type, the corresponding sides can be added to obtain \(2x > 8\) or \(x > 4\).

20. C. The average of 6 numbers is the sum of the numbers divided by 6. Thus, the sum of the numbers is the average multiplied by 6. or \(4.5 \times 6\), which is 27.

21. C. After 25 days the rats have eaten \(25r\) pounds of wheat. So \(\frac{25r}{W}\) is the fraction of the capacity eaten by the rats. To change this to percent, multiply by 100. \(\frac{25r}{W} \times 100 = 2,500 \left(\frac{r}{W}\right)\).

22. D. Factor \(x^2 + 2x - 8\) into \((x + 4)(x - 2)\). If \(x\) is either \(-4\) or \(2\), \(x^2 + 2x - 8 = 0\), and \(D\) is the correct answer.

23. E. The interest on the \$10,000 for the first month will be \(10p\). For the next 2 months the interest will be \(20q\). The total interest is \(10p + 20q\).

24. C. Area of rectangle \(ACDF = (AC)(CD)\). Area of rectangle \(BCDE = (BC)(CD)\) or \(\left(\frac{1}{2}\right)(AC)(CD)\).

Area of triangle \(GCD = \left(\frac{1}{2}\right)(AC)(CD)\).

25. E. A time-consuming method would be to solve for \(y\) in terms of \(x\) and to substitute that value in \(5y\). A superior method would be to multiply both sides of the equation by 6 in order to obtain a value of \(5y\).

\[3x = \frac{5}{6}y\]

\[(6)(3x) = \left(\frac{5}{6}y\right)(6)\]

\[18x = 5y\]
Data interpretation questions are based on information given in tables or graphs. These questions test your ability to interpret the information presented and to select the appropriate data for answering a question. There are usually five data interpretation questions in each quantitative section. They are generally questions 21–25.

**TESTING TACTICS**

The five questions that follow were part of an actual GRE test. These questions will be used to illustrate the data interpretation testing tactics.

Questions 21–25 refer to the following graphs.

![Graphs of Earnings and Revenues for Company X, 1978-1983](image)

**Distribution of Earnings from Nonelectronic Operations, 1983**

(in millions of dollars)

- Cosmetics: 22%
- Office Products: 10%
- Hardware: 11%
- Food: 8%
- Beverages: 9%
- Financial: 40%

Note: Drawn to scale.
21. Total earnings from operations in 1982 were approximately how much more than total earnings from operations in 1978?

(A) $100 million
(B) $125 million
(C) $180 million
(D) $340 million
(E) $475 million

22. For the year in which earnings from electronic operations first exceeded $400 million, total revenues were approximately

(A) $2.8 billion
(B) $4.5 billion
(C) $5.2 billion
(D) $5.8 billion
(E) $6.7 billion

23. In 1979, total earnings for Company X were approximately what percent of total revenues?

(A) 1%
(B) 5%
(C) 10%
(D) 15%
(E) 60%

24. For the two years in which earnings from electronic operations were most nearly equal, the combined earnings from nonelectronic operations were most nearly

(A) $340 million
(B) $520 million
(C) $670 million
(D) $780 million
(E) $1,520 million

25. In 1983 earnings from financial nonelectronic operations accounted for approximately how many millions of dollars?

(A) 312
(B) 300
(C) 180
(D) 140
(E) 120

---

**Tactic 1**

Get a General Picture of the Information Before Reading the Question

Read the titles. In the case of the preceding former GRE questions, note that the upper bar graphs present two kinds of data. The bar graph at the left deals with earnings, while the other bar graph deals with revenues. Note that earnings are given in millions of dollars, and revenues are expressed in billions. Also notice that each bar deals with two kinds of company operations. Observe that the pie chart below the bar graphs takes up the details of nonelectronic operations for one particular year.

**Tactic 2**

Avoid Lengthy Computations

Do not expect to be asked to do extensive computations in data interpretation questions. Most questions simply require reading the data correctly and putting them to use with common sense. For example, to obtain the correct answer for question 21, use the bar graph to the left. For 1978 the bar reaches a point of $430 million; for 1982, $770 million. If the reading is accurate, the rest of this example involves simple subtraction: $770 - 430 = $340 million. The correct choice (D) was picked by 87% of the people who took this test recently.
Break Down Lengthy Questions into Smaller Parts and Eliminate Impossible Choices

Question 25 is challenging. Only 29% of the people who took this test chose the correct answer (E). First consider the pie chart, and note that 40% of the earnings for 1983 were from financial operations. Now consider earnings, shown in the bar graph at the left. Concentrate on the upper part of the bar, for nonelectronic operations. The entire bar for 1983 reaches $780 million, and the electronic operations part reaches $480 million. The difference represents the nonelectronic part, or $300 million. 40% of $300 million = $120 million.

Use Only the Information Given

Use only the information given and your knowledge of everyday facts, such as the number of hours in a day, to answer these questions. You must use the data provided even if these data contradict real-life facts that you already know.

Answer the Questions Asked, Not What You Think the Questions Should Be

Question 25 does not ask for all the earnings from nonelectronic operations, only the earnings from financial nonelectronic operations.

Be Careful to Use Proper Units

In answering question 23, you must keep in mind that earnings are given in millions, while revenues are in billions. Hence,

\[
\text{1979 earnings} = \frac{500 \text{ million}}{5.2 \text{ billion}} = \frac{0.5 \text{ billion}}{5.2 \text{ billion}} = \frac{1}{10.4}, \text{ or approximately 10%}.
\]

Choice (C) is correct.

Use Your Answer Sheet as a Straight Edge to Help You Read the Graph

To make reading easier and to avoid errors, use the edge of your answer sheet to locate the position you are looking for on the graph.
**Tactic 8**

**Make Sure Your Answer Is Reasonable**

In question 25, answers (A) and (B) are unreasonable since the earnings from financial nonelectronic operations must be less than the total earnings of 300 million of all nonelectronic operations.

**Tactic 9**

**Be Prepared to Apply Basic Mathematical Rules, Principles, and Formulas**

Questions 21, 23, 24, and 25 call for careful reading and application of simple arithmetic principles (subtraction and finding a percent). Other questions may require the application of simple algebraic methods and geometric principles.

**Tactic 10**

**Whenever Possible, Answer the Question by Visualizing Rather Than by Computing**

Since one of the major benefits of graphs and tables is that they present data in a form that enables you to readily see relationships and to make quick comparisons, use this visual attribute of graphs and tables to help you answer the questions. Where possible, use your eye instead of your computational skills. For example, in 1979 the total earnings were $500 million. In answering question 25, however, you need to estimate the 1983 earnings as about $480 million for the electronic operations and $780 million for the total earnings.

**Practice Exercises**

Directions: Each of the Questions 1–24 has five answer choices. For each of these questions, select the best of the answer choices given.

Questions 1 and 2 refer to the following graphs.

**Distribution of Degrees**

By Sex, Year 1 and Year 2

Per Cent Distribution

---

1. The number of women earning Ph.D.’s in Year 2 (to the nearest hundred) was
   - (A) 200
   - (B) 500
   - (C) 1,500
   - (D) 13,000
   - (E) 15,000

2. Which of the following statements best describes the distribution of master’s degrees for Year 1 and Year 2?
   - (A) Fewer women received master’s degrees in Year 2 than in Year 1.
   - (B) The increase in the number of males who received master’s degrees in Year 2 may be represented by the decimal 0.064.
   - (C) The number of master’s degrees received in Year 2 was more than a 300% increase over the number received in Year 1.
   - (D) The ratio of men to women receiving master’s degrees was the same for both years.
   - (E) Fewer men received master’s degrees in Year 2 than in Year 1.
Questions 3 and 4 refer to the following data.

3. After the Louisiana Purchase the area of the United States had
(A) roughly tripled
(B) roughly doubled
(C) increased slightly
(D) stayed the same
(E) decreased slightly

4. Which of the following percentages is closest to the percent of the United States total area that is Alaska?
(A) 10
(B) 15
(C) 20
(D) 25
(E) 30

Questions 5–9 refer to the following table.

<table>
<thead>
<tr>
<th>INCOME (IN DOLLARS)</th>
<th>TAX (IN DOLLARS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0–4,000</td>
<td>1% of income</td>
</tr>
<tr>
<td>4,000–6,000</td>
<td>40 + 2% of income over 4,000</td>
</tr>
<tr>
<td>6,000–8,000</td>
<td>80 + 3% of income over 6,000</td>
</tr>
<tr>
<td>8,000–10,000</td>
<td>140 + 4% of income over 8,000</td>
</tr>
<tr>
<td>10,000–15,000</td>
<td>220 + 5% of income over 10,000</td>
</tr>
<tr>
<td>15,000–25,000</td>
<td>470 + 6% of income over 15,000</td>
</tr>
<tr>
<td>25,000–50,000</td>
<td>1,070 + 7% of income over 25,000</td>
</tr>
</tbody>
</table>

5. How much tax is due on an income of $7,500?
(A) $ 75
(B) $ 80
(C) $125
(D) $150
(E) $225

6. Your income for a year is $26,000. You receive a raise so that next year your income will be $29,000. How much more will you pay in taxes next year if the tax rate remains the same?
(A) $ 70
(B) $180
(C) $200
(D) $210
(E) $700

7. Joan paid $100 in taxes. If X was her income, which of the following statements is true?
(A) 0 < X < 4,000
(B) 4,000 < X < 6,000
(C) 6,000 < X < 8,000
(D) 8,000 < X < 10,000
(E) 10,000 < X < 15,000

8. The town of Zenith has a population of 50,000. The average income of a person who lives in Zenith is $3,700 per year. What is the total amount paid in taxes by the people of Zenith? Assume each person pays tax on $3,700.
(A) $ 37
(B) $ 3,700
(C) $50,000
(D) $185,000
(E) $1,850,000

9. A person who has an income of $10,000 pays what percent (to the nearest percent) of his or her income in taxes?
(A) 1
(B) 2
(C) 3
(D) 4
(E) 5
Questions 10–14 refer to the following graph.

Women in the Labor Force

14. Which of the following statements about the labor force can be inferred from the graphs?
   I. Between 1947 and 1957, there were no years when more than 5 million widowed or divorced women were in the labor force.
   II. In every year between 1947 and 1972, the number of single women in the labor force has increased.
   III. In 1965, women made up more than $\frac{1}{3}$ of the total labor force.
   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III

Questions 15–18 refer to the following table.

Participation in National Elections

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>of voting age</td>
<td>of voting age</td>
<td>of voting age</td>

</tr>
</tbody>
</table>

Source: U.S. Bureau of the Census

15. Which of the following groups had the highest percentage of voters in 1968?
   (A) 18–24 years
   (B) Female
   (C) South
   (D) 25–44 years
   (E) Male

16. In 1972, what percent (to the nearest percent) of persons of voting age were female?
   (A) 52
   (B) 53
   (C) 62
   (D) 64
   (E) 72

17. In 1968, how many males of voting age voted?
   (A) 37,440,000
   (B) 37,800,000
   (C) 42,160,000
   (D) 62,000,000
   (E) 374,400,000

10. The total labor force in 1960 was about y million with y equal to about
   (A) 22
   (B) 65
   (C) 75
   (D) 80
   (E) 85

11. In 1947, the percent of women in the labor force who were married was about
   (A) 28
   (B) 33
   (C) 38
   (D) 50
   (E) 65

12. What was the first year when more than 20 million women were in the labor force?
   (A) 1950
   (B) 1953
   (C) 1956
   (D) 1958
   (E) 1964

13. Between 1947 and 1972, the number of women in the labor force increased by about
   (A) 50%
   (B) 100%
   (C) 150%
   (D) 200%
   (E) 250%
18. Let $X$ be the number (in millions) of persons of voting age in the 25–44 year range who lived in the North and West in 1964. Which of the following includes all possible values and only possible values of $X$?

(A) $0 \leq X \leq 45$  
(B) $13 \leq X \leq 45$  
(C) $13 \leq X \leq 78$

Questions 19–21 refer to the following table.

<table>
<thead>
<tr>
<th>TIMED PERIOD</th>
<th>SPEED OF A TRAIN OVER A 3-HOUR PERIOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>(In minutes)</td>
<td>0  30  45  60  90  120  150  180</td>
</tr>
<tr>
<td>(In m.p.h.)</td>
<td>40  45  47.5  50  55  60  65  70</td>
</tr>
</tbody>
</table>

19. How fast was the train traveling $2 \frac{1}{2}$ hours after the beginning of the timed period?

(A) 50 m.p.h.  
(B) 55 m.p.h.  
(C) 60 m.p.h.

20. During the three hours shown on the table, the speed of the train increased by

(A) 25%  
(B) 50%  
(C) 75%

21. At time $t$, measured in minutes after the beginning of the time period, which of the following gives the speed of the train in accordance with the table?

(A) $\frac{1}{6t}$  
(B) $10t$  
(C) $40 + t$

Questions 22–24 refer to the following table.

<table>
<thead>
<tr>
<th>FOOD</th>
<th>% OF PROTEIN</th>
<th>% OF CARBOHYDRATES</th>
<th>% OF FAT</th>
<th>COST PER 100 GRAMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>10</td>
<td>20</td>
<td>30</td>
<td>$1.80$</td>
</tr>
<tr>
<td>B</td>
<td>20</td>
<td>15</td>
<td>10</td>
<td>$3.00$</td>
</tr>
<tr>
<td>C</td>
<td>20</td>
<td>10</td>
<td>40</td>
<td>$2.75$</td>
</tr>
</tbody>
</table>

22. If you purchase $x$ grams of Food A, $y$ grams of Food B, and $z$ grams of Food C, the cost will be

(A) $\left(\frac{9}{5}x + 3y + \frac{11}{4}z\right)\epsilon$  
(B) $\left(\frac{9}{5}x + 3y + \frac{11}{4}z\right)$  
(C) $(1.8x + 3z + 2.75y)$  
(D) $(3x + 1.8y + 2.75z)\epsilon$  
(E) $(x + y + z)$

23. Which of the following diets would supply the most grams of protein?

(A) 500 grams of A  
(B) 250 grams of B  
(C) 350 grams of C  
(D) 150 grams of A and 200 grams of B  
(E) 200 grams of B and 200 grams of C

24. All of the following diets would supply at least 75 grams of fat. Which of the diets costs the least?

(A) 200 grams of A, 150 grams of B  
(B) 500 grams of B, 100 grams of A  
(C) 200 grams of C  
(D) 150 grams of A, 100 grams of C  
(E) 300 grams of A

Answer Key

1. C  
2. C  
3. B  
4. B

19. D  
20. C  
21. D  
22. A  
23. E  
24. E

Answer Explanations

1. C. $10.6\%$ of 14,490 = 1,534.94. The closest answer is 1,500.

2. C. $101,122 \div 26,731 = 3.78$ or 378%.

3. B. The Louisiana Purchase added about 830,000 square miles. The previous area was about 890,000 square miles, so the area almost doubled.
4. B. Alaska is almost 600,000 square miles, which is about \(\frac{1}{6}\) of 3,660,000 square miles. \(\frac{1}{6}\) is \(16\frac{2}{3}\%\), so the correct answer is 15%. Save time by estimating; don’t perform the calculations exactly.

5. C. 7,500 is in the 6,000–8,000 bracket so the tax will be 80 + 3% of the income over 6,000. Since 7,500 – 6,000 = 1,500, the income over 6,000 is 1,500. 3% of 1500 = (0.03)(1500) = 45, so the tax is 80 + 45 = 125.

6. D. The tax on 26,000 is 1,070 + 7% of (26,000 – 25,000). Thus, the tax is 1,070 + 70 = 1,140. The tax on 29,000 is 1,070 + 7% of (29,000 – 25,000). Thus, the tax on 29,000 is 1,070 + 280 = 1,350. Therefore, you will pay 1,350 – 1,140 = $210 more in taxes next year. A faster method is to use the fact that the $3,000 raise is income over 25,000, so it will be taxed at 7%. Therefore, the tax on the extra $3,000 will be (0.07)(3,000) = 210.

7. C. If income is less than 6,000, then the tax is less than 80. If income is greater than 8,000, then the tax is greater than 140. Therefore, if the tax is 100, the income must be between 6,000 and 8,000. You do not have to calculate Joan’s exact income.

8. E. Each person pays the tax on $3,700, which is 1% of 3,700 or $37. Since there are 50,000 people in Zenith, the total taxes are (37)(50,000) = $1,850,000.

9. B. The tax on 10,000 is 220, so taxes are \(\frac{220}{10,000}\) = 0.022 = 2.2% of income. 2.2% is 2% after rounding to the nearest percent.

10. B. In 1960 women made up 33.4% or about \(\frac{1}{3}\) of the labor force. Using the line graph, there were about 22 million women in the labor force in 1960. So the labor force was about 3(22) or 66 million. The closest answer among the choices is 65 million.

11. D. In 1947, there were about 16 million women in the labor force, and about 14 – 6 or 8 million of them were married. Therefore, the percent of women in the labor force who were married is \(\frac{8}{16}\) or 50%.

12. C. Look at the possible answers first. You can use your pencil and admission card as straight edges.

13. B. In 1947, there were about 16 million women in the labor force. By 1972 there were about 32 million. Therefore, the number of women doubled, which is an increase of 100% (not of 200%).

14. A. I is true since the width of the band for widowed or divorced women was never more than 5 million between 1947 and 1957. II is false since the number of single women in the labor force decreased from 1947 to 1948. III cannot be inferred since there is no information about the total labor force or women as a percent of it in 1965. Thus, only I can be inferred.

15. E. Look in the fourth column.

16. B. In 1972 there were 72 million females out of 136 million persons of voting age. \(\frac{72}{136}\) = 0.529, which is 53% to the nearest percent.

17. B. In 1968, 70% of the 54 million males of voting age voted, and (0.7)(54,000,000) = 37,800,000.

18. B. Since 78 million persons of voting age lived in the North and West in 1964, and there were 65 million persons of voting age not in the 25–44 year range, there must be at least 78 – 65 = 13 million people in the North and West in the 25–44 year range. X must be greater than or equal to 13. Since there were 45 million people of voting age in the 25–44 year range, X must be less than or equal to 45.

19. D. \(\frac{1}{2}\) hours is 150 minutes.

20. C. The train’s speed increased by 70 – 40 which is 30 miles per hour. \(\frac{30}{40}\) is 75%.

21. D. When \(t = 0\), the speed is 40, so A and B are incorrect. When \(t = 180\), the speed is 70, so C and E are incorrect. Choice D gives all the values that appear in the table.

22. A. The cost of food A is $1.80 per hundred grams or 1.8g per gram, so \(x\) grams cost \((1.8x)\)¢ or \(\left(\frac{9}{5}\right)x\)¢. Each gram of food B costs \(3\)¢ so \(y\) grams of food B will cost \(3y\)¢. Each gram of food C costs \(2.75\)¢ or \(\frac{11}{4}\)¢; thus, \(z\) grams of food C will cost \(\left(\frac{11}{4}\right)z\)¢. Therefore, the total cost is \(\left[\left(\frac{9}{5}\right)x + 3y + \left(\frac{11}{4}\right)z\right]\)¢.
24. E. The diet of Choice A will cost \(2(1.80) + \left(\frac{3}{2}\right)(3) = 3.60 + 4.50 = 8.10\). Choice B will cost \(5(3) + 1.80 = 16.80\). Choice C costs \(2(2.75) = 5.50\). Choice D costs \(\left(\frac{3}{2}\right)(1.80) + 2.75 = 2.70 + 2.75 = 5.45\). The diet of Choice E costs \(3(1.80)\) or \$5.40 so Choice E costs the least.
The mathematics questions on the GRE General Test require a working knowledge of mathematical principles, including an understanding of the fundamentals of algebra, plane geometry, and arithmetic, as well as the ability to translate problems into formulas and to interpret graphs. The following review covers these areas thoroughly and will prove helpful.

Read through the review carefully. You will notice that each topic is keyed for easy reference. Each of the Practice Exercises in this chapter, as well as the Diagnostic and five Model Tests, are keyed in the same manner. Therefore, after working the mathematics problems in each area, you should refer to the answer key and follow the mathematics reference key so that you can focus on the topics where you need improvement.

Review the tactics in the preceding chapters for test-taking help.

Review and Practice

I. Arithmetic

I–A. Whole Numbers

A–1

The numbers 1, 2, 3, . . . are called the positive integers. −1, −2, −3, . . . are called the negative integers. An integer is a positive or negative integer or the number 0.

A–2

If the integer k divides m evenly, then we say m is divisible by k or k is a factor of m. For example, 12 is divisible by 4, but 12 is not divisible by 5. The factors of 12 are 1, 2, 3, 4, 6, and 12.

If k is a factor of m, then there is another integer n such that \( m = k \times n \); in this case, m is called a multiple of k.

Since \( 12 = 4 \times 3 \), 12 is a multiple of 4 and also 12 is a multiple of 3. For example, 5, 10, 15, and 20 are all multiples of 5 but 15 and 5 are not multiples of 10.

Any integer is a multiple of each of its factors.

A–3

Any whole number is divisible by itself and by 1. If p is a whole number greater than 1, which has only p and 1 as factors, then p is called a prime number. 2, 3, 5, 7, 11, 13, 17, 19 and 23 are all primes. 14 is not a prime since it is divisible by 2 and by 7.

A whole number that is divisible by 2 is called an even number; if a whole number is not even, then it is an odd number. 2, 4, 6, 8, and 10 are even numbers, and 1, 3, 5, 7, and 9 are odd numbers.
Any integer greater than 1 is a prime or can be written as a product of primes.

To write a number as a product of prime factors:

1. Divide the number by 2 if possible; continue to divide by 2 until the factor you get is not divisible by 2.
2. Divide the result from 1 by 3 if possible; continue to divide by 3 until the factor you get is not divisible by 3.
3. Divide the result from 2 by 5 if possible; continue to divide by 5 until the factor you get is not divisible by 5.
4. Continue the procedure with 7, 11, and so on, until all the factors are primes.

Express 24 as a product of prime factors.

1. $24 = 2 \times 12$, $12 = 2 \times 6$, $6 = 2 \times 3$ so $24 = 2 \times 2 \times 2 \times 3$. Since each factor (2 and 3) is prime, $24 = 2 \times 2 \times 2 \times 3$.

A class of 45 students will be seated in rows. Every row will have the same number of students. There must be at least two students in each row, and there must be at least two rows. A row is parallel to the front of the room. How many different arrangements are possible?

Since the number of students = (the number of rows)(the number of students in each row) and the number of students is 45, the question can be answered by finding how many different ways 45 can be written as a product of two positive integers that are both greater than 1. (The integers must be greater than 1 because there are at least two rows and at least two students per row.) Writing 45 as a product of primes makes this easy. $45 = 3 \times 15 = 3 \times 3 \times 5$. Therefore, $3 \times 15$, $5 \times 9$, $9 \times 5$, and $15 \times 3$ are the only possibilities, and the correct answer is 4. (The fact that a row is parallel to the front of the room means that $3 \times 15$ and $15 \times 3$ are different arrangements.)

A number $m$ is a common multiple of two other numbers $k$ and $j$ if it is a multiple of each of them. For example, 12 is a common multiple of 4 and 6, since $3 \times 4 = 12$ and $2 \times 6 = 12$. 15 is not a common multiple of 3 and 6, because 15 is not a multiple of 6.

A number $k$ is a common factor of two other numbers $m$ and $n$ if $k$ is a factor of $m$ and $k$ is a factor of $n$.

The least common multiple (L.C.M.) of two numbers is the smallest number that is a common multiple of both numbers. To find the least common multiple of two numbers $k$ and $j$:

Write $k$ as a product of primes and $j$ as a product of primes.

If there are any common factors delete them in one of the products.

Multiply the remaining factors; the result is the least common multiple.

Find the L.C.M. of 27 and 63.

$27 = 3 \times 3 \times 3$, $63 = 3 \times 3 \times 7$.

$3 \times 3 = 9$ is a common factor so delete it once.

The L.C.M. is $3 \times 3 \times 3 \times 7 = 189$.

You can find the L.C.M. of a collection of numbers in the same way except that, if in step (B) the common factors are factors of more than two of the numbers, then delete the common factor in all but one of the products.

It takes Eric 20 minutes to inspect a car. John needs only 15 minutes to inspect a car. If they both start inspecting cars at 9:00 A.M., what is the first time the two mechanics will finish inspecting a car at the same time?

Eric will finish $k$ cars after $k \times 20$ minutes, and John will finish $j$ cars after $j \times 15$ minutes. Therefore, they will both finish inspecting a car at the same time when $k \times 20 = j \times 15$. Since $k$ and $j$ must be integers (they represent the number of cars finished) this question asks you to find a common multiple of 20 and 15. Since you are asked for the first time the two mechanics will finish at the same time, you must find the least common multiple.

$20 = 4 \times 5 = 2 \times 2 \times 5$, $15 = 3 \times 5$.

Delete 5 from one of the products.

The L.C.M. is $2 \times 2 \times 5 = 60$.

Eric and John will finish inspecting a car at the same time 60 minutes after they start, or at 10:00 A.M.

The numbers 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9 are called digits. The number 132 is a three-digit number. In the number 132, 1 is the first or hundreds digit, 3 is the second or tens digit, and 2 is the last or units digit.

Find $x$ if $x$ is a two-digit number whose last digit is 2. The difference of the digits of $x$ is 5.

The two-digit numbers whose last digit is 2 are 12, 22, 32, 42, 52, 62, 72, 82, and 92. The difference of the digits of 12 is either 1 or -1, so 12 is not $x$. Since 7 - 2 is 5, $x$ is 72.
I–B. Fractions

B–1

A fraction is a number that represents a ratio or division of two numbers. A fraction is written in the form \( \frac{a}{b} \). The number on the top, \( a \), is called the numerator; the number on the bottom, \( b \), is the denominator. The denominator tells how many equal parts there are (for example, parts of a pie); the numerator tells how many of these equal parts are taken. For example, \( \frac{5}{8} \) is a fraction whose numerator is 5 and whose denominator is 8; it represents taking 5 of 8 equal parts, or dividing 8 into 5.

A fraction cannot have 0 as a denominator since division by 0 is not defined.

A fraction with 1 as the denominator is the same as the whole number that is its numerator. For example, \( \frac{12}{1} \) is 12, \( \frac{0}{1} \) is 0.

If the numerator and denominator of a fraction are identical, the fraction represents 1. For example, \( \frac{3}{3} = \frac{9}{9} = \frac{13}{13} = 1 \). Any whole number, \( k \), is represented by a fraction with a numerator equal to \( k \) times the denominator. For example, \( \frac{18}{6} = 3 \), and \( \frac{30}{5} = 6 \).

B–2

Mixed Numbers. A mixed number consists of a whole number and a fraction. For example, \( 7 \frac{1}{4} \) is a mixed number; it means \( 7 + \frac{1}{4} \) and \( \frac{1}{4} \) is called the fractional part of the mixed number \( 7 \frac{1}{4} \). Any mixed number can be changed into a fraction as follows:

1. Multiply the whole number by the denominator of the fraction.
2. Add the numerator of the fraction to the result of 1.
3. Use the result of 2 as the numerator, and use the denominator of the fractional part of the mixed number as the denominator. This fraction is equal to the mixed number.

Write \( 7 \frac{1}{4} \) as a fraction.

\[
\begin{align*}
\text{1} & \quad 4 \cdot 7 = 28 \\
\text{2} & \quad 28 \cdot 1 = 29 \\
\text{3} & \quad \frac{7 \cdot 1}{4} = \frac{29}{4}
\end{align*}
\]

A fraction whose numerator is larger than its denominator can be changed into a mixed number.

1. Divide the denominator into the numerator; the result is the whole number of the mixed number.
2. Put the remainder from step 1 over the denominator; this is the fractional part of the mixed number.

If a pizza pie has 8 pieces, how many pizza pies have been eaten at a party where 35 pieces were eaten?

Since there are 8 pieces in a pie, \( \frac{35}{8} \) pies were eaten. To find the number of pies, we need to change \( \frac{35}{8} \) into a mixed number.

1. Divide 8 into 35; the result is 4 with a remainder of 3.
2. \( \frac{3}{8} \) is the fractional part of the mixed number.
3. \( \frac{35}{8} = 4 \frac{3}{8} \).

In calculations with mixed numbers, change the mixed numbers into fractions.

B–3

Multiplying Fractions. To multiply two fractions, multiply their numerators to form the numerator of the product. Multiply their denominators to form the denominator of the product.

John saves \( \frac{1}{3} \) of $240. How much does he save?

\[
\frac{1}{3} \cdot 240 = \frac{240}{3} = 80
\]

The amount John saves.

B–4

Dividing Fractions. To divide one fraction (the dividend) by another fraction (the divisor), invert the divisor and multiply. To invert a fraction turn it upside down; for example, if you invert \( \frac{3}{4} \), the result is \( \frac{4}{3} \).
\[
\frac{5}{6} \div \frac{3}{4} = \frac{5}{6} \cdot \frac{4}{3} = \frac{20}{18} = \frac{10}{9}
\]

A worker makes a basket in \(\frac{2}{3}\) of an hour. If she works for \(7\frac{1}{2}\) hours, how many baskets will she make?

It takes \(\frac{2}{3}\) of an hour to make one basket, so we need to divide \(\frac{2}{3}\) into \(7\frac{1}{2}\). Since \(7\frac{1}{2} = \frac{15}{2}\), we want to divide \(\frac{15}{2}\) by \(\frac{2}{3}\). Thus

\[
\frac{15}{2} \div \frac{2}{3} = \frac{15 \cdot 3}{2 \cdot 2} = \frac{45}{4} = 11\frac{1}{4}
\]
baskets.

**B–5**

**Dividing and Multiplying by the Same Number**

If you multiply the numerator and denominator of a fraction by the same nonzero number, the value of the fraction remains the same.

If you divide the numerator and denominator of any fraction by the same nonzero number, the value of the fraction remains the same.

Consider the fraction \(\frac{3}{4}\). If we multiply 3 by 10 and 4 by 10, then \(\frac{30}{40}\) must be equal to \(\frac{3}{4}\). (In \(\frac{30}{40}\), 10 is a common factor of 30 and 40.)

When we multiply fractions, if any of the numerators and denominators have a common factor (see A–2 for factors) we can divide each of them by the common factor and the fraction remains the same. This process is called canceling and can be a great time-saver.

\[
\text{Multiply } \frac{4}{9} \cdot \frac{75}{8}.
\]

Since 4 is a common factor of 4 and 8, divide 4 and 8 by 4, getting \(\frac{4}{9} \cdot \frac{75}{8} = \frac{1}{9} \cdot \frac{75}{2}\). Since 3 is a common factor of 9 and 75, divide 9 and 75 by 3 to get \(\frac{1}{3} \cdot \frac{25}{2}\). Therefore \(\frac{4}{9} \cdot \frac{75}{8} = \frac{1}{3} \cdot \frac{25}{2} = \frac{25}{6}\).

Cancelling is denoted by striking or crossing out the appropriate numbers. For instance, the example above would be written as follows:

\[
\frac{1}{3} \div \frac{25}{2} = \frac{1}{3} \cdot \frac{25}{6}
\]

Since you want to work as fast as possible on the GRE, cancel whenever you can.

**B–6**

**Equivalent Fractions.** Two fractions are equivalent or equal if they represent the same ratio or number. In Section B–5, you saw that, if you multiply or divide the numerator and denominator of a fraction by the same nonzero number, the result is equivalent to the original fraction.

For example, \(\frac{7}{8} = \frac{70}{80}\) since \(70 = 10 \times 7\) and \(80 = 10 \times 8\).

In a multiple-choice test, your answer to a problem may not be the same as any of the given choices, yet one choice may be equivalent. Therefore, you may have to express your answer as an equivalent fraction.

To find a fraction with a known denominator equal to a given fraction:

1. Divide the denominator of the given fraction into the known denominator.
2. Multiply the result of 1 by the numerator of the given fraction; this is the numerator of the required equivalent fraction.

Your answer is \(\frac{2}{5}\). One of the test answers has a denominator of 30. Find a fraction with denominator 30 that is equal to \(\frac{2}{5}\).

1. 5 into 30 is 6.
2. \(6 \cdot 2 = 12\), so \(\frac{12}{30} = \frac{2}{5}\).

Check your result. Divide numerator and denominator by the same number. \(12 \div 6 = 2\) and \(30 \div 6 = 5\).

**B–7**

**Reducing a Fraction to Lowest Terms.** A fraction has been reduced to lowest terms when the numerator and denominator have no common factors.

For example, \(\frac{3}{4}\) is reduced to lowest terms, but \(\frac{3}{6}\) is not because 3 is a common factor of 3 and 6.
To reduce a fraction to lowest terms, cancel all the common factors of the numerator and denominator. (Canceling common factors will not change the value of the fraction.)

For example:

\[
\frac{2}{10} = \frac{100}{150} = \frac{15}{3} = \frac{2}{3}
\]

Since 2 and 3 have no common factors, \(\frac{2}{3}\) is reduced to lowest terms. A fraction is equivalent to its reduction to lowest terms.

Another way to cancel common factors, and hence reduce to lowest terms, is to first write the numerator and denominator as the products of primes.

\textbf{B–8}

\textbf{Adding Fractions.} If the fractions have the same denominator, then the denominator is called a common denominator. Add the numerators, and use this sum as the new numerator, retaining the common denominator as the denominator of the new fraction. Reduce the new fraction to lowest terms.

\[
\frac{1}{2} + \frac{2}{3} + \frac{7}{4} = ?
\]

1. 24 is a common denominator.
2. \(\frac{1}{2} = \frac{12}{24}, \frac{2}{3} = \frac{16}{24}, \frac{7}{4} = \frac{42}{24}\).
3. \(\frac{12 + 16 + 42}{24} = \frac{70}{24} = \frac{35}{12}\).

\textbf{B–9}

\textbf{Subtracting Fractions.} When the fractions have the same denominator, subtract the numerators and place the result over the denominator.

There are five tacos in a lunch box. Jim eats two of the tacos. What fraction of the original tacos are left in the lunch box?

Jim took \(\frac{2}{5}\) of the original tacos, so \(1 - \frac{2}{5}\) are left. Write \(\frac{5}{5}\) as \(\frac{5}{5} = \frac{5 - 2}{5} = \frac{3}{5}\). Therefore, \(\frac{3}{5}\) of the original tacos are left in the lunch box.

When the fractions have different denominators

1. Find a common denominator.
2. Express the fractions as equivalent fractions with the same denominator.

\[
\frac{3}{4} - \frac{2}{7} = ?
\]

1. A common denominator is \(5 \cdot 7 = 35\).
2. \(\frac{3}{5} = \frac{21}{35}, \frac{2}{7} = \frac{10}{35}\).
3. \(\frac{3 \cdot 2}{35} - \frac{10}{35} = \frac{21 - 10}{35} = \frac{11}{35}\).
**B-10**

**Complex Fractions.** A fraction whose numerator and denominator are themselves fractions is called a complex fraction. For example, \(\frac{2}{3}\) is a complex fraction. A complex fraction can always be simplified by dividing its numerator by its denominator.

\[
\frac{2}{3} \div \frac{4}{5} = \frac{2 \times 5}{3 \times 4} = \frac{5}{6}
\]

It takes 2 1/2 hours to get from Buffalo to Cleveland traveling at a constant rate of speed. What part of the distance is traveled in 3/4 of an hour?

\[
\frac{3/4}{2 1/2} = \frac{3/4}{5/2} = \frac{3}{5} \times \frac{2}{5} = \frac{3}{25} = \frac{3}{10} \text{ of the distance}
\]

**I-C. Decimals**

**C-1**

A collection of digits (the digits are 0, 1, 2, . . . , 9) after a period (called the decimal point) is called a decimal fraction. For example, these are all decimal fractions:

\[
0.503 \quad 0.32 \quad 0.5602 \quad 0.4
\]

The zero to the left of the decimal point is optional in a decimal fraction. We will use the zero consistently in this review.

*Every decimal fraction represents a fraction.* To find the fraction that a decimal fraction represents, keep in mind the following facts:

1. The denominator is \(10 \times 10 \times 10 \times \cdots \times 10\). The number of 10's is equal to the number of digits to the right of the decimal point.
2. The numerator is the number represented by the digits to the right of the decimal point.

**What fraction does 0.503 represent?**

1. There are three digits to the right of the decimal point, so the denominator is \(10 \times 10 \times 10 = 1,000\).
2. The numerator is 503, so the fraction is \(\frac{503}{1,000}\).

**Find the fraction that 0.05732 represents.**

1. There are five digits to the right of the decimal point, so the denominator is \(10 \times 10 \times 10 \times 10 \times 10 = 100,000\).
2. The numerator is 5,732, so the fraction is \(\frac{5,732}{100,000}\).

*You can add any number of zeros to the right of a decimal fraction without changing its value.*

\[
0.3 = \frac{3}{10} = \frac{30}{100} = 0.30 = 0.30000 = \frac{30,000}{100,000} = 0.300000000 \ldots
\]

**C-2**

We call the first position to the right of the decimal point the tenths place, since the digit in that position tells you how many tenths you should take. (It is the numerator of a fraction whose denominator is 10.) In the same way, we call the second position to the right the hundredths place, the third position to the right the thousandths, and so on. This is similar to the way whole numbers are expressed, since 568 means \(5 \times 100 + 6 \times 10 + 8 \times 1\). The various digits represent different numbers depending on their positions: the first place to the left of the decimal point represents units, the second place to the left represents tens, and so on.

The following diagram may be helpful:

\[
\begin{array}{cccccccc}
T & H & T & U & T & H & T \\
H & U & E & N & E & U & H \\
O & N & N & I & \cdot & N & N & O \\
U & D & S & T & T & D & U \\
S & R & S & H & R & S \\
A & E & \cdot & S & E & A \\
N & D & \cdot & D & N \\
D & S & \cdot & T & D \\
S & \cdot & H & T \\
& S
\end{array}
\]

Thus, 5,342.061 means 5 thousands + 3 hundreds + 4 tens + 2 + 0 tenths + 6 hundredths + 1 thousandth.
C–3

A DECIMAL is a whole number plus a decimal fraction; the decimal point separates the whole number from the decimal fraction. For example, 4,307.206 is a decimal that represents 4,307 added to the decimal fraction 0.206. A decimal fraction is a decimal with zero as the whole number.

C–4

A fraction whose denominator is a multiple of 10 is equivalent to a decimal. The denominator tells you the last place that is filled to the right of the decimal point. Place the decimal point in the numerator so that the number of places to the right of the decimal point corresponds to the number of zeros in the denominator. If the numerator does not have enough digits, add the appropriate number of zeros before the numerator.

Find the decimal equivalent of \( \frac{5.732}{100} \).

Since the denominator is 100, you need two places to the right of the decimal point, so \( \frac{5.732}{100} = 57.32 \).

What is the decimal equivalent of \( \frac{57}{10,000} \)?

The denominator is 10,000, so you need four decimal places to the right of the decimal point. Since 57 has only two places, we add two zeros in front of 57; thus \( \frac{57}{10,000} = 0.0057 \).

Do not make the error of adding the zeros to the right of 57 instead of to the left. The decimal 0.5700 is \( \frac{5,700}{10,000} \), not \( \frac{57}{10,000} \).

C–5

Adding Decimals. Decimals are much easier to add than fractions. To add a collection of decimals:

1. Write the decimals in a column with the decimal points vertically aligned.
2. Add enough zeros to the right of the decimal point so that every number has an entry in each column to the right of the decimal point.
3. Add the numbers in the same way as whole numbers.
4. Place a decimal point in the sum so that it is directly beneath the decimal points in the decimals added.

How much is \( 5 + 3.43 + 16.021 + 3.1 \)?

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>5</td>
<td>2</td>
<td>5.000</td>

</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>4 27.551</td>
</tr>
</tbody>
</table>

The answer is 27.551.

If Mary has $0.50, 3.25, and $6.05, how much does she have altogether?

\[
\frac{0.50}{3.25} + \frac{6.05}{9.80}
\]

Mary has $9.80.

C–6

Subtracting Decimals. To subtract one decimal from another:

1. Put the decimals in a column so that the decimal points are vertically aligned.
2. Add zeros so that every decimal has an entry in each column to the right of the decimal point.
3. Subtract the numbers as you would whole numbers.
4. Place the decimal point in the result so that it is directly beneath the decimal points of the numbers you subtracted.

Solve \( 5.053 - 2.09 \).

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>5.053</td>
<td>2</td>
<td>5.053</td>
</tr>
<tr>
<td></td>
<td>- 2.09</td>
<td>- 2.090</td>
<td>- 2.090</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>4 2.963</td>
</tr>
</tbody>
</table>

The answer is 2.963.

If Joe has $12 and he loses $8.40, how much money does he have left?

Since \( $12.00 - $8.40 = $3.60 \), Joe has $3.60 left.

C–7

Multiplying Decimals. Decimals are multiplied like whole numbers. The decimal point of the product is
placed so that the number of decimal places in the product is equal to the total of the number of decimal places in all of the numbers multiplied.

What is \((5.02)(0.6)\)?

\((502)(6) = 3.012\). There are two decimal places in 5.02 and one decimal place in 0.6, so the product must have \(2 + 1 = 3\) decimal places. Therefore, \((5.02)(0.6) = 3.012\).

If eggs cost $0.06 each, how much should a dozen eggs cost?

Since \((12)(0.06) = 0.72\), a dozen eggs should cost $0.72.

COMPUTING TIP: To multiply a decimal by 10, just move the decimal point to the right one place; to multiply by 100, move the decimal point two places to the right; and so on.

\[9,983.456 \times 100 = 998,345.6.\]

C–8

Dividing Decimals. To divide one decimal (the dividend) by another decimal (the divisor):

1. Move the decimal point in the divisor to the right until there is no decimal fraction in the divisor (this is the same as multiplying the divisor by a multiple of 10).
2. Move the decimal point in the dividend the same number of places to the right as you moved the decimal point in 1.
3. Divide the result of 2 by the result of 1 as if they were whole numbers.
4. The number of decimal places in the result (quotient) should be equal to the number of decimal places in the result of 2.

Divide 0.05 into 25.155.

1. Move the decimal point two places to the right in 0.05; the result is 5.
2. Move the decimal point two places to the right in 25.155; the result is 2515.5.
3. Divide 5 into 25155; the result is 5,031.
4. Since there was one decimal place in the result of 2; the answer is 503.1.

The work for this example might look like this:

\[
\begin{align*}
0.05 & \overline{)25.155} \\
5 & \downarrow \\
20 & \\
15 & \\
55 & \downarrow \\
55 & \\
0 & \\
\end{align*}
\]

You can always check division by multiplying.

\((503.1)(0.05) = 25.155\), so our answer checks.

If you write division as a fraction, the previous example would be expressed as \(\frac{25.155}{0.05}\).

You can multiply both the numerator and denominator by 100 without changing the value of the fraction, so

\[
\frac{25.155}{0.05} = \frac{25.155 \times 100}{0.05 \times 100} = \frac{2515.5}{5}
\]

Steps 1 and 2 above always change the division of a decimal by a decimal into division by a whole number.

To divide a decimal by a whole number, divide as if both were whole numbers. Then place the decimal point in the quotient so that the quotient has as many decimal places as the dividend.

\[
\frac{55.033}{1.1} = \frac{550.33}{11} = 50.03
\]

If oranges cost 42¢ each, how many oranges can you buy for $2.52?

Make sure that the units are compatible; 42¢ = $0.42. The number of oranges you can buy \(= \frac{2.52}{0.42} = \frac{252}{42} = 6\).

COMPUTING TIP: To divide a decimal by 10, move the decimal point to the left one place; to divide by 100, move the decimal point two places to the left; and so on.

\[
5,637.6471 \div 1,000 = 5.6376471
\]

To divide by 1,000 you move the decimal point three places to the left.

C–9

Converting a Fraction into a Decimal. To convert a fraction into a decimal, divide the denominator into the numerator. For example, \(\frac{3}{4} = 4)3.00 = 0.75\). Some fractions give an infinite decimal when you divide the denominator into the numerator; for example, \(\frac{1}{3} = 0.333\ldots\), where the three
dots mean you keep on getting 3 with each step of division. 0.033 . . . is an infinite decimal.

You should know the following decimal equivalents of fractions:

\[
\begin{align*}
\frac{1}{100} &= 0.01 \\
\frac{1}{50} &= 0.02 \\
\frac{1}{25} &= 0.04 \\
\frac{1}{20} &= 0.05 \\
\frac{1}{10} &= 0.1 \\
\frac{1}{8} &= 0.125 \\
\frac{1}{6} &= 0.1666 \ldots
\end{align*}
\]

\[
\begin{align*}
\frac{1}{5} &= 0.2 \\
\frac{1}{4} &= 0.25 \\
\frac{1}{3} &= 0.333 \ldots \\
\frac{2}{5} &= 0.4 \\
\frac{1}{2} &= 0.5 \\
\frac{2}{3} &= 0.666 \ldots \\
\frac{3}{4} &= 0.75
\end{align*}
\]

Any decimal ending with three dots is an infinite decimal.

I-D. **Percentage**

D-1

PERCENT is another method of expressing fractions or parts of an object. Percents are expressed in terms of hundredths, so 100% means 100 hundredths or 1. In the same way, 50% is 50 hundredths, or \(\frac{500}{100} = \frac{5}{10} = \frac{1}{2}\).

A decimal is converted into a percent by multiplying the decimal by 100. Since multiplying a decimal by 100 is accomplished by moving the decimal point two places to the right, you convert a decimal into a percent by moving the decimal point two places to the right. For example, 0.134 = 13.4%.

If you wish to convert a percent into a decimal, you divide the percent by 100. There is a shortcut for this also. To divide by 100 you move the decimal point two places to the left.

Therefore, to convert a percent into a decimal, move the decimal point two places to the left. For example, 24% = 0.24.

A fraction is converted into a percent by changing the fraction to a decimal and then changing the decimal to a percent. A percent is changed into a fraction by first converting the percent into a decimal and then changing the decimal to a fraction. You should know the following fractional equivalents of percents.

\[
\begin{align*}
1\% &= \frac{1}{100} \\
33\frac{1}{3}\% &= \frac{1}{3} \\
100\% &= 1 \\
2\% &= \frac{1}{50} \\
40\% &= \frac{2}{5} \\
120\% &= \frac{6}{5} \\
4\% &= \frac{1}{25} \\
50\% &= \frac{1}{2} \\
125\% &= \frac{5}{4} \\
5\% &= \frac{1}{20} \\
60\% &= \frac{3}{5} \\
133\frac{1}{3}\% &= \frac{4}{3} \\
10\% &= \frac{1}{10} \\
66\frac{2}{3}\% &= \frac{2}{3} \\
150\% &= \frac{3}{2} \\
20\% &= \frac{1}{5} \\
75\% &= \frac{3}{4} \\
25\% &= \frac{1}{4} \\
80\% &= \frac{4}{5}
\end{align*}
\]

Note, for example, that \(133\frac{1}{3}\% = 1.33\frac{1}{3} = 1\frac{1}{3} = \frac{4}{3}\).

When you compute with percents, it is usually easier to change the percents to decimals or fractions.

A company has 6,435 bars of soap. If the company sells 20% of its bars of soap, how many bars of soap did it sell?

Change 20% into 0.2. Thus, the company sold \((0.2)(6,435) = 1287.0\) bars of soap. An alternative method would be to convert 20% to \(\frac{1}{5}\). Then \(\frac{1}{5} \times 6,435 = 1,287\).

In a class of 60 students, 18 students received a grade of B. What percent of the class received a grade of B?

\[
\frac{18}{60} = 0.3 \quad \text{and} \quad 0.3 = 0.30 = 30\%, \text{ so 30\% of the class received a grade of B.}
\]
If the population of Dryden was 10,000 in 1980 and increased by 15% between 1980 and 1990, what was the population of Dryden in 1990?

The population increased by 15% between 1980 and 1990, so the increase was \((0.15)(10,000)\), which is 1,500. The population in 1990 was \(10,000 + 1,500 = 11,500\).

A quicker method: The population increased 15%, so the population in 1990 was 115% of the population in 1980. Therefore, the population in 1990 was 115% of 10,000, which is \((1.15)(10,000) = 11,500\).

**Interest and Discount.** Two of the most common uses of percent are in interest and discount problems.

The rate of interest is usually given as a percent. The basic formula for interest problems is:

\[
\text{INTEREST} = \text{AMOUNT} \times \text{TIME} \times \text{RATE}
\]

You can assume the rate of interest is the annual rate of interest unless the problem states otherwise, so you should express the time in years.

How much interest will $10,000 earn in 9 months at an annual rate of 6%?

9 months is \(\frac{3}{4}\) of a year and 6% = \(\frac{3}{50}\). Using the formula, we find that the interest is \(10,000 \times \frac{3}{4} \times \frac{3}{50} = \frac{50}{9} = 510\) or $510.

What annual rate of interest was paid if $5,000 earned $300 in interest in 2 years?

Since the interest was earned in 2 years, $150 was the interest earned in 1 year. \(\frac{150}{5,000} = 0.03 = 3\%\), so the annual rate of interest was 3%.

The type of interest described above is called simple interest.

There is another method of computing interest. Interest computed in this way is called compound interest. In computing compound interest, the interest is periodically added to the amount (or principal) that is earning interest.

What will $1,000 be worth after 3 years if it earns interest at the rate of 5% compounded annually?

"Compounded annually" means that the interest earned during 1 year is added to the amount (or principal) at the end of each year. The interest on $1,000 at 5% for 1 year is \(1000(0.05) = 50\), so you must compute the interest on $1,050 (not $1,000) for the second year. The interest is \(1050(0.05) = 52.50\). Therefore, during the third year interest will be computed for $1,102.50. During the third year the interest is \(1102.50(0.05) = 55.125 = 55.13\). Therefore, after 3 years the original $1,000 will be worth $1,157.63.

If you calculated simple interest on $1,000 at 5% for 3 years, the answer would be \(1000(0.05)(3) = 150\). Therefore, with simple interest, $1,000 is worth $1,150 after 3 years. You can see that you earn more interest with compound interest.

You can assume that interest means simple interest unless a problem states otherwise.

The basic formula for discount problems is:

\[
\text{DISCOUNT} = \text{COST} \times \text{RATE OF DISCOUNT}
\]

What is the discount if a car that costs $3,000 is discounted 7%?

The discount is \(3000 \times 0.07 = 210.00\) since 7% = 0.07.

If we know the cost of an item and its discounted price, we can find the rate of discount by using the formula

\[
\frac{\text{Rate of discount}}{\text{Cost}} = \frac{\text{Cost} - \text{Price}}{\text{Cost}}
\]

What was the rate of discount if a boat that cost $5,000 was sold for $4,800?

Using this formula, we find that the rate of discount equals

\[
\frac{5000 - 4800}{5000} = \frac{200}{5000} = \frac{1}{25} = 0.04 = 4\%
\]

After an item has been discounted once, it may be discounted again. This procedure is called successive discounting.

A bicycle originally cost $100 and was discounted 10%. After three months it was sold after being discounted another 15%. How much was the bicycle sold for?

After the 10% discount the bicycle was selling for $90 \((0.90) = 90\). An item that costs $90 and is discounted 15% will sell for \(90(0.85) = 76.50\), so the bicycle was sold for $76.50.

Notice that, if you added the two discounts of 10% and
15% and treated the successive discounts as a single discount of 25%, your answer would be that the bicycle sold for $75, which is incorrect. Successive discounts are not identical to a single discount that is the sum of the discounts. The preceding example shows that successive discounts of 10% and 15% are not identical to a single discount of 25%.

I–E. Rounding Off Numbers

E–1

Many times an approximate answer can be found more quickly and may be more useful than the exact answer. For example, if a company had sales of $998,875.63 during a year, it is easier to remember that the sales were about $1 million.

Rounding off a number to a decimal place means finding the multiple of the representative of that decimal place that is closest to the original number. Thus, rounding off a number to the nearest hundred means finding the multiple of 100 that is closest to the original number. Rounding off to the nearest tenth means finding the multiple of \(\frac{1}{10}\) that is closest to the original number. After a number has been rounded off to a particular decimal place, all the digits to the right of that particular decimal place will be zero.

To round off a number to the \(r\)th decimal place:

1. Look at the digit in the place to the right of the \(r\)th place.
2. If the digit is 4 or less, change all the digits in places to the right of the \(r\)th place to 0 to round off the number.
3. If the digit is 5 or more, add 1 to the digit in the \(r\)th place and change all the digits in places to the right of the \(r\)th place to 0 to round off the number.

Round off 3.445 to the nearest tenth.

The digit to the right of the tenths place is 4, so 3.445 is 3.4 to the nearest tenth.

Most problems dealing with money are rounded off to the nearest hundredth or cent if the answer contains a fractional part of a cent.

If 16 donuts cost $1.00, how much should three donuts cost?

Three donuts should cost \(\frac{3}{16}\) of $1.00. Since \(\frac{3}{16} \times 1. = 0.1875\), the cost would be $0.1875. In practice, you would round it up to $0.19 or 19¢.

Rounding off numbers can help you get quick, approximate answers. Since many questions require only rough answers, you can sometimes save time on the test by rounding off numbers.

Round off 43.796 to the nearest tenth.

The place to the right of tenths is hundredths, so look in the hundredths place. Since 9 is bigger than 5, add 1 to the tenths place. The number 43.796 is 43.8 rounded off to the nearest tenth.

If the digit in the \(r\)th place is 9 and you need to add 1 to the digit to round off the number to the \(r\)th decimal place, put a zero in the \(r\)th place and add 1 to the digit in the position to the left of the \(r\)th place. For example, 298 rounded off to the nearest 10 is 300; 99,752 to the nearest thousand is 100,000.

I–F. Signed Numbers

F–1

A number preceded by either a plus or a minus sign is called a SIGNED NUMBER. For example, \(+5\), \(-6\), \(-4.2\), and \(+\frac{3}{4}\) are all signed numbers. If no sign is given with a number, a plus sign is assumed; thus, 5 is interpreted as \(+5\).

Signed numbers can often be used to distinguish different concepts. For example, a profit of $10 can be denoted by \(+$10\) and a loss of $10 by \(–$10\). A temperature of 20 degrees below zero can be denoted as \(–20^\circ\).

F–2

Signed numbers are also called DIRECTED NUMBERS. You can think of numbers arranged on a line, called a number line, in the following manner:

Take a line that extends indefinitely in both directions, pick a point on the line and call it 0, pick another point on the line to the right of 0 and call it 1. The point to the right of 1 that is exactly as far from 1 as 1 is from 0 is called 2, the point to the right of 2 just as far from 2 as 1 is from 0 is called 3, and so on. The point halfway between 0 and 1 is called \(\frac{1}{2}\), the point halfway between \(\frac{1}{2}\) and 1 is called \(\frac{3}{4}\).

In this way, you can identify any whole number or any fraction with a point on the line.

All the numbers that correspond to points to the right of 0 are called positive numbers. The sign of a positive number is +.
If you go to the left of zero the same distance as you did from 0 to 1, the point is called \(-1\); in the same way as before, you can find \(-2, -3, -\frac{1}{2}, -\frac{3}{2}\), and so on.

All the numbers that correspond to points to the left of zero are called negative numbers. Negative numbers are signed numbers whose sign is \(-\). For example, \(-3, -5.15, -0.003\) are all negative numbers.

0 is neither positive nor negative; any nonzero number is positive or negative but not both.

**F–3**

**Absolute Value.** The absolute value of a signed number is the distance of the number from 0. The absolute value of any nonzero number is positive. For example, the absolute value of 2 is 2; the absolute value of \(-2\) is 2. The absolute value of a number \(a\) is denoted by \(|a|\), so \(|-2| = 2\). The absolute value of any number can be found by dropping its sign, \(|-12| = 12, |4| = 4\). Thus \(|-a| = |a|\) for any number \(a\). The only number whose absolute value is zero is zero.

**F–4**

**Adding Signed Numbers.**

Case I. Adding numbers with the same sign:

1. The sign of the sum is the same as the sign of the numbers being added.
2. Add the absolute values.
3. Put the sign from step 1 in front of the number you obtained in step 2.

What is \(-2 + (-3.1) + (-0.02)\)?

1. The sign of the sum will be \(-\).
2. \(|-2| = 2, |-3.1| = 3.1, |-0.02| = 0.02\), and \(2 + 3.1 + 0.02 = 5.12\).
3. The answer is \(-5.12\).

Case II. Adding two numbers with different signs:

1. The sign of the sum is the sign of the number that is largest in absolute value.
2. Subtract the absolute value of the number with the smaller absolute value from the absolute value of the number with the larger absolute value.

The answer is the number you obtained in step 2 preceded by the sign from step 1.

How much is \(-5.1 + 3\)?

1. The absolute value of \(-5.1\) is 5.1 and the absolute value of 3 is 3, so the sign of the sum will be \(-\).
2. 5.1 is larger than 3, and 5.1 \(- 3 = 2.1\).
3. The sum is \(-2.1\).

Case III. Adding more than two numbers with different signs:

1. Add all the positive numbers; the result is positive (this is Case I).
2. Add all the negative numbers; the result is negative (this is Case I).
3. Add the result of step 1 to the result of step 2, by using Case II.

If a store made a profit of $23.50 on Monday, lost $2.05 on Tuesday, lost $5.03 on Wednesday, made a profit of $30.10 on Thursday, and made a profit of $41.25 on Friday, what was its total profit (or loss) for the week? Use + for profit and − for loss.

The total is 23.50 + (−2.05) + (−5.03) + 30.10 + 41.25, which is 94.85 + (−7.08) = 87.77. The store made a profit of $87.77.

**F–5**

**Subtracting Signed Numbers.** When subtracting signed numbers:

1. Change the sign of the number you are subtracting (the subtrahend).
2. Add the result of step 1 to the number being subtracted from (the minuend), using the rules of Section F–4.

What is 7.8 − (−10.1)?

1. −10.1 becomes 10.1.
2. 7.8 + 10.1 = 17.9.

We subtract a negative number by adding a positive number with the same absolute value, and we subtract a positive number by adding a negative number of the same absolute value.
Multiplying Signed Numbers

Case I. Multiplying two numbers:

1. Multiply the absolute values of the numbers.
2. If both numbers have the same sign, the result of 1 is the answer, that is, the product is positive. If the numbers have different signs, then the answer is the result of 1 with a minus sign.

   \[(4)(-3) = ?\]

\[4 \times 3 = 12\]

2. The signs are different, so the answer is \(-12\).

You can remember the sign of the product in the following way:

\[(-)(-) = +\]
\[(+)(+) = +\]
\[(-)(+) = -\]
\[(+)(-) = -\]

Case II. Multiplying more than two numbers:

1. Multiply the first two factors using Case I.
2. Multiply the result of 1 by the third factor.
3. Multiply the result of 2 by the fourth factor.
4. Continue until you have used each factor.

\[(-5)(4)(2)\left(-\frac{1}{2}\right)\left(\frac{3}{4}\right) = ?\]

1. \((-5)(4) = -20\)
2. \((-20)(2) = -40\)
3. \((-40)\left(-\frac{1}{2}\right) = 20\)
4. \(20\left(\frac{3}{4}\right) = 15\), so the answer is 15.

Dividing Signed Numbers. Divide the absolute values of the numbers; the sign of the quotient is determined by the same rules as you used to determine the sign of a product. Thus:

\[+ + = +\]
\[- + = +\]
\[+ - = -\]
\[- + = -\]

Divide 53.2 by \(-4\).

53.2 divided by 4 is 13.3. Since one of the numbers is positive and the other negative, the answer is \(-13.3\).

\[-5 \div -2 = ?\]

\(-5\) divided by \(-2 = \frac{5}{2}\). Since both numbers are negative, the answer is positive.

The sign of the product or quotient is + if there are no negative factors or an even number of negative factors. The sign of the product or quotient is – if there are an odd number of negative factors.

Averages and Medians

The Average or Mean. The average or arithmetic mean of \(N\) numbers is the sum of the \(N\) numbers divided by \(N\).

The scores of 9 students on a test were 72, 78, 81, 64, 85, 92, 95, 60, and 55. What was the average score of the students?

Since there are 9 students, the average is the total of all the scores divided by 9:

\[\frac{1}{9}\text{ of } (72 + 78 + 81 + 64 + 85 + 92 + 95 + 60 + 55) = \frac{1}{9}\text{ of } (682) = 75\frac{7}{9}\text{. Therefore, the average score is } 75\frac{7}{9}\text{.}\]

The temperature at noon in Coldtown, U.S.A., was 5\(^\circ\) on Monday, 10\(^\circ\) on Tuesday, 2\(^\circ\) below zero on Wednesday, 5\(^\circ\) below zero on Thursday, 0\(^\circ\) on Friday, 4\(^\circ\) on Saturday, and 1\(^\circ\) below zero on Sunday. What was the average temperature at noon for the week?

Use negative numbers for the temperatures below zero. The average temperature is the average of 5, 10, \(-2\), \(-5\), 0, 4, and \(-1\) divided by 7, the number of days in a week:

\[\frac{5 + 10 + (-2) + (-5) + 0 + 4 + (-1)}{7} = \frac{11}{7} = 1\frac{4}{7}\text{.}\]

Therefore, the average temperature at noon for the week is \(1\frac{4}{7}\text{.}\)
The total income of all 10 workers is 10 times the average income, or $156,650. The 2 workers who each earned $20,000 made a total of $40,000, so the total income of the remaining 8 workers was $156,650 − $40,000 = $116,650. Therefore, the average annual income of the 8 remaining workers is \( \frac{116,650}{8} \) = $14,581.25.

G-2

The Median. If we arrange \( N \) numbers in order, the median is the middle number if \( N \) is odd and the average of the two middle numbers if \( N \) is even. In the first example in G-1, the median score was 78; in the second example, the median temperature for the week was 0. Notice that the medians are different from the averages. In the third example, we don’t have enough data to find the median, although we know the average.

In general, the median and the average of a collection of numbers are different.

I-H. Powers, Exponents, and Roots

H-1

If \( b \) is any number and \( n \) is a positive integer, \( b^n \) means the product of \( n \) factors each of which is equal to \( b \). Thus,

\( b^n = b \times b \times b \times \cdots \times b \), where there are \( n \) copies of \( b \).

If \( n = 1 \), there is only one copy of \( b \) so \( b^1 = b \). Here are some examples.

\[
2^5 = 2 \times 2 \times 2 \times 2 \times 2 = 32, \quad (-4)^3 = (-4) \times (-4) \times (-4) = -64,
\]

\[
\frac{3^2}{4} = \frac{3 \times 3}{4} = \frac{9}{4}, \quad 1^n = 1 \text{ for any } n, \quad 0^n = 0 \text{ for any } n.
\]

\( b^n \) is read as “\( b \) raised to the \( n \)th power.” \( b^2 \), read as “\( b \) squared,” is always greater than 0 (positive) if \( b \) is not zero, since the product of two negative numbers is positive. \( b^3 \), read as “\( b \) cubed,” can be negative or positive.

You should know the following squares and cubes:

\[
\begin{align*}
1^2 &= 1 & 8^2 &= 64 \\
2^2 &= 4 & 9^2 &= 81 \\
3^2 &= 9 & 10^2 &= 100 \\
4^2 &= 16 & 11^2 &= 121 \\
5^2 &= 25 & 12^2 &= 144 \\
6^2 &= 36 & 13^2 &= 169 \\
7^2 &= 49 & 14^2 &= 196 \\
8^2 &= 64 & 15^2 &= 225 \\
9^2 &= 81 & 16^2 &= 256
\end{align*}
\]

If you raise a fraction \( \frac{p}{q} \), to a power, then \( \left( \frac{p}{q} \right)^n = \frac{p^n}{q^n} \).

For example,

\[
\frac{5}{4}^3 = \frac{5^3}{4^3} = \frac{125}{64}.
\]

If the value of an investment triples each year, what percent of its value today will the investment be worth in 4 years?

The value increases by a factor of 3 each year. Since the time is 4 years, there will be four factors of 3. The investment will be worth \( 3 \times 3 \times 3 \times 3 = 3^4 \) as much as it is today. \( 3^4 = 81 \), so the investment will be worth 8,100% of its value today in 4 years.

H-2

Exponents. In the expression \( b^n \), \( b \) is called the base and \( n \) is called the exponent. In the expression \( 2^5 \), 2 is the base and 5 is the exponent. The exponent tells how many factors there are.

The two basic formulas for problems involving exponents are:

1. \( b^n \times b^m = b^{n+m} \)
2. \( a^n \times b^n = (a \cdot b)^n \)

1 and 2 are called laws of exponents.

What is \( 6^3 \)?

Since \( 6 = 3 \times 2 \),

\[
\begin{align*}
6^3 &= 3^3 \times 2^3 = 27 \times 8 = 216, \\
6^3 &= 6 \times 6 \times 6 = 216
\end{align*}
\]
Find the value of $2^3 \times 2^2$.

Using formula $\text{I}$, $2^3 \times 2^2 = 2^{3+2} = 2^5$, which is 32. You can check this, since $2^3 = 8$ and $2^2 = 4$; $2^3 \times 2^2 = 8 \times 4 = 32$.

**H-3**

**Negative Exponents.** $b^0 = 1$ for any nonzero number $b$. (Note: $0^0$ is not defined.)

Using the law of exponents once more, you can define $b^{-n}$ where $n$ is a positive number. If $\text{I}$ holds, $b^{-n} \times b^n = b^{n-n} = b^0 = 1$, so $b^{-n} = \frac{1}{b^n}$. *Multiplying by $b^{-n}$ is the same as dividing by $b^n$.*

$$2^{-3} = \frac{1}{2^3} = \frac{1}{8}$$

$$\left(\frac{1}{2}\right)^{-1} = \frac{1}{\frac{1}{2}} = 2$$

**H-4**

**Roots.** If you raise a number $d$ to the $n$th power and the result is $b$, then $d$ is called the $n$th root of $b$, which is usually written as $\sqrt[n]{b} = d$. Since $2^5 = 32$, then $\frac{5}{32} = 2$.

The second root is called the square root and is written as $\sqrt{\cdot}$; the third root is called the cube root. If you read the columns of the table on page 313 from right to left, you have a table of square roots and cube roots. For example,

$$\sqrt{225} = 15; \sqrt{81} = 9; \sqrt[3]{64} = 4.$$ 

There are two possibilities for the square root of a positive number; the square root of 9 is +3 and -3. The symbol $\sqrt{9}$ stands for the positive square root only; thus $\sqrt{9} = 3$.

Since the square of any nonzero number is positive, the square root of a negative number is not defined as a real number. Thus $\sqrt{-2}$ is not a real number. There are cube roots of negative numbers. $\sqrt[3]{-8} = -2$ because $(-2) \times (-2) \times (-2) = -8$.

You can also write roots as exponents; for example,

$$\sqrt[n]{b} = b^{1/n}, \text{ so } \sqrt{b} = b^{1/2}, \sqrt[3]{b} = b^{1/3}$$

Since you can write roots as exponents, formula $\text{II}$ in Section H–2 is especially useful.

$$a^{1/n} \times b^{1/n} = (a \cdot b)^{1/n} \text{ or } \sqrt[n]{a \times b} = \sqrt[n]{a} \times \sqrt[n]{b}.$$
Some examples of algebraic expressions are \(2x + y\), \(y^2 + 9y, z^2 - 5ab, c + d + 4, 5x + 2y(6x - 4y + z)\). When letters or numbers are written together without any sign or symbol between them, multiplication is assumed. Thus \(6xy\) means 6 times \(x\) times \(y\). \(6xy\) is called a term; terms are separated by + or − signs. The expression \(5z + 2 + 4x^2\) has three terms, 5, 2, and \(4x^2\). An expression consisting of one term is called a monomial (mono = one). If any expression has more than one term, it is called a polynomial (poly = many). The letters in an algebraic expression are called variables or unknowns. When a variable is multiplied by a number, the number is called the coefficient of the variable. In the expression \(5x^2 + 2yz\), the coefficient of \(x^2\) is 5, and the coefficient of \(yz\) is 2.

**A–2**

**Simplifying Algebraic Expressions.** You must be able to recognize algebraic expressions that are equal. It will also save time when you are working problems if you can change a complicated expression into a simpler one.

Case I. Simplifying expressions that don’t contain parentheses:

1. Perform any multiplications or divisions before performing additions or subtractions. Thus, the expression \(6x + y \div x\) means add 6x to the quotient of \(y\) divided by \(x\). Another way of writing the expression would be \(6x + \frac{y}{x}\). This is not the same as \(\frac{6x + y}{x}\).

2. The order in which you multiply numbers and letters in a term does not matter, so \(6xy\) is the same as \(6yx\).

3. The order in which you add terms does not matter; for instance, \(6x + 2y = x = 6x + x + 2y\).

4. If there are roots or powers in any terms, you may be able to simplify the term by using the laws of exponents. For example, \(5xy \cdot 3x^2y = 15x^3y^2\).

5. Combine like terms. Like terms (or similar terms) are terms that have exactly the same letters raised to the same powers; \(-2x, \frac{1}{3}x\) are like terms. For example, \(6x - 2x + x + y\) is equal to \(5x + y\). In combining like terms, you simply add or subtract the coefficients of the like terms, and the result is the coefficient of that term in the simplified expression. In our example above, the coefficients of \(x\) were \(-6, -2\), and \(+1\); since \(6 - 2 + 1 = 5\), the coefficient of \(x\) in the simplified expression is 5.

6. Algebraic expressions that involve divisions or factors can be simplified by using the techniques for handling fractions and the laws of exponents. Remember: dividing by \(b^n\) is the same as multiplying by \(b^{-n}\).

\[
3x^2 - 4\sqrt{x} + \sqrt{4x + xy} + 7x^2 = ?
\]

\[
\sqrt{4x} = \sqrt{4} \cdot \sqrt{x} = 2 \cdot \sqrt{x}.
\]

\[
3x^2 + 7x^2 = 10x^2, -4 \cdot \sqrt{x} + 2 \cdot \sqrt{x} = -2 \cdot \sqrt{x}.
\]

The original expression equals \(3x^2 + 7x^2 - 4 \cdot \sqrt{x} + 2 \cdot \sqrt{x} + xy\). Therefore, the simplified expression is \(10x^2 - 2 \cdot \sqrt{x} + xy\).

**Simplify \(\frac{21x^4y^2}{3x^6y}\).**

\[
\frac{21x^4y^2}{3x^6y} = \frac{7}{x^2}.
\]

\[
\frac{2x}{y} - \frac{4}{x} \text{ as a single fraction.}
\]

6. A common denominator is \(xy\) so \(\frac{2x}{y} = \frac{2x \cdot x}{y \cdot x} = \frac{2x^2}{xy}\), and \(\frac{4y}{x} = \frac{4y}{x} \cdot \frac{x}{x} = \frac{4y}{xy}\).

Therefore, \(\frac{2x}{y} - \frac{4}{x} = \frac{2x^2}{xy} - \frac{4y}{xy} = \frac{2x^2 - 4y}{xy}\).

Case II. Simplifying expressions that have parentheses:

The first rule is to perform the operations inside parentheses before doing the others. Thus, \((6x + y) + x\) means divide the sum of \(6x\) and \(y\) by \(x\). Notice that \((6x + y) + x\) is different from \(6x + y \cdot x\).

The main rule for getting rid of parentheses is the distributive law, which is expressed as \(a(b + c) = ab + ac\). In other words, if any monomial is followed by an expression contained in parentheses, then each term of the expression is multiplied by the monomial. Once we have gotten rid of the parentheses, we proceed as we did in Case I.

\[
2x(6x - 4y + 2) = (2x)(6x) + (2x)(-4y) + (2x)(2) = 12x^2 - 8xy + 4x.
\]

If an expression has more than one set of parentheses, get rid of the inner parentheses first and then work out through the rest of the parentheses.
To remove the inner parentheses we multiply \(6(x - 3y)\), getting \(6x - 18y\). Now we have \(2x - (x + 6x - 18y + 4y)\), which equals \(2x - (7x - 14y)\). Distribute the minus sign (multiply by \(-1\)), getting \(2x - 7x - (-14y) = -5x + 14y\).

Sometimes brackets are used instead of parentheses.

\[
-3x \left[ \frac{1}{2} (3x - 2y) - 2(3x + y + 4y) \right] = -3x \left[ \frac{1}{2} (3x - 2y) - 2(3x + xy + 4y) \right] = -3x \left[ \frac{3}{2} x - y - 6x - 2xy - 8y \right] = -3x \left[ \frac{9}{2} x - 2xy - 9y \right] = \frac{27}{2} x^2 + 6x^2y + 27xy
\]

\[A-3\]

**Adding and Subtracting Algebraic Expressions.** Since algebraic expressions are numbers, they can be added and subtracted.

**The only algebraic terms that can be combined are like terms.**

\[
(3x + 4y - xy^2) + (3x + 2x(x - y)) = ?
\]

\[= (3x + 4y - xy^2) + (3x + 2x^2 - 2xy), \text{ removing the inner parentheses;}
\]

\[= 6x + 4y + 2x^2 - xy^2 - 2xy, \text{ combining like terms.}
\]

\[
(2a + 3a^2 - 4) - 2(4a^2 - 2(a + 4)) = ?
\]

\[= (2a + 3a^2 - 4) - 2(4a^2 - 2a - 8), \text{ removing inner parentheses;}
\]

\[= 2a + 3a^2 - 4 - 8a^2 + 4a + 16, \text{ removing outer parentheses;}
\]

\[= -5a^2 + 6a + 12, \text{ combining like terms.}
\]

\[A-4\]

**Multiplying Algebraic Expressions.** When you multiply two expressions, you multiply each term of the first by each term of the second.

\[
(b - 4)(b + a) = b(b + a) - 4(b + a) = ?
\]

\[= b^2 + ab - 4b - 4a.
\]

\[
(2h - 4)(h + 2h^2 + h^3) = ?
\]

\[= 2h^3 + 4h + 4h - 8h - 8h^2 - 4h^3
\]

\[= -4h + 6h^2 + 2h^3, \text{ which is the product.}
\]

If you need to multiply more than two expressions, multiply the first two expressions, then multiply the result by the third expression, and so on until you have used each factor. Since algebraic expressions can be multiplied, they can be squared, cubed, or raised to other powers.

\[
(x - 2y)^3 = (x - 2y)(x - 2y)(x - 2y).
\]

Since \((x - 2y)(x - 2y) = x^2 - 2xy - 2xy + 4y^2\)

\[= x^2 - 4xy + 4y^2,
\]

then \((x - 2y)^3 = (x^2 - 4xy + 4y^2) (x - 2y)\)

\[= x(x^2 - 4xy + 4y^2) - 2(x^2 - 4xy + 4y^2)
\]

\[= x^3 - 4x^2y + 4xy^2 - 2x^2y + 8xy^2 - 8y^3
\]

\[= x^3 - 6x^2y + 12xy^2 - 8y^3.
\]

The order in which you multiply algebraic expressions does not matter. Thus \((2a + b)(x^2 + 2x) = (x^2 + 2x)(2a + b)\).

If \(a\) and \(b\) are two-digit numbers and the last digit of \(a\) is 7 and the last digit of \(b\) is 8, what is the last digit of \(a\) times \(b\)?

The key to problems such as this one is to think of a number in terms of its digits. Thus, \(a\) must be written as \(ax^7\), where \(x\) is a digit. This means that \(a = 10x + 7\). In the same way, \(b = 10y + 8\) for some digit \(y\). Therefore, \(a\) times \(b\) is \((10x + 7)(10y + 8)\), which is \(100xy + 80x + 70y + 56\). The digits \(x\) and \(y\) are each multiplied by 10 or 100, so they will not affect the units place. The only term that will affect the units place is 56, so the unit digit or last digit of \(a\) times \(b\) is 6.

This pattern works all the time and can be expressed by the following rule: **The last digit of the product of two
numbers is the last digit of the product of the last dig-
its of the two numbers. For example, the last digit of
136 times 157 is 2 because the last digit of 6 times 7 is 2.

A–5

Factoring Algebraic Expressions. If an algebraic
expression is the product of other algebraic expressions,
then the expressions are called factors of the original
expression. For instance, we say that \((2h - 4)\) and \((h + 2h^2 + h^3)\) are factors of \(-4h - 6h^2 + 2h^3\). We can always check
to see whether we have the correct factors by multiplying.
From the second example in A–4, we see that our claim is
correct. We need to be able to factor algebraic expressions
in order to solve quadratic equations. Factoring also can be
helpful in dividing algebraic expressions.

First remove any monomial factor that appears in every
term of the expression. Here are some examples:

\[
3x + 3y = 3(x + y): \quad \text{3 is a monomial factor.}
\]

\[
15a^2b + 10ab = 5ab(3a + 2): \quad \text{5ab is a monomial factor.}
\]

\[
\frac{1}{2}hy - 3h^2 + 4hy = h\left(\frac{1}{2}y - 3h^2 + 4y\right)
= h\left(\frac{9}{2}y - 3h^2\right): h \text{ is a monomial factor}
\]

You may also need to factor expressions that contain
squares or higher powers into factors that contain only
linear terms. (Linear terms are terms in which variables
are raised only to the first power). The first rule to remem-
ber is that, since \((a + b)(a - b) = a^2 + ba - ba - b^2 = a^2 - b^2\), the difference of two squares can always be factored.

\[
\text{Factor } (9m^2 - 16).
\]

\[9m^2 = (3m)^2 \text{ and } 16 = 4^2, \text{ so the factors are } (3m - 4)
(3m + 4).
\]

Since \((3m - 4)(3m + 4) = 9m^2 - 16\), these factors are
correct.

\[
\text{Factor } x^4y^4 - 4x^2.
\]

\[x^4y^4 = (x^2y^2)^2 \text{ and } 4x^2 = (2x)^2, \text{ so the factors are } x^2y^2 + 2x \text{ and } x^2y^2 - 2x.
\]

You also may need to factor expressions that contain
squared terms and linear terms, such as \(x^2 + 4x + 3\). The
factors will be of the form \((x + a)\) and \((x + b)\). Since \((x + a)(x + b) = x^2 + (a + b)x + ab\), you must look for a pair of
numbers \(a\) and \(b\) such that \(a \cdot b\) is the numerical term in
the expression and \(a + b\) is the coefficient of the linear
term (the term with exponent 1).

\[
\text{You want numbers whose product is 3 and whose sum is 4. Look at the possible factors of 3 and check whether}
\text{ they add up to 4. Since } 3 = 3 \times 1 \text{ and } 3 + 1 = 4, \text{ the}
\text{ factors are } (x + 3) \text{ and } (x + 1). \text{ Remember to check by}
multiplying.
\]

\[
\text{Factor } y^2 + y - 6.
\]

\[\text{Since } -6 \text{ is negative, the two numbers } a \text{ and } b \text{ must be of}
\text{ opposite sign. Possible pairs of factors for } -6 \text{ are } -6 \text{ and}
+1, 6 \text{ and } -1, 3 \text{ and } -2, \text{ and } -3 \text{ and } 2. \text{ Since } -2 + 3 = 1,
\text{ the factors are } (y + 3) \text{ and } (y - 2). \text{ Thus, } (y + 3)(y - 2) = y^2 + y - 6.
\]

\[
\text{Factor } a^3 + 4a^2 + 4a.
\]

\[\text{Factor out } a, \text{ so } a^3 + 4a^2 + 4a = a(a^2 + 4a + 4). \text{ Consider}
\text{ } a^2 + 4a + 4; \text{ since } 2 + 2 = 4 \text{ and } 2 \times 2 = 4, \text{ the factors are}
\text{ } (a + 2) \text{ and } (a + 2). \text{ Therefore, } a^3 + 4a^2 + 4a = a(a + 2)^2.
\]

If the term with the highest exponent has a coefficient
unequal to 1, divide the entire expression by that coeffi-
cient. For example, to factor \(3a^3 + 12a^2 + 12a\), factor out
3 from each term, and the result is \(a^3 + 4a^2 + 4a\), which is \(a(a + 2)^2\). Thus, \(3a^3 + 12a^2 + 12a = 3a(a + 2)^2\).

There are some expressions that cannot be factored, for
example, \(x^2 + 4x + 6\). In general, if you can't factor some-
thing by using the methods given above, don't waste a lot
of time on the question. Sometimes you may be able to
find the correct factors by checking the answer choices.

A–6

Division of Algebraic Expressions. The main things
to remember in division are:

1. When you divide a sum, you can get the same result
by dividing each term and adding quotients.
For example:

\[
\frac{9x + 4xy + y^2}{x} = \frac{9x}{x} + \frac{4xy}{x} + \frac{y^2}{x} = 9 + 4y + \frac{y^2}{x}.
\]

2. You can cancel common factors, so the results on fac-
toring will be helpful. For example:

\[
\frac{x^2 - 2x}{x - 2} = \frac{x(x - 2)}{x - 2} = x.
\]

You can also divide one algebraic expression by another
using long division.
Consider the equation \( x^2 + y^2 = 5x \).

If \( x = 1 \) and \( y = 2 \), then the left side is \( 1^2 + 2^2 \), which equals \( 1 + 4 = 5 \). The right side is \( 5 \cdot 1 = 5 \); since both sides are equal to \( 5 \), \( x = 1 \) and \( y = 2 \) is a solution.

If \( x = 5 \) and \( y = 0 \), then the left side is \( 5^2 + 0^2 = 25 \) and the right side is \( 5 \cdot 5 = 25 \), so \( x = 5 \) and \( y = 0 \) is also a solution.

If \( x = 1 \) and \( y = 1 \), then the left side is \( 1^2 + 1^2 = 2 \) and the right side is \( 5 \cdot 1 = 5 \). Therefore, since \( 2 \neq 5 \), \( x = 1 \) and \( y = 1 \) is not a solution.

Some equations do not have any solutions that are real numbers. For example, since the square of any real number is positive or zero, the equation \( x^2 = -4 \) does not have any real-number solutions.

**B-3**

**Equivalence.** One equation is equivalent to another equation if the two have exactly the same solutions. The basic idea in solving equations is to transform a given equation into an equivalent equation whose solutions are obvious.

**The two main tools for solving equations are:**

1. If you add or subtract the same algebraic expression to or from each side of an equation, the resulting equation is equivalent to the original equation.
2. If you multiply or divide both sides of an equation by the same nonzero algebraic expression, the resulting equation is equivalent to the original equation.

The most common type of equation is the linear equation with only one unknown. For example, \( 6x = 4x - 3 \), \( 3a + a = 2a - 4 \), and \( 3b + 2b = b - 4b \) are linear equations, each with only one unknown.

Using 1 and 2, you can solve a linear equation in one unknown in the following way:

(a) Group all the terms that involve the unknown on one side of the equation and all the purely numerical terms on the other side of the equation. This is called isolating the unknown.
(b) Combine the terms on each side.
(c) Divide each side by the coefficient of the unknown.

\[
\text{Solve } 6x + 2 = 3 \text{ for } x.
\]

(a) Using 1, subtract 2 from each side of the equation. Then \( 6x + 2 - 2 = 3 - 2 \) or \( 6x = 3 - 2 \).

(b) \( 6x = 1 \)

(c) Divide each side by 6. Therefore, \( x = \frac{1}{6} \).
You should always check your answer in the original equation,

since \( 6 \left( \frac{1}{6} \right) + 2 = 1 + 2 = 3, \ x = \frac{1}{6} \) is a solution.

\[
\text{Solve } 3x + 15 = 3 - 4x \text{ for } x.
\]

(a) Add \( 4x \) to each side and subtract 15 from each side. Then \( 3x + 15 - 15 + 4x = 3 - 15 - 4x + 4x \).

(b) \( 7x = -12 \).

(c) Divide each side by 7. Thus, \( x = \frac{-12}{7} \) is the solution.

**CHECK:**

\[
3 \left( \frac{-12}{7} \right) + 15 = \frac{-36}{7} + 15 = \frac{69}{7}
\]

and \( 3 - 4 \left( \frac{-12}{7} \right) = 3 + \frac{48}{7} = \frac{69}{7} \).

If you do the same thing to each side of an equation, the result is still an equation but it may not be equivalent to the original equation. Be especially careful if you square each side of an equation. For example, \( x = -4 \) is an equation; square both sides and you get \( x^2 = 16 \), which has both \( x = 4 \) and \( x = -4 \) as solutions. Always check your answer in the original equation.

If the equation you want to solve involves square roots, get rid of the square roots by squaring each side of the equation. Remember to check your answer since squaring each side does not always give an equivalent equations.

\[
\text{Solve } \sqrt{4x + 3} = 5.
\]

Square both sides: \( (\sqrt{4x + 3})^2 = 4x + 3 \) and \( 5^2 = 25 \), so the new equation is \( 4x + 3 = 25 \). Subtract 3 from each side to get \( 4x = 22 \) and now divide each side by 4. The solution is \( x = \frac{22}{4} = 5.5 \). Since \( 4(5.5) + 3 = 25 \) and \( \sqrt{25} = 5 \), \( x = 5.5 \) is a solution to the equation \( \sqrt{4x + 3} = 5 \).

If an equation involves fractions, multiply through by a common denominator and then solve. Check your answer to make sure you did not multiply or divide by zero.

\[
\text{Solve } \frac{3}{a} = 9 \text{ for } a.
\]

Multiply each side by \( a \): the result is \( 3 = 9a \). Divide each side by 9, and you obtain \( \frac{3}{9} = a \) or \( a = \frac{1}{3} \). Since \( \frac{3}{1/3} = 3 \cdot 3 = 9 \), \( a = \frac{1}{3} \) is a solution.

**B-4**

You may be asked to solve two equations in two unknowns. Use one equation to solve for one unknown in terms of the other. Then change the second equation into an equation in only one unknown, which can be solved by the methods of the preceding section on equivalence.

\[
\text{Solve for } x \text{ and } y: \begin{cases} \frac{x}{y} = 3 \\ 2x + 4y = 20. \end{cases}
\]

The first equation gives \( x = 3y \). Using \( x = 3y \), we find that the second equation is \( 2(3y) + 4y = 6y + 4y \) or \( 10y = 20 \), so \( y = \frac{20}{10} = 2 \). Since \( x = 3y \), \( x = 6 \).

**CHECK:**

\[
\frac{6}{2} = 3, \text{ and } 2 \cdot 6 + 4 \cdot 2 = 20,
\]

so \( x = 6 \) and \( y = 2 \) is a solution.

If \( 2x + y = 5 \) and \( x + y = 4 \), find \( x \) and \( y \).

Since \( x + y = 4 \), \( y = 4 - x \), so \( 2x + y = 2x + 4 - x = x + 4 = 5 \) and \( x = 1 \). If \( x = 1 \), then \( y = 4 - 1 = 3 \), so \( x = 1 \) and \( y = 3 \) is the solution.

**CHECK:**

\[
2 \cdot 1 + 3 = 5 \text{ and } 1 + 3 = 4.
\]

Sometimes we can solve two equations by adding them or by subtracting one from the other. If we subtract \( x + y = 4 \) from \( 2x + y = 5 \) in the second example in B-4, we have \( x = 1 \). However, the method explained above will work in cases where the addition method does not work.

**B-5**

**Solving Quadratic Equations.** If the terms of an equation contain squares of the unknown as well as linear terms, the equation is called quadratic. Some examples of quadratic equations are \( x^2 + 4x = 3 \), \( 2z^2 - 1 = 3z^2 - 2z \), and \( a + 6 = a^2 + 6 \).
To solve a quadratic equation:

1. Group all the terms on one side of the equation so that the other side is zero.
2. Combine the terms on the nonzero side.
3. Factor the expression into linear expressions.
4. Set the linear factors equal to zero and solve.

The method depends on the fact that if a product of expressions is zero then at least one of the expressions must be zero.

Solve \( x^2 + 4x = -3 \).

1. \( x^2 + 4x + 3 = 0 \)
2. \( x^2 + 4x + 3 = (x + 3)(x + 1) = 0 \)
3. Then \( x + 3 = 0 \) or \( x + 1 = 0 \). Therefore, the solutions are \( x = -3 \) and \( x = -1 \).

CHECK:

\[
(-3)^2 + 4(-3) = 9 - 12 = -3
\]

\[
(-1)^2 + 4(-1) = 1 - 4 = -3,
\]

so \( x = -3 \) and \( x = -1 \) are solutions.

A quadratic equation will usually have two different solutions, but it is possible for a quadratic to have only one solution or even no solution.

If \( 2z^2 - 1 = 3z^2 - 2z \), what is \( z \)?

1. \( 0 = 3z^2 - 2z^2 - 2z + 1 \)
2. \( z^2 - 2z + 1 = 0 \)
3. \( z^2 - 2z + 1 = (z - 1)^2 = 0 \)
4. \( z - 1 = 0 \) or \( z = 1 \)

CHECK:

\[
2 \cdot 1^2 - 1 = 2 - 1 = 1 \text{ and } 3 \cdot 1^2 - 2 \cdot 1 = 3 - 2 = 1,
\]

so \( z = 1 \) is a solution.

Equations that may not look like quadratics may be changed into quadratics.

Find \( a \) if \( a - 3 = \frac{10}{a} \).

Multiply each side of the equation by \( a \) to obtain \( a^2 - 3a = 10 \), which is quadratic.

1. \( a^2 - 3a - 10 = 0 \)
2. \( a^2 - 3a - 10 = (a - 5)(a + 2) \)
3. Then \( a - 5 = 0 \) or \( a + 2 = 0 \)

Therefore, \( a = 5 \) and \( a = -2 \) are the solutions.

CHECK:

\[
5 - 3 = 2 = \frac{10}{5}, \text{ so } a = 5 \text{ is a solution.}
\]

\[
-2 - 3 = -5 = \frac{10}{-2}, \text{ so } a = -2 \text{ is a solution.}
\]

You can also solve quadratic equations by using the quadratic formula. The quadratic formula states that the solutions of the quadratic equation \( ax^2 + bx + c = 0 \) are

\[
x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a},
\]

usually written as \( x = \frac{1}{2a} \left[ -b \pm \sqrt{b^2 - 4ac} \right] \). Use of the quadratic formula would replace 3 and 4.

Find \( x \) if \( x^2 + 5x = 12 - x^2 \).

1. \( x^2 + 5x + x^2 - 12 = 0 \)
2. \( 2x^2 + 5x - 12 = 0 \)

Then \( a = 2 \), \( b = 5 \) and \( c = -12 \). Therefore, using the quadratic formula, we find that the solutions are

\[
x = \frac{1}{4} \left[ -5 \pm \sqrt{25 - 4 \cdot 2 \cdot (-12)} \right] = \frac{1}{4} \left[ -5 \pm \sqrt{25 + 96} \right] = \frac{1}{4} \left[ -5 \pm \sqrt{121} \right]
\]

So we have \( x = \frac{1}{4} \left[ -5 \pm 11 \right] \). The solutions are \( x = \frac{3}{2} \) and \( x = -4 \).

CHECK:

\[
\left( \frac{3}{2} \right)^2 + 5 \cdot \frac{3}{2} = \frac{9}{4} + \frac{15}{2} = \frac{39}{4} = 12 - \frac{9}{4} = 12 - \left( \frac{3}{2} \right)^2
\]

\[
(-4)^2 + 5(-4) = 16 - 20 = -4 = 12 - 16 = 12 - (-4)^2
\]

NOTE: If \( b^2 - 4ac \) is negative, then the quadratic equation \( ax^2 + bx + c = 0 \) has no real solutions because negative numbers do not have real square roots.

The quadratic formula will always give you the solutions to a quadratic equation. If, however, you can factor the equation, factoring will usually give you the solution in less time. Remember: you want to answer as many questions as you can in the time given, so factor if you can. If you don’t see the factor immediately, then use the formula.
Practice Exercises

1. If \( r = \frac{s}{3} \) and \( 4r = 5t \), what is \( s \) in terms of \( t \)?
   (A) \( \frac{4t}{15} \)  (B) \( \frac{15t}{4} \)  (C) \( 4t \)  (D) \( 5t \)  (E) \( 60t \)

2. If \( \frac{1}{r} = 3 \) and \( s = 3 \), what is \( r \) in terms of \( s \)?
   (A) \( s \)  (B) \( 3 - s \)  (C) \( \frac{1}{s} \)  (D) \( -s \)  (E) \( 9s \)

3. \( \frac{a}{b} = c; \; b = c; \; b = ? \)
   (A) \( \frac{a}{2} \)  (B) \( \sqrt{a} \)  (C) \( \frac{a}{6} \)  (D) \( 2a \)  (E) \( a^2 \)

4. \( z + \frac{1}{z} = 2; \; z = ? \)
   (A) \( \frac{1}{2} \)  (B) \( 1 \)  (C) \( \frac{1}{2} \)  (D) \( 2 \)  (E) \( 2\frac{1}{2} \)

5. If \( \frac{n + n}{7 + 5} = \frac{12}{35} \), what is the numerical value of \( n \)?
   (A) \( 1 \)  (B) \( \sqrt{12} \)  (C) \( 6 \)  (D) \( 17.5 \)  (E) \( 35 \)

6. \( \frac{ca^2-cb^2}{-a-b} \) is equivalent to \( cb + ? \)
   (A) \( ac \)  (B) \( -ac \)  (C) \( 1 \)  (D) \( -1 \)  (E) \( c \)

7. \( \sqrt{0.09} = 3; \; x = ? \)
   (A) \( \frac{1}{10} \)  (B) \( \frac{3}{10} \)  (C) \( \frac{1}{3} \)  (D) \( 1 \)  (E) \( 10 \)

8. \( 7x - 5y = 13 \)
   \( 2x - 7y = 26 \)
   \( 9x - 12y = ? \)
   (A) \( 13 \)  (B) \( 26 \)  (C) \( 39 \)  (D) \( 40 \)  (E) \( 52 \)

9. \( ab - 2cd = p \)
   \( \frac{ab - 2cd}{6cd - 3ab} = \frac{r}{p} \)
   \( p = (?)r \)
   (A) \( -3 \)  (B) \( -\frac{1}{3} \)  (C) \( \frac{1}{3} \)  (D) \( 1 \)  (E) \( 3 \)

10. \( \sqrt[3]{\frac{16}{36}} + \frac{1}{4} = ? \)
    (A) \( \frac{2}{5} \)  (B) \( \frac{1}{3} \)  (C) \( \frac{5}{6} \)  (D) \( \frac{11}{12} \)  (E) \( \frac{7}{6} \)

11. \( \frac{z + \frac{2}{z}}{z} = 2z; \; z^2 = (?) \)
    (A) \( 0 \)  (B) \( \frac{1}{2} \)  (C) \( 1 \)  (D) \( \frac{1}{2} \)  (E) \( 2 \)

12. \( \frac{1}{\frac{1 + N}{N}} = ? \)
    (A) \( 1 \)  (B) \( \frac{1}{N} \)  (C) \( \frac{1}{N} \)  (D) \( N \)  (E) \( N^2 \)

13. If \( \frac{1}{x} = \frac{a}{b} \), then \( x \) equals the
    (A) sum of \( a \) and \( b \)
    (B) product of \( a \) and \( b \)
    (C) difference of \( a \) and \( b \)
    (D) quotient of \( a \) and \( b \)
    (E) quotient of \( a \) and \( b \)

14. \( x^2 + y = 9 \)
    \( x^2 - y = -1 \)
    \( y = ? \)
    (A) \( 1 \)  (B) \( \pm 3 \)  (C) \( 5 \)  (D) \( 8 \)  (E) \( 10 \)

15. \( 2x - 4y = -10 \)
    \( 5x - 3y = -3 \)
    \( 3x + 7y = ? \)
    (A) \( \frac{3}{5} \)  (B) \( \frac{2}{3} \)  (C) \( -7 \)  (D) \( \pm 7 \)  (E) \( 7 \)

16. \( 5x - 3y = 3 \)
    \( 2x - 4y = -10 \)
    \( 3x + y = (?) \)
    (A) \( -30 \)  (B) \( -13 \)  (C) \( -7 \)  (D) \( 7 \)  (E) \( 13 \)

17. \( 4y - x = 10 \)
    \( 3x = 2y \)
    \( xy = ? \)
    (A) \( 2 \)  (B) \( 3 \)  (C) \( 6 \)  (D) \( 12 \)  (E) \( 24 \)

18. \( 3x + 10 = 9x - 20 \)
    \( (x + 5)^2 = (?) \)
    (A) \( 5 \)  (B) \( 10 \)  (C) \( 15 \)  (D) \( 25 \)  (E) \( 100 \)
19. \( \frac{a}{b} = c; \ b = c \). Find \( b \) in terms of \( a \).

(A) \( a \)  (B) \( b \)  (C) \( \pm \sqrt{b} \)  (D) \( \pm \sqrt{a} \)  (E) \( \pm \sqrt{ac} \)

20. 17xy = 22xy - 5

\( x^2y^2 = (?) \)

(A) 0  (B) 1  (C) -5  (D) 5  (E) \( \frac{4}{5} \)

---

### II–C. Verbal Problems

#### C–I

The general method for solving word problems is to translate them into algebraic problems. The quantities you are seeking are the unknowns, which are usually represented by letters. The information you are given in the problem is then turned into equations. Words such as "is," "was," and "were" mean equals, and "of" and "as much as" mean multiplication.

**A coat was sold for $75. The coat was sold for 150% of its cost. How much did the coat cost?**

You want to find the cost of the coat. Let \( \$C \) be the cost of the coat. You know that the coat was sold for $75 and that $75 was 150% of the cost. Then $75 = 150\% \text{ of } \$C \text{ or } \$75 = 1.5C$. Solving for \( C \), you get \( \frac{75}{1.5} = 50 \), so the coat cost $50.

**CHECK:**

\[ (1.5) \times 50 = 75. \]

**Tom's salary is 125% of Joe's salary. Mary's salary is 80% of Joe's salary. The total of all three salaries is $61,000. What is Mary's salary?**

Let \( M = \text{Mary's salary, } J = \text{Joe's salary, and } T = \text{Tom's salary. } \) The first sentence says \( T = 125\% \text{ of } J \text{ or } T = \frac{5}{4} J \), and \( M = 80\% \text{ of } J \text{ or } M = \frac{4}{5} J \). The second sentence says that \( T + M + J = 61,000 \). Using the information from the first sentence, we can write

\[ T + M + J = \frac{5}{4} J + \frac{4}{5} J + J = \frac{25}{20} J + \frac{16}{20} J + J = \frac{61}{20} J. \]

Therefore, \( \frac{61}{20} J = 61,000 \); solving for \( J \), we have \( J = \frac{20}{61} \times 61,000 = 20,000 \).

\( 61,000 = 20,000. \) Therefore, \( T = \frac{5}{4} \times 20,000 = $25,000 \) and \( M = \frac{4}{5} \times 20,000 = $16,000. \)

**CHECK:**

\[ $25,000 + $16,000 + $20,000 = $61,000. \]

Mary's salary is $16,000.

**Steve weighs 25 pounds more than Jim. Their combined weight is 325 pounds. How much does Jim weigh?**

Let \( S = \text{Steve's weight in pounds and } J = \text{Jim's weight in pounds. The first sentence says } S = J + 25, \text{ and the second sentence becomes } S + J = 325. \text{ Since } S = J + 25, S + J = 325 \text{ becomes } J + 25 + J = 2J + 25 = 325. \text{ So } 2J = 300 \text{ and } J = 150. \) Therefore, Jim weighs 150 pounds.

**CHECK:**

If Jim weighs 150 pounds, then Steve weighs 175 pounds and \( 150 + 175 = 325. \)

**A carpenter is designing a closet. The floor will be in the shape of a rectangle whose length is 2 feet more than its width. How long should the closet be if the carpenter wants the area of the floor to be 15 square feet?**

The area of a rectangle is length times width, usually written as \( A = LW \), where \( A \) is the area, \( L \) is the length, and \( W \) is the width. We know \( A = 15 \) and \( L = 2 + W \). Therefore, \( LW = (2 + W) W = W^2 + 2W; \) this must equal 15. Therefore, we need to solve \( W^2 + 2W = 15 \) or \( W^2 + 2W - 15 = 0. \)

Since \( W^2 + 2W - 15 \) factors into \((W + 5)(W - 3)\), the only possible solutions are \( W = -5 \) and \( W = 3. \) Since \( W \) represents a width, -5 cannot be the answer; therefore the width is 3 feet. The length is the width plus 2 feet, so the length is 5 feet. Since \( 5 	imes 3 = 15 \), the answer checks.
Practice Exercises

1. How many cents are there in $2x - 1$ dimes?
   (A) $10x$  (B) $20x - 10$  (C) $19x$  (D) $\frac{2x - 1}{10}$
   (E) $\frac{x}{5} - 1$

2. How many nickels are there in $c$ cents and $q$ quarters?
   (A) $\frac{c + 5q}{5}$  (B) $5(c + q)$  (C) $5c + \frac{q}{5}$
   (D) $c + \frac{q}{5}$  (E) $c + 25q$

3. How many days are there in $w$ weeks and $w$ days?
   (A) $7w^2$  (B) $7$  (C) $8w$  (D) $14w$  (E) $7w$

4. How many pupils can be seated in a room with $s$ single seats and $d$ double seats?
   (A) $sd$  (B) $2sd$  (C) $2(s + d)$  (D) $2d + s$
   (E) $2s + d$

5. A classroom has $r$ rows of desks with $d$ desks in each row. On a particular day when all pupils are present 3 seats are left vacant. The number of pupils in this class is
   (A) $dr - 3$  (B) $d + r + 3$  (C) $dr + 3$  (D) $\frac{r}{d} + 3$
   (E) $\frac{d + r}{3}$

6. A storekeeper had $n$ loaves of bread. By noon he had $s$ loaves left. How many loaves did he sell?
   (A) $s - n$  (B) $s - n$  (C) $n + s$  (D) $sn - s$
   (E) $\frac{n}{s}$

7. A man has $d$ dollars and spends $s$ cents. How many dollars has he left?
   (A) $d - s$  (B) $s - d$  (C) $100d - s$
   (D) $\frac{100d - s}{100}$  (E) $\frac{d - s}{100}$

8. How much change (in cents) would a woman who purchases $p$ pounds of sugar at $c$ cents per pound receive from a one-dollar bill?
   (A) $100 - p - c$  (B) $pc - 100$  (C) $100 - pc$
   (D) $100 - p + c$  (E) $pc + 100$

9. Sylvia is two years younger than Mary. If Mary is $m$ years old, how old was Sylvia two years ago?
   (A) $m + 2$  (B) $m - 2$  (C) $m - 4$  (D) $m + 4$
   (E) $2m - 2$

10. A storekeeper sold $n$ articles at $D$ each and thereby made a profit of $r$ dollars. The cost to the storekeeper for each article was
    (A) $Dn - r$  (B) $D(n - r)$  (C) $\frac{Dn - r}{n}$
    (D) $\frac{D(n - r)}{n}$  (E) $\frac{Dn + r}{n}$

**Answer Key**

3. C  7. D
4. D  8. C

---

C–2

Distance Problems. A common type of word problem is a distance or velocity problem. The basic formula is

**DISTANCE TRAVELED = RATE \times TIME**

The formula is abbreviated $d = rt$.

The distance an object travels is the product of its average speed (rate) and the time it is traveling. This formula can be readily converted to express time in terms of distance and rate by dividing each side by $r$:

$t = \frac{d}{r}$

It can also be changed to a formula for rate by dividing it by $t$:

$r = \frac{d}{t}$.

You should memorize the original formula, $d = rt$, and know how to convert it quickly to the others.

A train travels at an average speed of 50 miles per hour for 2 $\frac{1}{2}$ hours and then travels at a speed of 70 miles per hour for 1 $\frac{1}{2}$ hours. How far did the train travel in the entire 4 hours?

The train traveled for 2 $\frac{1}{2}$ hours at an average speed of 50 miles per hour, so it traveled $50 \times \frac{5}{2} = 125$ miles in the first...
2 \frac{1}{2} \text{ hours. At a speed of 70 miles per hour for } 1 \frac{1}{2} \text{ hours, the distance traveled will be equal to } r \times t, \text{ where } r = 70 \\
\text{miles per hour and } t = 1 \frac{1}{2}, \text{ so the distance is } 70 \times \frac{3}{2} = 105 \text{ miles. Therefore, the total distance traveled is } 125 + 105 = 230 \text{ miles.}

The distance from Cleveland to Buffalo is 200 miles. A train takes $3 \frac{1}{2}$ hours to go from Buffalo to Cleveland and $4 \frac{1}{2}$ hours to go back from Cleveland to Buffalo. What was the average speed of the train for the round trip from Buffalo to Cleveland and back?

The train took $3 \frac{1}{2} + 4 \frac{1}{2} = 8 \text{ hours for the trip. The distance of a round trip is } 2(200) = 400 \text{ miles. Since } d = rt \text{ then } 400 = r \times 8 \text{ hours. Solve for } r \text{ and you have } r = \frac{400 \text{ miles}}{8 \text{ hours}} = 50 \text{ miles per hour. Therefore the average speed is } 50 \text{ miles per hour.}

The speed in the formula is the average speed. If you know that there are different speeds for different lengths of time, then you must use the formula more than once, as we did in the first example in C~2.

---

Practice Exercises

1. An automobile travels at the rate of 55 miles per hour on the Pennsylvania Turnpike. How many minutes will it take to travel $\frac{2}{3}$ of a mile at this rate?

   (A) 0.2  (B) 0.72  (C) 2.2  (D) 13.5  (E) 22

2. Miguel leaves by automobile at 9:00 A.M. and stops for repairs at 9:20 A.M. If the distance covered was 18 miles, what was the average velocity, in miles per hour, for this part of the trip?

   (A) 5.4  (B) 6  (C) 54  (D) 36  (E) 60

3. A man runs $y$ yards in $m$ minutes. What is his rate, in yards per hour?

   (A) $\frac{y}{60m}$  (B) $\frac{m}{60y}$  (C) $60my$  (D) $\frac{60y}{m}$  (E) $\frac{60m}{y}$

4. Ten minutes after a plane leaves the airport, it is reported that the plane is 40 miles away. What is the average speed of the plane, in miles per hour?

   (A) 66  (B) 240  (C) 400  (D) 600  (E) 660

5. An automobile passes City X at 9:55 A.M. and City Y at 10:15 A.M. City X is 30 miles from City Y. What is the average rate of the automobile, in miles per hour?

   (A) 10  (B) 30  (C) 90  (D) 120  (E) 360

6. The distance between two cities is 1,800 miles. How many gallons of gasoline will a motorist use with an automobile that uses (on the average) 1 gallon of gasoline for each 12 miles?

   (A) 150  (B) 160  (C) 216  (D) 1,500  (E) 2,160

7. How many miles does a car travel if it averages a rate of 35 miles per hour for 3 hours and 24 minutes?

   (A) 109  (B) 112  (C) 113  (D) 119  (E) 129

8. Two cars start towards each other from points 400 miles apart. One car travels at 40 miles an hour and the other travels at 35 miles an hour. How far apart, in miles, will the two cars be after 4 hours of continuous traveling?

   (A) 20  (B) 40  (C) 75  (D) 100  (E) 160

9. A motorist travels for 3 hours at 40 miles per hour and then covers a distance of 80 miles in 2 hours and 40 minutes. His average rate for the entire trip was

   (A) 35 m.p.h.
   (B) 35.3 m.p.h.
   (C) 35.5 m.p.h.
   (D) 36 m.p.h.
   (E) 37 m.p.h.

10. A man driving a distance of 90 miles averages 30 miles per hour. On the return trip he averages 45 miles per hour. His average speed for the round trip, in miles per hour, is

    (A) 34  (B) 36  (C) 37 \frac{1}{2}  (D) 40  (E) 75

11. The El Capitán of the Santa Fe traveled a distance of 152.5 miles from La Junta to Garden City in 2 hours. What was the average speed, in miles per hour?

    (A) 15.25  (B) 31.5  (C) 30.5  (D) 71  (E) 76.3
12. The distance between Portland, Oregon, and Santa Fe, New Mexico is 1,800 miles. How many hours would it take a train with an average speed of 60 miles per hour to make the trip?

(A) 30 (B) 39 (C) 48 (D) 300 (E) 480

13. A man drives for 5 hours at an average rate of 40 m.p.h. He develops some motor trouble and returns to his original starting point in 10 hours. What was his average rate on the return trip?

(A) 10 m.p.h.  
(B) 15 m.p.h.  
(C) 20 m.p.h.  
(D) 26.6 m.p.h.  
(E) 40 m.p.h.

14. If a man walks W miles in H hours, and then rides R miles in the same length of time, what is his average rate, in miles per hour, for the entire trip?

(A) \( \frac{R + W}{H} \)  
(B) \( \frac{2(R + W)}{H} \)  
(C) \( \frac{R + W}{2H} \)  
(D) \( \frac{H}{R - W} \)  
(E) \( \frac{RW - H}{2} \)

15. How long would a car traveling at 30 miles per hour take to cover a distance of 44 feet? (1 mile = 5,280 feet)

(A) 1 second  
(B) 2.64 seconds  
(C) 5.2 seconds  
(D) 1 minute  
(E) 7.7 minutes

**Answer Key**

1. B  
2. C  
3. A  
4. B  
5. C

---

**C-3**

**Work Problems.** In this type of problem you can assume that all workers in the same category work at the same rate. The main idea is this: If it takes \( k \) workers 1 hour to do a job, then each worker does \( \frac{1}{k} \) of the job in an hour or he works at the rate of \( \frac{1}{k} \) of the job per hour. If it takes \( m \) workers \( h \) hours to finish a job, then each worker does \( \frac{1}{m} \) of the job in \( h \) hours, so he does \( \frac{1}{h} \) of \( \frac{1}{m} \) in an hour. Therefore, each worker works at the rate of \( \frac{1}{mh} \) of the job per hour.

If 5 men take an hour to dig a ditch, how long should 12 men take to dig a ditch of the same type?

Since 5 workers took an hour, each worker does \( \frac{1}{5} \) of the job in an hour. Therefore, 12 workers will work at the rate of \( \frac{12}{5} \) of the job per hour. Thus, if \( T \) is the time required for 12 workers to do the job, \( \frac{12}{5} \times T = 1 \) job and \( T = \frac{5}{12} \times 1 \), so

\[ T = \frac{5}{12} \text{ hour or 25 minutes.} \]

Worker A takes 8 hours to do a job. Worker B takes 10 hours to do the same job. How long should worker A and worker B working together, but independently, take to do the same job?

Worker A works at a rate of \( \frac{1}{8} \) of the job per hour, since he takes 8 hours to finish the job. Worker B finishes the job in 10 hours, so he works at a rate of \( \frac{1}{10} \) of the job per hour.

Therefore, if they work together they should complete \( \frac{1}{8} + \frac{1}{10} = \frac{18}{80} = \frac{9}{40} \), so they work at a rate of \( \frac{9}{40} \) of the job per hour together. If \( T \) is the time they take to finish the job, \( \frac{9}{40} \times T = 1 \) job and \( T = \frac{40}{9} = \frac{4}{9} \) hours.

Therefore,

\[ \frac{9}{40} \times T = 1 \text{ and } T = \frac{40}{9} = \frac{4}{9} \text{ hours.} \]

There are two taps, tap 1 and tap 2, in a keg. If both taps are opened, the keg is drained in 20 minutes. If tap 1 is closed and tap 2 is open, the keg will be drained in 30 minutes. If tap 2 is closed and tap 1 is open, how long will it take to drain the keg?

Tap 1 and tap 2 together take 20 minutes to drain the keg.
so together they drain the keg at a rate of \( \frac{1}{20} \) of the keg per minute. Tap 2 takes 30 minutes to drain the keg by itself, so it drains the keg at the rate of \( \frac{1}{30} \) of the keg per minute. Let \( r \) be the rate at which tap 1 will drain the keg by itself. Then \( r + \frac{1}{30} \) of the keg per minute is the rate at which both taps together will drain the keg, so \( r + \frac{1}{30} = \frac{1}{20} \). Therefore, \( r = \frac{1}{20} - \frac{1}{30} = \frac{1}{60} \) and tap 1 drains the keg at the rate of \( \frac{1}{60} \) of the keg per minute. Tap 1 will take 60 minutes or 1 hour to drain the keg if tap 2 is closed.

### Practice Exercises

1. One boy can deliver newspapers on his route in \( 1 \frac{1}{4} \) hours. Another boy who takes his place one day takes 15 minutes longer to deliver these papers. How long would it take to deliver the papers if the two boys worked together?
   (A) 22 \( 1 \frac{1}{4} \) min.  (B) 37 \( 1 \frac{1}{2} \) min.  (C) 40 min.  
   (D) 50 min.  (E) 65 min.

2. A contractor estimates that he can paint a house in 5 days by using 6 men. If he actually uses only 5 men for the job, how many days will they take to paint the house?
   (A) 5  (B) \( 5 \frac{1}{4} \)  (C) \( 5 \frac{1}{2} \)  (D) 6  (E) \( 6 \frac{1}{2} \)

3. A club decided to build a cabin. The job can be done by 3 skilled workmen in 20 days or by 5 of the boys in 30 days. How many days will the job take if all work together?
   (A) 10  (B) 12  (C) \( 12 \frac{2}{3} \)  (D) 14  (E) 5

4. Andrew can do a piece of work in \( r \) days and Bill, who works faster, can do the same work in \( s \) days. Which of the following expressions, if any, represents the number of days the two of them would take to do the work if they worked together?
   \( \frac{r+s}{2} \)  (B) \( \frac{1}{r} + \frac{1}{s} \)  (C) \( r-s \)  (D) \( \frac{rs}{r+s} \)  (E) none of these

5. Four tractors working together can plow a field in 12 hours. How long will it take 6 tractors to plow a field of the same size, if all tractors work at the same rate?
   (A) 6 hr.  (B) 9 hr.  (C) 10 hr.  (D) 18 hr.  (E) 8 hr.

6. A small factory with 3 machines has a job of stamping out a number of pan covers. The newest machine can do the job in 3 days, another machine can do it in 4 days, and the third machine can do it in 6 days. How many days will the factory take to do the job, using all three machines?
   (A) \( 1 \frac{1}{3} \)  (B) \( 4 \frac{1}{3} \)  (C) 6  (D) 13  (E) \( 1 \frac{4}{9} \)

7. Steven can mow a lawn in 20 minutes and Bernard can mow the same lawn in 30 minutes. How long will they take, working together, to mow the lawn?
   (A) 10 min.  (B) \( 12 \frac{1}{2} \) min.  (C) 15 min.  
   (D) 25 min.  (E) 12 min.

8. It takes Bert an hour to do a job that Harry can do in 40 minutes. One morning they worked together for 12 minutes; then Bert went away and Harry finished the job. How long did it take him to finish?
   (A) 8 min.  (B) 16 min.  (C) 20 min.  
   (D) 28 min.  (E) 33 min.

9. One man can paint a house in \( r \) days and another man in \( s \) days. If together they can do the work in \( d \) days, the equation that expresses the amount of work done by both men in one day is
   (A) \( d = \frac{1}{r} + \frac{1}{s} \)  (B) \( \frac{1}{r} = \frac{d}{r+s} \)  (C) \( \frac{1}{d} = \frac{r+s}{rs} \)  
   (D) \( \frac{r+s}{d} = 1 \)  (E) \( \frac{d}{rs} = 1 \)

10. Linda has \( m \) minutes of homework in each of her \( s \) subjects. What part of her homework does she complete in an hour?
    (A) \( \frac{1}{ms} \)  (B) \( \frac{ms}{60} \)  (C) \( \frac{60}{ms} \)  (D) \( \frac{s}{60m} \)  
    (E) \( \frac{60m}{s} \)

11. Sam can mow a lawn in 20 minutes, while Mark takes 10 minutes longer to mow the same lawn. How long will they take to mow the lawn if they work together?
    (A) 10 min.  (B) 12 min.  
    (C) \( 12 \frac{1}{4} \) min.  (D) 15 min.  (E) more than 15 min.
12. It takes \( h \) hours to mow a lawn. What part of the lawn is mowed in 1 hour?

(A) \( h \quad (B) \quad \frac{h}{x} \quad (C) \quad hx \quad (D) \quad \frac{1}{h} \quad (E) \quad \frac{x}{h} \)

13. If \( M \) men can complete a job in \( H \) hours, how long will 5 men take to do this job?

(A) \( \frac{5M}{H} \quad (B) \quad \frac{M}{5H} \quad (C) \quad \frac{MH}{5} \quad (D) \quad \frac{5}{MH} \quad (E) \quad \frac{5H}{M} \)

14. Ann can type a manuscript in 10 hours. Florence can type the same manuscript in 5 hours. If they type this manuscript together, it can be completed in

(A) 2 hr. 30 min.
(B) 3 hr.
(C) 3 hr. 20 min.
(D) 5 hr.
(E) 7 hr. 30 min.

15. It was calculated that 75 men could complete a strip on a new highway in 20 days. When work was scheduled to commence, it was found necessary to send 25 men on another road project. How much longer will it take to complete the strip?

(A) 10 days \quad (B) 20 days \quad (C) 30 days \quad (D) 40 days \quad (E) 60 days

**Answer Key**

5. E 10. C 15. A

---

**II-D. Counting Problems**

**D-1**

Here is an example of the first type of counting problem: 50 students signed up for both English and math, and 90 students signed up for either English or math. If 25 students are taking English but are not taking math, how many students are taking math but not taking English?

In these problems, “either . . . or . . .” means that a person can take both, so the people taking both are included among the people taking either math or English.

**You must avoid counting the same people twice in these problems.** The formula is:

\[
\text{the number taking English or math} = \text{the number taking English} + \text{the number taking math} - \text{the number taking both.}
\]

You have to subtract the number taking both subjects since they are counted once with those taking English and counted again with those taking math.

A person taking English is either taking math or not taking math, so there are 50 + 25 = 75 people taking English, 50 taking English and math, and 25 taking English but not taking math. Since 75 are taking English, 90 = 75 + number taking math – 50, so 90 – 25 = 65 people are taking math. Of the people taking math, 50 are also taking English, so 65 – 50 or 15 are taking math but not English.

In a survey, 60% of those surveyed owned a car and 80% of those surveyed owned a TV. If 55% owned both a car and a TV, what percent of those surveyed owned a car or a TV but not both?

To indicate that 55% is common to both conditions, that is, owning a car and owning a TV, 55 appears in the area common to both circles in the figure. An additional 5% who owned a car but not a TV is indicated by a 5 in the circle at the left, since 60% of those surveyed owned a car. An additional 25% who owned a TV but not a car is
indicated by a 25 in the circle at the right, since 80% owned a TV. Therefore 30% owned either a car or a TV, but not both.

D-2

If an event can happen in \( m \) different ways, and each of the \( m \) ways is followed by a second event that can occur in \( k \) different ways, then the first event can be followed by the second event in \( m \cdot k \) different ways. This is called the fundamental principle of counting.

If there are 3 different roads from Syracuse to Binghamton and 4 different roads from Binghamton to Scranton, how many different routes are there from Syracuse to Scranton that go through Binghamton?

There are 3 different ways to go from Syracuse to Binghamton. Once you are in Binghamton, there are 4 different ways to get to Scranton. Using the fundamental principle of counting, you will find that there are \( 3 \times 4 = 12 \) different ways to get from Syracuse to Scranton going through Binghamton.

A club has 20 members. They are electing a president and a vice president from the members at large; there is no slate of nominees. How many different outcomes of the election are possible? (Assume the president and vice president must be different members of the club.)

There are 20 members, so there are 20 choices for president. Once a president is chosen, 19 members are left who can be vice president. Thus there are \( 20 \cdot 19 = 380 \) different possible outcomes of the election.

II-E. Ratio and Proportion

E-1

Ratio. A ratio is a comparison of two numbers by division. The ratio of \( a \) to \( b \) is written as \( a : b = \frac{a}{b} = a \div b \).

We can handle ratios as fractions, since a ratio is a fraction. In the ratio \( a : b \), \( a \) and \( b \) are called the terms of the ratio. Since \( a : b \) is a fraction, \( b \) can never be zero.

The fraction \( \frac{a}{b} \) is usually different from the fraction \( \frac{b}{a} \) (for example, \( \frac{3}{2} \) is not the same as \( \frac{2}{3} \)), so the order of the terms in a ratio is important.

If an orange costs 20¢ and an apple costs 12¢, what is the ratio of the cost of an orange to the cost of an apple?

The ratio is \( \frac{20¢}{12¢} = \frac{5}{3} \) or \( 5 : 3 \). Notice that the ratio of the cost of an apple to the cost of an orange is \( \frac{12¢}{20¢} = \frac{3}{5} \) or \( 3 : 5 \), so the order of the terms is important.

A ratio is a number, therefore, if you want to find the ratio of two quantities, they must be expressed in the same units.

What is the ratio of 8 inches to 6 feet?

Change 6 feet into inches. There are 12 inches in a foot, so \( 6 \) feet \( = 6 \times 12 \) inches \( = 72 \) inches. The ratio is \( \frac{8\text{ inches}}{72\text{ inches}} = \frac{1}{9} \) or \( 1 : 9 \).

If you regard ratios as fractions, the units must cancel out, that is, the two terms in a ratio must be expressed in the same unit of measure. In the above example, if you do not change units, the ratio would be \( \frac{8\text{ inches}}{6\text{ feet}} = \frac{4}{3} \) inches per foot, which is not a number.

If two numbers measure different quantities, their quotient is usually called a rate. For example, \( \frac{50\text{ miles}}{2\text{ hours}} \), which equal 25 miles per hour, is a rate of speed.

E-2

Proportion. A proportion is a statement that two ratios are equal. For example, \( \frac{3}{12} = \frac{1}{4} \) is a proportion; it could also be expressed as \( 3 : 12 = 1 : 4 \) or \( 3 : 12 :: 1 : 4 \).

In the proportion \( a : b = c : d \), the terms on the outside, \( a \) and \( d \), are called the extremes, and the terms on the inside, \( b \) and \( c \), are called the means. Since \( a : b \\ and \( c : d \) are ratios, \( b \) and \( d \) are both different from zero, so \( bd \neq 0 \).

Multiply each side of \( \frac{a}{b} = \frac{c}{d} \) by \( bd \); you get \( (bd) \left( \frac{a}{b} \right) = ad \) and \( (bd) \left( \frac{c}{d} \right) = bc \). Since \( bd \neq 0 \), the proportion \( \frac{a}{b} = \frac{c}{d} \) is equivalent to the equation \( ad = bc \). This is usually expressed in the following way:

In a proportion the product of the extremes is equal to the product of the means.
Find \( x \) if \( \frac{4}{5} = \frac{10}{x} \).

In the proportion \( \frac{4}{5} = \frac{10}{x} \), 4 and \( x \) are the extremes and 5 and 10 are the means, so \( 4 \times x = 5 \times 10 = 50 \). We solve for \( x \) and get \( x = \frac{50}{4} = 12.5 \).

Finding the products \( ad \) and \( bc \) is also called cross-multiplying the proportion: \( \frac{a}{b} \times \frac{c}{d} \). Cross-multiplying a proportion gives two equal numbers. The proportion \( \frac{a}{b} = \frac{c}{d} \) is read as “\( a \) is to \( b \) as \( c \) is to \( d \).”

Two numbers are in the ratio 5 : 4 and their difference is 10. What is the larger number?

Let \( m \) and \( n \) be the two numbers. Then \( \frac{m}{n} = \frac{5}{4} \) and \( m - n = 10 \). Cross-multiply the proportion and you get \( 5n = 4m \) or \( n = \frac{4}{5} m \). Then \( m - n = m - \frac{4}{5} m = \frac{1}{5} m = 10 \) and \( m = 50 \), which means \( n = \frac{4}{5} \times 50 = 40 \). Therefore, the larger number is 50.

CHECK:

\[
\frac{50}{40} = \frac{5}{4} \quad \text{and} \quad 50 - 40 = 10.
\]

Two variables, \( a \) and \( b \), are directly proportional if they satisfy a relationship of the form \( a = kb \), where \( k \) is a number that is a constant. The distance a car travels in 2 hours and its average speed for the 2 hours are directly proportional, since \( d = 2s \), where \( d \) is the distance and \( s \) is the average speed expressed in miles per hour. Here \( k = 2 \). Sometimes the word directly is omitted, so “\( a \) and \( b \) are proportional” means \( a = kb \).

If \( m \) is proportional to \( n \) and \( m = 5 \) when \( n = 4 \), what is the value of \( m \) when \( n = 18 \)?

There are two different ways to work the problem.

I. Since \( m \) and \( n \) are directly proportional, \( m = kn \); also, \( m = 5 \) when \( n = 4 \), so \( 5 = k \cdot 4 \), which means \( k = \frac{5}{4} \). Therefore, \( m = \frac{5}{4} n \). When \( n = 18 \), \( m = \frac{5}{4} \cdot 18 = \frac{90}{4} = 22.5 \).

II. Since \( m \) and \( n \) are directly proportional, \( m = kn \).

If \( n \) is some value of \( n \), then the value of \( m \) corresponding to \( n \) we will call \( m' \), and \( m' = kn' \).

Then \( \frac{m}{n} = k \) and \( \frac{m'}{n'} = k \); therefore, \( \frac{m}{n} = \frac{m'}{n'} \) is a proportion. Since \( m = 5 \) when \( n = 4 \), \( \frac{m}{n} = \frac{5}{4} = \frac{m'}{n'} \).

Cross-multiplying, we have \( 4m' = 90 \) or \( m' = \frac{90}{4} = 22.5 \).

If two quantities are proportional, you can always set up a proportion in this manner.

If a machine makes 3 yards of cloth in 2 minutes, how many yards of cloth will the machine make in 50 minutes?

The amount of cloth is proportional to the time the machine operates. Let \( y \) be the number of yards of cloth the machine makes in 50 minutes; then \( \frac{2 \text{ minutes}}{50 \text{ minutes}} = \frac{3 \text{ yards}}{y \text{ yards}} \), so \( \frac{2}{50} = \frac{3}{y} \). Cross-multiplying, you have \( 2y = 150 \), so \( y = 75 \). Therefore, the machine makes 75 yards of cloth in 50 minutes.

Since a ratio is a number, the units must cancel, so put the numbers that measure the same quantity in the same ratio.

Any two units of measurement of the same quantity are directly proportional.

How many ounces are there in \( 4 \frac{3}{4} \) pounds?

Let \( x \) be the number of ounces in \( 4 \frac{3}{4} \) pounds. Since there are 16 ounces in a pound, \( \frac{x \text{ ounces}}{16 \text{ ounces}} = \frac{4 \frac{3}{4}}{1 \text{ pound}} \).

Cross-multiply to get \( x = 16 \cdot 4 \frac{3}{4} = 16 \cdot \frac{19}{4} = 76 \); so \( 4 \frac{3}{4} \) pounds = 76 ounces.

You can always change units by using a proportion. You should know the following measurements:

**LENGTH:**
- 1 foot = 12 inches
- 1 yard = 3 feet

**AREA:**
- 1 square foot = 144 square inches
- 1 square yard = 9 square feet

**TIME:**
- 1 minute = 60 seconds
- 1 hour = 60 minutes
- 1 day = 24 hours
1 week = 7 days  
1 year = 52 weeks

VOLUME: 1 quart = 2 pints 
1 gallon = 4 quarts

WEIGHT: 1 pound = 16 ounces 
1 ton = 2,000 pounds

On a map, it is 2 1/2 inches from Harrisburg to Gary. The actual distance from Harrisburg to Gary is 750 miles. What is the actual distance from town A to town B if they are 4 inches apart on the map?

Let \( d \) miles be the distance from A to B; then \( \frac{2\frac{1}{2} \text{ inches}}{4 \text{ inches}} = \frac{750 \text{ miles}}{d \text{ miles}} \). Cross-multiplying we have \( \frac{5}{2} \) \( d \) = 4 \times 750 = 3,000, so \( d = \frac{2}{5} \times 3,000 = 1,200 \). Therefore, the distance from A to B is 1,200 miles. Problems like this one are often called scale problems.

Two variables, \( a \) and \( b \), are indirectly proportional if they satisfy a relationship of the form \( k = ab \), where \( k \) is a number that is a constant. Thus, the average speed of a car and the time the car takes to travel 300 miles are indirectly proportional, since \( st = 300 \), where \( s \) is the speed and \( t \) is the time.

\[
m \text{ is indirectly proportional to } n \text{ and } m = 5 \text{ when } n = 4. \text{ What is the value of } m \text{ when } n = 18?\]

Since \( m \) and \( n \) are indirectly proportional, \( m \cdot n = k \), and \( k = 5 \cdot 4 = 20 \) because \( m = 5 \) when \( n = 4 \). Therefore, \( 18m = k = 20 \), so \( m = \frac{20}{18} = \frac{10}{9} \) when \( n = 18 \).

Other examples of indirect proportion are work problems.

If two quantities are directly proportional, then, when one increases, the other increases. If two quantities are indirectly proportional, then, when one increases, the other decreases.

E-3

It is also possible to compare three or more numbers by using a ratio. "The numbers A, B, and C are in the ratio 2 : 4 : 3" means \( A : B = 2 : 4 \), \( A : C = 2 : 3 \), and \( B : C = 4 : 3 \). The order of the terms is important. \( A : B : C \) is read as "A is to B is to C."

What is the ratio of Tom’s salary to Martha’s salary to Anne’s salary if Tom makes $15,000, Martha makes $12,000, and Anne makes $10,000?

The ratio is 15,000 : 12,000 : 10,000, which is the same as 15 : 12 : 10. You can cancel a factor that appears in every term.

The angles of a triangle are in the ratio 5 : 4 : 3; how many degrees are there is the largest angle?

The sum of the angles in a triangle is 180°. If the angles are \( a^\circ \), \( b^\circ \), and \( c^\circ \), then \( a + b + c = 180 \), and \( a : b : c = 5 : 4 : 3 \). You can find \( b \) in terms of \( a \) since \( \frac{a}{b} = \frac{5}{4} \), and \( c \) in terms of \( a \) since \( \frac{a}{c} = \frac{5}{3} \), and then solve the equation for \( a \).

A quicker method for this type of problem is:

1. Add all the numbers: 5 + 4 + 3 = 12.
2. Use each number as the numerator of a fraction whose denominator is the result of 1, getting \( \frac{5}{12} \), \( \frac{4}{12} \), \( \frac{3}{12} \).
3. Each quantity is the corresponding fraction, from 2, of the total. Thus:

\[
a = \frac{5}{12} \text{ of } 180 \text{ or } 75, \quad b = \frac{4}{12} \text{ of } 180 \text{ or } 60, \\
\quad \text{ and } c = \frac{3}{12} \text{ of } 180 \text{ or } 45.
\]

The largest angle is 75°.

CHECK:

75 : 60 : 45 = 5 : 4 : 3 and 75 + 60 + 45 = 180.
Practice Exercises

1. An Erlenmeyer flask can hold 0.6 liter. How many flasks are necessary to hold 3.6 liters?
   (A) 3    (B) 4.2    (C) 6    (D) 12    (E) 21.6

2. At 13° Centigrade a cubic centimeter of uranium weighs 18.7 grams. What is the weight (in grams) of 0.1 cubic centimeter of uranium at 13° Centigrade?
   (A) 1    (B) 1.87    (C) 0.187    (D) 100    (E) 1870

3. If the cost of 500 articles is $d dollars, how many of these articles can be bought for $x dollars?
   \[
   \frac{500d}{x} \quad (B) \quad 500 \quad (C) \quad \frac{dx}{500} \quad (D) \quad \frac{500x}{d} \quad (E) \quad \frac{d}{500x}
   \]

4. A man left $5,000.00 to his three sons. For every dollar Abraham received, Benjamin received $1.50 and Charles received $2.50. How much money was left to Benjamin?
   (A) $750    (B) $1,000    (C) $1,100    (D) $1,500    (E) $3,000

5. The wey of Scotland is equivalent to 40 bushels. How many weys are there in 4 bushels?
   (A) \( \frac{1}{10} \)    (B) 1    (C) 10    (D) 44    (E) 160

6. The Japanese ken is equivalent to 5.97 feet. How many feet are there in 59.7 ken?
   (A) 0.1    (B) 10    (C) 248    (D) 356    (E) 360

7. 640 acres = 1 square mile
   1 acre = 4,840 square yards
   1 square mile = ? square yards
   (A) \( \frac{161}{121} \)    (B) \( \frac{121}{16} \)    (C) 1760    (D) 309,760    (E) 3,097,600

8. A bag of chicken feed will feed 18 chickens for 54 days. How many days will it feed 12 chickens?
   (A) 36    (B) 37    (C) 53    (D) 72    (E) 81

9. If 9 men need 15 days to complete a task, how many days would it take to complete this task if 3 additional men were employed?
   (A) \( 4 \frac{3}{4} \)    (B) 10    (C) 11 \( \frac{1}{4} \)    (D) 12    (E) 6

10. A man works 5 days a week and binds 35 sets of books each week. If there are 7 books in a set, what is the number of books he binds each day?
    (A) 1    (B) 7    (C) 25    (D) 35    (E) 49

11. Three men invested $2,000, $3,000, and $5,000, respectively, upon the formation of a partnership. The net profits at the end of the year amounted to $960.00. How much should the man who invested the least money receive as his share if the profits are divided in accordance with the amount each partner invested?
    (A) $192    (B) $220    (C) $240    (D) $384    (E) $480

12. Three boys have marbles in the ratio of 19 : 5 : 3. If the boy with the least number has 9 marbles, how many marbles does the boy with the greatest number have?
    (A) 27    (B) 33    (C) 57    (D) 81    (E) 171

13. Snow is accumulating \( f \) feet per minute. How much snow will accumulate in \( h \) hours if it continues falling at the same rate?
    (A) \( 60fh \)    (B) \( fh \)    (C) \( \frac{60f}{h} \)    (D) \( \frac{60h}{f} \)    (E) \( \frac{f}{h} \)

14. A diagram of a plane drawn to the scale of 0.5 inch equals 80 feet. If the length of the diagram is 4.5 inches, the actual length of the plane is
    (A) 320 ft.    (B) 360 ft.    (C) 640 ft.
    (D) 680 ft.    (E) 720 ft.

15. Joan can wire \( x \) radios in \( \frac{3}{4} \) minute. At this rate, how many radios can she wire in \( \frac{3}{4} \) of an hour?
    (A) \( \frac{x}{60} \)    (B) \( \frac{60}{x} \)    (C) 60x    (D) 60    (E) \( x + 60 \)

16. If a light flashes every 6 seconds, how many times will it flash in \( \frac{3}{4} \) of an hour?
    (A) 225    (B) 250    (C) 360    (D) 450    (E) 480

17. Samuel, Martin, and Miguel invest $5,000, $7,000, and $12,000, respectively, in a business. If the profits are distributed proportionately, what share of a $1,111 profit should Miguel receive?
    (A) $231.40    (B) $264.00    (C) $333.33
    (D) $370.33    (E) $555.50
18. If there are 5 to 8 eggs in a pound, what is the maximum number of eggs in 40 pounds?

(A) 5     (B) 8     (C) 160     (D) 200     (E) 320

19. 24-carat gold is pure gold.

18-carat gold is \( \frac{3}{4} \) gold.

20-carat gold is \( \frac{5}{8} \) gold.

The ratio of pure gold in 18-carat gold to pure gold in 20-carat gold is

(A) 5 : 8     (B) 9 : 10     (C) 15 : 24     (D) 8 : 5     (E) 10 : 9

20. A cup of oatmeal weighs 3 ounces. A cup of pancake mix weighs 5 ounces. How many cups of oatmeal will have the same weight as 3 cups of pancake mix?

(A) \( \frac{3}{5} \)     (B) \( \frac{2}{3} \)     (C) 3     (D) 5     (E) 15

**Answer Key**

7. E 14. E

### II–F. Sequence and Progressions

#### F–1

A **sequence** is an ordered collection of numbers. For example, 2, 4, 6, 8, 10, . . . is a sequence. 2, 4, 6, 8, 10 are called the terms of the sequence. We identify the terms by their positions in the sequence; 2 is the first term, 8 is the fourth term, and so on. The dots mean that the sequence continues; you should be able to figure out the succeeding terms. In the example, the sequence is the sequence of even integers, and the next term after 10 is 12.

What is the eighth term of the sequence 1, 4, 9, 16, 25, . . . ?

Since \( 1^2 = 1 \), \( 2^2 = 4 \), \( 3^2 = 9 \), the sequence is the sequence of squares of integers, so the eighth term is \( 8^2 = 64 \).

#### F–2

An **arithmetic progression** is a sequence of numbers with the property that the difference of any two consecutive numbers is always the same. The numbers 2, 6, 10, 14, 18, 22, . . . constitute an arithmetic progression, since each term is 4 more than the term before it. The number 4 is called the common difference of the progression.

If \( d \) is the common difference and \( a \) is the first term of the progression, the **nth term will be** \( a + (n - 1)d \). Thus, a progression with common difference 4 and initial term 5 will have \( 5 + 6(4) = 29 \) as its seventh term. You can check your answer. The sequence would be 5, 9, 13, 17, 21, 25, 29, . . . , so 29 is the seventh term.

To find the sum of the first \( n \) terms in an arithmetic progression, use the formula \( S = \frac{n}{2}(a + l) \), where \( l \) is the last term.

**In the arithmetic progression 7, 10, 13, 16, . . . what is the sum of 36 terms?**

First find the value of \( l \):

\[ l = 1 + d(n - 1) \]
\[ l = 7 + 3(35) \]
\[ l = 112 \]

Apply the formula \( S = \frac{n}{2}(a + l) \):

\[ S = 18(7 + 112) \]
\[ S = 18(119) \]
\[ S = 2,142 \]

The sum of 36 terms in the arithmetic progression 7, 10, 13, 16, . . . is 2,142.

A sequence of numbers is called a **geometric progression** if the ratio of consecutive terms is always the same. Thus, 3, 6, 12, 24, 48, . . . is a geometric progression since \( \frac{6}{3} = \frac{12}{6} = \frac{24}{12} = \frac{48}{24} = \ldots \). The **nth term of a geometric series is** \( ar^{n-1} \), where \( a \) is the first term and \( r \) is the common ratio. If a geometric progression starts with 2 and the
common ratio is 3, then the fifth term should be \(2 \cdot 3^4 = 2 \cdot 81 = 162\). The sequence is 2, 6, 18, 54, 162, \ldots, so 162 is indeed the fifth term of the progression.

We can quickly add up the first \(n\) terms of a geometric progression that starts with \(a\) and has common ratio \(r\). When \(r \neq 1\), the formula for the sum of the first \(n\) terms is

\[
\frac{a r^n - a}{r - 1}. \quad \text{(If } r = 1, \text{ all the terms are the same so the sum is na.)}
\]

Find the sum of the first seven terms of the sequence 5, 10, 20, 40, \ldots

Since \(\frac{10}{5} = 2\) \(\frac{20}{10} = 2\) \(\frac{40}{20} = 2\), the sequence is a geometric sequence with common ratio 2. The first term is 5, so \(a = 5\). The sum of the first seven terms means \(n = 7\). Thus,

\[
5 \cdot 2^7 - 5 \quad 2 - 1 = 5(2^7 - 1) = 5(128 - 1) = 5 \cdot 127 = 635.
\]

CHECK:

The first seven terms are 5, 10, 20, 40, 80, 160, 320, and 5 + 10 + 20 + 40 + 80 + 160 + 320 = 635.

**II–G. Inequalities**

**G–1**

The notation \(a > b\) means that the number \(a\) is greater than the number \(b\), that is, \(a = b + x\), where \(x\) is a positive number. If we look at a number line, \(a > b\) means that \(a\) is to the right of \(b\). The notation \(a > b\) can also be read as \(b\) is less than \(a\), which is also written as \(b < a\). For example, \(-5 > -7.5\) because \(-5 = -7.5 + 2.5\) and 2.5 is positive.

The notation \(a \leq b\) means that \(a\) is less than or equal to \(b\), or \(b\) is greater than or equal to \(a\). For example, \(5 \geq 4\); also \(4 \geq 4\). The notation \(a \neq b\) means that \(a\) is not equal to \(b\).

If you need to know whether one fraction is greater than another fraction, put the fractions over a common denominator and compare the numerators.

Which is larger, \(\frac{13}{16}\) or \(\frac{31}{40}\) ?

A common denominator is 80.

\[
\frac{13}{16} = \frac{65}{80}, \quad \text{and} \quad \frac{31}{40} = \frac{62}{80}.
\]

since \(65 > 62\),

\[
\frac{65}{80} > \frac{62}{80}, \quad \text{so} \quad \frac{13}{16} > \frac{31}{40}.
\]

**G–2**

Inequalities have certain properties that are similar to those of equations. We can talk about the left side and the right side of an inequality, and we can use algebraic expressions for the sides of an inequality. For example, \(6x < 5x + 4\). A value for an unknown satisfies an inequality if, when you evaluate each side of the inequality, the numbers satisfy the inequality. Thus, if \(x = 2\), then \(6x = 12\) and \(5x + 4 = 14\), and since \(12 < 14\), \(x = 2\) satisfies \(6x < 5x + 4\). Two inequalities are equivalent if the same collection of numbers satisfies both inequalities.

The following basic principles are used in work with inequalities:

1. Adding the same expression to each side of an inequality gives an equivalent inequality (written as \(a < b \leftrightarrow a + c < b + c\), where \(\leftrightarrow\) means equivalent).

2. Subtracting the same expression from each side of an inequality gives an equivalent inequality (\(a < b \leftrightarrow a - c < b - c\)).

3. Multiplying or dividing each side of an inequality by the same positive expression gives an equivalent inequality (\(a < b \leftrightarrow ca < cb\) for \(c > 0\)).

4. Multiplying or dividing each side of an inequality by the same negative expression reverses the inequality (\(a < b \leftrightarrow ca > cb\) for \(c < 0\)).

5. If both sides of an inequality have the same sign, inverting both sides of the inequality reverses the inequality.

\[
0 < a < b \leftrightarrow 0 < \frac{1}{b} < \frac{1}{a}
\]

\[
a < b < 0 \leftrightarrow \frac{1}{b} > \frac{1}{a} > 0
\]

6. If two inequalities are of the same type (both greater or both less), adding the respective sides gives the same type of inequality.

\((a < b \text{ and } c < d) \text{, then } a + c < b + d\)

Note that the inequalities are not equivalent.

7. If \(a < b\) and \(b < c\), then \(a < c\).

Find the values of \(x\) for which \(5x - 4 < 7x + 2\).

Using principle 2, subtract \(5x + 2\) from each side; then \((5x - 4 < 7x + 2) \leftrightarrow -6 < 2x\). Now use principle 5, and divide each side by 2; then \(-6 < 2x \leftrightarrow -3 < x\).
Any $x$ greater than $-3$ satisfies the inequality. It is a good idea to make a spot check. $-1 > -3$; let $x = -1$; then $5x = -4 = -9$ and $7x + 2 = -5$. Since $-9 < -5$, the answer is correct for at least the particular value $x = -1$.

Some inequalities are not satisfied by any real number. For example, since $x^2 \geq 0$ for all $x$, there is no real number $x$ such that $x^2 < -9$.

You may be given an inequality and asked whether other inequalities follow from the original inequality. You should be able to answer such questions by using principles ① through ⑨.

If there is any property of inequalities you can’t remember, try out some specific numbers. If $x < y$, then what is the relation between $-x$ and $-y$? Since $4 < 5$ but $-5 < -4$, the relation is probably $-x > -y$, which is true by ④.

Probably the most common mistake is forgetting to reverse the inequalities if you multiply or divide by a negative number.

### Practice Exercises

1. Point $P$ is on line segment $AB$. Which of the following is always true?
   
   (A) $AP = PB$  (B) $AP > PB$  (C) $PB > AP$
   (D) $AB > AP$  (E) $AB > AP + PB$

2. If $x < y$ and $a = b$, then
   
   (A) $x + a = y + b$  (B) $x + a < y + b$
   (C) $x + a > y + b$  (D) $x + a = y$  (E) $x + a = b$

3. If $x < y$ and $z = \frac{1}{2} x$ and $a = \frac{1}{2} y$, then
   
   (A) $z > a$  (B) $a > z$  (C) $\frac{1}{2} a = \frac{1}{2} z$
   (D) $2x > 2z$  (E) $2a > y$

4. If $b < d$ and $a = 2b$ and $c = 2d$, then
   
   (A) $b = d$  (B) $a = c$  (C) $a < c$
   (D) $b > d$  (E) $a > c$

5. If $p < q$ and $r < s$, then
   
   (A) $p = r > q + s$  (B) $p + r < q + s$
   (C) $pr < qs$  (D) $pr > qs$
   (E) $p + r = q + s$

6. If $-1 < x \leq 1$ and $x$ is an integer, then the value of $x$ is
   
   (A) 0 only  (B) 1 only  (C) 1 and 0
   (D) one value more than 1  (E) one value less than 1

7. In the inequality $5x + 2 < 2x + 5$ all of the following may be values of $x$ except
   
   (A) 0  (B) 1  (C) -1  (D) -2  (E) -3

8. If $a > b$ and $b > c$, then
   
   (A) $a < c$  (B) $a > c$  (C) $a = c$
   (D) $c > a$
   (E) $b > a$

9. If $a > b > 1$, then which of the following is true?
   
   (A) $b + a > 2a$  (B) $a^2 < ab$
   (C) $a - b < 0$  (D) $a < b + 1$
   (E) $a^2 > b^2$

10. If $2y > 5$, then
    
    (A) $y > 2.5$  (B) $y < 2.5$  (C) $y = 2.5$
    (D) $y = 10$  (E) $y = 5.2$

11. If $3x - 4 > 8$, then
    
    (A) $x = 4$  (B) $x = 0$
    (C) $x = 4.0$  (D) $x > 4$
    (E) $x < 4$

12. In triangle $ABC$, $AB = AC$. All of the following statements are true except
    
    (A) $AB < AC + BC$  (B) $AC < AB + BC$
    (C) $AC < AB + AC$  (D) $AC + BC = AB + BC$
    (E) $BC + AC > AB + BC$

13. In triangle $KLM$ the measure of angle $M$ is greater than the measure of angle $L$. Which of the following is true?
    
    (A) $KM > KL$  (B) $KL > KM$
    (C) $KL < KM$
    (D) $KM + LM < KL$  (E) $KL + LM < KM$
14. In triangles $ABC$ and $DEF$, $AC = DF$, $BC = EF$, and $AB > DE$. Then

(A) $m \angle C = m \angle F$  
(B) $m \angle F > m \angle C$

(C) $m \angle F < m \angle C$  
(D) $m \angle A = m \angle D$

(E) $m \angle B = m \angle E$

15. If $x < y$ and $a < b$, then

(A) $a + x < b + y$  
(B) $a + x > b + y$  
(C) $a = y$

(D) $x = b$  
(E) $ax = by$

### III. Geometry

#### III–A. Angles

**A–1**

If two straight lines meet at a point, they form an **angle**. The point is called the **vertex** of the angle, and the lines are called the **sides** or **rays** of the angle. The sign for angle is $\angle$, and an angle can be denoted in the following ways:

1. $\angle ABC$, where $B$ is the vertex, $A$ is a point on one side, and $C$ is a point on the other side.

2. $\angle B$, where $B$ is the vertex.

3. $\angle 1$ or $\angle x$, where $1$ or $x$ is written inside the angle.

Angles are usually measured in degrees. We say that an angle equals $x$ degrees when its measure is $x$ degrees. Degrees are denoted by $^\circ$. An angle of 50 degrees is a 50$^\circ$ angle.

**A–2**

Two angles are **adjacent** if they have the same vertex and a common side, and one angle is not inside the other.

### Answer Key

1. D  
2. B  
3. B  
4. C  
5. B  
6. C  
7. B  
8. B  
9. E  
10. A  
11. D  
12. E  
13. B  
14. C  
15. A

$\angle BAC$ and $\angle CAD$ are adjacent, but $\angle CAD$ and $\angle EAD$ are not adjacent.

If two lines intersect at a point, they form four angles. The angles opposite each other are called **vertical angles**. In the figure below, $\angle 1$ and $\angle 3$ are vertical angles, and $\angle 2$ and $\angle 4$ are vertical angles.

**Vertical angles are equal,** so, in the figure below,

$\angle 1 = \angle 5$, $\angle 2 = \angle 6$, $\angle 3 = \angle 7$, $\angle 4 = \angle 8$. 

$\triangle 1$
A straight angle is an angle whose sides lie on a straight line. A straight angle equals 180°.

∠ABC is a straight angle.

If the sum of two angles is a straight angle, then the angles are supplementary and each angle is the supplement of the other.

∠ABC and ∠CBD are supplementary.

If an angle of \( x^\circ \) and an angle of \( y^\circ \) are supplements, then \( x + y = 180 \).

If two supplementary angles are equal, they are both right angles. A right angle is half of a straight angle. A right angle = 90°.

∠ABC = ∠CBD, and they are both right angles. A right angle is denoted by ⊥.

When two lines intersect and all four of the angles are equal, then each of the angles is a right angle.

If the sum of two angles is a right angle, then the angles are complementary and each angle is a complement of the other.

∠BAC and ∠CAD are complementary.

If an angle of \( x^\circ \) and an angle of \( y^\circ \) are complementary, then \( x + y = 90 \).

If the supplement of angle \( x \) is three times as much as the complement of angle \( x \), how many degrees is angle \( x \)?

Let \( d \) be the number of degrees in angle \( x \); then the supplement of \( x \) is \((180 - d)^\circ \), and the complement of \( x \) is \((90 - d)^\circ \). Since the supplement is 3 times the complement, \( 180 - d = 3(90 - d) = 270 - 3d \), which gives \( 2d = 90 \), so \( d = 45 \).

Therefore, angle \( x \) is 45°.

If an angle is divided into two equal parts by a straight line, then the angle has been bisected and the line is called the bisector of the angle.

\( \overline{BD} \) bisects \( ∠ABC \), so \( ∠ABD = ∠DBC \).

An acute angle is an angle less than a right angle. An obtuse angle is an angle greater than a right angle, but less than a straight angle.

\( ∠1 \) is an acute angle, and \( ∠2 \) is an obtuse angle.

III-B. Lines

B-1

A line is understood to be a straight line. A line is assumed to extend indefinitely in both directions. There is one and only one line between two distinct points. There are two ways to denote a line:

1. by a single letter: \( \overline{l} \) \( l \) is a line;
2. by two points on the line: \( \overline{AB} \) is a line.
A line segment is the part of a line between two points called endpoints. A line segment is denoted by its endpoints. \[ \overline{AB} \]

\(AB\) is a line segment. If a point \(P\) on a line segment is equidistant from the endpoints, then \(P\) is called the midpoint of the line segment.

\[ \overline{AP} = \overline{PB} \]

When a line segment is extended indefinitely in one direction, it is called a ray. A ray has one endpoint.

\(AB\) is a ray that has \(A\) as its endpoint.

B–2

\(P\) is a point of intersection of two lines if \(P\) is a point that is on both of the lines. Two different lines cannot have more than one point of intersection, because there is only one line between two points.

\[ \overline{m} \cap \overline{n} = P \]

\(P\) is the point of intersection of \(m\) and \(n\). We also say that \(m\) and \(n\) intersect at \(P\).

Two lines in the same plane are parallel if they do not intersect no matter how far they are extended.

Lines \(m\) and \(n\) are parallel, but \(k\) and \(l\) are not parallel since, if \(k\) and \(l\) are extended, they will intersect. Parallel lines are denoted by the symbol \(\parallel\), so \(m \parallel n\) means that \(m\) is parallel to \(n\). If two lines are parallel to a third line, then they are parallel to each other.

If a third line intersects two given lines, it is called a transversal. A transversal and the two given lines form eight angles. The four inside angles are called interior angles. The four outside angles are called exterior angles. If two angles are on opposite sides of the transversal and have different lines for their sides, they are called alternate angles.

\[ \begin{array}{c|c|c} m & 1 & 2 \\ \hline & 4 & 3 \\ \hline n & 5 & 6 \\ & 8 & 7 \end{array} \]

Line \(k\) is a transversal of the lines \(m\) and \(n\). Angles 1, 2, 7, and 8 are the exterior angles, and angles 3, 4, 5, and 6 are the interior angles. \(\angle 4\) and \(\angle 6\) are an example of a pair of alternate angles. \(\angle 1\) and \(\angle 5\), \(\angle 2\) and \(\angle 6\), \(\angle 3\) and \(\angle 7\), and \(\angle 4\) and \(\angle 8\) are pairs of corresponding angles.

If two parallel lines are intersected by a transversal, then:

\(\mathbf{1}\) Alternate interior angles are equal.

\(\mathbf{2}\) Corresponding angles are equal.

\(\mathbf{3}\) Interior angles on the same side of the transversal are supplementary.
If we use the fact that vertical angles are equal, we can replace “interior” by “exterior” in 1 and 3.

The fact that \( m \) is parallel to \( n \) implies:

1. \( \angle 4 = \angle 6 \) and \( \angle 3 = \angle 5 \)
2. \( \angle 1 = \angle 5 \), \( \angle 2 = \angle 6 \), \( \angle 3 = \angle 7 \) and \( \angle 4 = \angle 8 \)
3. \( \angle 3 + \angle 6 = 180^\circ \) and \( \angle 4 + \angle 5 = 180^\circ \)

The reverse is also true. Let \( m \) and \( n \) be two lines that have \( k \) as a transversal.

1. If a pair of alternate interior angles are equal, then \( m \) and \( n \) are parallel.
2. If a pair of corresponding angles are equal, then \( m \) and \( n \) are parallel.
3. If a pair of interior angles on the same side of the transversal are supplementary, then \( m \) is parallel to \( n \).

If \( \angle 3 = \angle 5 \), then \( m \parallel n \). If \( \angle 4 = \angle 6 \), then \( m \parallel n \). If \( \angle 2 = \angle 6 \), then \( m \parallel n \). If \( \angle 3 + \angle 6 = 180^\circ \), then \( m \parallel n \).

If \( m \) and \( n \) are two parallel lines and angle 1 is 60°, how many degrees is angle 2?

Let \( \angle 3 \) be the vertical angle equal to \( \angle 2 \).

\( \angle 3 = \angle 2 \). Since \( m \) and \( n \) are parallel, corresponding angles are equal. Since \( \angle 1 \) and \( \angle 3 \) are corresponding angles, \( \angle 1 = \angle 3 \). Therefore, \( \angle 1 = \angle 2 \), and \( \angle 2 \) equals 60° since \( \angle 1 = 60^\circ \).

**B–3**

When two lines intersect and all four of the angles formed are equal, the lines are said to be **perpendicular**. If two lines are perpendicular, they are the sides of right angles whose vertex is the point of intersection.

\( AB \) is perpendicular to \( CD \), and angles 1, 2, 3, and 4 are all right angles. Since \( \perp \) is the symbol for perpendicular, we can write \( AB \perp CD \).

If two lines in a plane are perpendicular to the same line, then the two lines are parallel.

The fact that \( m \perp k \) and \( n \perp k \) implies that \( m \parallel n \).

If **any one** of the angles formed when two lines intersect is a right angle, then the lines are perpendicular.
III-C. Polygons

A polygon is a closed figure in a plane that is composed of line segments that meet only at their endpoints. The line segments are called sides of the polygon, and a point where two sides meet is called a vertex (plural vertices) of the polygon.

A polygon is usually denoted by the vertices given in order.

A \( ABCD \) is a polygon.

A diagonal of a polygon is a line segment whose endpoints are nonadjacent vertices. The altitude from a vertex \( P \) to a side is the line segment with endpoint \( P \) that is perpendicular to the side.

\( AC \) is a diagonal, and \( CE \) is the altitude from \( C \) to \( AD \).

Polygons are classified by the number of angles or sides they have. A polygon with three angles is called a triangle; a four-sided polygon is a quadrilateral; a polygon with five angles is a pentagon; a polygon with six angles is a hexagon; an eight-sided polygon is an octagon. The number of angles is always equal to the number of sides in a polygon, so a six-sided polygon is a hexagon, which has six angles. The term \( n \)-gon refers to a polygon with \( n \) sides.

If the sides of a polygon are all equal in length and if all the angles of a polygon are equal, the polygon is called a regular polygon.

If the corresponding sides and the corresponding angles of two polygons are equal, the polygons are congruent. Congruent polygons have the same size and the same shape.

are congruent, but

are not congruent.

In figures for problems on congruence, sides with the same number of strokes through them are equal.
III-D. Triangles

D-1

A triangle is a three-sided polygon. If two sides of a triangle are equal, the triangle is called isosceles. If all three sides are equal, the triangle is equilateral. When one of the angles in a triangle is a right angle, the triangle is a right triangle.

Isosceles  
Equilateral

Right

The symbol for a triangle is $\triangle$, so $\triangle ABC$ denotes a triangle whose vertices are $A$, $B$, and $C$.

The sum of the angles in a triangle is $180^\circ$.

The sum of the lengths of any two sides of a triangle must be greater than the length of the remaining side.

If two angles in a triangle are equal, then the lengths of the sides opposite the equal angles are equal. If two sides of a triangle are equal, then the angles opposite the two equal sides are equal. In an equilateral triangle all the angles are equal and each angle is $60^\circ$. If each of the angles in a triangle is $60^\circ$, then the triangle is equilateral.

If $AB = BC$, then $\angle BAC = \angle BCA$.

If one angle in a triangle is larger than another angle, the side opposite the larger angle is longer than the side.
opposite the smaller angle. If one side is longer than
another side, then the angle opposite the longer side is
larger than the angle opposite the shorter side.

\[ AB > AC \implies \angle BCA > \angle ABC. \]

If a side of a triangle is extended, then the resulting exter-
rior angle is greater than either of the opposite and inte-
rior angles. In the triangle above, if we had extended side
\( AC \) beyond \( C \) to a point \( D \), then \( \angle BCD \) would be greater
than \( \angle BAC \) and greater than \( \angle ABC \).

In a right triangle, the side opposite the right angle is
called the \textit{hypotenuse}, and the remaining two sides are
called \textit{legs}.

\textit{The Pythagorean theorem states that the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs.}

\[ (BC)^2 = (AB)^2 + (AC)^2 \]

If \( AB = 4 \) and \( AC = 3 \) then \( (BC)^2 = 4^2 + 3^2 = 25 \) so \( BC = 5 \).
If \( BC = 13 \) and \( AC = 5 \), then \( 13^2 = 169 = (AB)^2 + 5^2 \). So
\( (AB)^2 = 169 - 25 = 144 \) and \( AB = 12 \).

If the lengths of the three sides of a triangle are \( a \), \( b \), and
\( c \) and \( a^2 = b^2 + c^2 \), then the triangle is a right triangle,
where \( a \) is the length of the hypotenuse.

If \( AB = 8 \), \( AC = 15 \), and \( BC = 17 \), then, since \( 17^2 = 8^2 + 15^2 \), \( \angle BAC \) is a right angle.

\textbf{D-2}

\textbf{CONGRUENCE.} Two triangles are congruent if two pairs of

\underline{corresponding sides} and the \underline{corresponding \textit{included}}

angles are equal. This is called \textit{Side-Angle-Side} and is
denoted by \( \text{S.A.S.} \).

\[ AB = DE, AC = DF \text{ and } \angle BAC = \angle EDF \text{ imply that } \triangle ABC \equiv \triangle DEF. \]

The symbol \( \equiv \) means "is congruent."

Two triangles are congruent if two pairs of corresponding

\underline{angles} and the \underline{corresponding \textit{included}} \underline{side} are equal.
This is called \textit{Angle-Side-Angle} or \( \text{A.S.A.} \).

If \( AB = DE \), \( \angle BAC = \angle EDF \), and \( \angle CBA = \angle FED \), then
\( \triangle ABC \equiv \triangle DEF. \)

If all three pairs of \underline{corresponding sides} of two triangles

are equal, then the triangles are congruent. This is called

\textit{Side-Side-Side} or \( \text{S.S.S.} \).
$AC = DE$ and $CB = EF$, but the triangles are not congruent.

If two sides of a triangle are equal, then the altitude to the third side divides the triangle into two congruent triangles.

$AB = BC$ and $BD \perp AC$ implies $\triangle ADB \cong \triangle CDB$.

Therefore, $\angle ABD = \angle CBD$, so $BD$ bisects $\angle ABC$. Since $AD = DC$, $D$ is the midpoint of $AC$, so $BD$ is the median from $B$ to $AC$. A median is the segment from a vertex to the midpoint of the side opposite the vertex.

If $AB = 4$, $AC = 4.5$, and $BC = 6$, $\angle BAC = \angle EDF$, $DE = 4$, and $DF = 4.5$, what is $EF$?

Since two pairs of corresponding sides ($AB$ and $DE$, $AC$ and $DF$) and the corresponding included angles ($\angle BAC$, $\angle EDF$) are equal, the triangles $ABC$ and $DEF$ are congruent by S.A.S. Therefore, $EF = BC = 6$.

**D-3**

**Similarity.** Two triangles are similar if all three pairs of corresponding angles are equal. Since the sum of the angles in a triangle is $180^\circ$, it follows that, if two corresponding angles are equal, the third angles must be equal.

If you draw a line that passes through a triangle and is parallel to one of the sides of the triangle, the triangle formed is similar to the original triangle.
If \( DE \parallel BC \), then \( \triangle ADE \sim \triangle ABC \). The symbol \( \sim \) means "is similar to."

A man 6 feet tall casts a shadow 4 feet long; at the same time a flagpole casts a shadow 50 feet long. How tall is the flagpole?

The man with his shadow and the flagpole with its shadow can be regarded as the pairs of corresponding sides of two similar triangles.

Let \( h \) be the height of the flagpole. Since corresponding sides of similar triangles are proportional, \( \frac{4}{50} = \frac{6}{h} \).

Cross-multiplying gives \( 4h = 6 \cdot 50 = 300 \), so \( h = 75 \). Therefore, the flagpole is 75 feet high.

**III-E. Quadrilaterals**

A **quadrilateral** is a polygon with four sides. The sum of the angles in a quadrilateral is 360°. If the opposite sides of a quadrilateral are parallel, the figure is a parallelogram.

\( A \quad B \quad C \quad D \)

\( A \quad C \quad D \quad B \)

\( ABCD \) is a parallelogram.

In a parallelogram:

1. The opposite sides equal.
2. The opposite angles are equal.
3. A diagonal divides the parallelogram into two congruent triangles.
4. The diagonals bisect each other. (A line bisects a line segment if it intersects the segment at the midpoint of the segment.)

\( ABCD \) is a parallelogram.

1. \( AB = DC, \; BC = AD \).
2. \( \angle BCD = \angle BAD, \; \angle ABC = \angle ADC \).
3. \( \triangle ABC \cong \triangle ADC, \; \triangle ABD \cong \triangle CDB \).
4. \( AE = EC \) and \( BE = ED \).

If any of the statements 1, 2, 3, and 4 is true for a quadrilateral, then the quadrilateral is a parallelogram.

If all the angles of a parallelogram are right angles, the figure is a rectangle.

\( A \quad B \quad C \quad D \)

\( A \quad C \quad D \quad B \)

\( ABCD \) is a rectangle.

Since the sum of the angles in a quadrilateral is 360°, if all the angles of a quadrilateral are equal then the figure is a rectangle. The diagonals of a rectangle are equal. The length of a diagonal can be found by using the Pythagorean theorem.

\( A \quad B \quad C \quad D \)

\( A \quad C \quad D \quad B \)

If \( ABCD \) is a rectangle, \( AC = BD \) and \( (AC)^2 = (AD)^2 + (DC)^2 \).
If all the sides of a rectangle are equal, the figure is a square.

\[ ABCD \] is a square.

The length of the diagonal of a square is \( \sqrt{2} \) s, where s is the length of a side.

In square \( ABCD \), \( AC = (\sqrt{2}) \cdot AD \).

A quadrilateral with two parallel sides and two sides that are not parallel is called a trapezoid. The parallel sides are called bases, and the nonparallel sides are called legs.

If \( BC \parallel AD \), then \( ABCD \) is a trapezoid; \( BC \) and \( AD \) are the bases.

**III-F. Circles**

A circle is a figure in a plane consisting of all points that are the same distance from a fixed point called the center of the circle. A line segment from any point on the circle to the center of the circle is called a radius (plural: radii) of the circle. All radii of the same circle have the same length.

This circle has center \( P \) and radius \( AP \).

A circle is denoted by a single letter, usually its center. Two circles with the same center are concentric.

\( C \) and \( D \) are concentric circles.

A line segment whose endpoints are on a circle is called a chord. A chord that passes through the center of the circle is a diameter. The length of a diameter is twice the length of a radius. A diameter divides a circle into two congruent halves called semicircles.

\( P \) is the center of the circle.

\( AB \) is a chord and \( CD \) is a diameter.

A diameter that is perpendicular to a chord bisects the chord.
O is the center of this circle, and $AB \perp CD$; and $AE = EB$.

If a line intersects a circle at one and only one point, the line is said to be a tangent to the circle. The point common to a circle and a tangent to the circle is called the point of tangency. The radius from the center to the point of tangency is perpendicular to the tangent.

AP is tangent to the circle with center O. P is the point of tangency, and $OP \perp PA$.

An angle whose vertex is a point on a circle and whose sides are chords of the circle is called an inscribed angle. An angle whose vertex is the center of a circle and whose sides are radii of the circle is called a central angle.

$\angle BAC$ is an inscribed angle.

$\angle DOC$ is a central angle.

An arc is a part of a circle.

ACB is an arc. Arc $ACB$ is written as $\widehat{ACB}$.

If two letters are used to denote an arc, they represent the smaller of the two possible arcs. $\widehat{AB} = \widehat{ACB}$.

An arc can be measured in degrees. An entire circle is $360^\circ$; thus an arc of $120^\circ$ is $\frac{1}{3}$ of a circle.

A central angle is equal in measure to the arc it intercepts.

$m\angle AOB = m\widehat{AB}$ \hspace{1cm} (The measure of $\angle AOB$ equals the measure of $\widehat{AB}$.)

An inscribed angle is equal in measure to $\frac{1}{2}$ the arc it intercepts.

$m\angle ABC = m\frac{1}{2}\widehat{AC}$.

An angle inscribed in a semicircle is a right angle.
If $BC$ is a diameter, then $\angle BAC$ is inscribed in a semicircle; so $m\angle BAC = 90^\circ$.

III–G.  **Area and Perimeter**

G–1

The area $A$ of a square equals $s^2$, where $s$ is the length of a side of the square. Thus, $A = s^2$.

If $AD = 5$ inches, the area of square $ABCD$ is 25 square inches.

The area of a rectangle equals length times width. If $L$ is the length of one side and $W$ is the length of a side perpendicular to $L$, then the area $A = LW$.

If $AB = 5$ feet and $AD = 8$ feet, then the area of rectangle $ABCD$ is 40 square feet.

The area of a parallelogram is base $\times$ height; $A = bh$, where $b$ is the length of the base and $h$ is the length of an altitude to the base.

If $AD = 6$ yards and $BE = 4$ yards, then the area of parallelogram $ABCD$ is $6 \cdot 4$ or 24 square yards.

The area of a trapezoid is the (average of the bases) $\times$ height;

$$A = \left( \frac{b_1 + b_2}{2} \right) h,$$

where $b_1$ and $b_2$ are the lengths of the parallel sides and $h$ is the length of an altitude to one of the bases.

If $BC = 3$ miles, $AD = 7$ miles, and $CE = 2$ miles, then the area of trapezoid $ABCD$ is $\left( \frac{3 + 7}{2} \right) = 10$ square miles.

The area of a triangle is $\frac{1}{2}$ (base $\times$ height); $A = \frac{1}{2} bh$, where $b$ is the length of a side and $h$ is the length of the altitude to that side.

If $AC = 5$ miles and $BD = 4$ miles, then the area of the triangle is $\frac{1}{2} \times 5 \times 4 = 10$ square miles.
Since the legs of a right triangle are perpendicular to each other, the area of a right triangle is one-half the product of the lengths of the legs.

If the lengths of the sides of a triangle are 5 feet, 12 feet, and 13 feet, what is the area of the triangle?

Since \( 5^2 + 12^2 = 25 + 144 = 169 = 13^2 \), the triangle is a right triangle and the legs are the sides with lengths 5 feet and 12 feet. Therefore, the area is \( \frac{1}{2} \times 5 \times 12 = 30 \) square feet.

If we want to find the area of a polygon that is not of a type already mentioned, we break the polygon up into smaller figures such as triangles or rectangles, find the area of each piece, and add these to get the area of the given polygon.

The area of a circle is \( \pi r^2 \) where \( r \) is the length of a radius. Since \( d = 2r \), where \( d \) is the length of a diameter,

\[
A = \pi \left( \frac{d}{2} \right)^2 = \pi \frac{d^2}{4}.
\]

The number \( \pi \) is equal to approximately \( \frac{22}{7} \) or 3.14; however, there is no fraction that is exactly equal to \( \pi \), which is called an irrational number.

If \( OP = 2 \) inches, then the area of the circle with center \( O \) is \( \pi 2^2 \) or \( 4\pi \) square inches.

The portion of the plane bounded by a circle and a central angle is called a sector of the circle.

The shaded region is a sector of the circle with center \( O \). The area of a sector with a central angle of \( n^\circ \) in a circle of radius \( r \) is \( \frac{n}{360} \pi r^2 \).

If \( OB = 4 \) inches and \( \angle BOA = 100^\circ \), then the area of the sector is \( \frac{100}{360} \pi \cdot 4^2 = \frac{5}{18} \cdot 16\pi = \frac{40}{9} \pi \) square inches.

G-2

The perimeter of a polygon is the sum of the lengths of the sides.

What is the perimeter of a regular pentagon whose sides are 6 inches long?

A pentagon has five sides. Since the pentagon is regular, all sides have the same length, which is 6 inches. Therefore, the perimeter of the pentagon is \( 5 \times 6 \), which equals 30 inches or 2.5 feet.

The perimeter of a rectangle is \( 2(L + W) \), where \( L \) is the length and \( W \) is the width.

The perimeter of a square is \( 4s \), where \( s \) is the length of a side of the square.

The perimeter of a circle is called the circumference of the circle. The circumference of a circle is \( \pi d \) or \( 2\pi r \), where \( d \) is the length of a diameter and \( r \) is the length of a radius.

If \( O \) is the center of a circle and \( OP = 5 \) feet, then the circumference of the circle is \( 2 \times 5\pi \) or 10\pi feet.

The length of an arc of a circle is \( \frac{n}{360} \pi d \), where the central angle of the arc is \( n^\circ \).
If \( O \) is the center of a circle where \( OA = 5 \) yards and \( \angle AOB = 60^\circ \), then the length of arc \( AB \) is 
\[
\frac{60}{360} \pi \times 10 = \frac{10}{6} \pi = \frac{5}{3} \pi \text{ yards.}
\]

How far will a wheel of radius 2 feet travel in 500 revolutions? (Assume the wheel does not slip.)

The diameter of the wheel is 4 feet, so the circumference is \( 4\pi \) feet. Therefore, the wheel will travel \( 500 \times 4\pi \) or 2,000\( \pi \) feet in 500 revolutions.

**III–H. Coordinate Geometry**

In coordinate geometry, every point in the plane is associated with an ordered pair of numbers called coordinates. Two perpendicular lines are drawn; the horizontal line is called the x-axis, and the vertical line is called the y-axis. The point where the two axes intersect is called the origin. Both of the axes are number lines with the origin corresponding to zero (see the arithmetic section on signed numbers). Positive numbers on the x-axis are to the right of the origin, negative numbers to the left. Positive numbers on the y-axis are above the origin, negative numbers below the origin. The coordinates of a point \( P \) are \((x, y)\) if \( P \) is located by moving \( x \) units along the x-axis from the origin and then moving \( y \) units up or down. The distance along the x-axis is always given first.

The numbers in parentheses are the coordinates of the point. Thus \( P = (3, 2) \) means that the coordinates of \( P \) are \((3, 2)\). The distance \( d \) between the point with coordinates \((x, y)\) and the point with coordinates \((a, b)\) is 
\[
d = \sqrt{(x-a)^2 + (y-b)^2}.
\]

**Is \( ABCD \) a parallelogram? \( A = (3, 2), B = (1, -2), C = (-2, 1), D = (1, 5) \).**

The length of \( AB \) is \( \sqrt{(3-1)^2 + (2-(-2))^2} = \sqrt{2^2 + 4^2} = \sqrt{20} \). The length of \( CD \) is \( \sqrt{(-2-1)^2 + (1-5)^2} = \sqrt{(-3)^2 + (-4)^2} = \sqrt{25} \). Therefore, \( AB \neq CD \), so \( ABCD \) cannot be a parallelogram, since in a parallelogram the lengths of opposite sides are equal.

You can often use coordinate geometry to solve problems that do not appear to involve coordinates.

City A is 5 miles north of City B, and City C is 12 miles west of City B. How far is it from City A to City C?

Set up a coordinate axis with City B at the origin, east-west as the x-axis, and north-south as the y-axis, as in the diagram.

Then City A has coordinates \((0,5)\), and City C has coordinates \((-12,0)\). The distance from A to C is the square root of \((-12-0)^2 + (5-0)^2\), or \(\sqrt{144 + 25} = \sqrt{169} \), which is 13. It is 13 miles from City A to City C.
Geometry problems occur frequently. *If you are not provided with a diagram, draw one for yourself.* Think of any conditions that will help you answer the question; perhaps you can see how to answer a different question that will lead to an answer to the original question. It may help to draw in some diagonals, altitudes, or other auxiliary lines in your diagram.

**Practice Exercises**

1. Using these formulas: Circumference $= 2\pi r$, Area $= \pi r^2$ where $r =$ radius, find the area of a circle whose circumference is $x$.
   
   \[
   \begin{array}{ll}
   (A) & \frac{x^2}{4\pi} \\
   (B) & \frac{x^2}{4\pi} \\
   (C) & \frac{x^2}{4} \\
   (D) & \pi x^2 \\
   (E) & \pi x
   \end{array}
   \]

2. One side of a rectangle is $x$ inches. If the perimeter is $p$ inches, what is the length (in inches) of the other side?
   
   \[
   \begin{array}{ll}
   (A) & p - x \\
   (B) & p - 2x \\
   (C) & \frac{p - x}{2} \\
   (D) & \frac{p - 2x}{2} \\
   (E) & 2p - 2x
   \end{array}
   \]

3. $C$ is the midpoint of line segment $AE$. $B$ and $D$ are on line segment $AE$ so that $AB = BC$ and $CD = DE$. What percent of $AC$ is $AD$?
   
   \[
   \begin{array}{ll}
   (A) & 33 \% \\
   (B) & 50 \% \\
   (C) & 66 \% \\
   (D) & 133 \% \\
   (E) & 150
   \end{array}
   \]

4. A picture in an art museum is 6 feet wide and 8 feet long. If its frame has a width of 6 inches, what is the ratio of the area of the frame to the area of the picture?
   
   \[
   \begin{array}{ll}
   (A) & \frac{5}{16} \\
   (B) & \frac{5}{4} \\
   (C) & \frac{4}{5} \\
   (D) & \frac{5}{12} \\
   (E) & \frac{3}{5}
   \end{array}
   \]

5. To represent a family budget on a circle graph, how many degrees of the circle should be used to represent an item that is 20% of the total budget?
   
   \[
   \begin{array}{ll}
   (A) & 20 \% \\
   (B) & 36 \% \\
   (C) & 60 \% \\
   (D) & 72 \% \\
   (E) & 90
   \end{array}
   \]

6. What is the maximum number of glass tumblers (each with a circumference of $4\pi$ inches) that can be placed rectangularly on a table $48" \times 32"$?
   
   \[
   \begin{array}{ll}
   (A) & 36 \\
   (B) & 48 \\
   (C) & 92 \\
   (D) & 96 \\
   (E) & 192
   \end{array}
   \]

7. To avoid paying a toll on a direct road, I go west 10 miles, south 5 miles, west 30 miles, and north 35 miles. What is the length (in miles) of the toll road?
   
   \[
   \begin{array}{ll}
   (A) & 30 \\
   (B) & 45 \\
   (C) & 50 \\
   (D) & 70 \\
   (E) & 85
   \end{array}
   \]

8. The length of a rectangle is increased by 50%. By what percent would the width have to be decreased to maintain the same area?
   
   \[
   \begin{array}{ll}
   (A) & 33 \frac{1}{3} \% \\
   (B) & 50 \% \\
   (C) & 66 \frac{2}{3} \% \\
   (D) & 150 \% \\
   (E) & 200
   \end{array}
   \]

9. Area of circle $O = 9\pi$. What is the area of $ABCD$?
   
   \[
   \begin{array}{llll}
   (A) & 24 & (B) & 30 & (C) & 35 \\
   (D) & 36 & (E) & 48
   \end{array}
   \]

10. A man travels 4 miles north, 12 miles east, and then 12 miles north. How far (to the nearest mile) is he from the starting point?
   
   \[
   \begin{array}{llll}
   (A) & 17 & (B) & 20 & (C) & 21 \\
   (D) & 24 & (E) & 28
   \end{array}
   \]

11. If angle $DBA$ equals $39^\circ$ and angle $FBE$ equals $79^\circ$, then angle $GBC$ has a measure of
   
   \[
   \begin{array}{llll}
   (A) & 39^\circ & (B) & 51^\circ \\
   (C) & 62^\circ & (D) & 118^\circ \\
   (E) & 152^\circ
   \end{array}
   \]

12. The length of a rectangle is $l$ and the width is $w$. If the width is increased by 2 units, by how many units will the perimeter be increased?
   
   \[
   \begin{array}{llll}
   (A) & 2 & (B) & 4 & (C) & 2w \\
   (D) & 2w + 2 & (E) & 2w + 4
   \end{array}
   \]

13. If the radius of a wheel is $f$ feet, how many revolutions does the wheel make per mile? (1 mile = 5,280 feet.)
   
   \[
   \begin{array}{llll}
   (A) & \frac{5280f}{\pi} & (B) & \frac{5280\pi f}{2640} \\
   (C) & 5,280\pi f^2 & (D) & \frac{\pi f}{2640} \\
   (E) & \frac{\pi f^2}{5,280}
   \end{array}
   \]

14. The length of a wire fence around a circular flower bed is 100$\pi$ feet. What is the area (in square feet) of a two-foot concrete walk surrounding this fence?
   
   \[
   \begin{array}{llll}
   (A) & 98\pi & (B) & 100\pi \\
   (C) & 102\pi & (D) & 202\pi \\
   (E) & 204\pi
   \end{array}
   \]

15. How many tiles (each 1 foot square) are necessary to form a 1-foot border around the inside of a room 24 feet by 14 feet?
   
   \[
   \begin{array}{llll}
   (A) & 36 & (B) & 37 & (C) & 72 \\
   (D) & 74 & (E) & 76
   \end{array}
   \]

16. When the radius of a circle is doubled, the area is multiplied by
   
   \[
   \begin{array}{llll}
   (A) & 2 & (B) & 2\pi & (C) & 2\pi r \\
   (D) & 3.14 & (E) & 4
   \end{array}
   \]
17. $AD = 14$
   $EF = 6$
   $BC = ?$
   (A) 8 (B) 12 (C) 20 (D) 26 (E) 36

18. If the diagonal of a table with a square top is 6 feet, what is the area of the table top (in square feet)?
   (A) $\sqrt{18}$ (B) $9\pi$ (C) 18 (D) $18\sqrt{2}$ (E) 36

19. How many spokes are there in the wheel of a sports car if any two spokes form an angle of 15°?
   (A) 12 (B) 15 (C) 22 (D) 24 (E) 36

20. How many degrees are there in an angle formed by the hands of a clock at 2:30?
   (A) 100 (B) 105 (C) 110 (D) 115 (E) 120

21. If $8x$ represents the perimeter of a rectangle and $2x + 3$ represents its length, what is its width?
   (A) $6x + 3$ (B) $6x - 3$ (C) 3 (D) $2x - 3$ (E) $10x + 3$

22. Base $RT$ of triangle $RST$ is $\frac{4}{3}$ of altitude $SV$. If $SV$ equals $c$, which of the following is an expression for the area of triangle $RST$?
   (A) $\frac{2c}{5}$ (B) $\frac{2c^2}{5}$ (C) $\frac{c^2}{2}$ (D) $\frac{4c^2}{5}$ (E) $\frac{8c^2}{5}$

23. A triangle has a base $b$ and an altitude $a$. A second triangle has a base twice the altitude of the first triangle, and an altitude twice the base of the first triangle. What is the area of the second triangle?
   (A) $\frac{1}{2}ab$ (B) $ab$ (C) $2ab$ (D) $4ab$ (E) $\frac{1}{2}a^2b^2$

24. A pond 100 feet in diameter is surrounded by a circular grass walk 2 feet wide. How many square feet of grass are there on the walk? (Answer in terms of $\pi$.)
   (A) $98\pi$ (B) $100\pi$ (C) $102\pi$ (D) $202\pi$ (E) $204\pi$

25. What is the area of $ABCD$?
   (A) 5 (B) 8 (C) 10 (D) 16 (E) 20

26. The distance from A to C in the square field $ABCD$ is 50 feet. What is the area of field $ABCD$ in square feet?
   (A) $25\sqrt{2}$ (B) 625 (C) 1250 (D) 2500 (E) 5000

27. In the figure at the right, $ABCD$ is a square and semicircles are constructed on each side of the square. If $AB$ is 2, what is the area of the entire figure?
   (A) $2 + 4\pi$ (B) $2 - 4\pi$ (C) $4 + 8\pi$ (D) $4 - 2\pi$ (E) $4 + 2\pi$

28. O is the center of the circle at the right. $XO$ is perpendicular to $YO$ and the area of triangle $XOY$ is 32. What is the area of circle $O$?
   (A) $16\pi$ (B) $32\pi$ (C) $64\pi$ (D) $128\pi$ (E) $256\pi$

29. Square $QRST$ is inscribed in circle $O$. $OV \perp TS$
   $OV = 1$
   The area of the shaded portion is
   (A) $\pi - 4$ (B) $4\pi - 4$ (C) $2\pi - 4$ (D) $4\pi - 2$ (E) $2\pi - 2$

30. $QVR \perp SVT$
   $\angle VSR = x^\circ$
   $\angle VRW = (?)^\circ$
   (A) 90 - $x$ (B) 90 + $x$
   (C) $x - 90$ (D) 180 - $x$ (E) 135

31. $ABJI, JDEF, ACEG$ are squares.
   $BC = 3$
   $\frac{AB}{BC} = \frac{1}{3}$
   Area $BCDJ$ = ?
   (A) $\frac{1}{9}$ (B) $\frac{1}{3}$ (C) 1 (D) 3 (E) 9

32. Rectangle $ABCD$ is made up of five equal squares. $AD = 30$. Find $EF$.
   (A) 6 (B) 8 (C) 10 (D) 12 (E) 20
33. Radius \( OA = 6.5 \)  
Chord \( AC = 5 \)  
Area of triangle \( ABC \) equals  
(A) 16  (B) 18  (C) 24  
(D) 30  (E) 36  

34. Angles \( a, b \) and \( c \) are in ratio \( 1 : 3 : 2 \). How many degrees are there in angle \( b \)?  
(A) 30  (B) 50  (C) 60  
(D) 90  (E) 100  

35. \( BC \) equals one half of \( AB \).  
The area of right triangle \( ABC \) equals 64 square feet.  
Find hypotenuse \( AC \) to the nearest foot.  
(A) 12  (B) 14  
(C) 18  (D) 24  (E) 32  

36. \( ABCD \) is a square.  
\( AE = 2 \)  
\( GC = 8 \)  
Shaded area = 44  
Area of \( FBEJ = ? \)  
(A) 36  (B) 56  (C) 64  
(D) 68  (E) 80  

37. The area of rectangle \( KLMN \) equals 100. Base \( NM \) equals 20.  
What is the area of triangle \( ANM \) if \( A \) is any point on \( KL \)?  
(A) 25  (B) 50  (C) 75  
(D) 100  (E) cannot be determined  

38. \( ABCD \) is a rectangle.  
\( AD = 12, AB = 16, DE = ? \)  
(A) 8  (B) 10  (C) 14  
(D) 15  (E) 20  

39. \( O \) is the center of the circle.  
\( BC \) is parallel to \( AD \).  
\( OA = 5 \)  
\( CB = 8 \)  
\( AB = ? \)  
(A) \( \frac{3}{4} \)  (B) \( \frac{4}{5} \)  (C) 1  
(D) \( \frac{5}{4} \)  (E) \( \frac{4}{3} \)  

40. \( BA = 2BC \)  
\( EA = 2DE \)  
\( BE = 14 \)  
\( DC = ? \)  
(A) 7  (B) 18  (C) 21  
(D) 24  (E) 28  

41. If angle \( DBG \) equals 79° and angle \( CBE \) equals 39° then angle \( GBE \) equals  
(A) 51°  (B) 62°  (C) 101°  
(D) 108°  (E) 202°  

42. \( \angle A = (?)° \)  
(A) 15  (B) 45  (C) 60  
(D) 80  (E) 120  

43. Four equal circles each of diameter 1 foot touch at four points as shown in the figure. What is the area (in square feet) of the shaded portion?  
(A) \( 1 - \frac{\pi}{4} \)  (B) \( 1 - \pi \)  
(C) \( 1 - 4\pi \)  (D) \( \pi \)  (E) \( \frac{\pi}{4} \)  

44. Perimeter of \( ABCD = 24 \)  
The area of the shaded portion is  
(A) 27\( \pi \)  (B) 9\( \pi \) - 36  
(C) 9\( \pi \) - 24  (D) 36 - 9\( \pi \)  
(E) 24 - 9\( \pi \)  

45. \( ABIJ, BCHI, CDGH \), and \( DEFG \) are congruent rectangles.  
\( AJ = 21 \)  
\( KI = ? \)  
(A) 3  (B) 5.25  (C) 7  
(D) 10.5  (E) 14  

46. The area of the shaded portion is  
(A) \( 2r^2(4 - \pi) \)  
(B) \( 2r^2(2 - 2\pi) \)  
(C) \( 2r^2(\pi - 4) \)  
(D) \( 2r^2(\pi - 2) \)  
(E) \( r^2(2 - \pi) \)  

47. How many square units are there in the shaded triangle?  
(A) 4  (B) 6  (C) 8  
(D) 9  (E) 12  

48. \( AE \perp ED \)  
\( ED = 13 \)  
\( CD \perp ED \)  
\( CD = 3 \)  
\( DC \perp CB \)  
\( CB = 2 \)  
\( AB = ? \)  
\( AE = 11 \)  
(A) 8  (B) 13  (C) 14  
(D) 15  (E) 17  

---
49. If an airplane starts at point $R$ and travels 14 miles directly north to $S$, then 48 miles directly east to $T$, what is the straight-line distance (in miles) from $T$ to $R$?
   \[ \text{(A) 25 (B) 34 (C) 50 (D) 62 (E) 2500} \]

50. The area of a circle with radius $r$ is equal to the area of a rectangle with base $b$. Find the altitude of the rectangle in terms of $\pi$, $r$, and $b$.
   \[ \text{(A) } \sqrt{r} \text{ (B) } \frac{2\pi r}{b} \text{ (C) } \pi r^2 b \text{ (D) } \frac{\pi r^2}{b} \text{ (E) } \frac{\pi r^2}{b^2} \]

51. A line segment is drawn from point $(8, -2)$ to point $(4, 6)$. The coordinates of the midpoint of this line segment are
   \[ \text{(A) } (12, 4) \text{ (B) } (12, 8) \text{ (C) } (6, 4) \text{ (D) } (6, 2) \text{ (E) } (6, -2) \]

52. Lines joining point $(-4, 0)$ with point $(0, 5)$ with point $(4, 0)$ will form
   \[ \text{(A) a circle (B) a right triangle (C) a rectangle (D) a square (E) an isosceles triangle} \]

53. Point $A (-3, -4)$ is drawn to point $B (3, 4)$. Which of the following is true?
   \[ \text{(A) The length of } AB = 5 \text{ units. (B) } AB \text{ is parallel to the x-axis. (C) } AB \text{ passes through point } (6, 8). (D) } AB \text{ passes through the origin. (E) } AB \text{ is the radius of a circle with center at } (0, 0). \]

54. Triangle $ABC$ has the following vertices: $A(1, 0)$, $B(5, 0)$, and $C(3, 4)$. Which of the following is true?
   \[ \text{(A) } AB = BC \text{ (B) } AB = AC \text{ (C) } CA = CB \text{ (D) } AC > BC \text{ (E) } AC < BC \]

55. The area of a circle whose center is at $(0, 0)$ is $25\pi$. The circle passes through all of the following points EXCEPT
   \[ \text{(A) } (-5, 0) \text{ (B) } (5, 5) \text{ (C) } (5, 0) \text{ (D) } (0, 5) \text{ (E) } (0, -5) \]

56. The following points are vertices of quadrilateral $ABCD$: $(0, 4), (4, 0), (0, -4)$, and $(-4, 0)$. The area of $ABCD$ is
   \[ \text{(A) } 8 \text{ (B) } 16 \text{ (C) } 32 \text{ (D) } 48 \text{ (E) } 64 \]

57. The vertices of triangle $ABC$ are $(4, 3)$, $(4, 7)$, and $(8, 3)$. The area of triangle $ABC$ equals
   \[ \text{(A) } 4 \text{ (B) } 4 \sqrt{3} \text{ (C) } 8 \text{ (D) } 12.5 \text{ (E) } 16 \]

58. A line segment $AB$ is drawn from point $(2, 3)$ to point $(4, 7)$. What are the coordinates of the midpoint?
   \[ \text{(A) } (5, 3) \text{ (B) } (3, 5) \text{ (C) } (6, 10) \text{ (D) } (2, 4) \text{ (E) } (4, 2) \]

59. What is the distance from point $A (3, 4)$ to point $B (-3, -4)$?
   \[ \text{(A) } 0 \text{ (B) } 5 \text{ (C) } 10 \text{ (D) } 13 \text{ (E) } 14 \]

60. Point $P (4, 2)$ is the midpoint of line $OPC$, where $O$ is at origin $(0, 0)$. The coordinates of $C$ are
   \[ \text{(A) } (2, 1) \text{ (B) } (4, 8) \text{ (C) } (4, 4) \text{ (D) } (8, 2) \text{ (E) } (8, 4) \]

**Answer Key**

2. D 22. B 42. C
3. E 23. C 43. A
4. A 24. E 44. D
5. D 25. C 45. C
7. C 27. E 47. B
14. E 34. D 54. C
15. C 35. C 55. B
17. D 37. B 57. C

**IV. Tables and Graphs**

**IV-A. Tables**

Tables are often used in reports, magazines, and newspapers to present a set of numerical facts. They enable the reader to make comparisons and to draw quick conclusions. One of the main purposes of tables is to make complicated information easier to understand. The advantage of presenting data in a table is that you can see the information at a glance.

When answering questions based on tables, carefully read the table title and the column headings. The table title gives you a general idea of the type and often the purpose of the information presented. The column headings tell you the specific kind of information given in that column. Both the table titles and the column headings are usually very straightforward; after all, the table is supposed to make it easy for you to grasp this information. Therefore, in a column headed “Hourly Wage,” you can expect to find just that—a list of hourly wages. You do have to be careful, however, to choose the appropriate column from which to get the information you need and to take note of the units that are used.
Questions 1 and 2 refer to the following table.

**GROWTH OF REGULAR MONTHLY INVESTMENTS**
**AT 7% RETURN, COMPOUNDED MONTHLY**

<table>
<thead>
<tr>
<th>Number of Years Money Is Invested</th>
<th>Monthly Investment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>$50</td>
</tr>
<tr>
<td>2</td>
<td>$1,292</td>
</tr>
<tr>
<td>5</td>
<td>$3,601</td>
</tr>
<tr>
<td>10</td>
<td>$8,705</td>
</tr>
<tr>
<td>20</td>
<td>$26,198</td>
</tr>
</tbody>
</table>

1. How much interest is earned on a 7% investment for a 5-year period with monthly investments of $100?
   (A) $121
   (B) $201
   (C) $720
   (D) $1,201
   (E) $6,000

2. How much more is earned on a $50 monthly investment for 10 years than on a $100 monthly investment for 5 years?
   (A) $150
   (B) $701
   (C) $870
   (D) $1,504
   (E) $1,590

In 5 years, there will be 60 payments, for a total of $6,000. The table indicates that the investment will grow to $7,201, for a return on the investment of $1,201 (Choice D).

In each case the payments amount to $6,000. However, the 10-year program pays $8,705 while the 5-year program yields $7,201, a difference of $1,504 (Choice D).

Questions 3–5 refer to the following table.

**PER CAPITA INCOME BY STATE FOR 1991**
**AND PERCENT INCREASE FROM PRECEDING YEAR**

<table>
<thead>
<tr>
<th>State</th>
<th>Per-capita income</th>
<th>Increase from '90</th>
<th>State</th>
<th>Per-capita income</th>
<th>Increase from '90</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ala.</td>
<td>$15,367</td>

Source: Commerce Dept.
3. How much was the per capita increase in New Jersey in 1991 over 1990?
   (A) $498   (B) $507   (C) $2,530   (D) $24,875   (E) $25,372

The $25,372 figure represents a 2% increase over the 1990 per capita income for New Jersey. If \( x \) is the 1990 per capita income, then:
\[
x + 0.02x = 25,372
\]
\[
1.02x = 25,372
\]
\[
102x = 2,537,200
\]
\[
x = 24,874 \text{ (1990 per capita income)}
\]
The difference between the 1991 figure of $25,372 and $24,874 = $498 (Choice A).

4. What was the per capita income for Mississippi for the year 1990?
   (A) $513   (B) $1,283   (C) $5,130   (D) $51,237   (E) $12,830

The 1991 per capita income, $13,343, represents a 4% increase over the 1990 figure.

If \( x \) = the 1990 per capita income, then:
\[
x + 0.04x = 13,343
\]
\[
1.04x = 13,343
\]
\[
104x = 1,334,300 \text{ Hint: Estimate and choose E.}
\]

Questions 6 and 7 refer to the following table.

<table>

6. Meri is looking for a 7% investment that will grow to $1000 in 10 years but finds that she will have to accept an investment program that pays 6% for the same period. To realize $1000, how much more will she have to invest at 6% than at 7% over the 10-year period?

(A) $3.93  (B) $39.30  (C) $67.64  (D) $71.57  (E) $139.21

In 10 years, on the 6% investment the payments will be $715.70 and on the 7% plan the payments would have been $676.40, for a difference of $39.30 (Choice B).

7. What is the difference to the investor between a 10% investment for 5 years and a similar investment for 10 years?

(A) The investor pays $174.15 more in the 10-year program.
(B) The investor pays $174.15 less in the 10-year program.
(C) The investor pays $744.55 more in the 5-year program.
(D) The investor pays $570.14 more in the 5-year program.
(E) The investor pays $91.87 less per month in the 5-year program.

The total payments for the 5-year program = $148.91 \times 5 = $744.55.

The total payments for the 10-year program = $57.04 \times 10 = $570.40.

The difference = $744.55 - $570.40 = $174.15 (Choice B).

IV-B. Circle Graphs

Circle graphs are used to show the relationships of various sectors to the whole. Circle graphs often give the percent that each sector represents.

The following graph gives precise figures. It is advisable to convert to percentages, but figures may be rounded out.

Questions 8 and 9 refer to the following graph.

Areas of Service of the Approximately 223,297 Women in the U.S. Armed Forces

8. What is the measure of the central angle of the sector for women in the Air Force?

(A) 32°  (B) 73°  (C) 92°  (D) 115°  (E) 133°

Hint: Work in thousands.

The Air Force has \(\frac{73}{223}\) or 0.32 of the circle. It has a measure of (0.32)(360) degrees or 115° (Choice D).

9. What percent of the women in the U.S. Armed Forces are in the Marine Corps?

(A) 0.04%  (B) 0.14%  (C) 0.4%  (D) 1.4%  (E) 4%

Hint: Work in thousands.

\(\frac{9}{223} = 0.04 = 4\%\) (Choice E)

IV-C. Line Graphs

Line graphs are used to show how a quantity changes continuously. Very often the quantity is measured as time changes. If the line goes up, the quantity is increasing; if the line goes down, the quantity is decreasing; if the line is horizontal, the quantity is not changing. To measure the height of a point on the graph, use your pencil or a piece of paper (for example, the edge of the test booklet) as a straightedge.

Questions 10 and 11 refer to the following graph.

Volumes of Sales for a 10-Month Period for Two Salespeople

Source: Defense Department's 'Defense Almanac'
10. In which of the following are the data on the line graph correctly described?

I. The sales in Mark's best month were $50,000 more than in his worst month.

II. The sales in Ted's best month were $20,000 less than the sales in Mark's best month.

III. Ted's sales in his worst months were $10,000 less than Mark's sales in his worst month.

(A) I and II only (B) II and III only (C) I only (D) II only (E) I, II, and III

Sales in Mark's best months (8 and 10) = $90,000
Sales in Mark's worst month (1) = $40,000
Sales in Ted's best month (4) = $70,000
Sales in Ted's worst months (1, 3, 8, 10) = $30,000

The correct choice is E because:
I. $90,000 - $40,000 = $50,000
II. $90,000 - $70,000 = $20,000
III. $40,000 - $30,000 = $10,000

11. By what percent did Ted's sales increase from month 3 to month 4?

(A) 10% (B) 30% (C) 33% (D) 40% (E) 133 $\frac{1}{3}$%

Change $\frac{(70,000 - 30,000)}{\text{Original ($30,000$)}} \times 100 = \text{percent change}$

$\frac{40}{30} = 1 \frac{1}{3}$ or $133 \frac{1}{3}$% (Choice E)

IV-D. Bar Graphs

Quantities can be compared by the height or length of a bar in a bar graph. A bar graph can have either vertical or horizontal bars. You can compare different quantities or the same quantity at different times. Use your pencil or a piece of paper to compare bars that are not adjacent to each other.

Question 12 refers to the following graph.

**Danger on the Road**

Fatalities per one million licensed drivers in each age group in 1990

[Graph showing fatalities per age group with bars]

Source: National Highway Traffic Safety Administration

12. Which of the following can be concluded from the data presented on the graph "Danger on the Road"?

I. High school courses in drivers' education produce the safest drivers.

II. The percentage of teenage drivers involved in a fatal accident is higher than the percentage of drivers between 30 and 40 who are involved in fatal accidents.

III. Senior citizens lose some of the basic skills needed for safe driving.

(A) I only (B) II only (C) II and III only (D) I and III only (E) I, II, and III

I cannot be inferred since there is no information about whether a teenager involved in a fatal accident took drivers' education.

II can be inferred since the bars give the rates per million drivers.

III cannot be concluded. Drivers over 70 have more accidents than drivers in their 60's, but the chart does not give any information about why this happens.

The correct answer is B.
Questions 13 and 14 refer to the following graph.

**Student-Teacher Ratio**

Number of students for each teacher in public elementary and secondary schools.

<table>
<thead>
<tr>

Source: U.S. Department of Education

14. In 1990, how did the spending per public school student in New York and in New Jersey compare with the U.S. average?

(A) New York and New Jersey spent less than the national average.
(B) The amount spent by New York and by New Jersey was equal to the national average.
(C) New York and New Jersey each spent more than $3,000 more per pupil than the U.S. average.
(D) New York and New Jersey spent $3,000 less per pupil than the national average.
(E) This question cannot be answered from the information on the graph.

The bars for 1990 for New York and New Jersey indicate that each state spent almost $8,000 per pupil in public schools. The U.S. average is $4,300 per pupil. The correct answer is C.

**IV-E. Cumulative Graphs**

You can compare several categories by a graph of the cumulative type. These graphs are usually bar or line graphs where the height of the bar or line is divided proportionately among different quantities.

Questions 15–17 refer to the following graph.

**THE BUDGETS OF THREE FAMILIES**

Family A has an annual income of $20,000. Family B has an annual income of $50,000. Family C has an annual income of $100,000.
15. How does the percent of the total budget spent by Family A for health compare with the percent of the total budget spent by Family B for health?

(A) Family A spent 200% more of its budget on health than did Family B.

(B) Family B spent 50% more of its budget on health than did Family A.

(C) The amounts spent by the two families were unequal, but the percentages of the totals were equal.

(D) Family A spent 5% less of its budget on health than did Family B.

(E) Family B spent 5% less of its budget on health than did Family A.

Family A spent 2 of the 20 units, or 10% of the total, on health. Family B spent 1 of the 20 units, or 5%, of the total on health. The correct choice is E.

16. What percent of Family C’s budget went for housing and entertainment?

(A) \(16 \frac{2}{3}\%\)  
(B) 25%  
(C) 33 \(\frac{1}{3}\)%  
(D) 50%  
(E) 75%

For Family C, housing = 4 units and entertainment = 6 units, for a total of 10 units.

\[\frac{10}{20} = \frac{1}{2}\], or 50% (Choice D)

17. How does the food bill for Family A compare with the food bill for Family C?

(A) Family A spent twice as much for food as did Family C.

(B) Family C spent one-half as much for food as did Family A.

(C) Family A and Family C spent the same amount for food.

(D) Family A spent \(2\frac{1}{2}\) times as much as did Family C.

(E) Family C spent \(2\frac{1}{2}\) times as much as did Family A.

Though the number of units spent for food is twice as great for Family A, this is a case of a larger part of a smaller whole (annual income of $20,000), compared with a smaller part of a larger whole (annual income of $100,000).

Family A spent \(\frac{8}{20}\) or \(\frac{4}{10}\) of $20,000 = $8000 for food.

Family C spent \(\frac{4}{20}\) or \(\frac{2}{10}\) of $100,000 = $20,000 for food.

\(2\frac{1}{2}\)($8,000) = $20,000. The correct choice is E.

Review of Formulas

(The number next to each formula refers to the section of the chapters where the formula is discussed.)

Interest = Amount × Time × Rate  \(\text{I–D–2}\)

Discount = Cost × Rate of discount  \(\text{I–D–2}\)

\[x = \frac{1}{2a} \left(- b \pm \sqrt{b^2 - 4ac}\right)\] (quadratic formula)  \(\text{II–B–5}\)

Distance = Speed × Time  \(\text{II–C–2}\)

\[a^2 + b^2 = c^2,\] where \(a\) and \(b\) are the lengths of the legs and \(c\) is the length of the hypotenuse of a right triangle (Pythagorean theorem)  \(\text{III–D–1}\)

Diameter of a circle = \(2 \times \text{Radius}\)  \(\text{III–F}\)

Area of a square = \(s^2\)  \(\text{III–G–1}\)

Area of a rectangle = \(LW\)  \(\text{III–G–1}\)

Area of a triangle = \(\frac{1}{2}bh\)  \(\text{III–G–1}\)

Area of a circle = \(\pi r^2\)  \(\text{III–G–1}\)

Area of a parallelogram = \(bh\)  \(\text{III–G–1}\)

Area of a trapezoid = \(\frac{1}{2} (b_1 + b_2)h\)  \(\text{III–G–1}\)

Circumference of a circle = \(\pi d\)  \(\text{III–G–2}\)

Perimeter of a square = \(4s\)  \(\text{III–G–2}\)

Perimeter of a rectangle = \(2(L + W)\)  \(\text{III–G–2}\)

Distance between points \((x, y)\) and \((a, b)\) = \(\sqrt{(x - a)^2 + (y - b)^2}\)  \(\text{III–H}\)
The analytical ability portion of the GRE is made up of two types of questions: analytical reasoning (puzzle) questions and logical reasoning (argument analysis) questions. Typically, each analytical ability section consists of twenty-five questions. Nineteen analytical reasoning questions are divided into three to five groups, each containing three to seven questions. Six logical reasoning questions come in two sets of three, one set following the first group of analytical reasoning questions, and one set ending the section.

In dealing with analytical ability questions, you should expect to spend most of your time reading and analyzing the puzzle statements and the verbal arguments themselves. Read closely. Once you have worked out a particular structure of relationships, organizing your information in outline or diagram form, you will find the puzzle questions themselves relatively easy. Similarly, once you have critically evaluated a particular verbal argument, noting the assumptions on which it is based and the inferences that can logically be drawn from it, you will find questions concerning the reasoning displayed in that argument readily manageable.

Both types of questions are designed at three different levels of difficulty: easy, moderate, and hard. Of course, your perception of these distinctions will depend on your own level of ability. The tactics presented in this chapter will help you approach questions at all levels. Expect to find some questions in each section relatively easy, and others much more difficult. Do not make the mistake of using all your time on questions that appear extremely difficult.

**Analytical Reasoning Tactics**

**Tactic 1**

Tackle Each Group of Analytical Reasoning Questions as a Unit

Analytical reasoning questions require you to think through a complicated set of conditions and to keep these conditions in mind as you answer a group of questions. It therefore makes sense for you to treat each group of questions as a unit and attempt to answer all the questions while you still have the conditions clearly in mind. Do not jump from one group to a second before you answer all the questions in the first group; you will lose time refamiliarizing yourself with the relationships.

Within a given group, you may find it helpful to skip from question to question. In answering the fourth question based on a particular set of conditions, you may gain an insight into the total relationship that will help you answer questions 2 and 3.
Tactic 2

Simplify the Information by Using Abbreviations and Symbolic Shorthand

The analytical reasoning questions are not intended to be ambiguous. Far from it—the test-makers take great pains to use language precisely and to word the set of conditions describing a particular relationship so exactly that only one interpretation works. In doing so, however, they use so many words that it is easy to get lost. To see the situation clearly, you need to work with symbols, not words.

Strip away individual names and irrelevant details that confuse the situation. If the test-makers list a lengthy group of items, substitute initials for the individual words. If they take a dozen words to describe a relationship, try to express it in three or four letters and symbols (×, =, ÷, etc.). In the course of taking lecture notes, you have probably worked up your own personal shorthand, a system of symbolic notation you use to express ideas rapidly. Build on this system, adding to it any of the standard logical symbols found in the following chart.

STANDARD LOGICAL NOTATION

<table>
<thead>
<tr>
<th>Linking Term</th>
<th>Symbol</th>
</tr>
</thead>
<tbody>
<tr>
<td>and</td>
<td>+</td>
</tr>
<tr>
<td>or</td>
<td>V</td>
</tr>
<tr>
<td>not</td>
<td>~</td>
</tr>
<tr>
<td>if - then</td>
<td>⊃</td>
</tr>
<tr>
<td>if and only if</td>
<td>=</td>
</tr>
<tr>
<td>equal to, same as</td>
<td>=</td>
</tr>
<tr>
<td>not equal to, not same as greater (taller, older, etc.)</td>
<td>&gt;</td>
</tr>
<tr>
<td>less than (shorter, younger, etc.)</td>
<td>&lt;</td>
</tr>
</tbody>
</table>

Work with these symbols if and only if they seem useful to you. You may prefer other symbols, such as & for and.

See how this tactic works in dealing with a set of conditions presented on a recent GRE.

Silent films are always covered, and always in the first week.
Westerns and adventure films are always covered, with westerns covered in the week immediately preceding the week adventure films are covered.
Musicals are never covered in the same course in which fantasy films are covered.
If Detective films are covered, they are covered after westerns are covered, with exactly one of the other genres covered between them.
Cinema noir is not covered unless detective films are covered in one of the previous weeks.

Your first task is to reduce this mass of data to manageable proportions. First, substitute initials for the names of the eight genres, as follows:

| Adventure films | = A |
| Cinema noir | = C |
| Detective films | = D |
| Fantasy films | = F |
| Horror films | = H |
| Musical comedies | = M |
| Silent films | = S |
| Westerns | = W |

Now, note down what you know about these genres:

S always 1
W ⇒ A always (here ⇒ means immediately precedes)
If F, no M
If M, no F
If C, D ⇒ C (here ⇒ means precedes, but not necessarily immediately)
If D, W ⇒ ? ⇒ D

Take a look at the last condition. You know that westerns immediately precede adventure films (W ⇒ A always). Therefore, you can rewrite the last condition to read:

If D, W ⇒ A ⇒ D

Whenever detective films are covered, you know the exact order and identity of three of the six film genres discussed in the course.

Questions 20–22

An instructor regularly offers a six-week survey course on film genres. Each time the course is given, she covers six of the following eight genres: adventure films, cinema noir, detective films, fantasy films, horror films, musical comedies, silent films, and westerns. She will discuss exactly one genre per week according to the following conditions:
Highlight Key Words That Limit the Situation Critically

Look at the preceding example. Note the words that limit the relationships presented. Silent films are always covered and always in the first week. Westerns immediately precede adventure films. Exactly one genre is covered between westerns and detective films. Cinema noir is not covered unless detective films are covered. Musical comedies are never covered in the same course in which fantasy films are covered.

These words are critical to your understanding of the situation. Take particular note of them, underlining them or circling them to emphasize their importance.

Frequently Used Key Words

all
always
at least (at least one member in common — can be 1, 2, 3...)
at most (at most two members in common — can be 0, 1, or 2)
but
can be
cannot be
consecutive (three consecutive days)
directly (directly opposite; directly after)
each
every
exactly (exactly one; exactly once)
except
if
immediately (immediately preceding; immediately adjacent)
impossible
must be
never
no fewer than (no fewer than three—can be 3, 4, 5...)
no more than (no more than four—can be 0, 1, 2, 3, or 4)
none
only (once and only once; if and only if)
perfectly (perfectly straight; perfectly round)
possible
same
some
the least (shortest, smallest, youngest, etc.)
the most (tallest, greatest, oldest, etc.)
unless

Note that certain of these key words have only one function — to rule out a potential ambiguity. These words so precisely define the situation that only one interpretation is possible. Take, for example, immediately. What does the statement “John precedes Kenneth” tell you? It tells you that John is somewhere ahead of Kenneth. What does the statement “John immediately precedes Kenneth” tell you? It tells you the exact relationship between John and Kenneth, letting you know that John is the person who comes right before Kenneth, and that nobody else comes between Kenneth and John.

First, Eliminate Answer Choices Ruled Out by Individual Conditions; Then, Work Through Remaining Choices or Guess

Pay special note to any conditions phrased in unambiguous terms—always, never, all, none. Because they allow only one interpretation of the situation, you may be able to use them to rule out several answer choices at a glance.

See how a single condition allows you to eliminate three answer choices to a question based on the preceding set of course conditions.

20. Which of the following is an acceptable schedule of genres for weeks one through six of the course?

(A) Silent films, westerns, adventure films, detective films, horror films, musical comedies
(B) Silent films, westerns, adventure films, horror films, detective films, fantasy films
(C) Fantasy films, musical comedies, detective films, cinema noir, musical comedies, horror films
(D) Westerns, adventure films, detective films, cinema noir, musical comedies, horror films
(E) Detective films, westerns, adventure films, horror films, fantasy films, cinema noir
What is the first condition that must be met? "S always 1." Therefore, every schedule of genres must begin with S, silent films. Choices A and B begin with S; they deserve further examination. Choices C, D, and E, however, begin with other genres. Eliminate them and give them no further thought.

Go back to Choice A. What pattern do you see?

S W A D H M

S is where it belongs. W A D is an acceptable pattern. In the absence of F, M is acceptable. Choice A works.

Double check yourself. Look over Choice B. Here the pattern is:

S W A H D F

Once again, S is in its place. W A meets the second condition. In the absence of M, F is acceptable. The problem lies in the placement of D. According to the rules, it can exist only in the pattern W A D. It is not enough for westerns merely to precede detective films. The fourth condition states that exactly one genre is covered between westerns and detective films. Given the second condition, that one genre must be adventure films. Thus, if detective films are covered, the pattern must be W A D. Choice B is incorrect. The correct answer is Choice A.

In this instance, you narrowed things down to Choices A and B and had time to work out that Choice A was correct. If you run out of time, don’t worry. Just guess. In this example, you have a fifty-fifty probability of a correct answer by weeding out Choices C, D, and E. By being able to eliminate some answer choices at a glance, you have improved your chance of selecting the correct choice.

Tactic

Study Conditions Not Merely for What They State But for What They Imply

Analytical reasoning questions resemble the inference questions you find in reading comprehension tests. To answer them correctly, you must understand not only what the conditions state explicitly but what they imply.

See how this holds true in answering the following question on the preceding GRE example.

22. Which of the following will NEVER be covered in the sixth week of the course?

(A) Cinema noir
(B) Fantasy films
(C) Horror films
(D) Musical comedies
(E) Westerns

Look at your list of conditions. Which of them provide information about the order in which the different genres may be covered?

S always 1
W ⇒ A always (here ⇒ means immediately precedes)
If C, D → C (here → means precedes, but not necessarily immediately)
If D, W ⇒ A ⇒ D

Consider the second condition. If westerns and adventure films are always covered, with westerns always immediately preceding adventure films, this implies that westerns can be covered in only weeks 2, 3, 4, or 5. They cannot be covered in week 1, for that is reserved for silent films (S always 1). Likewise, they cannot be covered in week 6, for they must be followed by adventure films. (See table)

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
<tbody>
<tr>
<td>S</td>

<tr>
<td>S</td>
<td></td>
<td>W</td>
<td>A</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

From studying the implications of the conditions, you can see that only four basic configurations are possible. You can also see that westerns will never be covered in the sixth week of the course. The correct answer is Choice E.
Organize Information in List or Table Form

When you study a set of conditions for its implications, you wind up with a mass of information. You need to organize this information. As in the preceding question, you will find it useful to list the basic conditions and to set down their implications in table form.

Apply this tactic to the following set of conditions from a recent GRE.

Questions 16–19

A cryptanalyst must translate into letters all of the digits included in the following two lines of nine symbols each:

9 3 3 4 5 6 6 7
2 2 3 3 4 5 7 8

The cryptanalyst has already determined some of the rules governing the decoding:
Each of the digits from 2 to 9 represents exactly one of the eight letters A, E, I, O, U, R, S, and T, and each letter is represented by exactly one of the digits.
If a digit occurs more than once, it represents the same letter on each occasion.
The letter T and the letter O are each represented exactly 3 times.
The letter I and the letter A are each represented exactly two times.
The letter E is represented exactly four times.

List the digits from 2 to 9. Beside each digit, note the number of times that digit occurs in the two lines being decoded.

<table>
<thead>
<tr>
<th>Number of Occurrences</th>
<th>Digit</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 x</td>
<td>2</td>
</tr>
<tr>
<td>4 x</td>
<td>3</td>
</tr>
<tr>
<td>3 x</td>
<td>4</td>
</tr>
<tr>
<td>2 x</td>
<td>5</td>

<tr>
<td>2 x</td>
<td>7</td>
</tr>
<tr>
<td>1 x</td>
<td>8</td>
</tr>
<tr>
<td>1 x</td>
<td>9</td>
</tr>
</tbody>
</table>

Next, compare the information in this table with the information already determined by the cryptanalyst. Note on the table what you can deduce from this comparison. (For example, the cryptanalyst has determined that the letter E occurs four times. Therefore, you can deduce that the letter E must be represented by the digit 3, the only digit occurring four times.)

Unassigned Letters R, S, U

See how simple it is to answer the following GRE question by referring to this table of information.

16. If 2 represents R and 7 represents A, then 5 must represent

(A) I  (B) O  (C) S  (D) T  (E) U

Examine the chart. According to the rules determined by the cryptanalyst, 2, 5 and 7 each represent one (and only one) of three letters: A, I, and an undetermined third letter. This question identifies that third letter as R and stipulates that 2 represents R and 7 represents A. Incorporate this information into your table for the moment. The only letter of the three that remains is I. Thus, 5 must represent I. The correct answer is Choice A.

Number of Occurrences | Digit |

Unassigned Letters S, U
Organize Information in Map or Diagram Form

One of the best ways to deal with the information in an analytical reasoning question is to construct a simple map or diagram. This is particularly helpful when you are dealing with a problem involving the physical or temporal order of things. It is much easier to tell whether a particular route from point A to point B is possible when you actually see points A and B on a map.

Note how you can construct a map to illustrate the following set of conditions from a recent GRE.

Questions 18–22

On an island there are exactly seven towns: T, U, V, W, X, Y, and Z. All existing and projected roads on the island are two-way and run perfectly straight between one town and the next. All distances by road are distances from the main square of one town to the main square of another town. U is the same distance by road from T, V, and W as Y is from X and Z. The following are all of the currently existing roads and connections by road on the island.

Road 1 goes from T to V via U.
Road 2 goes from U directly to W.
The Triangle Road goes from X to Y, from Y to Z, and from Z back to X.

Any main square reached by two roads is an interchange between them, and there are no other interchanges between roads.

Draw Road 1, labeling points T, U, and V.

\[ \begin{array}{c}
T \\
U \\
V 
\end{array} \]

Now draw Road 2, for simplicity’s sake making it perpendicular to Road 1.

\[ \begin{array}{c}
W \\
T \\
U \\
V 
\end{array} \]

Above this diagram, and unconnected to it, construct the Triangle Road.

To indicate that they each are the same length (their main squares are the same distance apart), mark the following five line segments with equal signs: UT, UV, UW, YX, and YZ. You now have a diagram that you can use to answer any questions about the physical relationships among the island’s seven towns.

Questions 14–18

P, Q, R, S, T are the computers in the five overseas offices of a large multinational corporation. The computers are linked in an unusual manner in order to provide increased security for the data in certain offices. Data can be directly requested only from:

- P by Q
- P by T
- Q by P
- R by P
- S by Q
- S by T
- T by R

If a computer can directly request data from another computer, then it can also pass on requests for data to that other computer.
In this situation, you are dealing not with two-way streets, but with “one-way” streets. To say that T can directly request data from P does not imply that P can directly request data from T. Thus, you need to use arrows to indicate the direction in which requests for data may go.

Go through the list, connecting each pair of letters with its arrow or arrows.

Q → P
Q → P → T
Q → P → T
Q → P → T
R
R
R

You now have a diagram that illustrates exactly how these computers are linked. Note how much information about these relationships you have. For example, you can see that several possible routes allow you to request information from computer R. P can request information directly from R. Alternatively, Q and T may also request information from R via P. Taking this process to extremes, R can even request information from itself by routing its request through T and P.

Individual questions often contain new conditions that affect the determined structure of relationships. To understand how a change in the computer linkup described affects the relationships involved, you have only to make a new diagram or alter your diagram temporarily.

See how readily you can answer the following GRE question by altering your diagram appropriately.

17. If computers Q, R, S, and T are the only ones operating, which of the following requests for data can be made, either directly or through one or more of the other computers?

(A) A request by P for data from Q
(B) A request by Q for data from R
(C) A request by Q for data from T
(D) A request by R for data from P
(E) A request by R for data from S

P is nonfunctional. Therefore, it is out of the linkup: you must delete it and the arrows going to and from it from your diagram. Thus altered, your diagram looks like this:

Q → S → T

A quick glance reveals that, of the choices given, only Choice E is possible. Despite the gaps in the linkup, R can still, by going through T, request data from S.

One word of caution: When an analytical reasoning question introduces new information in the form of a stipulation—an additional condition or restriction, or, as in the question above, a suspension of one of the original conditions—be sure you add that information to your diagram or table temporarily: apply it to that question alone. Do not apply it to other questions in its group.

**Tactic 8: Beware of Making Unwarranted Assumptions**

Generally, once you have set up your table or completed your diagram based on a particular set of conditions, you should have little difficulty with the group of questions based on those conditions. Sometimes, however, you may misread one of the conditions, drawing an incorrect inference from it. For example, in a set establishing relationships of age and military rank among the members of a squad, you should not assume that a person who is older than another person must hold a higher rank than that person.

Beware of reading too much into a condition. Take the following condition:

If J is selected for a team, K must also be selected for that team.

Or, in brief,

If J, K (J ⊆ K)

Do not assume on the basis of this that if K is selected for a team, J must also be selected for that team. The condition does not work both ways: it has not been imposed on both parties.

Many sets of conditions in analytical reasoning problems include such one-way conditions. The set of conditions for the film course, for example, includes the following condition:

*Cinema noir* is not covered unless detective films are covered in one of the previous weeks.
In other words,

If C, D → C

However, this restriction does not apply equally to C and D. The same condition has not been imposed on both genres. To say that

Cinema noir is not covered unless detective films are covered in one of the previous weeks

is not to say that

Detective films are not covered unless cinema noir is covered in one of the following weeks.

In other words,

If C, D → C does NOT imply if D, D → C

It is unfortunately very easy to introduce graphic assumptions into the construction of a diagram. For example, look at the diagram below, based upon the description of road connections in the discussion of Tactic 7.

Questions 18–22

On an island there are exactly seven towns: T, U, V, W, X, Y, and Z. All existing and projected roads on the island are two-way and run perfectly straight between one town and the next. All distances by road are distances from the main square of one town to the main square of another town. U is the same distance by road from T, V, and W as Y is from X and Z. The following are all of the currently existing roads and connections by road on the island.

Road 1 goes from T to V via U.
Road 2 goes from U directly to W.
The Triangle Road goes from X to Y, from Y on to Z, and from Z back to X.
Any main square reached by two roads is an interchange between them, and there are no other interchanges between roads.

19. It is possible that the distance by road from X to Y is unequal to the distance by road from

(A) T to U  
(B) U to V  
(C) U to W  
(D) X to Z  
(E) Y to Z

The question asks that you find a road that can differ in length from Road XY.

It is possible that Triangle XYZ is an equilateral triangle, and that lines XY, XZ, and YZ are all equal in length. That, however, is not what you are told. You are told only that XY and YZ are equal in length, as are TU, UV, and UW. You have no information about the length of XZ. By picturing Triangle XYZ as equilateral, you assume a relationship in which all road segments are the same in length and in which no road can differ in length from Road XY. If that were the case, there would be no correct answer to the question.

The test-makers do not create questions for which no correct answers exist. If you can find no correct answer to an analytical reasoning question, go back to the original conditions and re-examine them. You will find that you have misinterpreted one or more of them.

In this case, in constructing your diagram you have assumed incorrectly that the condition defining the length of XY and YZ applies equally to XZ. It does not. XZ can be equal in length to XY. It can be greater in length than XY. It can be shorter in length than XY. Therefore, it follows that the distance by road from X to Y can be unequal to the distance by road from X to Z. The correct answer is Choice D.

The diagram above represents the Triangle Road as an equilateral triangle; visually, XY, YZ, and XZ are equal in length. Unfortunately, this diagram embodies an assumption that may mislead you when you attempt to answer the following question.
Logical Reasoning Tactics

Look at the Question Before You Look at the Argument

Analytical reasoning questions come in groups of three to seven questions based on a single set of conditions. It makes sense to analyze the set of conditions carefully before you look at the questions based upon it. One, or at most two, logical reasoning questions, however, are based on a given argument. Rather than jumping in blindly and analyzing each and every aspect of the argument—assumptions, central point, evidence, further application, logical flaws—do no more work than necessary. Look at the question stem. Then examine the argument. Know what aspect of the argument you are to concentrate on, and focus on it. You will save time and effort.

See how this tactic applies to the following logical reasoning question from a recent GRE.

The Census Bureau reported that the median family income, after adjustment, increased 1.6 percent in 1983. Poverty normally declines when family income goes up, but the national poverty rate remained at its highest level in eighteen years in 1983. The Census Bureau offered two possible explanations: the lingering effects of the deep and lengthy 1981-1982 recession, and increases in the number of people living in families headed by women and in the number of adults not living with any relatives. Both groups are likely to be poorer than the population as a whole.

Which of the following conclusions can be properly drawn from this report?

(A) The national poverty rate has increased steadily over the last eighteen years.
(B) The national poverty rate will increase when there are lingering effects of an earlier recession.
(C) The median family income can increase even though the family income of some subgroups within the population declines or fails to increase.
(D) The category of adults not living with any relatives is the most critical group in the determination of whether the economy has improved.
(E) The median family income is affected more by changes in family patterns than by the extent of expansion or recession of the national economy.

Your goal is to select the answer choice that logically follows from specific facts and ideas stated in the passage. You do not have to evaluate the argument for possible flaws in logic or consider the premises on which it is based. You are looking for a proper conclusion. Therefore, you must carefully analyze each answer choice and see how it relates to the passage. You can eliminate any answer choice that contradicts what the passage states as fact. You can also eliminate any answer choice that strays from the subject of the passage or cannot be linked to specific supporting evidence in the passage.

Go through the answer choices, keeping sight of your goal while you think the argument through. Is Choice A a conclusion that can be properly drawn from what is stated in the passage? No. Choice A contradicts something the passage states as fact. In asserting that the national poverty rate has increased steadily over the last eighteen years, Choice A contradicts the second sentence, which states that the national poverty rate remained at its highest level in 1983. According to the passage, therefore, the national poverty rate did not steadily increase throughout the period in question.

Is Choice B a conclusion that can be properly drawn from what is stated in the passage? No. Choice B goes beyond what the passage states or suggests. In the third sentence, “the lingering effects of the deep and lengthy 1981–1982 recession” are offered as a possible explanation for the failure of the national poverty rate to decline. These lingering effects are not, however, offered as evidence that the national poverty rate will increase.

Is Choice C a conclusion that can be properly drawn from what is stated in the passage? Possibly. Choice C states that the median family income can increase even though the family income of some subgroups within the population declines or fails to increase. This assertion is in keeping with the facts presented in the passage. The first sentence states that the median family income has increased. The second sentence states that the national poverty rate remained at its highest level. This implies that the income of some families either failed to increase or declined. The third sentence cites two subgroups whose income is likely to fall below the national median. Choice C is probably correct—it appears to be a conclusion that can be drawn from the passage—but, just to be sure, you should check out the remaining answer choices, Choices D and E.
Is Choice D a conclusion that can be properly drawn from what is stated in the passage? No. Choice D goes far beyond what the passage suggests or states. Where the passage cites an increase in two subgroups—families headed by women, and adults not living with any relatives—as one possible explanation for the lack of improvement in the economy, Choice D pinpoints one of these two subgroups as the most critical group in determining whether the economy has improved. There is no evidence in the passage to support singling out one particular subgroup in this way. Therefore, you can eliminate Choice D.

What of Choice E? Is Choice E a conclusion that can be properly drawn from what is stated in the passage? No. Like Choice D, Choice E goes beyond what the passage states or suggests. Nothing in the passage suggests that one factor more than another affects the median family income. In fact, the passage cites changes in family pattern and the effects of recession not as influences on the median family income but as influences on the national poverty rate. Choice E clearly is incorrect.

Of the conclusions listed, the only one that can be properly drawn from the passage is Choice C.

**Tactic 2**

Learn to Spot the Major Logical Reasoning Question Types

Just as it will help you to know the major types of reading questions on the GRE, it will also help you to familiarize yourself with the major types of logical reasoning questions on the test.

If you can recognize just what a given question is asking for, you'll be better able to tell which particular approach to take to the argument at hand.

Here are eight categories of logical reasoning questions you are sure to face.

1. **Assumption** Questions that test your ability to recognize the premises on which an argument is based often take the following forms:

   The conclusion above depends on which of the following assumptions?
   The author of the passage above makes which of the following assumptions?
   The author of the passage above presupposes that...
   The statement above assumes which of the following?

2. **Inference** Questions that test your ability to go beyond the author's explicit statements and see what these statements imply may be worded:

   It can be inferred from the passage above that the author believes that...
   Which of the following is implied by the passage above?
   From the information above, which of the following can be most reasonably inferred about...

3. **Conclusion** Questions that test your ability to determine what claim can logically be made on the basis of the evidence in the passage often take these forms:

   If the statements above are true, which of the following conclusions can be properly drawn?

Choose the most logical completion for the following paragraph.
Which of the following would provide the most logical conclusion for the preceding paragraph?
The statements in the passage, if true, best support which of the following conclusions?

4. **Central Point** Questions that test your ability to understand the thrust of an argument are often worded:

   The statement cited above conveys which of the following propositions?
The passage above emphasizes which of the following points?
The author in the passage above argues that...
Which of the following expresses the point the author of the passage above makes?

5. **Support** Questions that test your ability to recognize whether an assertion supports or undermines an argument are often worded:

   Which of the following, if true, does NOT support the claim that...
   Which of the following, if true, would additionally weaken the traditional opinion that...
   Which of the following, if true, would constitute the strongest evidence in support of the claim made above?
The persuasiveness of the claim made above is most weakened by...

6. **Argument Evaluation** Questions that test your ability to judge an argument often take these forms:

   Which of the following would be most important to know in evaluating the accuracy of the argument above?
   Which of the following hypotheses, if true, would help resolve the apparent paradox introduced above?
If all of the statements above are correct, an explanation of their apparent contradiction is provided by...

Which of the following identifies a flaw in the speaker's reasoning?

Knowledge of which of the following would be LEAST useful in evaluating the claims made in the passage above?

7. Application Questions that test your ability to apply the principles governing one argument to another argument are often worded:

Which of the following parallels the method of argumentation above?

The argument above is most like which of the following?

Which of the following suffers from a flaw that, in its logical aspects, is most like the difficulty described above?

8. Technique Questions that test your ability to recognize an argument's method of organization or technique may be worded:

The author's point is made primarily by...
The labor negotiator minimizes his differences with management by...
The passage above criticizes the authorities by...

Pay Particular Attention to Signal Words in the Question (and in the Argument as Well)

In answering logical reasoning questions, you must read closely both the argument and the question or questions based on it. When you do so, be on the lookout for certain signal words that can clarify the situation. In particular, be alert for:

Cause and Effect Signal Words

The following words often signal the conclusion of an argument:

accordingly
consequently
hence
therefore
thus

Contrast Signal Words

The following words often signal a reversal of thought within an argument or a question stem:

although
but
despite
even though
however
in contrast
instead
nevertheless
not
on the contrary
on the other hand
rather than
unlike

See how several of these signal words function in the following logical reasoning problem from a recent GRE.

Literary historians today have rejected conventional analyses of the development of English Renaissance drama. They no longer accept the idea that the sudden achievement of Elizabethan playwrights was a historical anomaly, a sort of magical rediscovery of ancient Greek dramatic form applied to contemporary English subject matter. Instead, most students of the theater now view Elizabethan drama as being organically related to traditional local drama, particularly medieval morality plays.

Which of the following is NOT consistent with the passage above?

(A) England had a dramatic tradition before the Renaissance period.

(B) Elizabethan drama, once thought to be a sudden blossoming forth of creativity, is now seen as part of a historical continuum.

(C) Historians' views of the antecedents of English Renaissance drama have changed considerably.

(D) Current scholarship applies an evolutionary model to English Renaissance drama.

(E) Although English Renaissance drama treats English subject matter, its source of form and method is classical Greek drama.

Your job is to decide which answer choice is NOT consistent with the passage above. Therefore, you can eliminate any answer choice that is consistent with it.

Go through the answer choices. Is Choice A in keeping with what is stated in the passage? Yes. The concluding sentence states that Elizabethan (i.e., English Renaissance) drama is viewed as "organically related" to the earlier traditional local drama. In other words, there was a dramatic tradition in England before Renaissance times. You can eliminate Choice A.
Is Choice B in keeping with what is stated in the passage? Yes. The second sentence states that the sudden achievement of Elizabethan drama is no longer viewed as a historical anomaly. In other words, it is not seen as something abnormal, something that stands apart from history, but as part of a historical continuum. You can eliminate Choice B.

Is Choice C in keeping with what is stated in the passage? Yes. The opening sentence states that literary historians have rejected the conventional views of how English Renaissance drama developed. Therefore, their views of its antecedents have changed considerably. You can eliminate Choice C.

Is Choice D in keeping with what is stated in the passage? Yes. The concluding sentence speaks of English Renaissance drama as being “organically related” to earlier dramatic forms. In other words, it developed out of or evolved from these earlier forms. The language here is that of evolutionary discourse. You can eliminate Choice D.

Is Choice E in keeping with what is stated in the passage? No. The second sentence states that literary historians have discarded the view that English Renaissance drama owes its form and method to the plays of classical Greece. Choice E asserts the very point that the passage seeks to deny. Thus, Choice E is not consistent with the passage and is the correct answer choice.

### Tactic 4

**In Questions About an Argument’s Assumptions, First Pinpoint the Argument’s Conclusion and the Grounds on Which It Is Based**

When asked about an argument’s assumptions, work backwards from what is stated to what is unsaid. Start with the conclusion. Why does the argument’s proponent arrive at this conclusion? What evidence supports it? When you are clear exactly what claim has been made and on what grounds it is founded, you are in a position to determine the assumptions underlying the argument. Ask yourself what there is about this particular evidence that justifies this particular claim. In the process, you will uncover the argument’s unstated premises.

Apply this tactic to the following GRE question.

A study of illusionistic painting inevitably begins with the Greek painter Zeuxis. In an early work, which is the basis for his fame, he painted a bowl of grapes that was so lifelike that birds pecked at the fruit. In an attempt to expand his achievement to encompass human figures, he painted a boy carrying a bunch of grapes. When birds immediately came to peck at the fruit, Zeuxis judged that he had failed.

Zeuxis’ judgment that he had failed in his later work was based on an assumption. Which of the following can have served as that assumption?

- (A) People are more easily fooled by illusionistic techniques than are birds.
- (B) The use of illusionistic techniques in painting had become commonplace by the time Zeuxis had completed his later work.
- (C) The grapes in the later painting were even more realistic than the ones in the earlier work.
- (D) Birds are less likely to peck at fruit when they see that a human being is present.
- (E) After the success of his early work, Zeuxis was unable to live up to the expectations of the general public.

What is Zeuxis’ judgment or conclusion? His conclusion is that he failed to paint human figures with the illusion of life. Why does he draw this conclusion? What evidence does he offer to support it? He concludes that he failed to paint human figures with the illusion of life because birds came to peck at the fruit in one of his paintings that included a human figure. Why does he think this evidence supports his conclusion? Given this description, what assumption does he necessarily make about the behavior of birds? He assumes that birds are unlikely to peck at fruit when they realize a person is nearby. In other words, “Birds are less likely to peck at fruit when they see that a human being is present.” The correct answer is Choice D.
**Tactic 5**

In Questions About Weakening or Strengthening an Argument, Examine the Argument for Any Unstated Assumptions It Makes

An argument is based upon certain assumptions made by its author. If an argument's basic premises are sound, the argument is strengthened. If the argument's basic premises are flawed, the argument is weakened.

Pinpoint what the argument assumes. Then compare that assumption with the answer choices. If the question asks you to choose an answer that most strengthens the argument, look for the answer choice that is most in keeping with the argument's basic assumption. If the question asks you to choose an answer that most weakens the argument, look for the answer choice that casts the most doubt on that assumption.

Apply this tactic to the following question from a recent GRE.

It is important to teach students to use computers effectively. Therefore, students should be taught computer programming in school.

Which of the following, if true, most weakens the argument above.

(A) Only people who use computers effectively are skilled at computer programming.
(B) Only people skilled at computer programming use computers effectively.
(C) Some people who use computers effectively cannot write computer programs.
(D) Some schools teach computer programming more effectively than others.
(E) Most people who are able to program computers use computers effectively.

The argument claims that, if students are to learn to use computers effectively, they should be taught computer programming in school. It clearly assumes a high correlation between knowledge of computer programming and effective computer use. It assumes at the least that people who have studied computer programming use computers effectively, and, possibly, that people who have not studied computer programming do not.

Choices B and E are in keeping with the argument's assumptions: if true, they would strengthen the argument, not weaken it. Therefore, Choices B and E are incorrect.

Choice A does not cast doubt on an assumption. It reverses it. This particular assumption, however, works only one-way. Think of it in if-then terms. Saying “If people are skilled at computer programming, then they can use computers effectively” does not imply “If people can use computers effectively, then they are skilled at computer programming.” Likewise, the assumption “Only people skilled at computer programming use computers effectively” does not imply “Only people who use computers effectively are skilled at computer programming.” Choice A is incorrect.

Choice D is also incorrect. It neither strengthens nor weakens the argument. It goes off on an entirely different track.

The correct answer is Choice C. It states that people exist who use computers effectively yet are unskilled at computer programming—they cannot write programs. It thus casts doubt upon the assumption that people unskilled at computer programming do not or cannot use computers effectively.

**Tactic 6**

Be on the Lookout for Common Logical Fallacies

If you've studied logic, rhetoric, philosophy, or debating, you may notice some familiar types of fallacies and logical errors turning up on the exam—for example, the *ad hominem* argument, in which the speaker attacks the personality of his or her opponent rather than criticizing the opponent's arguments; the *post hoc ergo propter hoc* argument, in which a simple association between two things is erroneously assumed to imply a cause-and-effect relationship between them; the *hasty generalization*, in which one or two isolated instances are taken as proof of some general rule; *circular reasoning*, in which the argument assumes the truth of what's supposed to be proved; and various kinds of *confusion of logical categories*. Technical terms like the ones just mentioned will NOT be tested or used on the exam. But you will be expected to recognize flaws like these when they appear in arguments and understand why they weaken the arguments based upon them.
Practice Exercises

Directions: Each questions or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1-4

An office manager must assign offices to six staff members. The available offices, numbered 1-6 consecutively, are arranged in a row, and are separated only by six-foot-high dividers. Therefore, voices, sounds, and cigarette smoke readily pass from each office to those on either side.

Miss Braun’s work requires her to speak on the telephone frequently throughout the day. Mr. White and Mr. Black often talk to one another in their work, and prefer to have adjacent offices. Miss Green, the senior employee, is entitled to Office 5, which has the largest window. Mr. Parker needs silence in the office(s) adjacent to his own. Mr. Allen, Mr. White, and Mr. Parker all smoke. Miss Green is allergic to tobacco smoke and must have nonsmokers in the office(s) adjacent to her own. Unless otherwise specified, all employees maintain silence while in their offices.

1. The best location for Mr. White is in Office
   (A) 1 (B) 2 (C) 3 (D) 4 (E) 6

2. The best employee to occupy the office furthest from Mr. Black would be
   (A) Mr. Allen (B) Miss Braun (C) Miss Green (D) Mr. Parker (E) Mr. White

3. The three employees who smoke should be placed in Offices
   (A) 1, 2, and 3 (B) 1, 2, and 4 (C) 1, 2, and 6 (D) 2, 3, and 4 (E) 2, 3, and 6

4. Which of the following events, occurring one month after the assignment of offices, would be most likely to lead to a request for a change in office assignment by one or more employees?
   (A) Miss Braun’s deciding that she needs silence in the office(s) adjacent to her own.
   (B) Mr. Black’s contracting laryngitis.
   (C) Mr. Parker’s giving up smoking.
   (D) Mr. Allen’s taking over the duties formerly assigned to Miss Braun.
   (E) Miss Green’s installing a noisy teletype machine in her office.

5. Excessive amounts of mercury in drinking water, associated with certain types of industrial pollution, have been shown to cause Hobson’s disease. Island R. has an economy based entirely on subsistence-level agriculture; modern industry of any kind is unknown. The inhabitants of Island R. have an unusually high incidence of Hobson’s disease.

Which of the following can be validly inferred from the above statements?
   I. Mercury in drinking water is actually perfectly safe.
   II. Mercury in drinking water must have sources other than industrial pollution.
   III. Hobson’s disease must have causes other than mercury in drinking water.
   (A) II only (B) III only (C) I and II only (D) I and III only (E) II and III only

6. Those who oppose the new water project claim to have the best interests of this community at heart. Yet they are the same people who, only three years ago, opposed the building of the new state highway, which now provides half a million commuters with fast, easy motoring every day. What could be a better argument in favor of the water project?

Which of the following statements is most like the argument above?
   (A) Those who oppose nuclear power are unable or simply unwilling to recognize the fact that the nuclear energy industry has a safety record unparalleled by that of any other industry.
   (B) The new gun control law is a misguided and dangerous proposal, which has been denounced by every sportsmen’s club and gun-owner’s association in the state.
   (C) We must fight the proposed antipornography statute, for its principal sponsors have voted against every major piece of women’s rights legislation introduced in the last twenty years.
   (D) The polls show that over 60% of the concerned parents in the state favor the school bond issue; cast your vote with the concerned majority on election day.
   (E) The so-called tax reform bill now before the state senate must be defeated; its only true beneficiaries would be the wealthy corporations, which already pay too little in taxes.
Questions 7–11

The office staff of the XYZ Corporation presently consists of three bookkeepers (A, B, and C) and five secretaries (D, E, F, G, and H). Management is planning to open a new office in another city using three secretaries and two bookkeepers of the present staff. To do so they plan to separate certain individuals who do not function well together. The following guidelines were established to set up the new office:

1. Bookkeepers A and C are constantly finding fault with one another and should not be sent as a team to the new office.
2. C and E function well alone but not as a team. They should be separated.
3. D and G have not been on speaking terms for many months. They should not go together.
4. Since D and F have been competing for promotion, they should not be a team.

7. If A is to be moved as one of the bookkeepers, which of the following CANNOT be a possible working unit?
   (A) ABDEH
   (B) ABDGH
   (C) ABFGH
   (D) ABEGH
   (E) ABFGH

8. If C and F are moved to the new office, how many combinations are possible?
   (A) 1 (B) 2 (C) 3 (D) 4 (E) 5

9. If C is sent to the new office which member of the staff CANNOT go with C?
   (A) B (B) D (C) F (D) G (E) H

10. Under the guidelines developed, which of the following MUST go to the new office?
    (A) B (B) D (C) E (D) G (E) H

11. If D goes to the new office which of the following is (are) true?
    I. C cannot go.
    II. A cannot go.
    III. H must also go.
    (A) I only
    (B) II only
    (C) I and II only
    (D) I and III only
    (E) I, II, and III

12. Fran: I want to stay out of Professor Caldwell’s classes if I can. I’ve heard she’s very strict when it comes to giving out the grades.

    Sid: That’s not true. My friend Phil took her class year, and she gave him an A.

From the conversation above, it can be inferred that Sid interpreted Fran’s statement to mean that Professor Caldwell

(A) makes unfair demands on her students
(B) only gives good grades to a few favored students
(C) has become increasingly strict in her grading over the past year
(D) gives out fewer good grades than most teachers in the department
(E) never gives out grades of A

13. The nursing shortage in this country is a phony one, caused by the concentration of nurses in the geographical regions with the highest paid and most generous fringe benefits for nurses. In addition, the League of American Nurses has artifically worsened the shortage by encouraging nursing schools to keep enrollments low in order to boost nurses’ salaries to even higher levels.

All of the following statements, if true, would tend to WEAKEN the argument above except:

(A) Although nurses are paid less in Texas than in Connecticut, there are 35% more nurses in Texas than in Connecticut.
(B) Nationwide, the salaries of nurses have risen at a slower rate than inflation over the last ten years.
(C) The number of students who earned degrees in nursing last year was almost double the number six years ago.
(D) Those areas of the country with the highest pay for nurses also have correspondingly higher living costs.
(E) The League of American Nurses has almost no influence on the policies of American nursing schools.

Questions 14–17

After months of talent searching for an administrative assistant to the president of the college the field of applicants has been narrowed down to five (A, B, C, D, and E). It was announced that the finalist would be chosen after a series of all-day group personal interviews were held. The examining committee agreed upon the following procedure:

1. The interviews will be held once a week.
2. Three candidates will appear at any all-day interview session.
3. Each candidate will appear at least once.
4. If it becomes necessary to call applicants for additional interviews, no more than one such applicant should be asked to appear the next week.
5. Because of a detail in the written applications, it was agreed that whenever Candidate B appears, A should also be present.
6. Because of travel difficulties, it was agreed that C will appear for only one interview.
14. At the first interview, the following candidates appear: A, B, and D. Which of the following combinations can be called for the interview to be held the next week?
   - (A) BCD
   - (B) CDE
   - (C) ABE
   - (D) ABC
   - (E) ADE

15. Which of the following is a possible sequence of combinations for interviews in two successive weeks?
   - (A) ABC; BDE
   - (B) ABD; ABE
   - (C) ADE; ABC
   - (D) BDE; ACD
   - (E) CDE; ABC

16. If A, B, and D appear at the interview and D is called for an additional interview the following week, which two candidates may be asked to appear with D?
   - I. A
   - II. B
   - III. C
   - IV. E
   - (A) I and II
   - (B) I and III only
   - (C) II and III only
   - (D) II and IV only
   - (E) III and IV only

17. Which of the following correctly state(s) the procedure followed by the search committee?
   - I. After the second interview, all applicants have appeared at least once.
   - II. The committee sees each applicant a second time.
   - III. If a third session is held it is possible for all applicants to appear at least twice.
   - (A) I only
   - (B) II only
   - (C) I and II only
   - (D) III only
   - (E) I and III only

Questions 18–21

To obtain a government post in the Republic of Malabar, you must either be a member of the ruling Independence Party or a personal associate of President Zamir. Party members seeking a government post must either give a substantial donation in gold bullion to the party’s campaign fund or make a televised speech denouncing President Zamir’s political enemies. Gold bullion may be purchased only at the National Bank, which does business only with those who have been certified as politically sound by the Minister of Justice.

Only those who either have been certified as politically sound by the Minister of Justice or have donated 300 hours of service to the Independence Party are allowed to make political speeches on television.

To become a personal associate of President Zamir, you must either give a substantial donation in gold bullion to the president’s personal expense account or perform personal services for a member of his immediate family. Before appointing a personal associate to a government post, President Zamir always checks to make sure that he or she has been certified as politically sound by the Minister of Justice.

18. Mr. Mizar is a member of the Independence Party.
   To obtain a government post, his next step must be to either
   - (A) be certified as politically sound by the Minister of Justice, or give a substantial donation in gold bullion to the party’s campaign fund
   - (B) donate 300 hours of service to the Independence Party, or give a substantial donation in gold bullion to the president’s personal expense account
   - (C) be certified as politically sound by the Minister of Justice, or donate 300 hours of service to the party
   - (D) perform personal services for a member of President Zamir’s immediate family, or make a televised speech denouncing the president’s political enemies
   - (E) be certified as politically sound by the Minister of Justice, or become a personal associate of President Zamir

19. All those who wish to obtain government posts must
   - I. become personal associates of President Zamir
   - II. be certified as politically sound by the Minister of Justice
   - III. purchase gold bullion at the National Bank
   - (A) I only
   - (B) II only
   - (C) III only
   - (D) II and III only
   - (E) Neither I, II, nor III

20. Mr. Razim has been certified as politically sound by the Minister of Justice. He may obtain a government post immediately only if he
   - (A) has donated 300 hours of service to the Independence Party
   - (B) is allowed to make political speeches on television
   - (C) is a member of the Independence Party
   - (D) is a personal associate of President Zamir
   - (E) has purchased gold bullion at the National Bank
21. Because of a financial crisis, the National Bank is closed indefinitely. Those who wish to obtain government posts during this period must
(A) either perform some kind of services or make televised speeches denouncing President Zamir's political enemies
(B) become members of the Independence Party
(C) donate 300 hours of service to the Independence Party
(D) become personal associates of President Zamir
(E) either become members of the Independence Party or perform any services for the party

Questions 22 and 23

In a laboratory study, 160 rabbits in an experimental group were injected with Serum D, while 160 rabbits in a control group were injected with a harmless sugar solution. Within two weeks, 39% of the experimental group rabbits had contracted jungle fever, a highly contagious and usually fatal disease. Therefore, jungle fever must be caused by some substance similar to the substances found in Serum D.

22. The above argument would be most greatly strengthened if it were shown that
(A) the normal rate of jungle fever among rabbits is less than 0.01%
(B) 40% of the rabbits in the control group had also contracted jungle fever within two weeks
(C) Serum D contains substances extracted from the root of a certain poisonous jungle wildflower
(D) the blood of jungle fever victims invariably contains a high level of a certain toxic substance also found in Serum D
(E) nearly all the rabbits who contracted jungle fever died within two days of the appearance of the first symptoms

23. The above argument would be most seriously weakened if it were shown that
(A) none of the substances in Serum D occurs naturally in the habitats of most species of rabbit
(B) the rabbits in the experimental group had been kept strictly isolated from one another
(C) jungle fever is usually found only among victims of the bite of the South American Lesser Hooded Viper
(D) the scientists administering the injections were unaware of the contents of the solutions they were using
(E) one of the rabbits in the experimental group had had jungle fever prior to the start of the experiment

24. Now Mesa Electronics brings tomorrow's technology to today's home stereo. The same space-age circuitry used by the Wanderer spacecraft to send images of the most distant planets back to earth has been incorporated in the new Mesa X-2700 stereo system. If your home entertainment is important to you, why settle for an old-fashioned stereo system when the Mesa X-2700 is priced at only a few dollars more?

The most serious logical weakness of this argument is its failure to
(A) provide technical data on the manufacturing specifications of the Mesa X-2700
(B) show the relevance of space-age circuitry to the requirements of home stereo
(C) specify the exact price difference between the Mesa X-2700 and old-fashioned stereo systems
(D) acknowledge the contributions of scientists in the space program to the development of the advanced circuitry mentioned
(E) explain the precise meaning of the technical terms used

Questions 25–28

Professor Kittredge's literature seminar includes students with varied tastes in poetry. All those in the seminar who enjoy the poetry of Browning also enjoy the poetry of Eliot. Those who enjoy the poetry of Eliot despise the poetry of Coleridge. Some of those who enjoy the poetry of Eliot also enjoy the poetry of Auden. All those who enjoy the poetry of Coleridge also enjoy the poetry of Donne. Some of those who enjoy the poetry of Donne also enjoy the poetry of Eliot. Some of those who enjoy the poetry of Auden despise the poetry of Coleridge. All those who enjoy the poetry of Donne also enjoy the poetry of Frost.

25. Miss Garfield enjoys the poetry of Donne. Which of the following must be true?
(A) She may or may not enjoy the poetry of Coleridge.
(B) She does not enjoy the poetry of Browning.
(C) She enjoys the poetry of Auden.
(D) She does not enjoy the poetry of Eliot.
(E) She enjoys the poetry of Coleridge.

26. Mr. Huxtable enjoys the poetry of Browning. He may also enjoy any of the following poets except
(A) Auden
(B) Coleridge
(C) Donne
(D) Eliot
(E) Frost
27. Miss Inaguchi enjoys the poetry of Coleridge. Which of the following must be false?
   (A) She does not enjoy the poetry of Auden.
   (B) She enjoys the poetry of Donne.
   (C) She enjoys the poetry of Frost.
   (D) She does not enjoy the poetry of Browning.
   (E) She may enjoy the poetry of Eliot.

28. Based on the information provided, which of the following statements concerning the members of the seminar must be true?
   (A) All those who enjoy the poetry of Eliot also enjoy the poetry of Browning.
   (B) None of those who despise the poetry of Frost enjoy the poetry of Auden.
   (C) Some of those who enjoy the poetry of Auden despise the poetry of Coleridge.
   (D) None of those who enjoy the poetry of Browning despise the poetry of Donne.
   (E) Some of those who enjoy the poetry of Frost despise the poetry of Donne.

Questions 29–31

A certain city is served by six subway lines, designated by the letters A, B, and C, and the numbers 1, 2, and 3.

When it snows, morning service on the B line is delayed.

When it rains or snows, service on the A, 2, and 3 lines is delayed both morning and afternoon.

When the temperature drops below 30°F, afternoon service is cancelled on either the A line or the 3 line, but not both.

When the temperature rises above 90°F, afternoon service is cancelled on either the C line or the 3 line, but not both.

When service on the A line is delayed or cancelled, service on the C line, which connects with the A line, is delayed.

When service on the 3 line is cancelled, service on the B line, which connects with the 3 line, is delayed.

29. On January 10, with the temperature at 15°F, it snows all day. On how many lines will service be affected, including both morning and afternoon?
   (A) 2
   (B) 3
   (C) 4
   (D) 5
   (E) 6

30. On August 15, with the temperature at 97°F, it begins to rain at 1 P.M. What is the minimum number of lines on which service will be affected?
   (A) 2
   (B) 3
   (C) 4
   (D) 5
   (E) 6

31. On which of the following occasions would service on the greatest number of lines be disrupted?
   (A) A snowy afternoon with the temperature at 45°F
   (B) A snowy morning with the temperature at 45°F
   (C) A rainy morning with the temperature at 45°F
   (D) A snowy afternoon with the temperature at 20°F
   (E) A rainy afternoon with the temperature at 95°F

Questions 32–36

Seven candidates in a gubernatorial primary election are to speak at a voters’ forum. They are named Johnson, Kelleher, Lindsay, Macmillan, Nevins, Oberlander, and Pankhurst, and currently hold the offices of lieutenant governor, attorney general, state comptroller, U.S. Senator, highway commissioner, county supervisor, and schools superintendent, though not necessarily in that order.

The third speaker will be the highway commissioner. Macmillan, who is not the county supervisor, will speak after the speaker who immediately follows Nevins. Johnson is the state comptroller.

The lieutenant governor will speak sixth. The attorney general will speak immediately before the county supervisor.

Pankhurst will speak immediately after Oberlander and immediately before Kelleher.

Schools Superintendent Nevins will speak fifth.

32. The first speaker will be
   (A) Oberlander
   (B) the state comptroller
   (C) Pankhurst
   (D) the county supervisor
   (E) Lindsay

33. The speaker who immediately precedes Macmillan will be
   (A) the highway commissioner
   (B) Johnson
   (C) the lieutenant governor
   (D) Kelleher
   (E) the county supervisor

34. Which of the following correctly pairs a speaker with his or her current office?
   (A) Oberlander—U.S. Senator
   (B) Kelleher—highway commissioner
   (C) Lindsay—county supervisor
   (D) Pankhurst—lieutenant governor
   (E) Macmillan—attorney general

35. Before the forum, Pankhurst drops out of the race, while a new candidate, Quigley, enters the race. If Pankhurst is dropped from the forum, while Quigley is added in the slot immediately after Lindsay, the sixth speaker will be
   (A) Kelleher
   (C) Nevins
   (E) Macmillan
   (B) Johnson
   (D) Quigley
36. If, in addition to the changes described in question 35, the highway commissioner and the U.S. Senator agree to exchange positions in the speaking schedule, which of the following will be true?

(A) Macmilian will speak after Oberlander and before Johnson.

(B) Kelleher will be the only candidate to speak after Lindsay.

(C) There will be an equal number of speakers before and after Johnson.

(D) Only one candidate will speak after Nevins and before Kelleher.

(E) The first and last speakers will not be changed.

Questions 37–39

A certain baseball team has four pitchers, named Miller, Craig, Hook, and Mizell. Each of the four is best known for throwing one type of pitch: fastball, curve ball, slider, or screwball.

Each of the four also uses a particular style of delivery in pitching: overhand, three-quarter, sidearm, or underhand.

Hook is best known for throwing the slider. Neither Craig nor Mizell uses a three-quarter style of delivery.

The pitcher who uses an underhand delivery is best known for throwing the fastball.

Mizell is best known for throwing the screwball.

Miller uses an overhand delivery.

37. Which of the following correctly matches a pitcher with his best-known pitch and his style of delivery?

(A) Miller—curve ball—three-quarter

(B) Hook—slider—side arm

(C) Craig—fastball—underhand

(D) Mizell—curve ball—underhand

(E) Miller—screwball—sidearm

38. During a game, if the starting pitcher is ineffective, he will be replaced by another pitcher. All of the following are possible pitching changes except

(A) the curve ball pitcher being replaced by the pitcher who uses an overhand delivery

(B) the screwball pitcher being replaced by Hook

(C) Miller being replaced by the fastball pitcher

(D) the slider pitcher being replaced by the pitcher who uses a sidearm delivery

(E) Craig being replaced by the curve ball pitcher

39. In a four-game series, the manager of the team decides to pitch the fastball pitcher first, the pitcher who uses a three-quarter delivery second, the curve ball pitcher third, and the pitcher who uses a sidearm delivery fourth. In which order will the pitchers appear?

(A) Mizell, Craig, Miller, Hook

(B) Craig, Hook, Miller, Mizell

(C) Miller, Craig, Hook, Mizell

(D) Craig, Miller, Mizell, Hook

(E) Miller, Hook, Mizell, Craig

Questions 40 and 41

As President of the National Association of Widget Manufacturers, I oppose government handouts to private business. But the present program of federal aid to the widget industry must continue. This is not a handout but rather a system of moderate cash subsidies to enable our beleaguered industry to withstand the shocks of rising costs and high interest rates, and so continue to provide useful employment to thousands of U.S. citizens.

40. The major logical weakness of the argument above is the fact that

(A) the speaker is arguing against his own personal interest

(B) it makes no attempt to explain the ultimate causes of rising costs and high interest rates

(C) it draws no meaningful distinction between handouts and subsidies

(D) it does not explain the significance of the widget industry for the U.S. economy as a whole

(E) it offers no factual evidence to substantiate the claim that the widget industry is in danger

41. Which of the following persons would be most likely to disagree with the conclusions reached in the above argument?

(A) The president of a medium-sized widget manufacturing firm

(B) The patentee of a new device designed to make the widget obsolete

(C) The federal administrator charged with coordinating the widget industry subsidy program

(D) A congressional representative from a district containing several large widget manufacturing plants

(E) The president of the national widget industry employees' union

42. Leafletting and speechmaking on government property should be outlawed. Radicals and fanatics have no right to use public property when peddling their unsavory views.

The argument above is based on the assumption that

(A) radicals and fanatics prefer using public property when disseminating their views

(B) legal restrictions that apply to one group need not apply equally to all

(C) the general public has a vested interest in the free exchange of varied political views

(D) political activity that interferes with the orderly functioning of government should not be protected by law

(E) all those who leaflet and make speeches on government property are radicals and fanatics
Answer Key

1. C
2. D
3. A
4. D
5. E
6. C
7. B
8. A
9. B
10. A
11. D
12. E
13. A
14. B
15. C
16. E
17. A
18. C
19. E
20. D
21. A
22. D
23. E
24. B
25. A
26. B
27. E
28. C
29. D
30. C
31. B
32. A
33. C
34. B
35. D
36. A
37. C
38. A
39. B
40. C
41. B
42. E

Answer Explanations

1–4: Miss Green is definitely assigned to Office #5. Since no smoker may be near Miss Green, either Miss Braun or Mr. Black are the only ones that may be near #5. Mr. Black cannot go to #6 because he must be close to Mr. White. He must therefore take Office #4 and give Miss Braun #6. Mr. White may have #3 and be close to Mr. Black. Messrs. Allen and Parker have yet to be assigned. At this point the two vacancies are #1 and #2. Mr. Parker cannot be near Mr. White, who often talks to Mr. Black. Mr. Parker should have #1 and leave #2 for Mr. Allen. The assignment of offices may be summarized as follows:

<table>
<thead>
<tr>
<th>OFFICE #</th>
<th>STAFF MEMBER</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Mr. Parker</td>
</tr>
<tr>
<td>2</td>
<td>Mr. Allen</td>
</tr>
<tr>
<td>3</td>
<td>Mr. White</td>
</tr>
<tr>
<td>4</td>
<td>Mr. Black</td>
</tr>
<tr>
<td>5</td>
<td>Miss Green</td>
</tr>
<tr>
<td>6</td>
<td>Miss Braun</td>
</tr>
</tbody>
</table>

1. C. Observe summary chart.
2. D. Observe summary chart.
3. A. Observe summary chart.
4. D. Mr. Allen is a smoker and cannot be near Miss Green, who, because of seniority, must stay in #5. This would cause a complete change of assignments.
5. E. I is denied by the statement that some forms of mercury cause Hobson’s disease. II mentions the mercury in drinking water that is associated with industrial pollution. It may be concluded that mercury may get into drinking water by some other means. III alludes to the fact that this island has no industrial wastes and yet has a high incidence of this disease.

6. C. The argument presented here against proposed legislation is based upon unrelated, earlier legislation. Linking the water project and the highway proposal is similar in logic to linking the antipornography proposal and the earlier women’s rights legislation.

7–11: This summary with dotted lines indicates combinations to avoid:

BOOKKEEPERS → A → B → C
SECRETARIES → D → E → F → G → H

7. B. See item #3.
8. A. Since C is going, A cannot go, leaving B as the second bookkeeper. To have three secretaries, you cannot use E with C, leaving only D, F, G, and H. If D is used, F and G are ruled out. There is one and only one combination: F, G, and H with C and B.

9. B. If C goes you cannot use D. See explanation above.

10. A. Bookkeeper B has no limitations. A cannot go with C. D cannot go with F or G. E cannot go with C. Although H has no limitations, he could be left in the old office with a combination of E, F, and G. Another way of analyzing this question is to consider that to get two bookkeepers out of the three available ones, you must take either A or C but not both.

11. D. If D goes, the other two secretaries must be E and H. C cannot go with E. Therefore, A and B are the two bookkeepers.
12. E. If the professor is strict about grades, she might possibly still make unfair demands (A) and also have favorites (B). It is possible that she acquired this tendency recently (C). It is possible that few of her students deserve good grades (D), but the fact that she NEVER gives out grades of A could quite possibly label her as being very strict when it comes to giving out grades.

13. A. The statement in (A) may not weaken the argument. Texas is a much bigger, more heavily populated state than Connecticut. Even though there are 35% more nurses in Texas than Connecticut, the lower salary in Texas may still cause fewer nurses to go there than would otherwise go.

14. B. According to procedure item #4, only one candidate may appear on two subsequent weeks.

15. C. (A) violates item #5. (B) contradicts #4. (D) fails to consider #5. (E) does not take #6 into account.

16. E. (A) is not correct; see item #4. (B) is not correct because of item #4. (C) and (D) contradict item #5.

17. A. Since there are five applicants and three appear at each session, after the second session all applicants must have made an appearance (I).

18–21: In solving this puzzle, a flowchart indicating the various steps which can lead to a government post in Malabar will be useful. It might look something like this:

```
Party Member
  ┌──────────┐
  │ Cert. ──→ │
  │ Gold ──→ │
  │ Post ────┘
  └──────────┘
       ┌──────────┐
       │ Service to Party ───→ │
       │ TV ───→ │
       │ Post ───┘

       ┌──────────┐
       │ Gold ───┘
       └──────────┘
       ┌──────────┐
       │ Assoc. ──→ │
       │ Cert. ──→ │
       │ Post ────┘
       └──────────┘
```

18. C. As the chart shows, an Independence Party member has two possible routes to a government post. Therefore, as his next step, Mr. Mizar may either be certified by the Minister of Justice or donate 300 hours of service.

19. E. To answer this question, check the chart to determine whether there is any step which is required by all routes to a government post. Since there is no such step, the correct answer is choice E. Note that statement II is not correct; it is possible for a party member to avoid having to be certified by the Minister of Justice by donating 300 hours of service to the party instead.

20. D. As the chart shows, a personal associate of President Zamir who has been certified by the Minister of Justice is immediately eligible for a government post. Each of the other choices would leave some requirement unfulfilled. Choice E would be correct if Mr. Razim were known to be a party member; however, this is not stated in the question.

21. A. According to this question, all routes to a government post which require the purchase of gold bullion have been blocked off. The only remaining routes are: the Party Member--Cert. or Services--TV route; and the Service--Assoc.--Cert. route. Both routes require either the performance of some kind of service or the making of a televised speech.

22. D. The conclusion that some substance found in Serum D causes jungle fever would be greatly strengthened if the substance and the fever were invariably found together, as stated in choice E. Choice A does not help to establish the cause of the high rate of jungle fever in the experimental group. Choice B would weaken the original argument, not strengthen it. Choices C and E would neither weaken nor strengthen the argument.

23. E. Since we are told that jungle fever is a "highly contagious" disease, choice E suggests an alternative explanation for the high rate of jungle fever in the experimental group. Choice A is irrelevant, since we have no idea whether rabbits in general or any particular species of rabbits are frequent victims of jungle fever in the first place. Choice B would strengthen the argument, not weaken it.

24. B. The force of the argument presented in this advertisement lies in the attractiveness of the promise of "space-age circuitry" in the X-2700 stereo system. Choice B effectively points out the fundamental weakness of this appeal. All the other choices present features of the advertisement which might be regarded as flaws, but which are very minor in comparison to the flaw indicated in choice B.

25–28: For a puzzle like this one, which relates various interlocking groups to one another, you'll need to draw a circle diagram showing the interrelationships of the groups named. Use solid lines to represent groups whose relationships are definitely established; use broken lines to represent groups about which some ambiguity
exists. Your diagram should look more or less like this one:

25. A. If Miss Garfield is within the circle labeled D (lovers of Donne), she may or may not be within the circle labeled C (lovers of Coleridge). Each of the other statements presents as definite fact something which may or may not be true.

26. B. As the diagram shows, the circle labeled B has no overlap with the circle labeled C. Therefore, there are no Browning-lovers who are also Coleridge-lovers. Browning-lovers may also enjoy Auden, Donne, or Frost; they definitely enjoy Eliot, since the circle labeled B is entirely within the circle labeled E.

27. E. All of the choices are possibly true, with the exception of choice E. Since the circle labeled C and the circle labeled E have no overlap, Miss Inaguchí definitely does not enjoy the poetry of Eliot.

28. C. Since some Auden-lovers are Eliot-lovers, and since all Eliot-lovers are Coleridge-despisers, there must be some Auden-lovers who are Coleridge-despisers.

29. D. As shown by the second, third, and sixth statements listed, the A, B, C, 2, and 3 lines will all be affected.

30. C. The 97° temperature will cancel afternoon service on either the C or the 3 line. The rain will delay service on the A, 2, and 3 lines. When service on the A line is delayed, service on the C line is delayed. Therefore the C line and the 3 line are affected either way, and the delays on the A and the 2 lines raise to four the minimum number of lines affected.

31. B. On a snowy morning with the temperature at 45° F, the A, B, C, 2, and 3 lines will all be affected. Under each of the other conditions mentioned, only four lines will be affected.

32–36: Draw a chart providing spaces for the initials of the seven speakers along with abbreviations for the seven offices they hold. Start by filling in the most definite information provided, which is found in the second, fifth, and eighth paragraphs. Your chart now looks like this:

<table>
<thead>
<tr>
<th>SPEAKER</th>
<th>OFFICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td></td>
</tr>
<tr>
<td>2.</td>
<td></td>
</tr>
<tr>
<td>3.</td>
<td></td>
</tr>
<tr>
<td>4.</td>
<td></td>
</tr>
<tr>
<td>5.</td>
<td></td>
</tr>
<tr>
<td>6.</td>
<td></td>
</tr>
<tr>
<td>7.</td>
<td></td>
</tr>
</tbody>
</table>

The third paragraph tells us that Macmillan should be placed in the seventh spot in the line-up. The sixth paragraph tells us that the attorney general will speak immediately before the county supervisor; however, looking at the chart, we see that the only two consecutive places still open are the first and the second, so that these two speakers must fit into those two openings. The chart now looks like this:

<table>
<thead>
<tr>
<th>SPEAKER</th>
<th>OFFICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td></td>
</tr>
<tr>
<td>2.</td>
<td></td>
</tr>
<tr>
<td>3.</td>
<td></td>
</tr>
<tr>
<td>4.</td>
<td></td>
</tr>
<tr>
<td>5.</td>
<td></td>
</tr>
<tr>
<td>6.</td>
<td></td>
</tr>
<tr>
<td>7.</td>
<td></td>
</tr>
</tbody>
</table>

We can now put state comptroller Johnson into the fourth place in the line-up, since this is the only possible place for her. In addition, we know from the seventh paragraph that Oberlander, Pankhurst, and Kelleher will speak in that order, and the chart now shows that the only three consecutive places still open are, the first, second, and third places. Therefore, Oberlander, Pankhurst, and Kelleher belong in those spots. By elimination we can fill in the remaining slots. The questions are now easy.

32. A. Read directly from the chart
33. C. Read directly from the chart
34. B. Read directly from the chart
35. D. If Pankhurst, in the second slot, drops out, those who originally were scheduled to speak third, fourth, fifth, sixth, and seventh will now speak second, third, fourth, fifth, and sixth. If Quigley is to speak following Lindsay, who is now the fifth speaker, Quigley will speak sixth.
36. A. Choice A is correct, since Macmillan will now be the second speaker, and will follow Oberlander and precede Johnson. Choice B is wrong, because Quigley will also speak after Lindsay (see question 35). Choice C is wrong, because only two speakers will precede Johnson but four will follow her. Choice D is wrong, because Lindsay and Quigley will both follow Nevins and precede Kelleher. And choice E is false because the last speaker was changed from Macmillan to Kelleher.

37–39: For this puzzle, you'll need a three-column chart listing pitchers, pitches, and styles of delivery. The information given in the second, fourth, fifth, and sixth paragraphs can be easily charted as follows:

<table>
<thead>
<tr>
<th>PITCHER</th>
<th>PITCH</th>
<th>DELIVERY</th>
</tr>
</thead>
<tbody>
<tr>
<td>H.</td>
<td>Sl.</td>
<td>T.</td>
</tr>
<tr>
<td>F.</td>
<td>U.</td>
<td></td>
</tr>
<tr>
<td>Miz.</td>
<td>Sc.</td>
<td>S.</td>
</tr>
<tr>
<td>Mil.</td>
<td>C.</td>
<td>O.</td>
</tr>
</tbody>
</table>

Now, using the process of elimination and the information in the third paragraph, you can complete the chart like this:

<table>
<thead>
<tr>
<th>PITCHER</th>
<th>PITCH</th>
<th>DELIVERY</th>
</tr>
</thead>
<tbody>
<tr>
<td>H.</td>
<td>Sl.</td>
<td>T.</td>
</tr>
<tr>
<td>C.</td>
<td>F.</td>
<td>U.</td>
</tr>
<tr>
<td>Miz.</td>
<td>Sc.</td>
<td>S.</td>
</tr>
<tr>
<td>Mil.</td>
<td>C.</td>
<td>O.</td>
</tr>
</tbody>
</table>

All three questions can be answered by referring to this chart.

37. C. Read directly from the chart.

38. A. Choice A is impossible, because the curve ball pitcher and the pitcher who uses an overhand delivery are one and the same. This difficulty does not apply to any of the other choices.

39. B. Read directly from the chart.

40. C. The only difference between the “handouts” which the author deplores and the “subsidies” he favors is the words used to describe them. In one case, the words used are negatively loaded; in the other, they are positive, or at least neutral. Choice A is directly contrary to fact. Choices B and C are true, but of minor importance. Choice D is probably false; the reference in the argument to the thousands of widget industry jobs does indicate the significance of the industry for the U.S. economy.

41. B. The persons named in choices A, C, D, and E would all have an interest in the continuation of the widget industry subsidy program. The person named in choice B, however, would oppose outside help to an industry with which he or she is in direct competition.

42. E. In this argument, the first sentence states the conclusion; the second sentence states the evidence. However, there is no real connection between the two statements unless the assumption given in choice E is accepted as valid.
An Overview of the Computer-Adaptive GRE

Before studying the specific tips that will enable you to do your best on this computer-adaptive test (CAT), briefly review the key features of the exam:

• A typical CAT consists of 93 questions in three sections.

• The verbal section contains 30 questions: 6 sentence completions, 7 analogies, 8 reading comprehension questions, 9 antonyms. These appear on-screen in no set order: 2 sentence completions may be followed by 2 antonyms.

• The mathematics section contains 28 questions. Most of these are quantitative comparisons or standard multiple-choice questions, but a significant subset consists of data interpretation questions based on tables or graphs.

• The analytical section contains 35 questions split between analytical reasoning (puzzle-solving) and logical reasoning (argument analysis), with the bulk of the questions involving puzzle-solving.

• Because the CAT you take will be tailored to your skills, it may vary slightly from the typical test described above.

• You receive more credit for getting a hard question right than for answering an easy question correctly.

• You cannot skip questions: you must answer the question on-screen and confirm that you are sure of your answer choice before you can proceed to the next question.

• Once you have confirmed an answer, you cannot go back and change it.

Bear this background in mind as you review the following tips.
Starting Right Now

Begin to familiarize yourself with computer skills.

Using a Mouse

A mouse is a small electronic device that enables you to send signals to your PC. It sits on a mouse pad, its tail (the electric cord that links it to your PC) pointed away from you. As you move the mouse back and forth along the surface of the mouse pad, you see a pointer or arrow moving on the computer screen. On the rear surface of the mouse is a “button.” To tell the computer to do something, you click that button.

Here is a GRE antonym question as it would appear on a computer screen. Right now the arrow is off to one side.

To enter your answer to this question, you must move the mouse until the arrow touches the oval next to your answer choice.

Once the pointer is on the oval, click the button. Note that the empty oval is now black. This means that the computer has recorded your answer choice.

If you decide that you prefer a different answer, simply move the mouse until the arrow is on the appropriate oval and click the button. The new oval is now black, while the old one is blank.
Once you’re sure of your answer choice, you have to use the mouse twice more before you can go on to the next question. First, you must move the pointer until it’s on the box or icon labeled “Next” at the bottom right of the screen. Click the button to signal that you want to move on. Before you can do so, however, you have to confirm, by using the mouse a second time, that you really want to proceed. Up to this moment, you can still change your answer. Once you click on the box labeled “Confirm,” however, the screen will change to show the next question. You cannot go back to change an answer you have confirmed.

There are six icons at the bottom of an ETS CAT screen, three to the left and three to the right. They read, in order from left to right, as follows:

```
Quit   Exit   Time   Help   Confirm   Next
Test   Section Answer
```

Because ETS currently refuses to allow other publishers to duplicate their testing tools, we have had to create alternative icons for our model CAT screens. Thus, in place of the CAT icon “Next,” our screen has the icon “Proceed.” Where the CAT tells you to “Confirm” your answer, our screen asks, “Are You Sure?”

Our layout thus reads, from left to right:

```
Abandon   Leave   Clock   Need   Are You   Proceed
Ship   Section   Help?   Sure?
```

Do not let these minor differences confuse you. The basic layout of the screen is identical and the functions of the testing tools are the same. Even if our icons don’t match the ones on the CAT exactly, you can depend on what we say about the appearance of the test.

**Scrolling Through a Text**

Occasionally, to answer a question you may have to consider more information than can fit conveniently on a single computer screen. A 500-word reading passage, for example, takes up too much room for one screen; so do certain charts and bar and line graphs.
In such cases, a vertical scroll bar will appear along the right side of the reading passage or chart. It enables you to control what part of the text you see onscreen. Click on the scroll bar's down arrow, and it will allow you to move down one line to see the next line of text. Continue to click on the down arrow, and you'll scroll down even more. Conversely, click on the up arrow, and you'll scroll back up. You can scroll line by line; you can also scroll a page at a time. If you hold down the mouse button on an arrow, you can scroll through the text quite rapidly.

The small gray status bar at the top of the pane or little window helps you figure out just where you are in the text. When you're at the start of the text, it reads “Beginning”; when you're at the end of the text, it reads “End.” When you're in the middle and can scroll in either direction, it reads “More Available.”

If you're a rapid reader and are unused to word-processing programs and other software programs that incorporate scrolling, you may find the process a bit awkward at first. If you can get your hands on a computer, try playing around with some programs that allow you to manipulate chunks of text in this way. When you take the CAT, you'll have a chance to work through a tutorial that teaches you how to scroll. However, you'll have an easier time on the test if, when you come in, you're already comfortable with scrolling techniques.

**Before the Test**

**Schedule the test for your best time of day.**

When you sign up to take the test on a specific date, you will be given a choice of time slots. Some people are morning people; others work well in the midafternoon. Consider how your energy and alertness levels vary during the course of a day. Also, consider possible transportation problems, such as rush hour. With these and other relevant factors in mind, select the time slot that works best for you.

**When you register for the test, make sure the test center has experience in administering the computerized GRE.**

When you call to register for the computerized GRE, take a moment to find out as much as you can about the test center to which you have been assigned. Ask whether this center has administered the CAT before and, if so, how many times it has given the test. If the national registration center lacks this information, call the test center directly. The GRE is important to you; you want to take it at a test center that has a history of administering it successfully.

**Look over the test site before the day on which you are scheduled to take the test.**

Do a practice run to the test center a week or so before you take the test. If you'll go by car, check out the traffic patterns. See whether you'll need to allow extra time to get to the site, and whether you'll be able to find parking easily. If you'll use public transportation, figure out how to get from the bus stop or train station to the test center. Some test centers are located in suites in skyscrapers; others, in storefront locations in the middle of busy malls. Also learn the location of the restrooms and the nearest place to buy a quick snack.

**Set out your test kit the night before the test.**

Avoid sudden panic on the morning of the test. Before you go to bed, set out everything you'll need to take with you in the morning. For the computerized test, you need two forms of official I.D., at least one of which includes a
current photograph; be sure you have these forms in your wallet or purse. If you need to wear special glasses when you work at a computer, set them out. Include also your directions to the site and your authorization voucher, if you have been given one. [If, however, you register by phone for an imminent date and pay via credit card, the Sylvan Parametrics National Registration Center will not send you an authorization voucher; instead, the scheduler will assign you a confirmation number by which you can identify yourself to the test center staff. Have that number with you on the day of the test.]

Also set out the clothes you plan to wear. Choose comfortable, casual clothing. Now is not the time to make a fashion statement; simplicity, not elegance, should be the order of the day. Bring along a sweater; you can’t do your best if you’re shivering from the cold.

Don’t bother to set out pencils and scrap paper. The test center will supply you with both. You will not be allowed to take any “testing aids”—calculators, watches with calculator functions, pens, rulers, highlighters, books, handheld PC’s—into the testing room.

On the Day of the Test

Take as much time as you need to work through the tutorials that precede the actual test.

The computerized GRE makes you work through four tutorials:
• How to Use a Mouse
• How to Select an Answer
• How to Use the Testing Tools
• How to Scroll

You can’t skip these tutorials: They’re mandatory, even for computer majors. They’re also important; every computer program has its idiosyncrasies, and you need to familiarize yourself with this particular computer setup.

Proceed at your own pace, and don’t worry about how much time you’re taking. The 20 to 30 minutes you spend working through the tutorials before you begin testing will not count against your time for taking the test.

As you work through the tutorials, make sure you know all the test directions thoroughly.

Once the test begins, any time you have to switch screens to look up directions or to get help with scrolling is time you lose from the actual test. The clock keeps on ticking; and, to maximize your score, you’ve got to keep on thinking and clicking. For this reason, be sure you’ve memorized the directions for the different types of questions you’ll face on the test.

Before you move on from the tutorial section to the actual test, take a break.

At the end of the tutorial section, you have to click to indicate either that you’re done with reviewing this material and are ready to move on to the actual test, or that you want to review some of the tutorial sections a bit longer. If you think you’re ready to move on to the test, stop right there. Don’t click. Just raise your hand to let the proctor know that you need assistance; and, when he or she comes to your carrel, ask for a restroom break. You’ll be escorted out of the computer room and allowed to sign out. You may have spent half an hour or more mastering the material in the tutorials section; and, if you’re new to working with a mouse, you may be a bit tense. Feel free to wash your face, nibble a quick snack, stretch, or do anything else that will relax you before you move into the test-taking mode. Any time-out you take before the test actually starts is “free”: it doesn’t cost you any of that all-important question-answering time.

Once the Test Has Started

Avoid clicking on the boxes at the bottom left of the screen.

As you will learn in the tutorial, there are six boxes at the bottom of the screen, three to the left and three to the right. They read, in order from left to right: Quit, Exit, Time, Help, Confirm, Next. Avoid the ones to the left, especially the two leftmost. If you click on either of those boxes, you’re abandoning ship, quitting either the particular section on which you’re working or the whole test. There is no point in doing so. Even if you’re dissatisfied with your performance and unwilling to have your scores sent to the graduate schools you selected, you can use this test as a practice session. Don’t bail out midway; wait. After you’ve completed all four sections of the test, you will have a chance to indicate whether you want to cancel the test or to receive a score for your work. Make the decision then. Even if you decide to cancel your test, you’ll benefit from seeing what specific questions the computer selected for you. After all, you will have paid almost $100 to take the test. Get your money’s worth from the experience.

Also avoid clicking on the third lefthand box, the “Time” box. If you click on it, the information line at the top of the computer screen will stop showing the amount of time remaining in the section on which you’re working. Then you won’t be able to pace yourself effectively, and you may completely lose track of how much time you have left. Why create problems for yourself? Keep away from those boxes at the bottom left. (If you accidentally click on the “Time” box and hide the time information momentarily, don’t panic; just click on the box a second time to turn the time indicator back on again.)
The Census Bureau reported that the median family income, after adjustment for inflation, increased 1.6 percent in 1983. Poverty normally declines when family income goes up, but the national poverty rate remained at its highest level in eighteen years in 1983. The Census Bureau offered two possible explanations: the lingering effects of the deep and lengthy 1981–1982 recession, and increases in the number of people living in families headed by women and in the number of adults not living with any relatives. Both groups are likely to be poorer than the population as a whole.

Which of the following conclusions can be properly drawn from this report?

- The national poverty rate has increased steadily over the last eighteen years.
- The national poverty rate will increase when there are lingering effects of an earlier recession.
- The median family income can increase even though the family income of some subgroups within the population declines or fails to increase.
- The category of adults not living with any relatives is the most critical group in the determination of whether the economy has improved.
- The median family income is affected more by the changes in family patterns than by the extent of expansion or recession of the national economy.
Simulate your own computer-adaptive GRE.

In addition to working through the practice exercises in this book on the various question types, you may want to spend some time on exercises designed to give you a sense of taking the CAT. First, however, go through the following process.

1. **Figure out how well you’re likely to do on each section of the GRE.**

Before you can work out your best strategy for dealing with the computerized GRE, you need to assess your strengths and weaknesses in the three areas tested: verbal reasoning, quantitative reasoning, and analytical and logical reasoning.

Take the seven-section pencil-and-paper Diagnostic Test in Chapter 2, and use the Answer Key to check your answers. Then, following the directions in the Self-Appraisal section, compute your raw score for each of the three areas tested, and use the unofficial conversion chart that follows to estimate your probable score on the GRE. Note the types of questions you do well on, the ones you generally mess up, and the ones that take you a great deal of time to answer, even if, in the end, you get them right.

Finally, fill in the following chart:

<table>
<thead>
<tr>
<th>Test</th>
<th>V</th>
<th>Q</th>
<th>A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Score</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Did well on</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Did poorly on</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Took too much time over</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Left out</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This information will help you design your own personal tactics for doing well on the computerized GRE.

2. **Analyze your trouble spots.**

Suppose that, on the verbal section, you did quite well on the sentence completion and antonym questions but took so much time on the reading comprehension questions that you wound up answering only 23 of 30 questions. How could you use this information to do better on the CAT? You know that questions on this test follow no set order: a 500-word reading passage with four comprehension questions based on it may be followed by two analogies or by one sentence completion and two antonyms. Therefore, if you find you're taking too much time on a reading passage, consider bailing out: it's all right to make an occasional random guess in order to move on to new questions that you probably can answer more easily and rapidly. Similarly, if you find that you are baffled by logical reasoning problems but are great at puzzle-solving, consider making quick guesses on the logic problems so that you'll have more time to devote to successful puzzle-solving.

Now that you have a sense of some strategies that can help you, try taking a simulated computer-adaptive GRE. Use the series of charts that follow to mimic the experience of taking a test that is uniquely tailored to your level of ability, so that you don't have to waste time answering questions that are too hard (or too easy) for you.
Sentence Completion

Directions: Begin by answering Model Test 1, Section 1, Question 4. You will need to check each answer as you go. If you answer correctly, follow the arrows down. If you answer incorrectly, follow the arrows up. As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 2. Answer the indicated question in that section. For example, 5(2) means that you should answer Question 5 in Section 2.
VERBAL SECTION—MODEL TEST 1

Analogies
Directions: Begin by answering Model Test 1, Section 1, Questions 12 and 13. You will need to check each answer as you go. If you answer correctly, follow the arrows down. If you answer incorrectly, follow the arrows up. As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 2. Answer the indicated question in that section. For example, 13(2) means that you should answer Question 13 in Section 2.
VERBAL SECTION—MODEL TEST 1

Reading Comprehension

Directions: Begin by answering Model Test 1, Section 1, Questions 17 and 18. You will need to check each answer as you go. If you answer correctly, follow the arrows down. If you answer incorrectly, follow the arrows up. As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 2. Answer the indicated question in that section. For example, 25(2) means that you should answer Question 25 in Section 2.
Antonyms

Directions: Begin by answering Model Test 1, Section 1, Questions 33 and 34. You will need to check each answer as you go. If you answer correctly, follow the arrows down. If you answer incorrectly, follow the arrows up. As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 2. Answer the indicated question in that section. For example, 33(2) means that you should answer Question 33 in Section 2.
QUANTITATIVE SECTION—MODEL TEST 1
(30 Questions)

Quantitative Comparisons

Directions: Begin by answering Model Test 1, Section 3, Questions 8 and 9, and Section 4, Questions 8, 9, and 10. You will need to check each answer as you go. Determine the number of questions you answered correctly, and follow the appropriate path. If you answered one or fewer questions correctly, follow the arrow up. If you answered two or three questions correctly, follow the arrow down. (For the first set of questions, follow the center arrow if you answered two or more questions correctly, the arrow down if you answered four or five questions correctly.) As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 4. Answer the indicated question(s) in that section. For example, 8–10(4) means that you should answer Questions 8–10 in Section 4.
QUANTITATIVE SECTION—MODEL TEST 1

Multiple-Choice

Directions: Begin by answering Model Test 1, Section 3, Questions 17 to 20, and Question 26. You will need to check each answer as you go. Determine the number of questions you answered correctly, and follow the appropriate path. If you answered one or fewer questions correctly, follow the arrow up. If you answered two questions correctly, follow the center arrow. If you answered three questions correctly, follow the arrow down. (For the first set of questions, follow the center arrow if you answered two or three questions correctly, the arrow down if you answered four or five questions correctly.) As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 4. Answer the indicated question(s) in that section. For example, 16(4) means that you should answer Question 16 in Section 4.
Analytical Reasoning and Logic

Directions: Begin by answering Model Test 1, Section 6, Questions 12 to 18. You will need to check each answer as you go. Determine the number of questions you answered correctly, and follow the appropriate path. If you answered three or fewer questions correctly, follow the arrow up. If you answered four to six questions correctly, follow the arrow down. (For the first set of questions, follow the arrow up if you answered four or fewer questions correctly, the arrow down if you answered five to seven questions correctly.) As you proceed, you will notice a number in parentheses. This number directs you to another section in Model Test 1, in this case Section 5. Answer the indicated question(s) in that section. For example, 7(5) means that you should answer Question 7 in Section 5.
This chapter is designed to give you further experience in what to expect on the verbal, quantitative, and analytical ability sections of the Graduate Record Examination General Test. These tests should serve as a basis for analysis, which for some may signal the need for further drill before taking the other tests, and for others, may indicate that preparation for this part of the test is adequate. For the best results, take these tests only after reviewing your weak areas, found as a result of completing our Diagnostic Test.

Simulate actual test conditions as you take each test. Find a quiet place to work. Keep an accurate record of your time. If you complete a section before the suggested time has elapsed, check your work and do not start another section. Don’t be worried, however, if you are not able to answer all questions in the allotted time. This may also occur on the actual test. No one is expected to know the answers to all questions on an aptitude test. Read the questions carefully. Work carefully and as rapidly as possible. Do not spend too much time on questions that seem difficult for you. If time permits, go back to the ones you left out.

Remember: no penalty is imposed for guessing. Your score is determined by the number of correct answers. Therefore, it is to your advantage to answer every question—even if you have to guess. Of course, you better your odds of answering correctly if you eliminate as many incorrect answer choices as you can and then guess from the remaining choices.

After you have devoted the specified time allowed for each section of a model examination, refer to the correct answers furnished, determine your raw score, judge your progress, and plan further study. You should then carefully study the explanations for the correct answers of those questions that gave you difficulty. If you find that a particular topic needs further review, refer to the earlier part of the book where this topic is treated before attempting to take the next model test. If you follow this procedure, by the time you complete the last test in this chapter you will feel confident about your success.
Answer Sheet – MODEL TEST 1

Start with number 1 for each new section.
If a section has fewer than 38 questions, leave the extra spaces blank.

Section 1

1. A B C D E
2. A B C D E
3. A B C D E

MODEL TEST 1

SECTION 1
Time—30 Minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. To the cynic, there are no wholly altruistic, unselfish acts; every human deed is ------- an ulterior selfish motive.
   (A) independent of
   (B) emulated by
   (C) disguised as
   (D) founded upon
   (E) similar to

2. Like the theory of evolution, the big-bang model of the universe’s formation has undergone modification and -------, but it has ------- all serious challenges.
   (A) alteration…confirmed
   (B) refinement…resisted
   (C) transformation…ignored
   (D) evaluation…acknowledged
   (E) refutation…misdirected

3. We have in America a ------- speech that is neither American, Oxford English, nor colloquial English, but ------- of all three.
   (A) motley…an enhancement
   (B) hybrid…a combination
   (C) nasal…a blend
   (D) mangled…a medley
   (E) formal…a patchwork

4. It has been said that printing does as much harm as good, since it gives us bad books as well as good ones and ------- falsehood and error no less than -------.
   (A) displays…folly
   (B) flaunts…ignorance
   (C) betrays…treachery
   (D) demonstrates…pedantry
   (E) propagates…knowledge

5. A university training enables a graduate to see things as they are, to go right to the point, to disen-tangle a ------- of thought.
   (A) line
   (B) strand
   (C) mass
   (D) plethora
   (E) skein

6. Rather than portraying Joseph II as a radical reformer whose reign was strikingly enlightened, the play Amadeus depicts him as ------- thinker, too wedded to orthodox theories of musical composition to appreciate an artist of Mozart’s genius.
   (A) a revolutionary
   (B) an idiosyncratic
   (C) a politic
   (D) a doctrinaire
   (E) an iconoclastic

7. While ------- in his own approach to philosophy, the scholar was, illogically, ------- his colleagues who averred that a seeker of knowledge must be free to select such doctrines as pleased him in every school.
   (A) indiscriminate…supportive of
   (B) eclectic…intolerant of
   (C) speculative…cordial to
   (D) problematical…dissimissive of
   (E) theoretic…impatient with

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. FANS : BLEACHERS::
   (A) cheerleaders : pompons
   (B) audience : seats
   (C) team : goalposts
   (D) conductor : podium
   (E) referee : decision

9. AUGER : BORE::
   (A) awl : flatten
   (B) bit : grind
   (C) plane : smooth
   (D) scythe : mash
   (E) mallet : pierce

10. SCURRY : MOVE::
    (A) chant : sing
    (B) chatter : talk
    (C) carry : lift
    (D) sleep : drowse
    (E) limp : walk
11. CHAMELEON : HERPETOLOGIST:  
M (A) fungii : ecologist  
(B) salmon : ichthyologist  
(C) mongoose : ornithologist  
(D) oriole : virologist  
(E) aphid : etymologist

12. SONG : CYCLE:  
M (A) waltz : dance  
(B) tune : arrangement  
(C) sonnet : sequence  
(D) agenda : meeting  
(E) cadenza : aria

13. OB DURATE : FLEXIBILITY:  
M (A) accurate : perception  
(B) turbid : roughness  
(C) principled : fallibility  
(D) diaphanous : transparency  
(E) adamant : submissiveness

14. SARTORIAL : TAILOR:  
H (A) pictorial : spectator  
(B) thespian : designer  
(C) histrionic : singer  
(D) rhetorical : questioner  
(E) terpsichorean : dancer

15. SKIRT : ISSUE:  
H (A) vest : interest  
(B) rig : wager  
(C) dodge : encounter  
(D) sweep : election  
(E) mask : purpose

16. FEUD : ACRIMONY:  
H (A) scuffle : confusion  
(B) crusade : heresy  
(C) duel : brevity  
(D) scrimmage : sparring  
(E) siege : vulnerability

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

(This passage was written prior to 1950.)

In the long run a government will always encroach upon freedom to the extent to which it has the power to do so; this is almost a natural law of politics, since, whatever the intentions of the people who exercise political power, the sheer momentum of government leads to a constant pressure upon the liberties of the citizen. But in many countries society has responded by throwing up its own defenses in the shape of social classes or organized corporations which, enjoying economic power and popular support, have been able to set limits to the scope of action of the executive. Such, for example, in England was the origin of all our liberties—won from government by the stand first of the feudal nobility, then of churches and political parties, and latterly of trade unions, commercial organizations, and the societies for promoting various causes. Even in European lands which were arbitrarily ruled, the powers of the monarchy, though absolute in theory, were in their exercise checked in a similar fashion. Indeed the fascist dictatorships of today are the first truly tyrannical governments which Western Europe has known for centuries, and they have been rendered possible only because on coming to power they destroyed all forms of social organization which were in any way rivals to the state.

18. According to the passage, the natural relationship between government and individual liberty is one of  
M (A) marked indifference  
(B) secret collusion  
(C) inherent opposition  
(D) moderate complicity  
(E) fundamental interdependence

19. Fascist dictatorships differ from monarchies of recent times in  
E (A) setting limits to their scope of action  
(B) effecting results by sheer momentum  
(C) rivaling the state in power  
(D) exerting constant pressure on liberties  
(E) eradicating people's organizations

20. The passage suggests which of the following about fascist dictatorships?  
M (A) They represent a more efficient form of the executive.  
(B) Their rise to power came about through an accident of history.  
(C) They mark a regression to earlier despotic forms of government.  
(D) Despite superficial dissimilarities, they are in essence like absolute monarchies.  
(E) They maintain their dominance by rechanneling opposing forces in new directions.
Yet, while Darwinian theory extends its domain, some of its cherished postulates are slipping, or at least losing their generality. The "modern synthesis," the contemporary version of Darwinism that has reigned for thirty years, took the model of adaptive gene substitution within local populations as an adequate account, by accumulation and extension, of life's entire history. The model may work well in its empirical domain of minor, local, adaptive adjustment; populations of the moth Biston betularia did turn black, by substitution of a single gene, as a selected response for decreased visibility on trees that had been blackened by industrial soot. But is the origin of a new species simply this process extended to more genes and greater effect? Are larger evolutionary trends within major lineages just a further accumulation of sequential adaptive changes?

Many evolutionists (myself included) are beginning to challenge this synthesis and to assert the hierarchical view that different levels of evolutionary change often reflect different kinds of causes. Minor adjustment within populations may be sequential and adaptive. But speciation may occur by major chromosomal changes that establish sterility with other species for reasons unrelated to adaptation. Evolutionary trends may represent a kind of higher-level selection upon essentially static species themselves, not the slow and steady alteration of a single large population through untold ages.

Before the modern synthesis, many biologists (see Bateson, 1922, in bibliography) expressed confusion and depression because the proposed mechanisms of evolution at different levels seemed contradictory enough to preclude a unified science. After the modern synthesis, the notion spread (amounting almost to a dogma among its less thoughtful lieutenants) that all evolution could be reduced to the basic Darwinism of gradual, adaptive change within local populations. I think that we are now pursuing a fruitful path between the anarchy of Bateson's day and the restriction of view imposed by the modern synthesis. The modern synthesis works in its appropriate arena, but the same Darwinian processes of mutation and selection may operate in strikingly different ways at higher domains in a hierarchy of evolutionary levels. I think that we may hope for uniformity of causal agents, hence a single, general theory with a Darwinian core. But we must reckon with a multiplicity of mechanisms that preclude the explanation of higher level phenomena by the model of adaptive gene substitution favored for the lowest level.

At the basis of all this ferment lies nature's irreducible complexity. Organisms are not billiard balls, propelled by simple and measurable external forces to predictable new positions on life's pool table. Sufficiently complex systems have greater richness. Organisms have a history that constrains their future in myriad, subtle ways. Their complexity of form entails a host of functions incidental to whatever pressures of natural selection superintended the initial construction. Their intricate and largely unknown pathways of embryonic development guarantee that simple inputs (minor changes in timing, for example) may be translated into marked and surprising changes in output (the adult organism).

Charles Darwin chose to close his great book with a striking comparison that expresses this richness. He contrasted the simpler system of planetary motion, and its result of endless, static cycling, with the complexity of life and its wondrous and unpredictable change through the ages:

There is grandeur in this view of life, with its several powers, having been originally breathed into a few forms or one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.

21. According to the author, many contemporary evolutionists find the Darwinian synthesis

(A) wholly unfounded
(B) overly restrictive
(C) essentially contradictory
(D) sadly confusing
(E) strikingly productive

22. In asserting the complexity of nature, the author refers to billiard balls on life's pool table (lines 55-58) as

(A) an illustration of the unpredictable changes of nature
(B) an instance of confusion and mobility
(C) an example of a relatively uncomplicated system
(D) an application of the fixed law of gravity
(E) an accurate model of genetic change

23. It can be inferred that the paragraph immediately preceding this passage most likely discussed

(A) the absence of a unified theory of evolution
(B) individuals challenging the Darwinian synthesis
(C) the expansion of evolutionary theory into new realms
(D) experimental methods of genetic substitution
(E) the place of genetics in the study of natural history

24. With which of the following statements regarding Charles Darwin would the author be most likely to agree?

I. Darwin left his early successors in some confusion as to the universal applicability of his evolutionary theory.
II. Darwin experienced periods of despondency caused by the thoughtlessness of his lieutenants.
III. Darwin contrasted the simplicity and calculability of planetary cycles favorably to the diversity and unpredictability of living creatures.

(A) I only (B) III only
(C) I and II only (D) I and III only
(E) I, II, and III
25. The author does all of the following EXCEPT
   (A) denounce an adversary
   (B) pose a question
   (C) provide an example
   (D) use a metaphor
   (E) refer to an authority

26. Which of the following phrases from the passage best categorizes the transformation undergone by certain members of Biston betularia?
   (A) “larger evolutionary trends within major lineages” (line 16)
   (B) “minor adjustment within populations” (line 23)
   (C) “higher-level selection” (line 28)
   (D) “irreducible complexity” (lines 54–55)
   (E) “endless, static cycling” (lines 72–73)

27. The passage supplies information for answering which of the following questions?
   (A) How did the modern synthesis contradict basic Darwinism?
   (B) What effect did industrial pollution have on certain moth populations?
   (C) How did Bateson’s theories anticipate the ideas of the modern synthesis?
   (D) What sort of living creature is most likely to evolve into a new species?
   (E) Are instances of speciation less common than the modern synthesis would indicate?

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the words in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. DISREGARD:
   (A) admit
   (B) evade
   (C) heed
   (D) improve
   (E) prevent

29. VERACITY:
   (A) uncertainty
   (B) mendacity
   (C) plausibility
   (D) intuition
   (E) opposition

30. BEDECK:
   (A) erect
   (B) awake
   (C) isolate
   (D) cleanse
   (E) strip

31. ESTRANGE:
   (A) reconcile
   (B) feign
   (C) perplex
   (D) arbitrate
   (E) commiserate

32. SPURIOUS:
   (A) cautious
   (B) fantastic
   (C) modest
   (D) genuine
   (E) pertinent

33. PROVIDENT:
   (A) manifest
   (B) prodigal
   (C) thankful
   (D) tidy
   (E) refuted

34. CAPITULATE:
   (A) initiate
   (B) defame
   (C) exonerate
   (D) resist
   (E) repeat

35. INDIGENOUS:
   (A) affluent
   (B) parochial
   (C) alien
   (D) serene
   (E) inimical

36. SALUBRITY:
   (A) unwholesomeness
   (B) insolvency
   (C) dissatisfaction
   (D) diffidence
   (E) rigidity

37. QUAIL:
   (A) hover
   (B) tolerate
   (C) arouse enmity
   (D) become resolute
   (E) abstain from action

38. TANTAMOUNT:
   (A) not negotiable
   (B) not equivalent
   (C) not ambitious
   (D) not evident
   (E) not relevant

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY.
DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 2
Time—30 Minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. The simplest animals are those whose bodies are [E] simplest in structure and which do the things done by all living animals, such as eating, breathing, moving, and feeling, in the most ------- way.
   (A) haphazard
   (B) bizarre
   (C) primitive
   (D) advantageous
   (E) unique

2. Although weeks remain for concessions to be made and for new approaches to be attempted, negotiations have reached such a state that management and union leaders are ------- that their differences can no longer be reconciled.
   (A) encouraged
   (B) bewildered
   (C) apprehensive
   (D) relieved
   (E) skeptical

3. Not only the ------- are fooled by propaganda; we can all be misled if we are not -------.
   (A) ignorant...cynical
   (B) gullible...wary
   (C) credulous...headstrong
   (D) illiterate...mature
   (E) fatuous...intelligent

4. When those whom he had injured accused him of being a -------, he retorted curtly that he had never been a quack.
   (A) libertine
   (B) sycophant
   (C) charlatan
   (D) plagiarist
   (E) reprobate

5. There is an essential ------- in human gestures, and when someone raises the palms of his hands together, we do not know whether it is to bury himself in prayer or to throw himself into the sea.
   (A) economy
   (B) dignity
   (C) insincerity
   (D) reverence
   (E) ambiguity

6. It is somewhat paradoxical that, nine times out of ten, the coarse word is the word that ------- an evil and the ------- word is the word that excuses it.
   (A) condemns...refined
   (B) exonerates...vulgar
   (C) contradicts...crass
   (D) condones...genteel
   (E) admits...clever

7. It has been Virginia Woolf's peculiar destiny to be declared annoyingly feminine by male critics at the same time that she has been ------- by women interested in the sexual revolution as not really eligible to be ------- their ranks.
   (A) lauded...enlisted in
   (B) emulated...counted among
   (C) neglected...helpful to
   (D) dismissed...drafted into
   (E) excoriated...discharged from

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. DROPCLOTH : FURNITURE:: [E] (A) banner : flagpole
   (B) towel : rack
   (C) pillow : bedding
   (D) curtain : theatre
   (E) apron : clothing

9. ARCHIPELAGO : ISLAND:: [E] (A) arbor : bower
   (B) garden : flower
   (C) mountain : valley
   (D) sand : dune
   (E) constellation : star

10. CROW : BOASTFUL:: [E] (A) smirk : witty
   (B) conceal : sly
   (C) pout : sulky
   (D) blush : coarse
   (E) bluster : unhappy

11. ASCETIC : SELF-DENIAL:: [M] (A) nomad : dissipation
    (B) miser : affluence
    (C) zealot : fanaticism
    (D) renegade : loyalty
    (E) athlete : stamina
As the works of dozens of women writers have been rescued from what E.P. Thompson calls “the enormous condensation of posterity,” and considered in relation to each other, the lost continent of the female tradition has risen like Atlantis from the sea of English literature. It is now becoming clear that, contrary to Mill’s theory, women have had a literature of their own all along. The women novelists, according to Vineta Colby, was “really neither single nor anomalous,” but she was also more than a “register and spokesman for her age.” She was part of a tradition that had its origins before her age, and has carried on through our own. Many literary historians have begun to reinterpret and revise the study of women writers. Ellen Moers sees women’s literature as an international movement, “apart from, but hardly subordinate to the mainstream: an undercurrent, rapid and powerful. This movement” began in the late eighteenth century, was multinational, and produced some of the greatest literary works of two centuries, as well as most of the lucrative pot-boilers.” Patricia Meyer Spacks, in *The Female Imagination*, finds that “for readily discernible historical reasons women have characteristically concerned themselves with matters more or less peripheral to male concerns, or at least slightly skewed from them. The differences between traditional female preoccupations and roles and male ones make a difference in female writing.” Many other critics are beginning to agree that when we look at women writers collectively we can see an imaginative continuum, the recurrence of certain patterns, themes, problems, and images from generation to generation.

This book is an effort to describe the female literary tradition in the English novel from the generation of the Brontës to the present day, and to show how the development of this tradition is similar to the development of any literary subculture. Women have generally been regarded as “sociological chameleons,” taking on the class, lifestyle, and culture of their male relatives. It can, however, be argued that women themselves have constituted a subculture within the framework of a larger society, and have been unified by values, conventions, experiences, and behaviors impinging on each individual. It is important to see the female literary tradition in these broad terms, in relation to the wider evolution of women’s self-awareness and to the ways any minority group finds its direction of self-expression relative to a dominant society, because we cannot show a pattern of deliberate progress and accumulation. It is true, as Ellen Moers writes, that “women studied with a special closeness the works written by their own sex”; in terms of influences, borrowings, and affiliations, the tradition is strongly marked. But it is also full of holes and hiatuses, because of what Germaine Greer calls the “phenomenon of the transience of female literary fame”; “almost uninterruptedly since the Interregnum, a small group of women have enjoyed dazzling literary prestige during their own lifetimes; only to vanish without trace from the records of posterity.” Thus each generation of women writers has found itself, in a sense, without a history, forced to rediscover the past anew, forging again and again the consciousness of their sex. Given this perpetual disruption, and also the self-hatred that has alienated women writers from a sense of collective identity, it does not seem possible to speak of a movement.
17. The author of this passage implies that a significant element furthering the woman writer’s awareness of a female literary tradition is her
(A) vulnerability to male deprecation
(B) assimilation of the values of her subculture
(C) rejection of monetary gain as an acceptable goal
(D) ability to adopt the culture of the dominant society
(E) sense that fame and prestige are evanescent

18. In the second paragraph of the passage the author’s attitude toward the literary critics cited can best be described as one of
(A) irony
(B) ambivalence
(C) disparagement
(D) receptiveness
(E) awe

19. The passage supplies information for answering which of the following questions?
(A) Does the author believe the female literary tradition to be richer in depth than its masculine counterpart?
(B) Are women psychological as well as sociological chameleons?
(C) Does Moers share Greer’s concern over the ephemeral nature of female literary renown?
(D) What patterns, themes, images, and problems recur sufficiently in the work of women writers to belong to the female imaginative continuum?
(E) Did Mills acknowledge the existence of a separate female literary tradition?

20. The passage suggests that it might be possible to speak of an actual female literary movement were it not for
(A) masculine suppression of feminist criticism
(B) female lack of artistic autonomy
(C) the ephemeral nature of female literary renown
(D) the absence of proper contemporary role models
(E) female rejection of disruptive male influences

21. In the first paragraph, the author makes use of all the following techniques EXCEPT
(A) extended metaphor
(B) enumeration and classification
(C) classical allusion
(D) direct quotation
(E) comparison and contrast

22. Which of the following words could best be substituted for “forging” (line 67) without substantially changing the author’s meaning?
(A) counterfeiting
(B) creating
(C) exploring
(D) diverting
(E) straining

23. It can be inferred from the passage that the author considers Moers’ work to be
(A) fallacious and misleading
(B) scholarly and definitive
(C) admirable, but inaccurate in certain of its conclusions
(D) popular, but irrelevant to mainstream female literary criticism
(E) idiosyncratic, but of importance historically

24. Which of the following would be the most appropriate title for the passage?
(A) A Unique Phenomenon: Nineteenth and Twentieth Century Feminine Literary Movements
(B) A Literature of Their Own: The Female Literary Tradition
(C) Adaptive Coloration: Feminine Adoption of Masculine Cultural Criteria
(D) The Emergence of the Contemporary Women’s Novel
(E) Fame Versus Fortune: The Dilemma of the Woman Writer

The classical idea of matter was something with solidity and mass, like wet stone dust pressed in a fist. If matter was composed of atoms, then the atoms too must have solidity and mass. At the beginning of the twentieth century the atom was imagined as a tiny billiard ball or a granite pebble writ small. Then, in the physics of Niels Bohr, the miniature billiard ball became something akin to a musical instrument, a finely tuned Stradivarius 10 billion times smaller than the real thing. With the advent of quantum mechanics, the musical instrument gave way to pure music. On the atomic scale, the solidity and mass of matter dissolved into something light and airy. Suddenly physicists were describing atoms in the vocabulary of the composer—“resonance,” “frequency,” “harmony,” “scale.” Atomic electrons sang in choirs like seraphim, cherubim, thrones, and dominions. Classical distinctions between matter and light became muddled. In the new physics, light bounced about like particles, and matter undulated in waves like light.

In recent decades, physicists have uncovered elegant subatomic structures in the music of matter. They use a strange new language to describe the subatomic world: quark, squark, gluon, gauge, technicolor, flavor, strangeness, charm. There are up quarks and down quarks, top quarks and bottom quarks. There are particles with truth and antitruth, and there are particles with naked beauty. The simplest of the constituents of ordinary matter—the proton, for instance—has taken on the character of a Bach fugue, a four-point counterpoint of matter, energy, space, and time. At matter’s heart there are arpeggios, chromatics, syncopation. On the lowest rung of the chain of being, Creation dances.
25. Which of the following would be the most appropriate title for the passage?
   (A) Linguistic Implications of Particle Physics
   (B) The Influence of Music on Particle Interactions
   (C) Matter’s Transformation: The Music of Subatomic Physics
   (D) Trends in Physics Research: Eliminating the Quark
   (E) The Impossible Dream: Obstacles to Proving the Existence of Matter

26. The author refers to “quarks,” “squarks” and “charms” (lines 25–26) primarily in order to
   (A) demonstrate the similarity between these particles and earlier images of the atom
   (B) make a distinction between appropriate and inappropriate terms
   (C) object to theoretical suggestions of similar frivolous names
   (D) provide examples of idiosyncratic nomenclature in contemporary physics
   (E) cite preliminary experimental evidence supporting the existence of subatomic matter

27. The author’s tone in the second paragraph can best be described as one of
   (A) sympathetic concern
   (B) moderate indignation
   (C) marked derision
   (D) admiring enthusiasm
   (E) qualified skepticism

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. RECTIFY:
   (A) apologize
   (B) sanctify
   (C) make worse
   (D) rule illegal
   (E) rebuke

29. APEX
   (A) smallest amount
   (B) clearest view
   (C) lowest point
   (D) broad plateau
   (E) bright color

30. PROSAIC:
   (A) imaginative
   (B) contradictory
   (C) hesitant
   (D) redundant
   (E) disorderly

31. DISSONANCE:
   (A) amalgamation
   (B) harmony
   (C) neutrality
   (D) resolution
   (E) proximity

32. DOLTISH:
   (A) immature
   (B) coarse
   (C) clever
   (D) stable
   (E) genial

33. CHAGRIN:
   (A) frown
   (B) disguise
   (C) make indifferent
   (D) make aware
   (E) please

34. DISINGENUOUS:
   (A) naive
   (B) accurate
   (C) hostile
   (D) witty
   (E) polite

35. RECALCITRANCE:
   (A) dependability
   (B) submissiveness
   (C) apathy
   (D) incongruity
   (E) eloquence

36. FECUNDITY:
   (A) consideration
   (B) comprehensibility
   (C) barrenness
   (D) gravity
   (E) sanity

37. LUGUBRIOS:
   (A) transparent
   (B) sedulous
   (C) soporific
   (D) jocose
   (E) querulous

38. ANIMUS:
   (A) hospitality
   (B) probity
   (C) anonymity
   (D) amity
   (E) insularity

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY.
DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 3

Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
<th>Sample Answers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example 1: 2 × 6</td>
<td>2 + 6</td>
<td>● ○ ○ ○ ○</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to \( \triangle PQR \).

Example 2: \( PN \) \( NQ \) (since equal measures cannot be assumed, even though \( PN \) and \( NQ \) appear equal)

Example 3: \( x \) \( y \) (since \( N \) is between \( P \) and \( Q \))

Example 4: \( w + z \) \( 180 \) (since \( PQ \) is a straight line)
A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>

<tr>
<td>x</td>
<td>E</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

In triangle ABC, m\( \angle A \) > m\( \angle B \), and m\( \angle C \) = 60°.

13. \((BC)^2 + (BD)^2\) M

14. Side CB | Side AB M

15. BC | DC H

Note: Not drawn to scale.
The perimeters of all the polygons are equal.
Each of Questions 16–30 has five choices. For each of these questions, select the best of the answer choices given.

16. In circle O above, \( OA = 4 \) and arc \( AB = 112^\circ \). How many degrees are in \( \angle ABO \)?
   (A) 22  (B) 34  (C) 44  (D) 45  (E) 68

17. In triangle \( ABC \), \( \angle B = \angle C \). \( D \) is any point on \( BC \).
   Which of the following statements is true?
   (A) \( AB > BC \)  (B) \( AB < BC \)  (C) \( BD = DC \)  (D) \( AC > AD \)  (E) \( AC < AD \)

18. At a luncheon table where 12 men are seated, one-half of the men belong to Club A, one-third belong to Club B, and one-fourth belong to both clubs. How many men belong to neither?
   (A) 3  (B) 4  (C) 5  (D) 6  (E) 8

19. A lending library charges \( c \) cents for the first week that a book is loaned and \( f \) cents for each day over one week. What is the cost for taking out a book for \( d \) days, where \( d \) is greater than 7?
   (A) \( c + fd \)  (B) \( c + f(d - 7) \)  (C) \( cd \)  (D) \( 7c + f(d - 7) \)  (E) \( cd + f \)

20. The numerator and denominator of a fraction are in the ratio of 2:3. If 6 is subtracted from the numerator, the result will be a fraction that has a value \( \frac{2}{3} \) of the original fraction. The numerator of the original fraction is
   (A) 4  (B) 6  (C) 9  (D) 18  (E) 27

Questions 21–25 refer to the following table and graphs.

### WEIGHT DISTRIBUTION IN AVERAGE ADULT

<table>
<thead>
<tr>
<th>Organ</th>
<th>Weight (Grams)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Muscles</td>
<td>30,000</td>
</tr>
<tr>
<td>Skeleton</td>
<td>10,000</td>
</tr>
<tr>
<td>Blood</td>
<td>5,000</td>
</tr>
<tr>
<td>Gastrointestinal tract</td>
<td>2,000</td>
</tr>
<tr>
<td>Lungs</td>
<td>1,000</td>
</tr>
<tr>
<td>Liver</td>
<td>1,700</td>
</tr>
<tr>
<td>Brain</td>
<td>1,500</td>
</tr>
</tbody>
</table>

### USE OF WATER BY THE AVERAGE ADULT

**DAILY WATER INTAKE**

**GRAPH I**

- Solid Food: 1000 cc
- Plasmas: 1500 cc

**DAILY WATER OUTPUT**

**GRAPH II**

- Lungs: 400 cc
- Sweat: 500 cc
- Liquid Waste: 1500 cc
- Solid Waste: 100 cc

21. Which of the following can be inferred from the table and graphs?
   I. Half of the total body weight is the skeleton and blood.
   II. About 2.4% of the total body weight is the liver.
   III. The weight of the blood in the average adult is twice the weight of the skeleton.
   (A) I only  (B) II only  (C) III only  (D) I and III  (E) II and III

22. If the weight of the skeleton is represented as \( g \) grams, the total body weight is represented as
   (A) \( 7g \)  (B) \( g + 6 \)  (C) \( 60g \)  (D) \( g + 60 \)  (E) \( 70,000g \)

23. What is the angle of the sector in Graph I representing daily water intake in solid food?
   (A) 51°  (B) 72°  (C) 103°  (D) 120°  (E) 144°
24. What percent of daily water output is water expired from the lungs?
   (A) 1.6%
   (B) 4%
   (C) 16%
   (D) 19%
   (E) 40%

25. What percent of the daily water output through the kidneys is the daily water intake in fluids?
   (A) 25%
   (B) 33%
   (C) 60%
   (D) 100%
   (E) 150%

26. If a eggs weigh b ounces each, c eggs weigh from d to e ounces each, and f eggs weigh from g to h ounces each, what is the minimum weight (in ounces) of all the eggs?
   (A) ab + ce + fg
   (B) ab + cd + fg
   (C) ab + ce + fh
   (D) ab + cd + fh
   (E) ab + de + gh

27. In distributing milk at a summer camp it is found that a quart of milk will fill either 3 large glass tumblers or 5 small glass tumblers. How many small glass tumblers can be filled with one large glass tumbler?
   (A) $\frac{3}{5}$
   (B) $1\frac{2}{5}$
   (C) $1\frac{2}{3}$
   (D) 2
   (E) $2\frac{1}{3}$

28. In the figure above, $AB \perp BC, BC \perp CD, AB = 8, BC = 5, CD = 4$. What is the shortest distance from A to D?
   (A) 12
   (B) 13
   (C) 15
   (D) 16
   (E) 17

29. There are 27 students in a chemistry class and 22 students in a physics class. Seven of these students take physics and chemistry. What is the ratio of the number of students taking only physics to those taking only chemistry.
   (A) 3:4
   (B) 4:3
   (C) 7:6
   (D) 22:27
   (E) 34:29

30. A trailer carries 3, 4, or 5 crates on a trip. Each crate weighs no less than 125 pounds and no more than 250 pounds. What is the minimum weight (in pounds) of the crates on a single trip?
   (A) 375
   (B) 600
   (C) 625
   (D) 750
   (E) 1,250

21. **At the 10% rate, what would be the monthly payment needed to pay off a $10,000 loan in 15 years?**
   - (A) $99.74
   - (B) $96.72
   - (C) $104.60
   - (D) $110.83
   - (E) $107.47

22. **How many years will it take to satisfy a $5000 loan at 10% if the monthly payment is $50?**
   - (A) 8
   - (B) 12
   - (C) 16
   - (D) 18
   - (E) 20

23. **What is the difference in each monthly payment between a 17-year loan of $5000 at the 10% rate and an 18-year loan for the same amount at the same rate?**
   - (A) $0.85
   - (B) $1.01
   - (C) $1.07
   - (D) $1.23
   - (E) $1.25

24. **According to this table, for an 18-year loan the monthly payment for a $1000 loan is what percent of the amount of the loan?**
   - (A) 0.1%
   - (B) 1.0%
   - (C) 1.5%
   - (D) 5.1%
   - (E) 10.0%

25. **How much money will be paid in interest on a $1000 loan at 10% over a period of 18 years?**
   - (A) $990
   - (B) $1000
   - (C) $1099
   - (D) $1160
   - (E) $1890
26. In triangle $ACD$ above, the measure of $\angle BAE = 50$; the length of $BE$ equals the length $AE$; and $BE \parallel CD$. What is the measure of $\angle ADC$?

(A) 30
(B) 50
(C) 60
(D) 80
(E) 100

27. If the operation $\bigcirc$ is defined by the equation $x \bigcirc y = 2x + y$, what is the value of $a$ in the equation $2 \bigcirc a = a \bigcirc 3$?

(A) 0
(B) −1
(C) 1
(D) 1.5
(E) 4

28. A coffee shop blends 2 kinds of coffee, putting in 2 parts of a 33¢ a pound grade to 1 part of a 24¢ a pound grade. If the mixture is changed to 1 part of the 33¢ a pound grade to 2 parts of the less expensive grade, how much will the shop save in blending 100 pounds?

(A) $0.90
(B) $1.00
(C) $3.00
(D) $8.00
(E) $9.00

29. There are 200 questions on a 3-hour examination. Among these questions are 50 mathematics problems. It is suggested that twice as much time be allowed for each mathematics problem as for each of the other questions. How many minutes should be spent on the mathematics problems?

(A) 36
(B) 60
(C) 72
(D) 100
(E) 120

Note: Not drawn to scale.

30. In the figure above, $x =$

(A) 30
(B) 40
(C) 45
(D) 60
(E) 80

Time—30 minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

For a motorist there are three ways of going from City A to City C. By way of a bridge the distance is 20 miles and the toll is 75¢. A tunnel between the two cities is a distance of 10 miles and the toll is $1.00 for the vehicle and driver plus 10¢ for each passenger. A two-lane highway without tolls goes east for 30 miles to City B and then 20 miles in a northwest direction to City C.

1. Which of the following is the shortest route from City B to City C?
   (A) Directly on the toll-free highway to City C
   (B) The bridge
   (C) The tunnel
   (D) The tunnel or the bridge
   (E) The bridge only if traffic is heavy on the toll-free highway

2. The most economical way of going from City A to City B, in terms of tolls and distance, is to use the
   (A) tunnel
   (B) bridge
   (C) bridge or tunnel
   (D) toll-free highway
   (E) bridge and highway

3. Martin usually drives alone from City C to City A every working day. His firm deducts a percentage of employee pay for lateness. Which factor would most probably influence his choice of the bridge or the tunnel?
   (A) Whether his wife goes with him
   (B) Scenic interest of each route
   (C) Traffic conditions on the road, bridge, and tunnel
   (D) Saving of 25¢ in tolls
   (E) Price of gasoline consumed in covering the 10 additional miles on the bridge

4. In choosing between the use of the bridge and the tunnel, the chief factor(s) would be
   I. traffic and road conditions
   II. number of passengers in the car
   III. location of one’s home in the center or outskirts of one of the cities
   IV. desire to save 25¢
   (A) I only
   (B) II only
   (C) II and III only
   (D) III and IV only
   (E) I and II only

Questions 5–6

A church’s facilities were too small to accommodate the crowd for a special two-day religious service. Church members received a license to use the public park, and a public address system was promptly installed. Citizens who were not members of that church protested the action of the Park Department for having issued this license.

5. What is the best argument used by the church to retain its license?
   (A) Wide publicity had already been given to the location of special service.
   (B) The public address system was installed at great expense.
   (C) The church is a local taxpayer.
   (D) The park had been used before by religious organizations for rallies, concerts, and meetings.
   (E) No one would be excluded from entering the park during the service.

6. Which of the following is the best argument used by the citizens who protested the action by the Park Department?
   (A) Freedom of speech was violated.
   (B) Citizens would be denied the enjoyment of the public park during these two days.
   (C) There would be a violation of the noise-level standards.
   (D) A public referendum should have been held.
   (E) The town would incur expenses to clean up the park after the two-day service.

7. Wilbur is over six feet tall.

The statement above can be logically deduced from which of the following statements?
   (A) The average height of the members of the basketball team is over six feet; Wilbur is the center on the basketball team.
   (B) If Wilbur was not asked to join the basketball team, then he is not six feet tall; Wilbur was asked to join the basketball team.
   (C) If Wilbur is over six feet tall, then he can see the parade; Wilbur can see the parade.
   (D) In Dr. Gray’s seminar, everyone who is not over six feet tall is seated in the first row; Dr. Gray seated Wilbur in the second row.
   (E) Everyone who is over six feet tall has to help stack cartons in the stockroom; Wilbur has to help stack cartons.
Questions 8–12

A project to consolidate the programs of a large university and a small college is set up. It is agreed that the representatives work in small committees of three, with two representatives of the large university. It was also agreed that no committee be represented by faculty members of the same subject area. The large university was represented by the following professors: J, who teaches English literature, K, who is chairman of the Mathematics Department, and L, who is in the Department of Natural Sciences. The small college appointed the following: M, who teaches mathematics, N, who is a Latin teacher, and O and P, who teach English literature.

8. Which of the following represents a committee [E] properly composed?
   (A) K, L, N
   (B) K, L, M
   (C) J, K, L
   (D) J, O, N
   (E) J, K, M

9. Which of the following may serve with P?
   [E]
   (A) K and M
   (B) K and L
   (C) K and O
   (D) J and K
   (E) M and N

10. Which of the following must be true?
    [M]
    I. If J serves on a committee, P must be assigned to that committee.
    II. If J cannot serve on a committee, then M cannot be assigned to that committee.
    III. If J cannot serve on a committee, then L must serve on that committee.
    (A) I only
    (B) II only
    (C) III only
    (D) I and II only
    (E) II and III only

11. If L is not available for service, which of the following must be on the committee?
    [M]
    (A) M and J
    (B) O and J
    (C) N and J
    (D) N and O
    (E) P and J

12. Which of the following must be true?
    [M]
    I. N and O are always on the same committee.
    II. M and O never serve on the same committee.
    III. When M serves, L must serve.
    (A) I only
    (B) II only
    (C) I and II only
    (D) III only
    (E) II and III only

Questions 13–16

In a certain society, there are two marriage groups, Red and Brown. No marriage is permitted within a group. On marriage, males become part of their wife’s group; women remain in their own group. Children belong to the same group as their parents. Widowers and divorced males revert to the group of their birth. Marriage to more than one person at the same time and marriage to a direct descendant are forbidden.

13. A Brown female could have had
    [M]
    I. a grandfather born Red
    II. a grandmother born Red
    III. two grandfathers born Brown
    (A) I only
    (B) III only
    (C) I and II only
    (D) II and III only
    (E) I, II, and III

14. A male born into the Brown group may have
    [M]
    (A) an uncle in either group
    (B) a Brown daughter
    (C) a Brown son
    (D) a son-in-law born into the Red group
    (E) a daughter-in-law in the Red group

15. Which of the following is not permitted under the rules as stated?
    [M]
    (A) A Brown male marrying his father’s sister
    (B) A Red female marrying her mother’s brother
    (C) A man born Red, who is now a widower, marrying his brother’s widow
    (D) A widower marrying his wife’s sister
    (E) A widow marrying her divorced daughter’s ex-husband

16. If widowers and divorced males retained the group they had upon marrying, which of the following would be permissible? (Assume that no previous marriage occurred.)
    [H]
    (A) A woman marrying her dead sister’s husband
    (B) A woman marrying her divorced daughter’s ex-husband
    (C) A widower marrying his brother’s daughter
    (D) A woman marrying her mother’s brother, who is a widower
    (E) A divorced male marrying his ex-wife’s divorced sister

Questions 17–22

The letters A, B, C, D, E, F, and G, not necessarily in that order, stand for seven consecutive integers from 1 to 10.

D is 3 less than A.
B is the middle term.
F is as much less than B as C is greater than D.
G is greater than F.
17. The fifth integer is
   (A) A
   (B) C
   (C) D
   (D) E
   (E) F

18. A is as much greater than F as which integer is less than G?
   (A) A
   (B) B
   (C) C
   (D) D
   (E) E

19. If A = 7, the sum of E and G is
   (A) 8
   (B) 10
   (C) 12
   (D) 14
   (E) 16

20. A – F = ?
   (A) 1
   (B) 2
   (C) 3
   (D) 4
   (E) cannot be determined

21. An integer T is as much greater than C as C is greater than E. T can be written as A + E. What is D?
   (A) 2
   (B) 3
   (C) 4
   (D) 5
   (E) cannot be determined

22. The greatest possible value of C is how much greater than the smallest possible value of D?
   (A) 2
   (B) 3
   (C) 4
   (D) 5
   (E) 6

23. Ellen: I just heard that Julie flunked out of college.
    Nancy: That can’t be true; she got straight A’s in high school.

   From the conversation above, it can be inferred that
   (A) Nancy thinks Ellen is lying
   (B) Nancy assumes that no one who got straight A’s in high school is likely to flunk out of college
   (C) Ellen thinks Julie has flunked out of college
   (D) Nancy thinks Julie is still in college
   (E) Ellen knows that Julie flunked out of college

24. President of the company to the Board of Directors: We are being threatened by a union organizing drive. The workers are trying to wrest control from us. We must take any steps necessary to prevent this takeover, even if some of these measures may not be fully legal.

   If the statements above are true, it follows that
   (A) successful opposition to a union organizing drive must require illegal measures
   (B) the union organizing drive is being conducted illegally
   (C) the board of directors will refuse to recognize the union even if it wins a representation election
   (D) maintaining full control of the company is more important than obeying the law
   (E) successful unionization of any company deprives the company officers of control over the company

25. If you present a purple pass, then you may enter the compound.

   If the statement above is true, which of the following must also be true?
   I. If you do not present a purple pass, then you may not enter the compound.
   II. If you may enter the compound, then you must have presented a purple pass.
   III. If you may not enter the compound, then you did not present a purple pass.

   (A) I only
   (B) II only
   (C) III only
   (D) I and II only
   (E) I, II, and III

25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

In country X, the Conservative, Democratic, and Justice parties have fought three civil wars in twenty years. To restore stability, an agreement is reached to rotate the top offices—President, Prime Minister, and Army Chief of Staff—among the parties, so that each party controls one and only one Office at all times. The three top office holders must each have two deputies, one from each of the other parties. Each deputy must choose a staff composed equally of members of his or her chief’s party and members of the third party.

1. When the Justice Party holds one of the top offices, what of the following cannot be true?
   (A) Some of the staff members within that office are Justice Party members.
   (B) Some of the staff members within that office are Democratic Party members.
   (C) Two of the deputies within the other offices are Justice Party members.
   (D) Two of the deputies within the other offices are Conservative Party members.
   (E) Some of the staff members within the other offices are Justice Party members.

2. When the Democratic Party holds the Presidency, the staffs of the Prime Minister’s deputies are composed
   I. one-fourth of Democratic Party members
   II. one-half of Justice Party members, one-fourth of Conservative Party members
   III. one-half of Conservative Party members, one-fourth of Justice Party members
   (A) I only
   (B) I and II only
   (C) II or III, but not both
   (D) I and II or I and III
   (E) Neither I, II, nor III

3. Which of the following is allowable under the rules as stated?
   (A) More than half of the staff within a given Office belonging to a single party
   (B) Half the staff members within a given Office belonging to a single party
   (C) Any person having a member of the same party as his or her immediate superior
   (D) Half the total number of staff members in all three Offices belonging to a single party
   (E) Half the staff members within a given Office belonging to parties different from the party of the top office holder in that Office

4. The Office of the Army Chief of Staff passes from the Conservative to the Justice Party. Which of the following must be fired?
   (A) The Democratic deputy and all staff members belonging to the Justice Party
   (B) The Justice Party deputy and all his or her staff members
   (C) The Justice Party deputy and half of the Conservative staff members in the chief of staff office
   (D) The Conservative deputy and all of his or her staff members belonging to the Conservative Party
   (E) No deputies, and all staff members belonging to the Conservative Party

5. If Elaine is on the steering committee, then she is on the central committee. This statement can be logically deduced from which of the following statements?
   (A) All members of the central committee are on the steering committee.
   (B) Elaine is on either the central committee or the steering committee.
   (C) Everyone who is on the steering committee is also on the central committee.
   (D) Some members of the central committee are on the steering committee.
   (E) Elaine is on the steering committee.

6. Frank must be a football player; he is wearing a football jersey.
   The conclusion above is valid only if it is true that
   (A) football players often wear football jerseys
   (B) all football players wear football jerseys
   (C) football players never wear any kind of shirt other than football jerseys
   (D) football players are required to wear football jerseys
   (E) only football players wear football jerseys

7. Today’s high school students are not being educated, they are being trained. Their teachers demand little of them other than that they memorize facts and follow directions. The current emphasis on training in basic math and verbal skills, while a useful step, rarely leads to the essential second step: development of independent critical thinking.
10. If the Celtic instructor insists on holding at least one session on Friday, in which of the following can Tom enroll?

(A) Armenian Literature on Monday, Wednesday, and Friday
(B) Sanskrit on Monday, Wednesday, and Friday

11. Which of the following additional courses, meeting as indicated, can Tom take?

(A) Old Church Slavonic—Monday, Wednesday, and Friday from 10 a.m. to 12 noon
(B) Intermediate Aramaic—Monday, Wednesday, and Friday from 11 a.m. to 12:30 p.m.
(C) Introductory Acadian—Tuesday and Thursday from 2 to 4 p.m.
(D) Fundamentals of Basque—Tuesday and Thursday from 1 to 3 p.m.
(E) Old Norse-Icelandic—Monday only from 12 to 3 p.m.

Questions 12–18

Joe, Larry, Ned, Mary, Paul, Willy, Crystal, Albert, Bob, Frank, Ellen, and Rick all live in the same six-floor building. There are two apartments per floor. No more than two persons live in any apartment. Some apartments may be empty.

Larry and his roommate live two floors above Albert and his roommate, Crystal.

Joe lives alone, three floors below Willy and two floors below Ellen.

Mary lives one floor below Albert and Crystal.

Ned lives three floors above the floor on which Bob and Frank have single apartments.

Rick and Paul live in single apartments two floors below Mary.

12. Which of the following lists the persons named in the correct order, going from the bottom floor to the top?

(A) Rick, Bob, Mary, Albert, Larry, Ned
(B) Rick, Frank, Ned, Ellen, Larry, Crystal
(C) Paul, Bob, Joe, Crystal, Ned, Larry
(D) Larry, Ellen, Albert, Mary, Frank, Rick
(E) Larry, Joe, Mary, Albert, Bob, Rick

13. Which of the following pairs must live on the same floor?

I. Ned, Ellen
II. Joe, Mary
III. Albert, Larry

(A) I only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III
14. Larry’s roommate, assuming that he or she is one of the persons mentioned, is
   (A) Ellen
   (B) Willy
   (C) Mary
   (D) Ned
   (E) Paul

15. Rick lives on the
    (A) first floor, below Bob or Frank
    (B) second floor, below Joe or Albert and Crystal
    (C) third floor, above Mary or Ellen
    (D) fourth floor, opposite Albert and Crystal
    (E) sixth floor, opposite Larry and his roommate

16. An empty apartment or empty apartments may be found on the
    (A) second floor only
    (B) fourth floor only
    (C) fifth floor only
    (D) third or sixth floor, but not both
    (E) fourth or sixth floor or both

17. Joe arranges to move into an apartment two floors down, whose occupant moves into an apartment one floor up. The occupant of this apartment moves into one three floors up, whose occupant takes Joe’s old apartment. The new occupant of Joe’s old apartment is
    (A) Bob or Frank
    (B) Ned or Ellen
    (C) Mary
    (D) Rick
    (E) Paul

18. Dorothy lives with a roommate. Her roommate could be any of the following EXCEPT
    (A) Willy
    (B) Mary
    (C) Ned
    (D) Ellen
    (E) Frank

Questions 19–22

19. If A occurs, which may occur?
   (E)
   I. F and G
   II. E and H
   III. D
   (A) I only
   (B) II only
   (C) III only
   (D) I and III or II and III, but not both
   (E) I, II, and III

20. If B occurs, which must occur?
   (E)
   (A) F and G
   (B) D and G
   (C) D
   (D) G and H
   (E) J

21. If J occurs, which must have occurred?
   (E)
   (A) E
   (B) Both E and F
   (C) Either B or C
   (D) G
   (E) Both B and C

22. Which may occur as a result of a cause not mentioned?
   (E)
   I. D
   II. A
   III. F
   (A) I only
   (B) II only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

23. In recommending to the board of trustees a tuition increase of $500 per year, the President of the university said: “There were no student demonstrations over the previous increases of $300 last year and $200 the year before.”
   If the President’s statement is accurate, which of the following can be validly inferred from the information given?
   I. Most students in previous years felt that the increases were justified because of increased operating costs.
   II. Student apathy was responsible for the failure of students to protest the previous tuition increases.
   III. Students are not likely to demonstrate over the new tuition increases.
   (A) I only
   (B) II only
   (C) I or II, but not both
   (D) I, II, and III
   (E) Neither I, II, nor III
24. A meadow in springtime is beautiful, even if no one is there to appreciate it.

The statement above would be a logical rebuttal to which of the following:

(A) People will see only what they want to see.
(B) Beauty is only skin deep.
(C) There's no accounting for taste.
(D) Beauty exists only in the eye of the beholder.
(E) The greatest pleasure available to mankind is the contemplation of beauty.

25. Since it is possible that substances contained in certain tree roots may provide a cure for cancer, the government must provide sufficient funds to allow thorough testing of this possibility.

The argument above assumes that

(A) substances contained in certain tree roots will probably cure cancer
(B) the line of research mentioned offers at present the most promising possibility for finding a cure for cancer
(C) the possibility of finding a cure is sufficient reason for funding research into possible cancer cures
(D) a cure for cancer would be extremely valuable to society
(E) the government is the only possible source of funds for the research described

38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

6. There is a danger that because Mr. Peters’ suggestions are so theatrically ________, readers may treat the book as a performance, enthralling but too ________ to take seriously.
   (A) striking...pedestrian
   (B) bold...overwrought
   (C) plausible...fantastic
   (D) conventional...disturbing
   (E) lacking...histrionic

7. As long as the acquisition of knowledge is rendered habitually ________, so long will there be a prevailing tendency to discontinue it when free from the ________ of parents and teachers.
   (A) repugnant...coercion
   (B) academic...authority
   (C) gratifying...restrictions
   (D) honorable...influence
   (E) irrelevant...custody

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. MODERATOR : DEBATE::
   (A) legislator : election
   (B) chef : banquet
   (C) auditor : lecture
   (D) conspirator : plot
   (E) umpire : game

9. DELIRIUM : DISORIENTATION::
   (A) paralysis : immobility
   (B) anorexia : pain
   (C) insomnia : fretfulness
   (D) rash : vaccination
   (E) malaria : relapse

10. GLOSSARY : WORDS::
    (A) catalogue : dates
    (B) atlas : maps
    (C) almanac : synonyms
    (D) thesaurus : rhymes
    (E) lexicon : numbers

11. ARMATURE : STATUE::
    (A) landscape : painting
    (B) framework : building
    (C) arsenal : weapon
    (D) composer : symphony
    (E) apparatus : experiment
12. EPAULET : SHOULDER::
   (A) noose : neck
   (B) tiara : head
   (C) splint : arm
   (D) knapsack : back
   (E) palm : hand

13. LUMBER : BEAR::
   (A) roost : hen
   (B) bray : donkey
   (C) waddle : goose
   (D) swoop : hawk
   (E) chirp : sparrow

14. CELERITY : SNAIL::
   (A) indolence : sloth
   (B) cunning : weasel
   (C) curiosity : cat
   (D) humility : peacock
   (E) obstinacy : mule

15. ENERVATED : VIGOR::
   (A) lax : rigor
   (B) profound : stupor
   (C) pallid : flavor
   (D) ravenous : appetite
   (E) nervous : energy

16. ADULATION : FLATTERY::
   (A) humility : vanity
   (B) credulity : sincerity
   (C) emulation : rivalry
   (D) irascibility : provocation
   (E) castigation : admonishment

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

The Quechua world is submerged, so to speak, in a cosmic magma that weighs heavily upon it. It possesses the rare quality of being, as it were, interjected into the midst of antagonistic forces, which in turn implies a whole body of social and aesthetic structures whose innermost meaning must be the administration of energy. This gives rise to the social organism known as the ayllu, the agrarian community that regulates the procurement of food. The ayllu formed the basic structure of the whole Inca empire.

The central idea of this organization was a kind of closed economy, just the opposite of our economic practices, which can be described as open. The closed economy rested on the fact that the Inca controlled both the production and consumption of food. When one adds to this fact the religious ideas noted in the Quechua texts cited by the chronicler Santa Cruz Pachacuti, one comes to the conclusion that in the Andean zone the margin of life was minimal and was made possible only by the system of magic the Quechua constructed through his religion. Adversities, moreover, were numerous, for the harvest might fail at any time and bring starvation to millions. Hence the whole purpose of the Quechua administrative and ideological system was to carry on the arduous task of achieving abundance and staving off shortages. This kind of structure presupposes a state of unremitting anxiety, which could not be resolved by action. The Quechua could not do so because his primumordial response to problems was the use of magic, that is, recourse to the unconscious for the solution of external problems. Thus the struggle against the world was a struggle against the dark depths of the Quechua's own psyche, where the solution was found. By overcoming the unconscious, the outer world was also vanquished.

These considerations permit us to classify Quechua culture as absolutely static or, more accurately, as the expression of a mere state of being. Only in this way can we understand the refuge that it took in the germinative center of the cosmic mandala as revealed by Quechua art. The Quechua empire was nothing more than a mandala, for it was divided into four zones, with Cuzco in the center. Here the Quechua ensconced himself to contemplate the decline of the world as though it were caused by an alien and autonomous force.

17. It can be inferred from the passage that the Quechua world
   (A) aimed at socioeconomic interdependence
   (B) eliminated economic distress
   (C) may be placed in ancient South America
   (D) is located in contemporary Mexico
   (E) was a scene of dynamic activity

18. The term mandala as used in the last paragraph most likely means
   (A) an agrarian community
   (B) a kind of superstition
   (C) a closed economic pattern
   (D) a philosophy or way of regarding the world
   (E) a figure composed of four divisions

19. The author implies that the Quechua world was
   (A) uncivilized
   (B) highly introspective
   (C) vitally energetic
   (D) free of major worries
   (E) well organized
20. With which of the following statements would the author most likely agree?

(A) Only psychological solutions can remedy economic ills.

(B) The Quechua were renowned for equanimity and unconcern.

(C) The Quechua limited themselves to realizable goals.

(D) Much of Quechua existence was harsh and frustrating.

(E) Modern Western society should adopt some Quechua economic ideas.

The explosion of a star is an awesome event. The most violent of these cataclysms, which produce supernovae, probably destroys a star completely. Within our galaxy of roughly 100 billion stars the last supernova was observed in 1604. Much smaller explosions, however, occur quite frequently, giving rise to what astronomers call novae and dwarf novae. On the order of 25 novae occur in our galaxy every year, but only two or three are near enough to be observed. About 100 dwarf novae are known altogether. If the exploding star is in a nearby part of the galaxy, it may create a "new star" that was not previously visible to the naked eye. The last new star of this sort could be observed clearly from the Northern Hemisphere appeared in 1946. In these smaller explosions the star loses only a minute fraction of its mass and survives to explode again.

Astrophysicists are fairly well satisfied that they can account for the explosions of supernovae. The novae and dwarf novae have presented more of a puzzle. From recent investigations that have provided important new information about these two classes of exploding star, the picture that emerges is quite astonishing. It appears that every dwarf nova—and perhaps every nova—is a member of a pair of stars. The two stars are so close together that they revolve around a point that lies barely outside the surface of the larger star. As a result the period of rotation is usually only a few hours, and their velocities range upward to within a two-hundredth of the speed of light.

Astronomers use the term "cataclysmic variable" to embrace the three general classes of exploding star: dwarf novae, nova and supernovae. A cataclysmic variable is defined as a star that suddenly and unpredictably increases in brightness by a factor of at least 10. Dwarf novae are stars that increase in brightness by a factor of 10 to 100 within a period of several hours and decline to their former brightness in two or three days. In this period they emit some 10.38 to 10.39 ergs of energy. At maximum brilliance a dwarf nova shines about as intensely as our sun; previously it had been only about a hundredth as bright. The number of outbursts ranges anywhere from three to 30 a year, but for any one star the intervals have a fairly constant value. Moreover, the maximum brightness from outburst to outburst is the same within a factor of two for a given star. The dwarf novae are often referred to, after their prototypes, as U Geminorum or SS Cygni stars. (The stars of each constellation are designated by letters or numbers.) A subgroup of dwarf novae, called Z Camelpardalis stars, do not always descend to minimum brightness between outbursts but may stay at some intermediate level for several months.

21. The author's primary purpose in the passage is to

(A) compare the characteristics of novae with those of other stars

(B) explain why supernovae are so much less frequent than novae and dwarf novae

(C) account for the unpredictability of cataclysmic variables as a class

(D) describe the nature and range in scale of cataclysmic variables

(E) explain what happens during the stages of a star's destruction

22. According to the passage, our observations of novae are hampered by their

(A) extreme brightness

(B) loss of mass

(C) speed of rotation

(D) distance from earth

(E) tremendous violence

23. Dwarf novae differ from supernovae in which of the following aspects?

I. Magnitude of outburst

II. Frequency of observation

III. Periodicity of flare-ups

(A) I only

(B) II only

(C) I and II only

(D) I and III only

(E) I, II, and III

24. By the term "new star" (line 13) the author means one that has

(A) recently gained in mass

(B) moved from a distant galaxy

(C) become bright enough to strike the eye

(D) not previously risen above the horizon

(E) become visible by rotating in its orbit

25. The passage suggests which of the following about Z Camelpardalis stars?

(A) They revert to their original level of brightness more readily than do U Geminorum stars.

(B) Their outbursts are more frequent than those of other dwarf novae.

(C) They may lose a proportionally greater fraction of their mass than do SS Cygni stars.

(D) They may be less frequently observed by astronomers than are supernovae.

(E) They are distinguishable from other dwarf novae by their lesser degree of brightness.
26. Which of the following topics would most probably be the subject of the paragraph immediately following the last paragraph above?

(A) The likelihood of our sun’s becoming a dwarf nova
(B) The manner in which the twin stars revolve
(C) The characteristics of the explosion of a nova
(D) The origin of the term “cataclysmic variable”
(E) The nature of the explosions of supernovae

27. The passage provides information that would answer which of the following questions?

I. In what century were astronomers last able to observe the explosion of a supernova?
II. Why do the Z Camelopardalis stars remain at intermediate levels of brightness after some outbursts?
III. How rapidly after outburst do dwarf novae achieve their maximum level of brilliance?

(A) I only
(B) III only
(C) I and II only
(D) I and III only
(E) II and III only

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. FLUSTER:
   (A) soothe
   (B) diminish
   (C) strengthen
   (D) divert
   (E) allow

29. DELETION:
   (A) injury
   (B) delay
   (C) insertion
   (D) permission
   (E) pollution

30. DISPARAGE:
   (A) resemble
   (B) eulogize
   (C) vacillate
   (D) annoy
   (E) appear

31. BALEFUL:
   (A) meager
   (B) beneficent
   (C) indifferent
   (D) uncomfortable
   (E) original

32. SERVILITY:
   (A) resilience
   (B) wickedness
   (C) independence
   (D) righteousness
   (E) humility

33. FELICITOUS:
   (A) inappropriate
   (B) ineffable
   (C) irrational
   (D) atypical
   (E) uncertain

34. PRECIPITOUS:
   (A) cooperative
   (B) cautious
   (C) inaccurate
   (D) formal
   (E) simplistic

35. ASSUAGE:
   (A) wane
   (B) belie
   (C) worsen
   (D) intervene
   (E) presume

36. LATENT:
   (A) prior
   (B) tardy
   (C) devious
   (D) manifest
   (E) astronomical

37. BROACH:
   (A) seal off
   (B) vie with
   (C) unsettle
   (D) stint
   (E) enhance

38. ENCOMIUM:
   (A) prodigality
   (B) denunciation
   (C) sacrifice
   (D) disability
   (E) abbreviation

31. B  
32. C  
33. A  
34. B  
35. C  
36. D  
37. A  
38. B
9. C. An auger is a tool that pierces or bores holes. A plane is a tool that smooths surfaces.

(Facet)

10. B. To scurry is to move in a brisk and rapid manner. To chatter is to talk in a brisk and rapid manner.

(Manner)

11. B. A chameleon, a kind of lizard, is studied by a herpetologist (scientist who studies reptiles and amphibians). A salmon, a kind of fish, is studied by an ichthyologist.

(Defining Characteristic)

12. C. A song is part of a cycle or series of songs. A sonnet is part of a sequence or series of sonnets.

(Group and Member)

13. E. Someone obdurate (unyielding, inflexible) is lacking in flexibility. Someone adamant (unshakable in opposition) is lacking in submissiveness.

(Antonym Variant)

14. E. Sartorial by definition means pertaining to the tailor's art. Terpsichorean by definition means pertaining to the dancer's art.

(Defining Characteristic)

15. C. To skirt an issue is to evade addressing or dealing with it. To dodge an encounter is to evade meeting the person. Beware eye-catchers. Skirt here is a verb meaning evade. Vest here is a verb meaning to have a legal right or interest in something. Neither here is a noun referring to a garment.

(Function)

16. A. A feud or war of revenge is a fight characterized by acrimony or bitterness. A scuffle or haphazard struggle is a fight characterized by confusion.

(Defining Characteristic)

17. E. In this paragraph the author maintains that all forms of government tend to become somewhat dictatorial. He shows how society protects itself from this tendency. Throughout, he demonstrates how people tend to protect or safeguard their individual liberties.

18. C. The author says that the tendency for a government to encroach upon individual liberty to the extent to which it has the power to do so is "almost a natural law" of politics. Thus, government and individual liberty are inherently by their very natures in opposition to one another.
19. E. The final sentence states that the fascist dictatorships "destroyed (eradicated) all forms of social organization which were in any way rivals to the state."

20. C. If the fascist dictatorships "are the first truly tyrannical governments which Western Europe has known for centuries," then it can be inferred that centuries ago there were tyrannical or despotic governments in Western Europe. Thus, the fascist governments represent a regression or reversion to an earlier form of government.

21. B. In the third paragraph, the author mentions the "restriction of view" imposed by the modern synthesis, a synthesis he and many of his fellow evolutionists have challenged. Choice A is incorrect. The author states that the "modern synthesis works in its appropriate arena." Choices C and D are incorrect. It was prior to the modern synthesis that scientists such as Bateson found the proposed mechanisms of evolution confusing and contradictory. Choice E is incorrect. According to the author, he and many other contemporary evolutionists find the Darwinian synthesis simplistic; they find the current rethinking of evolutionary theory to be productive.

22. C. The movement of billiard balls on a pool table is relatively simple to predict: you can measure the forces involved and figure out where the balls will go. Compared to the complexity of life, the billiard ball example provides an example of a relatively uncomplicated system.

23. C. The opening sentence briefly mentions Darwinian theory's extending its domain, stating that while it has been doing so some problems have arisen. This suggests that the author has just been discussing the expansion or extension of evolutionary theory into new fields.

24. A. You can answer this question by the process of elimination. The author would be likely to agree with Statement I: he cites the confusion and depression expressed by post-Darwinian biologists unable to resolve the contradictions inherent in the then current version of evolutionary theory. Therefore, you can eliminate Choice B. The author would be unlikely to agree with Statement II: he attributes despondency to Darwin's successors, not to Darwin. Therefore, you can eliminate Choices C and E. The author would be unlikely to agree with Statement III: although he quotes Darwin's comparison of the two systems, he indicates that Darwin preferred the "wondrous and unpredictable change" of life in its complexity to the static cycling of the spheres. Therefore, you can eliminate Choice D. Only Choice A is left. It is the correct answer.

25. A. The author poses questions about how well Darwinism works as a model and provides the example of Biston betularia as an instance of minor, local, adaptive adjustment. He uses the metaphor of the pool table, and refers to Bateson and to Darwin, quoting the latter. He never denounces or censure an opponent.

26. B. The transformation of certain members of Biston betularia into black moths can be categorized as minor adjustment within populations. In this instance, the substitution of a single gene (a minor adjustment) brought about an adaptive change, a selected response that made the moths less visible against their background.

27. B. The passage states that populations of the moth Biston betularia turned black, thus gaining the selective advantage of blending in better with their soot-darkened environment. No information is provided to answer the other questions.

28. C. The opposite of to disregard or ignore is to heed or pay attention to. Think of "disregarding a warning."

29. B. The opposite of veracity or truthfulness is mendacity or dishonesty. Word Parts Clue: Ver- means truth. Veracity means truthfulness. Think of "trusting someone's veracity."

30. E. The opposite of to bedeck or ornament profusely is to strip. Think of someone "bedecked in diamonds and furs."

31. A. The opposite of to estrange or alienate is to reconcile. Think of "estranged couples" in a divorce.

32. D. The opposite of spurious (false or fraudulent) is genuine. Think of forgers selling "a spurious work of art."

33. B. The opposite of provident or frugal is prodigal or extravagant. Think of the fable of the prodigal grasshopper and the provident ant.

34. D. The opposite of to capitulate or yield is to resist. Think of "capitulating without a fight."

35. C. The opposite of indigenous or native is alien or foreign. Beware eye-catchers. Choice A is incorrect. Do not confuse indigenous or native with indigent or poor.

36. A. The opposite of salubrity or healthfulness is unwholesomeness. Think of "the salubrity of mountain air."
37. D. The opposite of to quail or lose courage is to become resolute or firm. Think of “quailing in fear.”

38. B. The opposite of tantamount or equivalent in value is not equivalent. Context Clue: “Failure to publish is tantamount to suppression.”

Section 2

1. C. The key phrase here is “simplest in structure.” In biology, primitive life forms are considered simple. Evolved forms are more specialized and do things in more complex ways.

2. C. The leaders would be apprehensive in such circumstances that they could not achieve their goal of reconciliation. Note that the clause “negotiations have reached such a state” generally implies that they have reached a sorry state.

3. B. If we are not wary or cautious, even we may be fooled by propaganda. One does not have to be gullible or easily deceived to fall for such tricks.

4. C. Charlatan is another term for a quack or pretender to medical knowledge.

5. E. The statement that “we do not know” whether a gesture indicates devotion or despair suggests that gestures are by their nature ambiguous or unclear.

6. A. The common expectation is that refined or genteel people would reject evil while coarse people would tolerate it. However, the reverse holds true: paradoxically, the coarse word condemns an evil and the refined word excuses or condones it. Watch out for words like paradoxically that signal the unexpected.

7. D. The incongruity here is that one group finds Woolf too feminine for their tastes while another finds her not feminine (or perhaps feminist) enough for theirs. Note that the word peculiar signals that Woolf’s destiny is an unexpected one.

9. E. An archipelago is a group or chain of islands. A constellation is a group of stars. Beware eye-catchers. A garden does not by definition consist of flowers; a garden may comprise vegetables instead.

10. C. To crow is to express oneself in a boastful manner. To pout is to express oneself in a sulky manner.

(Defining Characteristic)

11. C. By definition, an ascetic (one who practices severe self-discipline) is characterized by self-denial. A zealot (extreme enthusiast) is characterized by fanaticism. Beware eye-catchers. A miser may hoard wealth, but he is not necessarily characterized by affluence. Even poor persons may be misers.

(Defining Characteristic)

12. A. To camouflage something is to make it difficult to discern or perceive. To encipher or encode something is to make it difficult to comprehend.

(Function)

13. B. A seer or prophet is by definition someone gifted in prophecy. A sage or wise person is by definition someone gifted in wisdom.

(Defining Characteristic)

14. C. A bracket is a support for a shelf. A strut is a support for a rafter. Note that you are being tested on an unfamiliar secondary meaning of strut. As always in dealing with the more difficult questions at the end of the analogy section, be suspicious when you come across what seems like a familiar word that is being used in an apparently incongruous context. You may be being tested on an unfamiliar secondary meaning of the word.

(Function)

15. A. Taxonomy is the science or study of the classification of plants and animals. Etymology is the science or study of the derivation of words.

(Defining Characteristic)

16. B. To be brusque or abrupt is to exhibit uncenemoniousness. To be obstinate or stubborn is to exhibit intractability.

(Synonym Variant)

17. B. In the third paragraph the author argues that women “have been unified by values, conventions, experiences, and behaviors imposing on each individual.” To the extent that they have done this, they have come to constitute a subculture within our society. It is as part of such a subculture that women writers become conscious of their own female literary tradition. Thus, their assimilation of the values of their subculture furthers their ability to recognize the female literary tradition.
18. D. The author opens the paragraph by stating that many literary critics have begun reinterpreting the study of women’s literature. She then goes on to cite individual comments that support her assertion. Clearly, she is receptive or open to the ideas of these writers, for they and she share a common sense of the need to reinterpret their common field. Choices A and B are incorrect. The author cites the literary critics straightforwardly, presenting their statements as evidence supporting her thesis.

Choice C is incorrect. The author does not disparage or belittle these critics. By quoting them respectfully she implicitly acknowledges their competence.

Choice E is incorrect. The author quotes the critics as acknowledged experts in the field. However, she is quite ready to disagree with their conclusions (as she disagrees with Moers’ view of women’s literature as an international movement). Clearly, she does not look on these critics with awe.

19. E. Question E is answerable on the basis of the passage. According to lines 7–8, Mills disbelieved in the idea that women "have had a literature of their own all along."

20. C. The gaps exist in the female literary tradition because once-famous female authors disappear from the records posthumously: they cease to be the subjects of critical discussion, and vanish as if they never had existed. Thus, there is no continuity in the female literary tradition.

21. B. The writer neither lists (enumerates) nor sorts (classifies) anything in the opening paragraph. Choice A is incorrect. The writer likens the female tradition to a lost continent and develops the metaphor by describing the continent “rising...from the sea of English literature.”

Choice C is incorrect. The author refers or alludes to the classical legend of Atlantis. Choice D is incorrect. The author quotes Colby and Thompson. Choice E is incorrect. The author contrasts the revised view of women’s literature with Mills’ view.

22. B. If women writers have no history, they have to re-discover the past. In the process, they create or forge their consciousness of what their sex has achieved.

Here forge is used with its meaning of fashion or make, as blacksmiths forge metal by hammering it into shape. It is in this sense that James Joyce used forge in A Portrait of the Artist as a Young Man, whose hero goes forth to “forge in the smithy of [his] soul the unrequited conscience of [his] race.”

23. C. The author both cites Moers’ work in support of her own assertions and argues against the validity of Moers’ conclusion that women’s literature is an international movement. Thus, while she finds Moers’ work basically admirable and worthy of respect, she considers it inaccurate in some of the conclusions it draws.

Choice A is incorrect. The author would not cite Moers as she does in the second paragraph if she believed Moers to be wholly misleading. Choice B is incorrect. Since the author disagrees with at least one of Moers’ conclusions, she obviously does not find Moers’ work the definitive or final word.

Choices D and E are incorrect. Neither is supported by the author’s mentions of Moers.

24. B. Both the author’s use of the phrase “a literature of their own” in the opening paragraph and her ongoing exploration of what she means by the female literary tradition in the English novel support this choice.

Choice A is incorrect. It is not the uniqueness of the phenomenon but the traditional nature of the phenomenon that interests the author.

Choice C is incorrect. The passage deals specifically with women’s literary tradition.

Choice D is incorrect. The passage is concerned with the roots of female writing, not with its present day manifestations.

Choice E is incorrect. The author presents no such choice.

25. C. The opening paragraph discusses changes in the idea of matter, emphasizing the use of musical terminology to describe the concepts of physics. The second paragraph then goes on to develop the theme of the music of matter.

Choice A is incorrect. Although the author gives examples of the physicists’ “strange new language” his chief concern is with the physical concepts themselves, not with their linguistic ramifications.

Choice B is incorrect. Music does not directly influence the interactions of the particles; physicists merely use musical terms to describe these interactions.

Choice D is incorrect. The passage nowhere suggests the quark is to be eliminated.

Choice E is incorrect. The passage says nothing about proving or disproving the existence of matter.

26. D. The author mentions these terms as examples of what he means by the strange new language or idiosyncratic nomenclature of modern particle physics.

27. D. In his references to the elegance of the newly discovered subatomic structures and to the dance of Creation, the author conveys his admiration and enthusiasm.

Choice A is incorrect. While the author is clearly sympathetic to the new physics, his attitude is not one of apprehension or concern.

Choices B and C are incorrect. The author sees no occasion for indignation (resentment) or derision (scorn) in the new physics.

Choice E is incorrect. The author views the elegant world of subatomic physics with wonder and delight, not with doubt.
28. C. The opposite of to rectify or correct is to make worse.
Word Parts Clue: Rect- means right; -ify means to make. Rectify means to make right.
Think of “rectifying an error.”

29. C. The opposite of the apex or highest point is the lowest point.
Think of being at “the apex of one’s career.”

30. A. The opposite of prosaic (dull, matter-of-fact) is imaginative.
Think of “being bored by a commonplace, prosaic job.”

31. B. The opposite of dissonance or discord is harmony.
Word Parts Clue: Dis- means apart; son- means sound. Dissonance is the state of sounding apart (that is, not in harmony).
Think of an instance of “jarring dissonance.”

32. C. The opposite of doltish or stupid is clever.
Think of “a doltish blockhead.”

33. E. The opposite of to chagrin (disappoint) is to please.
Beware eye-catchers. Choice A is incorrect. Chagrin is unrelated to grin.
Think of “being chagrined by a defeat.”

34. A. The opposite of disingenuous or guileful (giving a false impression of naiveté) is naive or unsophisticated.
Think of a “disingenuous appearance of candor.”

35. B. The opposite of recalcitrance or stubbornness is submissiveness.
Think of “obstinate recalcitrance.”

36. C. The opposite of fecundity or fruitfulness is barrenness.
Think of “the earth’s abundant fecundity.”

37. D. The opposite of lugubrious or melancholy is jocose or given to jesting.
Think of “lugubrious mourners.”

38. D. The opposite of animus or hostility is amity or friendliness and good will.
Beware eye-catchers. Choice A, though tempting, is incorrect. Hospitality is an action (the enthusiastic reception of guests), not an emotion: when you speak of someone’s hospitality, you are speaking of what he does, not of what he feels.

Section 3

1. B. Since the value of the fraction is negative, the denominator must be negative since the numerator has a positive value. Therefore the value of \( x \) is less than 1.

2. A. \( y^2 - 1 = 3 \)
\( y^2 = 4 \)
\( y = \pm 2 \)
Since \( x = 3 \), \( x \) is larger than \( y \).

3. A. The perimeter = 4(2) or 8 feet.
The area = (2)^2 or 4 square feet.

4. D. \( x \) could be 9, 18, or 27.

5. D. We know that \( a + b = 90 \), that 90 \(- b = a \), and that 90 \(- a = b \). Because we may not assume that \( a = b \), choice D is correct.

6. C. \( \sqrt{2x \cdot \frac{\sqrt{y}}{2}} = \sqrt{\frac{2x^2y}{2y}} = \sqrt{x^2} = x \)
\( \frac{3}{2} \)
\( \frac{3}{2} \)
\( \frac{3}{4} \)
\( \frac{3}{4} \)
\( \frac{3}{4} \)
\( \frac{3}{4} \)
\( \frac{1}{2} \)

7. C. \( \frac{A}{B} \) or \( \frac{A}{B} \) or \( \frac{A}{B} \) or \( \frac{A}{B} \) or \( \frac{A}{B} \) or \( \frac{A}{B} \) or \( \frac{1}{2} \)

8. C. \( AC = 5.6 - 2.8 = 2.8 \)
\( BD = 6.2 - 3.4 = 2.8 \)

9. B. The sum of 2 negative integers is negative.
The product of 2 negative integers is positive.

10. C. Because the perimeters are equal, we can say that \( 4a = 3b = 5c \).
Because equals added to equals results in equals, \( 5c + 3b \) (Column A) = \( 4a + 5c \) (Column B).

11. C. \( \frac{1}{x} + \frac{1}{x} = \frac{1}{x} + \frac{1}{x} = \frac{1}{x} \cdot \frac{1}{x} = \frac{1}{x^2} \)
\( x \)
\( \frac{1}{x} \cdot \frac{1}{x} = \frac{1}{x^2} \)

12. B. Because the measure of \( \angle A \) is 70⁰, the sum of the measures of angles B and C is 110⁰.
Since \( \angle B = \angle C \) and \( x = 27 \frac{1}{2} \), the value of \( y \) is 180 - 2(27 \frac{1}{2}) or 125. Because \( 2x = 55 \) choice B is correct.

13. C. If \( \frac{1}{2} AC = \frac{1}{2} BC = \frac{1}{2} AB \), then \( AC = AB = BC \). The triangle is equilateral and \( z = 60 \).
Since \( BD \) divides \( AC \) so that \( AD = DC \), it is also perpendicular, forming right triangle \( BDC \), and \( x = 90 \). This question is an application of the Pythagorean theorem.

14. A. Since the measure of \( \angle C \) is 60, the measure of \( \angle A + \angle B \) is 120, and therefore the measure of \( \angle A \) is more than \( \frac{1}{2} \) of 120, since \( A \) is larger than \( B \) (given). Side \( CB \) lies opposite the angle with a measure of more than 60 and is therefore larger than side \( AB \), which lies opposite the angle with a measure of 60.
15. A. \( ABD \) is equilateral. \( x = y = w = 60 \). Since \( AB \bot BC \), \( y + z = 90 \), and \( z = 30 \). \( BC \) lies opposite \( v \) which equals 120° and \( DC \) lies opposite the 30° angle. Therefore, \( BC > DC \).

16. B. \( OA = OB = 4 \)
\[ m \angle AOB = \text{arc } AB = 112^\circ \]
\[ m \angle OAB + m \angle ABO = 68^\circ \]
\[ m \angle OAB = m \angle ABO = 34^\circ \]

17. D. \( \angle ADC > \angle ABD \) (the exterior angle of a triangle is greater than either remote interior angle); \( \angle ADC > \angle ACD \) (since \( \angle ACD = \angle ABD \); \( AC > AD \) (In a triangle the larger side is opposite the larger angle.)

18. C. Examine the problem graphically. \( \frac{1}{2} \) of 12 (or 6) belong to Club A, but note that 3 of these belong to both A and B. \( \frac{1}{3} \) of 12 (or 4) belong to Club B, but of these 3 also belong to Club A. We have thus accounted for 7 men who are club members. Therefore, 5 men belong to neither club.

19. B. Since \( d > 7 \), the charge for the first week, \( c \) cents, must be paid plus \( f \) cents for each additional day. The number of days over and above 1 week = \( (d - 7) \). The charge for these days is \( f \times (d - 7) \). Total cost = \( c + f \times (d - 7) \).

20. D. Let \( \frac{2x}{3x} \) = the original fraction.
\[ \frac{2x - 6}{3x} = \frac{2}{3} \left( \frac{2x}{3x} \right) \text{ [given]} \]
\[ \frac{2x - 6}{3x} = \frac{4}{9} \]
\[ \frac{2x - 6}{3x} = \frac{4}{9} \]
\[ 18x = 54 \]
\[ 6x = 54 \]
\[ x = 9 \]

numerator = \( 2x \) or 18

21. B. I is not correct. The weight of the skeleton and blood = 15,000 grams.
\[ \frac{15,000}{70,000} \] is less than \( \frac{1}{2} \).

II is correct. The weight of the liver is 1,700 grams. The total body weight is 70,000 grams.
\[ \frac{1,700}{70,000} \approx 2.4\% \]

III is not correct. The weight of the blood in the average adult is half the weight of the skeleton.

22. A. Set up a proportion. Let \( x \) = total body weight in terms of g.
\[ \frac{\text{weight of skeleton}}{\text{total body weight}} = \frac{10,000 \text{ grams}}{70,000 \text{ grams}} = \frac{g}{x} \]
\[ \frac{1}{7} = \frac{g}{x} \]
\[ x = 7g \]

23. E. \[ \frac{1000}{2500} = \frac{\text{part}}{\text{entire}} = \frac{2}{5} = \frac{2}{5} \] of \( 360^\circ = 144^\circ \)

24. C. \[ \frac{\text{part}}{\text{whole}} = \frac{400}{2,500} = \frac{4}{25} = 16\% \]

25. D. Output through kidneys = 1500 cc. (Graph II)
Intake in fluids = 1500 cc. (Graph I)
\[ \frac{1,500}{1,500} = 1 = 100\% \]

26. B. \( a \) eggs must weigh \( ab \) ounces. Minimum weight for all \( c \) eggs = \( cd \) ounces. Minimum weight for all \( f \) eggs = \( fg \) ounces. Minimum weight of all eggs = \( ab + cd + fg \).
27. C. There is a direct proportion between the two types of tumbler.
\[
\frac{3 \text{ large tumblers}}{5 \text{ small tumblers}} = \frac{1 \text{ large tumbler}}{x \text{ small tumblers}}
\]
\[
3x = 5
\]
\[
x = \frac{5}{3} \text{ or } 1 \frac{2}{3}
\]

28. B. \(\angle 1 = \angle 2\) (Vertical angles are equal.)
\(\triangle AEB\) is similar to \(\triangle DEC\).

Since \(\frac{CD}{AB} = \frac{4}{8} = \frac{1}{2}\), then \(CE = 1\) or \(\frac{2}{3}\).

Let \(x = CE\).

Let \(y = EB\).

Then \(\frac{x}{y} = \frac{1}{2}\) and \(2x = y\). Since
\[
x + y = 4
\]
\[
x + 2x = 5
\]
\[
3x = 5
\]
and \(x = \frac{5}{3}\) (CE)

In right triangle \(CED\), leg \(CD = 4\),
\[
\text{leg } CE = \frac{5}{3}.
\]

By the Pythagorean theorem
\[
(CE)^2 + (CD)^2 = (ED)^2
\]
\[
\left(\frac{5}{3}\right)^2 + 4^2 = (ED)^2
\]
\[
\frac{25}{9} + 16 = (ED)^2
\]
\[
\frac{169}{9} = (ED)^2
\]
\[
\frac{13}{3} = ED
\]

If \(ED = \frac{13}{3}\) then \(AE = \frac{26}{3}\).

Therefore \(AD = \frac{39}{3} = 13\).

29. A. Note that 7 students take both subjects. 20 students take chemistry only and 15 students take physics only. The ratio of those taking physics only to those taking chemistry only is \(\frac{15}{20} = \frac{3}{4}\) or 3:4.

30. A. Minimum crates = 3
Minimum weight = 125 pounds
\[3 \times 125 = 375\text{ pounds}\]

**Section 4**

1. C. Let \(x = \) the price of the item.
\[0.8x + 8 = x\]
\[8x + 80 = 10x\]
\[80 = 2x\]
\[x = 40\]

2. C. Since this is a parallelogram, \(EH = FG\).

3. B. Column A: \(\frac{2 + 3}{3} = \frac{5}{3} = \frac{1}{2}\)
Column B: \(\frac{3 + 4}{4} = \frac{7}{4} = \frac{1}{2}\)

Since \(\frac{7}{4}\) is greater than \(\frac{1}{2}\), choice B is correct.

4. C. The area of \(ABCD = (BC) (DC)\) or \((2.5\pi) (10)\) or \(25\pi\). The area of the circle is \(\pi r^2\).
Since the diameter is 10, the radius is 5 and the area is \(\pi r^2\), or \(25\pi\).

5. A. \(125R = 81\)
\[R = \frac{81}{125}\]
\[5 > R\]

6. A. \((-3)^9\) has a negative value (Column B)
\((-3)^8\) has a positive value (Column A)

7. C. If the arithmetic mean of \(b\) and \(c\) is 60, then \(b + c = 120\). Therefore \(a = 180 - 120\) or 60.

8. B. The value of \(r\) is between \(-2\) and \(-9\). For any of these values \(r^2\) would be negative. For example, if \(r = -2\), then \(\frac{1}{r^2} = \frac{1}{(-2)^2} = \frac{1}{4}\)
\[\frac{1}{-128} = \frac{1}{128}\]
For any of these values for \(r\), \(r^6\) would have a positive value. For example, if \(r = -2\), then
\[\frac{1}{64} \times \frac{1}{-128} = \frac{1}{128}\]

9. C. \(x^2 = xy\). Divide by \(x\) and \(x = y\).

10. A. \(\frac{1}{2} + \frac{1}{3} = \frac{5}{6} = \frac{25}{30}\)
\[\frac{2}{5} = \frac{12}{30}\]

11. C. Radii \(OD\) and \(OC\) are equal legs of right triangle \(DOC\). Area of \(DOC = \frac{1}{2} (\text{leg})(\text{leg}) = 12.5\) or \((\text{leg})^2 = 25\). Therefore, \(\text{leg} = 5\). Since leg (or radius) equals 5, the area of the circle equals \(25\pi\).
12. D. \[ \frac{c^2 \cdot d^2 \cdot e^2}{c \cdot d \cdot e^3} \] or \( \frac{1}{cde} \) may be larger than, smaller than, or equal to \( \frac{cde}{3} \) depending upon the values of \( c, d, \) and \( e. \)

13. A. Because \( b = 125, x = 55, \) and \( y = 180 - (55 + 70) \) or \( 180 - 125 = 55, \) therefore \( c = 180 - 55 \) or \( 125 \) and \( a = 180 - 70 \) or \( 110. \) Thus \( c > a, \) and choice A is correct.

14. C. The measure of \( \angle ACB = 180^\circ - 125^\circ \) or \( 55^\circ. \)
   The measure of \( \angle BAC = 180^\circ - 110^\circ \) or \( 70^\circ. \)
   The measure of \( \angle ABC = 180^\circ - (55^\circ + 70^\circ) \) or \( 55^\circ. \)
   Because angles \( B \) and \( C \) have equal measures, \( AB = AC. \)

15. A. Measure of \( \angle ABC = 80^\circ. \)
   Measure of \( \angle CAB = 180^\circ - (80^\circ + 30^\circ) \) or \( 70^\circ. \)
   Therefore \( a = 35 \) and \( b = \frac{1}{2} \) (80) or 40.
   Therefore \( d = 180 - (35 + 40) \) or 105.

16. B. To compare fractions, change all fractions to fractions with the same numerator or denominator.

\[
\frac{2}{9} = \frac{1}{\frac{9}{2}}; \quad \frac{3}{11} = \frac{1}{\frac{11}{3}}; \quad \frac{4}{13} = \frac{1}{\frac{13}{3}}
\]

\( \frac{1}{8} \) has the largest denominator.

17. C. \[
\frac{\text{number of girls}}{\text{total number of students}} = \frac{x}{x + y}
\]

18. D. \( \angle 1 + \angle 4 = 180^\circ \)
   \( 145^\circ + \angle 4 = 180^\circ \)
   \( \angle 4 = 35^\circ \)
   \( \angle 2 + \angle 5 = 180^\circ \)
   \( 125^\circ + \angle 5 = 180^\circ \)
   \( \angle 5 = 55^\circ \)
   \( \angle 4 + \angle 5 + \angle 3 = 180^\circ \)
   (the sum of the angles of a triangle equals \( 180^\circ) \)
   \( 35^\circ + 55^\circ + \angle 3 = 180^\circ \)
   \( \angle 3 = 90^\circ \)

19. E. \[
\begin{align*}
4 \text{ quarts} & = 1 \text{ gallon} \\
16 \text{ quarts} & = 4 \text{ gallons} \\
2 \text{ pints} & = 1 \text{ quart} \\
32 \text{ pints} & = 16 \text{ quarts} \\
or, 64 \text{ half pints} & = 16 \text{ quarts}
\end{align*}
\]

20. C. Since \( ABC \) is equilateral, the measure of \( \angle BAC = 60 \) and of \( ACB = 60. \)

\[
\begin{align*}
53 + x & = 60 \\
x & = 7 \\
72 - y & = 60 \\
y & = 12 \\
x + y & = 19
\end{align*}
\]

21. E. Using a straightedge at the lowest line of the table, read the figure under the column marked 15.

22. D. In the body of the table, find the payment \$50.00, and note that it is to the right of the \$5000 row and under the 18-year column.

23. C. In the table, find the row for \$5000. Then note that the payment for a 17-year loan is \$51.07 per month, while an 18-year loan requires a payment of \$50.00 per month. The difference is \$1.07 per month.

24. B. The monthly payment is \$10.00.

\[
\frac{\$10}{\$1000} = \frac{1}{100}, \text{ or } 1%.
\]

25. D. At \$10.00 a month, or \$120.00 per year, the total payments for 18 years would amount to \$2160. \( 2160 - 1000 = \$1160. \)
26. D. Since \( BE = AE \), the measure of \( \angle BAE = ABE \) = 50. In triangle \( BAE \), the measure of \( \angle AEB = 180 - 100 = 80 \). Since \( BE \parallel CD \), the measure of \( \angle ADC \) = the measure of \( \angle AEB = 80 \).

27. C. \[
\begin{align*}
2 \odot a &= 4 + a \\
a \odot 3 &= 2a + 3 \\
4 + a &= 2a + 3 \\
1 &= a
\end{align*}
\]

28. C. First mixture
\[
\begin{align*}
(33\varepsilon) (2 \text{ pounds}) &= 66\varepsilon \\
(24\varepsilon) (1 \text{ pound}) &= 24\varepsilon
\end{align*}
\]
90\varepsilon is cost of 3 pounds or
30\varepsilon is cost of 1 pound.

Second mixture
\[
\begin{align*}
(33\varepsilon) (1 \text{ pound}) &= 33\varepsilon \\
(24\varepsilon) (2 \text{ pounds}) &= 48\varepsilon
\end{align*}
\]
81\varepsilon is cost of 3 pounds or
27\varepsilon is cost of 1 pound.

The shop will save 3\varepsilon per pound or $3.00 for 100 pounds.

29. C. Let \( x = \) number of minutes allowed for each of the questions other than the mathematics problems. Then \( 2x = \) number of minutes allowed for each mathematics problem. \((50)(2x)\) or \(100x = \) number of minutes allowed for all mathematics problems. \((150)(x)\) or \(150x = \) number of minutes allowed for all other questions.

\[
\begin{align*}
100x + 150x &= \text{total time} = 3 \text{ hours} \\
100x + 150x &= 180 \text{ minutes} \\
250x &= 180 \\
x &= \frac{180}{250} \\
100x &= \frac{180}{250} \times 100 = 72 \text{ minutes}
\end{align*}
\]

30. A. In \( \triangle ADC \), since the measure of \( \angle A = 30 \) and the measure of \( \angle C = 80 \), then the measure of \( \angle ADC = 70 \) and its supplement \( \angle FDB = 110 \). Then the measure of \( \angle BFD = 30 \) which = \( \angle AFE \) (vertical angles).

Section 5

1–4. It would be helpful to make a chart to summarize the information:

<table>
<thead>
<tr>
<th>Route</th>
<th>Miles</th>
<th>Toll</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bridge</td>
<td>20</td>
<td>$0.75</td>
</tr>
<tr>
<td>Tunnel</td>
<td>10</td>
<td>$1.00</td>
</tr>
<tr>
<td></td>
<td></td>
<td>+ 10¢ each additional passenger</td>
</tr>
<tr>
<td>Highway</td>
<td>50 (30 to B, 20 to C)</td>
<td>None</td>
</tr>
</tbody>
</table>

1. A. The mileage from City B to City C is 20 miles on the highway. The other choices would mean going to City A (30 miles) and then taking either the tunnel (10 miles) or the bridge (20 miles).

2. D. The mileage on the toll-free highway from City A to City B is 30 miles. The other choices involve going to City C by bridge or tunnel, then from City C for 20 miles to City B.

3. C. The difference in cost between the bridge toll and the tunnel toll is negligible considering the possible docking of pay due to lateness. Therefore, the most important factor would be traffic conditions, which could cause delays.

4. E. Generally speaking, the extra 25¢ for using the tunnel would be worth the cost to save the extra 10 miles when crossing the bridge, so IV is not a chief factor. Whether a commuter lived on the outskirts of the city or in its center would affect only the choice of local roads to get to one of the main arteries, so III is not a main consideration. Traffic and road conditions, however, can be expected to influence a driver to choose one means over the other, since delays can cause lateness (I). Also, if the car has many passengers, at 10¢ a passenger, there could be a possible saving in using the bridge (II). Factors I and II are important in choosing between the bridge and the tunnel.

5. D. The established precedent is the best argument for permitting the church to use the park.

6. B. The argument in (A) could be used by the church. The correct answer is (B) since there would be some inconvenience to those who are
not members of that church. We cannot assume that the church meeting would be excessively noisy (C). We cannot assume that the church people will leave litter to be cleaned up (E).

7. D. The original statement is a conclusion. The correct answer is the argument from which it can be drawn; that is, choice D. If Wilbur were six feet tall or less, he would be seated in the first row. He is not in the first row; therefore, he is not six feet tall or less. (If P, then Q. Not Q; therefore, not P.) We can draw no conclusions from any of the other choices; They all allow the possibility that Wilbur is only 5’11” tall (or 3’11” tall, for that matter).

8–12. It would be useful to summarize the information as follows:

| Large University | J, K, L |
| Small College    | M, N, O, P |
| English Literature | J, O, P |
| Mathematics      | K, M |
| Natural Sciences | L |
| Latin            | N |

9. B. K and M both teach mathematics (A). O cannot serve with P since they both represent the small college and they both teach English literature (C). J cannot serve with P because they both teach English literature (D). M and N cannot serve with P for they all represent the small college.

10. E. J and P cannot serve on the same committee since they both teach English literature I. If J cannot serve then K and L must serve. If K is serving, M may not represent the small college (II). Since L must serve, (III) is correct.

11. C. If L is not available then J and K must serve. Since J is serving neither O nor P may serve.

12. E. (I) is incorrect since N and O represent the small college. (II) is correct. M and O represent the small college. (III) is correct. When M serves, K may not serve.

13. C. Both parents of a Brown female are Brown, but her father was born Red. Her mother’s mother was Brown, and therefore that grandfather was born Red (I); her father’s mother was Red (II), and therefore that grandfather was born Brown (III). Use the following logic: if the parents were born in different groups, and the grandmothers were in the same groups as the parents, the grandfathers must have been in different groups.

14. A. This male’s mother is Brown, and his father was born Red. His mother’s unmarried brother is Brown, his father’s unmarried brother is Red—not to mention married brothers of his parents! Our friend may only marry a Red woman, and their children will be Red (B, C); any persons the children marry must be born Brown (D, E).

15. B. A Red female’s mother is Red, and the brother, whether unmarried, divorced, or a widower, is also Red. No Red may marry a Red. The Brown male’s father was born Red, so his sister is Red (A). The brother of the man born Red (who as a widow, is Red again) was also born Red, so his wife (now his widow) is Brown (C). Any widower has reverted to his original group, while his wife’s sister is in the same group as his wife was (D). Any widow’s daughter is in her own group, and the ex-husband, having reverted to the group of his birth, will be eligible (E).

16. D. The woman’s mother has the same group as she; the mother’s brother was born into this group, but married into the other and, as a widower (according to the changed rules) remains in the second group, so marriage is possible. The dead sister’s husband remains in the same group as the dead sister and is not eligible (A). The daughter is in the mother’s group and the ex-husband remains in it and so is not eligible (B). The widower retains his married group; his brother, born in the same group as he was, is in the same married group; so is his daughter, and is not eligible (C). The divorced male now has his ex-wife’s group; so does the sister, widowed or otherwise, so no marriage is possible (E).

17–22. The trick here is to determine the relative positions of the letters on the basis of the clues, just as if this were a puzzle dealing with persons in a line or any similar situation. Questions 17 and 18 can then be answered immediately; Questions 19–22 involve simple arithmetic which is easy once the relative positions of the letters that stand for the integers are known. Start with the most definite statement, that B is the middle term, and diagram it like this:

```
- - - B - - -
```

The preceding statement, that D is 3 less than
A, gives two possible positions for A (A cannot be where B is or to the left; and it cannot be at the extreme right because then D would be where B is):

    _ _ D B A _ _

or

    _ _ _ D _ B _ A

The third statement, F is as much less than B as C is greater than D, yields three possibilities: F is 1, 2, or 3 less than B. If F is 1 less than B, C is 1 greater than D. This is not possible in either of the two diagrams above. If F is 3 less than B, C is 3 greater than D. This, too, is not possible in either diagram. If F is 2 less than B, C is 2 greater than D. This is not possible in the first diagram, but it is possible in the second. This, then, must be the correct solution. The two end positions must therefore belong to E and G, and the last statement tells you G must be to the right of F. So you have:

    E F D B C A G

The questions are now easy.

17. B. By inspection of the diagram.
18. D. According to the diagram, A is 4 greater than F, and D is 4 less than G.
19. B. Given a value for any of the letters, you can find the values of all the others. If A = 7, E = 2 and G = 8. Their sum is 10. Be careful that you don’t assume that A = 7 in the other questions. That is given for this question only.
20. D. You might choose E on the reasoning that, if no value is given for any number, no numerical value can be found for A - F. But this is wrong. You can tell that A is 4 greater than F. When any number is subtracted from a second number 4 greater than the first number, the result is 4, no matter what the numbers are.
21. D. C is 4 greater than E, so T is 4 greater than C. But this means that T is 3 greater than A. If T = A + E and T = A + 3, E = 3. If E = 3, D = 5.
22. D. If the seven integers all fall in the span from 1 to 10, then the highest possible value of C will occur if the seven letters represent the integers 4-10. In this case, C = 8. The smallest possible value of D will occur if the seven letters represent the integers 1-7. In this case, D = 3, and 8 - 3 = 5.

23. B. Nancy says that what Ellen reports can’t be true and offers, as evidence, Julie’s high school grades. The assumption must be that no one who got such grades is likely to flunk out of college. Choice A is wrong because Ellen merely reports what she has heard; by disrupting it, Nancy does not brand her a liar. Nor does Ellen necessarily assume that the rumor is true (C). D is wrong because Nancy does not necessarily claim that Julie has not left college —only that she hasn’t flunked out. Ellen has only heard something—she knows nothing (E).

24. D. The president states that any measures required to defeat the “takeover,” i.e., to maintain full control, are justified, whether legal or not. This implies D. The president does not say that illegal measures will definitely be required (A) or allege anything about the union (B). He or she states that in this case the workers are trying to take control; E is an unsupported generalization. The president’s statements establish only what the president advocates, not what he or she and the Board of Directors will actually do if the union wins (C).
25. C. Given the statement “If P, then Q,” the only other statement that can be validly deduced from it is “If not Q, then not P” In this instance, P = presentation of a purple pass; Q = permission to enter the compound. Consequently, only statement III may be validly inferred. You cannot validly deduce “if not P, then not Q” (statement I) or “if Q, then P” (statement II).

Section 6

1–4. The diagram shown here will make this puzzle much easier to follow.

The top row shows the top office holders; the second row shows the deputies; the third row shows the staffs. Note that these relationships are true no matter which office a given party holds.
1. D. Check the diagram, or reason as follows: the three Offices must always have two Democratic, two Conservative, and two Justice Party deputies. When the Justice Party holds a top office, one of the deputies in that Office must be a Conservative, so only one of the deputies in the other Offices can be a Conservative. A, B, C, and E all follow logically from the rules and must be true.

2. D. Check the diagram—but remember that the staffs being asked about are not those under the Democratic President, but those under the Prime Minister, who can belong to either of the other parties. In each of the other Offices, one of the deputies must be a Democratic Party member who can have no Democratic staff members, while the other deputy must have one-half Democratic staff members—for a total of one-fourth the staff members in each office. If the Prime Minister is a Justice Party member, one-half the staff members will be Justice and one-fourth Conservative; if the Prime Minister is Conservative, it will be the other way around. So I must be true, and either II or III must also be true.

3. B. This must always be the case. Since the two deputies in any Office must each have a staff composed half of members of the top office holder’s party, exactly half the staff members in any Office must always belong to one party. Choice E is, therefore, logically impossible. The rules for deputies and staffs exclude A and C. Exactly one-third of the total staff members in all three Offices must belong to each party (D).

4. C. The Conservative Chief of Staff has a Justice Department deputy, while the Justice Party Chief of Staff must not; since a Conservative deputy must be brought in, all the Conservative staff members of the fired Justice Party deputy must also be fired; however, the Democratic deputy may retain his or her Conservative staff members, which means only half of the Conservative staff members must be fired. Looking at the diagram, you can see that the Democratic deputy and his or her Justice Party staffers can retain their posts (A); while the Justice deputy must be fired, his or her Democratic staffers can stay (B); the Conservative Chief of Staff had no Conservative deputy (D); one deputy must be fired, but some Conservative staffers may retain their posts (E).

5. C. The statement given is true only if all members of the set “steering committee members” belong to the set “central committee members.” (In a diagram, steering committee members would be a circle entirely inside a circle representing central committee members.) Choice A does not rule out the possibility that the steering committee has other members besides those who are on the central committee. B says that Elaine must belong to one of the committees, not necessarily to both. D is a weaker version of A; E establishes no link between central committee membership and steering committee membership.

6. E. If anyone other than a football player wears a football jersey, the conclusion is not valid; so it is valid only if choice D is true. The other choices establish, in various ways, that football players probably or certainly wear football jerseys, but this does not mean that no one else does.

7. E. Evidence of original insights (choice E) would best indicate the presence of what the author most stresses: independent critical thinking. Choice A may display ambition on the student’s part; choice B evidences mastery of basic verbal skills; choice C shows a willingness to do hard work. But neither choice A, B, nor C is what the author would find most praiseworthy. Choice D is tempting, but simply avoiding clichés and vagueness does not necessarily display independent critical thinking.

8–11. You could make a calendar for these questions, but it would be very complicated. It’s easier just to use the times given to make a table showing which possibilities can be scheduled without conflicts.

<table>
<thead>
<tr>
<th>Course</th>
<th>Days</th>
<th>Time Choice 1</th>
<th>Time Choice 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>

</tr>
</tbody>
</table>

8. D. The table will tell you that D is impossible; Sanskrit on MWF meets from 10 to 12, which conflicts with Latin. The others are all possible.

9. A. This leaves the hours from 9 to 2 on Tuesday and Thursday free for Celtic Literature. Tom can schedule a 4-hour session at either 9 or 10 on either day (four possibilities), or two-hour sessions starting at 9, 10, 11, or 12 on Tuesday and Thursday (sixteen possible schedules), or two 2-hour sessions in 1 day on either day (four possibilities). The other choices leave either MWF from 2 to 4 or MWF from 12 to 2. In either case, there are only six possibilities for scheduling Celtic Literature.
10. D. The Friday session must be either from 12 to 2 or from 2 to 4. No schedule leaves both these slots free. It can be 12 to 2 only if Tom takes Sanskrit on MWF and Armenian Literature on TTh. It can be 2 to 4 only if he takes Sanskrit on TTh and Armenian Literature on MWF.

11. B. This one may be hard without a calendar; you must look back at the times listed, unless you included them in your table. The MWF 11-12:30 slot is open if Tom takes morning Latin (out at 11) and MWF Armenian Literature (starts at 12:30). This doesn’t interfere with Celtic Literature. Choices A, C, and D conflict with Sanskrit; E conflicts with Armenian and Celtic Literature.

12–18. To diagram this puzzle, start with several dashes in a column. These will represent the floors of the building. Start with more than six, so that a wrong guess doesn’t push you off your diagram. Use initials and put one person or persons occupying an apartment on each side of a dash representing a given floor. Starting with L (and a blank for his roommate), A/ C, M, and R and P fall into place easily. You now have six floors from top to bottom, so R and P must be on floor one. The only floors remaining with two blank spots are two and five; B and F must go on floor two and N must go three floors up, on floor five. The only remaining floor on which J can be three below anyone is floor three; W must be on floor six and E on floor five. You now have:

L/W or L—W
N/E or N—E
—A/C
J—M
B—F
R—P

Note that the diagram for floors five and six reflects the fact that Larry and Willy are on the same floor, as are Ned and Ellen, and may or may not be roommates.

12. C. By inspection of the diagram. Note that choice D gives a correct list from top to bottom—don’t get careless and choose this answer.

13. C. Again by simple inspection of the diagram.

14. B. The only person mentioned who can live on floor six, and therefore be Larry’s roommate, is Willy.

15. A. By inspection of the diagram, choices B and C also have the wrong persons above or below; choices D and E list the right persons, but Rick can’t live on floor four or floor six.

16. E. No one mentioned is on floor four; Willy may live with Larry on floor six.

17. B. Follow the diagram: Joe goes from floor three to floor one; Rick or Paul goes to floor two; Bob or Frank goes to Ned or Ellen’s apartment on floor five, and one of them goes to Joe’s old apartment.

18. E. Dorothy cannot possibly live with Frank, because we are told that he has a single apartment. All of the other persons mentioned as possibilities may have space available in their apartments.

19–22. A diagram like the one shown will make it possible to trace the events without becoming confused. The other point to bear in mind is that you must avoid unsupported assumptions; for example, statement (2) doesn’t mean that F always occurs if B occurs—just that it never occurs without B having occurred. Similarly, statement (1) doesn’t mean that B or C cannot occur without A—just that if A occurs, one of these (but not both) will occur. Finally, statement (3) doesn’t mean that D occurs only this way—it may occur on its own, without B or C, but it will certainly occur if B or C occurs. Unless you’re clear on this, you’ll probably miss some questions.

19. D. A causes B or C, but not both. In either case, D occurs (III). F and E can occur only if B or C occurs, respectively, so they cannot both occur if A occurs (I, II). The other parts of I and II are consistent: G will occur if F occurs; H will occur if E occurs.

20. C. See statement (3). F may occur if B occurs, but may not (choice A); D will occur if B occurs, but D may cause H instead of G (choice B); G occurs if F occurs and may occur if D occurs, but F need not occur if B occurs, while D can lead to H; so G or H must occur, but both need not occur (choice D); J may not occur even if E or F occurs (choice E).
21. C. If J occurs, E or F must have occurred—statement (5); thus either B or C must have occurred—statements (2), (4). Since E or F, but not both, is required for J, choices A and B are wrong. If E occurs and F does not, G need not occur (choice D). B and C can both occur (if one is not caused by A) but both aren’t necessary for J; they can lead to E and F, but one of these is all that is required for J to occur (choice E).

22. C. D may occur without B or C; no cause for A is mentioned (I, II); but F occurs only if B occurs (statement 2) and so no other cause is possible (III).

23. E. Statements I and II are plausible explanations for the students’ passivity in previous years, but neither one can be inferred definitely (choices A and B); you cannot conclude that one of them must be true (some third explanation is possible) or that they exclude each other (both could be true simultaneously) (choice C). From the students’ previous behavior, no valid inferences about their response to a new, larger tuition hike are possible (choices D and E).

24. D. The original statement says that beauty has an objective existence, that is, can exist independently of a person’s perceiving it. This would be a rebuttal to the claim made in choice D that beauty is purely subjective and so entirely dependent on its perception by some viewer. None of the other choices is in opposition to the original statement.

25. C. Examine the structure of the argument: the only reason given for funding the research is that the possibility exists that the substances cure cancer. The unstated assumption is that this is a sufficient reason for providing funds. No probability is mentioned (choice A), and no comparison with other lines of research is made (choice B). D, while probably true, does not provide logical support for the argument about researching this specific possibility. The argument simply says that the government should provide the funds, not that they are definitely unavailable elsewhere (choice E).

Section 7

1. B. The structure of the sentence indicates that you are looking for two synonyms or near-synonyms, in this case squallor and filth.

2. A. Some aspects of the hypothesis can be criticized. However, its basic point still appears to hold true: it has not been refuted or disproved.

3. C. To rail against fate would be to complain angrily about it or utter words of bitterness about it. Note how the use of parallel structure (neither...nor) indicates that the two participial phrases linked together are similar in meaning.

4. C. If the continents have formed sometime in the course of the earth’s lifetime, then they are not primordial features of the earth that have existed from the earth’s beginning. As in the present sentence, inverted word order may sometimes indicate a contrast. The inversion of normal word order in the sentence opening (“Old as the continents are”) is concessive: the writer is conceding a point. Rewritten in normal word order, the sentence would begin “Although the continents are old.”

5. A. It would be ironic or the reverse of what was expected for friends of judicial autonomy or independence to support the abolition or destruction of an independent judiciary. Note how the use of irony implicitly signals the reversal of normal expectations.

6. B. Readers would be disinclined to take seriously a work they considered overwrought or excessive in its bold theatricality. Note how the use of but indicates that the second missing word contrasts with enthralling (absorbing) in meaning.

7. A. When an activity is repugnant or distasteful, people will discontinue it as soon as they are free to do so. If parents and teachers make the process of getting an education distasteful, children will quit school as soon as they are no longer coerced or forced to attend. Note how the “as long as... happens, so long will... happen” structure indicates cause and effect.

8. E. A moderator presides over a debate. An umpire presides over a game. (Function)

9. A. Delirium causes disorientation or confusion. Paralysis causes immobility or loss of movement. (Cause and Effect)

10. B. A glossary or word list is composed of words. An atlas is composed of maps. (Defining Characteristic)

11. B. An armature is the skeleton that supports a statue. A framework is the skeleton that supports a building. (Function)

12. B. An epaulet is an ornament worn on the shoulder. A tiara is an ornament worn on the head. (Defining Characteristic)
13. C. A bear characteristically lumbers or moves heavily. A goose characteristically waddles or moves clumsily.

   (Defining Characteristic)

14. D. A snail is not noted for celerity or speed. A peacock is not noted for humility or modesty.

   (Antonym Variant)

15. A. Someone enervated or weakened is lacking in vigor or strength. Someone lax or easy-going is lacking in rigor or severity.

   (Antonym Variant)

16. E. Adulation or excessive flattery is more extreme than simple flattery. Castigation or severe reproof is more extreme than an admonishment or gentle reproof.

   (Degree of Intensity)

17. C. The references to the Inca empire and to the Andes Mountains, as well as to magical religions and chroniclers, suggest the Quechua world may have been placed in ancient South America.

18. E. The passage compares the Quechua empire to a mandala because “it was divided into four parts.” Thus, a mandala is most likely a figure composed of four divisions.

19. B. The author refers to the Quechua as existing in “a state of unremitting anxiety, which could not be resolved by action” and which a Quechua could deal with only by looking into himself and struggling with the depths of his own psyche. This suggests that the Quechua world was highly introspective.

20. D. Both the unremitting anxiety of Quechua life and the recurring harvest failures that brought starvation to millions illustrate the harshness and frustration of Quechua existence.

21. D. The author states what cataclysmic variables are and describes how the three general classes of exploding stars range in magnitude and other characteristics. Choice A is incorrect. The author gives far more emphasis to dwarf novae than to novae. Choice B is incorrect. The author offers no such explanation. Choice C is incorrect. The author states the unpredictability of cataclysmic variables; he does not explain or account for it. Choice E is incorrect. The author offers no such explanation.

22. D. The first paragraph says, ...“25 novae occur in our galaxy every year, but only two or three are near enough to be observed.” Thus, our observations of novae are hampered by their distance.

23. E. You can arrive at the correct answer by the process of elimination. Statement I is accurate. Dwarf novae explosions are less violent than are those of supernovae. Therefore, you can eliminate Choice B. Statement II is accurate. Dwarf novae are observed far more frequently than are supernovae. Therefore, you can eliminate Choices A and D. Statement III is accurate. Dwarf novae, unlike supernovae, flare up periodically rather than flaring up once and being totally consumed. Therefore, you can eliminate Choice C. Only Choice E is left. It is the correct answer.

24. C. Lines 11–14 state: “If the exploding star is in a nearby part of the galaxy, it may create a ‘new star’ that was not previously visible to the naked eye.” Thus, a new star is one that has become bright enough to strike the eye.

25. C. In each explosion, a dwarf nova loses “a minute fraction of its mass” (line 17). By staying at an intermediate level of brightness rather than descending to minimum brightness, Z Camelopardalis stars may use up a proportionally greater fraction of their mass than do the SS Cygni stars, which descend to minimum brightness between outbursts. Choice A is incorrect. Rather than reverting to some original level of brightness, Z Camelopardalis stars stay at an intermediate level of brightness for a time. Choice B is incorrect. There is nothing in the passage to suggest it. Choice D is incorrect. Z Camelopardalis stars are dwarf novae, which are far more frequently observed by astronomers than are supernovae. Choice E is incorrect. Nothing in the passage suggests that Z Camelopardalis stars are less bright than other dwarf novae.

26. C. In lines 19–21, the author states that although astrophysicists can account for the explosions of supernovae, “the novae and dwarf novae have presented more of a puzzle.” He then proceeds to discuss dwarf novae in detail. He has yet to discuss novae, the other class of puzzling catastrophic variables.

27. D. You can arrive at the correct answer by the process of elimination. Question I is answerable on the basis of the passage. Line 5 states that the last supernova was observed in 1604. Therefore, you can eliminate Choices B and E. Question II is unanswerable on the basis of the
passage. No reason for the phenomenon is given in the passage. Therefore, you can eliminate Choice C. Question III is answerable on the basis of the passage. Lines 38–41 state that dwarf novae increase in brightness “within a period of several hours” and then decline from this maximum level of brilliance over a period of two to three days. Therefore, you can eliminate Choice A. Only Choice D is left. It is the correct answer.

28. A. The opposite of to fluster or discompose is to soothe. Think of “being flustered by reporters’ questions.”

29. C. The opposite of a deletion or removal of material is an insertion of material. Think of “the deletion of objectionable material” from films.

30. B. The opposite of to disparage or belittle is to eulogize or praise. Think of “rival candidates disparaging each other.”

31. B. The opposite of baleful (malign, harmful) is beneficent or productive of good. Think of “dangerous baleful influences.”

32. C. The opposite of servility or oversubmissiveness is independence. Think of “cringing servility.”

33. A. The opposite of felicitous (happily suited to a situation; appropriate) is inappropriate. Think of “a felicitous remark.”

34. B. The opposite of precipitous (hasty, rash; steep) is cautious. Think of “a precipitous flight.”

35. C. The opposite of to assuage or ease is to worsen. Think of “assuaging someone’s grief.”

36. D. The opposite of latent (existing in potential; not manifest) is manifest or evident. Think of “latent ability that needs bringing out.”

37. A. The opposite of to broach or open up something is to seal it off. Think of “broaching a topic of conversation.”

38. B. The opposite of an encomium or statement of praise is a denunciation or condemnation. Think of “a hero receiving an encomium.”

MODEL TEST 2

SECTION 1

Time—30 Minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

Eight varsity baseball players (G, H, J, K, L, M, N, O) are to be honored at a special ceremony. Three of these players (H, M, and O) are also varsity football players. Two of them (K and N) are also basketball players on the varsity team. In arranging the seats it was decided that no athlete in two sports should be seated next to another two-sport athlete.

1. Which of the following combinations is possible in order to have the arrangement of seat assignments as planned?
   (A) H G K J
   (B) H K J L
   (C) J K M N
   (D) J L H K
   (E) L K N J

2. Which of the following cannot sit next to M?
   (A) G
   (B) J
   (C) G and J
   (D) K
   (E) L

3. Before all athletes are seated there are two vacant seats on either side of N. Which two athletes may occupy these seats?
   (A) G and K
   (B) G and L
   (C) J and H
   (D) L and O
   (E) M and J

4. To have the proper seating arrangement, K should sit between
   (A) G and H
   (B) J and M
   (C) L and N
   (D) J and N
   (E) J and L

Questions 5–7

It takes a high degree of courage for a politician to risk her career by introducing federal legislation requiring registration and licensing of gun possession. While many say that the elimination of private ownership of firearms will cure the sociologic ills of our country, the gun lobby in Washington maintains that this would be an invasion of personal liberty.

5. According to the statement in the passage, why would members of Congress hesitate to introduce gun-control legislation?
   (A) It would never pass.
   (B) It would be declared unconstitutional.
   (C) It would not decrease crime.
   (D) It is unpopular.
   (E) The gun lobby is very strong.

6. Which of the following is the best argument against national gun registration?
   (A) It would be difficult to enforce.
   (B) It is a violation of rights granted in the Constitution.
   (C) Murderers would ignore gun control legislation.
   (D) Most murders occur between individuals who were acquainted with each other before the shooting.
   (E) Many homicides are committed without the use of guns.

7. Which of the following is the best claim for banning firearms?
   (A) The root causes of violence lie deep in the nature of society.
   (B) The state with the lowest crime rate has a stringent antigun law.
   (C) Many accidents occur in legal hunting and rifflery.
   (D) With fewer guns there would be fewer shootings.
   (E) Guns have no place in a civilized country.

Questions 8–11

To obtain a visa for the Republic of Nimrod, an applicant must appear in person at the Nimrodian Consulate...
and show a U.S. birth certificate or naturalization papers, a certificate of vaccination for swamp fever, and a notorized bank statement showing a balance in excess of $1,000. Bank statements are available during normal business hours (Monday through Friday, 9 A.M. to 3 P.M. at most banks, which also have a notary on staff). Vaccinations are routinely performed at Alabaster Hospital, adjacent to the Nimrodian Consulate, on Wednesdays from noon to 5 P.M. They are also performed at Beryl Clinic, an hour’s travel away from the consulate, on Mondays and Thursdays from 9 A.M. to noon and on Fridays from 4 to 5 P.M. Copies of U.S. birth certificates are issued on Mondays and Thursdays from 9 to 5 and copies of naturalization papers are issued on Tuesdays and Fridays from 9 to 5. The Nimrodian Consulate is open Mondays, Wednesdays, and Fridays from noon to 4 P.M.

Questions 12–18

The organizer of Local 58 of the hospital workers is forming a five-person team to leaflet a nearby hospital. The team must contain two persons to distribute leaflets, one speaker to address the workers who stop, and a two-person defense squad. A, B, and C are possible leafleters; C, D, and E are possible speakers; F, G, and H are possible members of the defense guard. A and C prefer to work with each other on the same team. E prefers to work only if F works.

12. Which is a possible team if all preferences are respected?
   (A) A, B, C, D, F
   (B) A, C, D, E, F
   (C) A, B, C, F, G
   (D) A, C, E, G, H
   (E) B, C, D, F, G

13. If A is chosen as a member of the team and all preferences are respected, which must be true?
   (A) B must be a leafletter.
   (B) C must be a leafletter.
   (C) F must go.
   (D) Any of the three defense personnel may go.
   (E) Neither D nor E can go.

14. Which choice of personnel is impossible if all preferences are respected?
   (A) A and B as leafletters, C as speaker
   (B) B and C as leafletters
   (C) A and C as leafletters, F and H on defense
   (D) Either D or E as speaker, with F on defense
   (E) G and H on defense

15. If A and B are leafletters and all preferences are respected, which is (are) true?
   I. C is the speaker.
   II. F is on defense.
   III. Either F or G is on defense.
   (A) I only
   (B) II only
   (C) III only
   (D) I and II only
   (E) I and III only

16. How many different possible teams can the organizer assemble, if all preferences are respected?
   (A) 5    (B) 8    (C) 9    (D) 13    (E) 15

17. Which person(s) must be chosen as part of any team, if all preferences are respected?
   I. A
   II. E
   III. F
   (A) I only
   (B) III only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III
18. Which person can be part of the smallest number of different possible teams, if everyone’s preferences are respected?

(A) A
(B) B
(C) C
(D) D
(E) E

21. If J is a military attaché, which of the following must be true?

I. The Rumelian chairperson is I.
II. F is a trade expert.
III. I is a trade expert.

(A) I only
(B) II only
(C) I and II only
(D) I or III, but not both
(E) II or III, but not both

22. Which of the following can be deduced from the introductory paragraph plus statements (1), (2), (4), and (5) only?

(A) The identities of the Rumelian trade experts
(B) The identities of the Wallachian military attachés
(C) The identity of the Wallachian chairperson
(D) Which two delegates are seated between G and H
(E) Which two delegates are seated between B and C

23. Which of the following statements, if true, would tend to weaken Malthus’s argument?

I. The total population of humans has risen at a rapid rate partly because of the removal of natural checks on population.
II. In many nations, the increase in human population has far outstripped the food-producing capacity.
III. Human population growth may be halted by the use of contraception.
IV. For many ethnic and religious groups, artificial control of conception is morally unacceptable.

(A) I only
(B) I and II
(C) II only
(D) II and IV only
(E) III only

Questions 19–22

Delegations from Wallachia and Rumelia are meeting to discuss military, trade, and diplomatic problems. Each delegation consists of a chairperson, two military attachés, and two trade experts. The Wallachian delegation consists of A, B, C, D, and E; the Rumelian delegation of F, G, H, I, and J. Each chairperson is to occupy rectangular table. The two delegations sit on opposite sides of the rectangular table.

(1) A insists on being seated at the opposite end of the table from B.
(2) G, who is deaf in his right ear, must be at the right end of the table.
(3) Neither D nor F is a chairperson.
(4) The Wallachian military attachés, one of whom is B, are seated together, and neither is opposite either of the Rumelian military attachés, neither of whom is G.
(5) C, a trade expert, is seated opposite H.

Questions 23 and 24

In 1978 Thomas Malthus published “Essay on Population” in which he postulated that food supply can never keep pace with the rate of increase in human population.

19. F may be a

(A) trade expert seated next to I
(B) military attaché seated next to I
(C) military attaché seated next to J
(D) trade expert seated next to H
(E) trade expert seated opposite B

20. About which of the following do the stated conditions provide the least information?

(A) The identity of the Wallachian chairperson
(B) The identity of the Rumelian chairperson
(C) The identities and seating positions of the Wallachian military attachés
(D) Which delegate is immediately to the right of the Wallachian chairperson
(E) Which delegate is immediately to the right of the Rumelian chairperson
24. Which of the following would be most likely to help limit the demands placed on food supplies?

(A) Wars
(B) Conservation of natural resources
(C) Better farming methods
(D) Better international relations
(E) Improved disease control

25. Most people who take the experimental medicine GRE/APT develop headaches; therefore, if Alice does not take GRE/APT, she will probably not develop headaches.

The argument above most resembles which of the following?

(A) Most Dobermans are easy to train, so Beth is sure to have no trouble training the Doberman she has just bought.
(B) Most U.S.-built cars are poorly made; since this car is well made, it was probably not built in the United States.
(C) Most Broadway plays are very well acted, so The Logic Game, which is not a Broadway play, is probably not well acted.
(D) Most engineers spent many years in school, so Sharon, who has spent many years in school, is probably an engineer.
(E) All societies known to history have had clearly defined social hierarchies, so there will probably never be a truly nonhierarchical society.

38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. No volume on the history of economics can conclude without the hope that the subject will be ------- politics to form again the larger discipline of political economy.
   (A) vindicated by
   (B) segregated from
   (C) reunited with
   (D) recapitulated by
   (E) dependent on

2. Many educators believe that, far from being a temporary stopgap, useful only as a transitional measure, bilingual education has proved to have definite ------- education in any one tongue.
   (A) correlations with
   (B) advantages over
   (C) connotations for
   (D) limitations on
   (E) influence on

3. While the disease is in ------- state it is almost impossible to determine its existence by -------.
   (A) a dormant...postulate
   (B) a critical...examination
   (C) an acute...analysis
   (D) a suspended...estimate
   (E) a latent...observation

4. When facts are ------- and data hard to come by, even scientists occasionally throw aside the professional pretense of ------- and tear into each other with shameless appeals to authority and arguments that are unabashedly ad hominem.
   (A) elusive...objectivity
   (B) established...courtesy
   (C) demonstrable...neutrality
   (D) ineluctable...cooperation
   (E) hypothetical...scholarship

5. Woolf ------- conventional notions of truth: in her words, one cannot receive from any lecture "a nugget of pure truth" to wrap up between the pages of one's notebook and keep on the mantelpiece forever.
   (A) anticipates
   (B) articulates
   (C) neglects
   (D) mocks
   (E) rationalizes

6. The term “rare earths” is in fact a -------, for, paradoxically, the rare-earth elements are in actuality -------, being present in low concentration virtually all minerals.
   (A) truism...essential
   (B) misnomer...ubiquitous
   (C) disclaimer...ephemeral
   (D) metaphor...figurative
   (E) mnemonic...unmemorable

7. That Clement would reclaim psychoanalysis as a healing profession is the ------- of her argument, but it is exactly in this part of her critique, translated to the American psychoanalytic milieu, that her shafts -------.
   (A) crux...fall down
   (B) implication...break down
   (C) basis...strike home
   (D) essence...dig in
   (E) thrust...glance away

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. BLEAT : SHEEP ::
   (A) bask : lizard
   (B) preen : peacock
   (C) chirp : sparrow
   (D) slither : snake
   (E) butt : goat

9. CURDLE : MILK ::
   (A) flow : water
   (B) change : oil
   (C) brew : coffee
   (D) decant : wine
   (E) clot : blood

10. MOLT : FEATHERS ::
    (A) slough : skin
    (B) sharpen : talons
    (C) curry : hide
    (D) flutter : wings
    (E) bare : fangs

11. OFFHAND : PREMEDITATION ::
    (A) upright : integrity
    (B) aboveboard : guile
    (C) cutthroat : competition
    (D) backward : direction
    (E) underlying : foundation
12. LARVAL : INSECT ::
   (A) serpentine : snake
   (B) floral : plant
   (C) amphibian : reptile
   (D) embryonic : mammal
   (E) alate : bird

13. POLTERGEIST : APPARITION ::
   (A) dwarf : stature
   (B) witch : familiar
   (C) ogre : monster
   (D) sorceror : spell
   (E) gremlin : mischief

14. AUSTERE : STYLE ::
   (A) controlled : movement
   (B) affluent : wealth
   (C) subservient : demeanor
   (D) inspirational : faith
   (E) pragmatic : speech

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

At night, schools of prey and predators are almost always spectacularly illuminated by the bioluminescence produced by the microscopic and larger plankton. The reason for the ubiquitous production of light by the microorganisms of the sea remains obscure, and suggested explanations are controversial. It has been suggested that light is a kind of inadvertent by-product of life in transparent organisms. It has also been hypothesized that the emission of light on disturbance is advantageous to the plankton in making the predators of the plankton conspicuous to their predators! Unquestionably, it does act this way. Indeed, some fisheries base the detection of their prey on the bioluminescence that the fish excrete. It is difficult, however, to defend the thesis that this effect was the direct factor in the original development of bioluminescence, since the effect was of no advantage to the individual microorganism that first developed it. Perhaps the luminescence of a microorganism also discourages attack by light-avoiding predators and is of initial survival benefit to the individual. As it then becomes general in the population, the effect of revealing plankton predators to their predators would also become important.

15. AVER : AFFIRMATION ::
   (A) proclaim : objection
   (B) denounce : defiance
   (C) nonplus : resistance
   (D) refuse : distress
   (E) demur : protest

16. CHIDE : PILLOW ::
   (A) exalt : venerate
   (B) humor : mollycoddle
   (C) castigate : punish
   (D) quibble : cavil
   (E) sanctify : scourge

18. The author mentions the activities of fisheries in order to provide an example of
   (A) how ubiquitous the phenomenon of bioluminescence is coastaly
   (B) how predators do make use of bioluminescence in locating their prey
   (C) how human intervention imperils bioluminescent microorganisms
   (D) how nocturnal fishing expeditions are becoming more and more widespread
   (E) how limited bioluminescence is as a source of light for human use

19. The passage provides an answer to which of the following questions?
   (A) What is the explanation for the phenomenon of bioluminescence in marine life?
   (B) Does the phenomenon of plankton bioluminescence have any practical applications?
   (C) Why do only certain specimens of marine life exhibit the phenomenon of bioluminescence?
   (D) How does underwater bioluminescence differ from atmospheric bioluminescence?
   (E) What are the steps that take place as an individual microorganism becomes bioluminescent?

20. The author’s attitude toward the hypothesis that plankton chiefly benefited from their bioluminescence because it made the plankton predators visible to their predators can best be described as
   (A) perplexed
   (B) derisive
   (C) intrigued
   (D) defensive
   (E) dispassionate
The curtain rises; the Cardinal and Daniel de Bosola enter from the right. In appearance, the Cardinal is something between an El Greco cardinal and a Van Dyke noble lord. He has the tall, spare form—the elongated hands and features—of the former; the trim pointed beard, the imperial repose, the commanding authority of the latter. But the El Greco features are not really those of asceticism or inner mystic spirituality. They are the index to a cold, refined but ruthless cruelty in a highly civilized controlled form. Neither is the imperial repose an aloof mood of proud detachment. It is a refined expression of satanic pride of place and talent.

To a degree, the Cardinal’s coldness is artificially cultivated. He has defined himself against his younger brother Duke Ferdinand and is the opposite to the overwrought emotionality of the latter. But the Cardinal’s aloof mood is not one of bland detachment. It is the deliberate detachment of a methodical man who collects his thoughts and emotions into the most compact and formidable shape—that when he strikes, he may strike with the more efficient and devastating force. His easy movements are those of the slowly circling eagle just before the swift descent with the exposed talons. Above all else, he is a man who never for a moment doubts his destined authority as a governor. He dervisively and sharply rebukes his brother the Duke as easily and readily as he mocks his mistress Julia. If he has betrayed his hireling Bosola, he uses his brother as the tool to win back his “familiar.” His court dress is a long brilliant scarlet cardinal’s gown with white cuffs and a white collar turned back over the red, both collar and cuffs being elaborately scalloped and embroidered. He wears a small cape, reaching only to the elbows. His cassock is buttoned to the ground, giving a heightened effect to his already tall presence.

Richelieu would have adored his neatly trimmed beard. A richly jeweled and ornamented cross lies on his breast, suspended from his neck by a gold chain.

Bosola, for his part, is the Renaissance “familiar” dressed conventionally in somber black with a white collar. He wears a chain about his neck, a suspended ornament, and a sword. Although a “bravo,” he must not be thought of as a leather-jacketed, heavy-booted tough, squat and swarthy.

Still less is he a sneering, leering, melodramatic villain of the Victorian gaslight tradition. Like his black-and-white clothes, he is a colorful contradiction, a scholar-assassin, a humanist-hangman; introverted and introspective, yet ruthless in action; moody and reluctant, yet violent. He is a man of scholarly taste and subtle intellectual discrimination doing the work of a hired ruffian. In general effect, his impersonator must achieve suppleness and subtlety of nature, a highly complex, compressed, yet well restrained intensity of temperament. Like Duke Ferdinand, he is inwardly tormented, but not by undiluted passion. His dominant emotion is an intellectualized one: that of disgust at a world filled with knavery and folly, but in which he must play a part and that a lowly, despicable one. He is the kind of rarity that Browning loved to depict in his Renaissance monologues.

21. The primary purpose of the passage appears to be to

(A) provide historical background on the Renaissance church
(B) describe ecclesiastical costuming and pageantry
(C) analyze the appearances and moral natures of two dramatic figures
(D) compare and contrast the subjects of two historical paintings
(E) denounce the corruption of the nobility in Renaissance Italy

22. It can be inferred from the passage that the Cardinal and Bosola

(A) are feuding brothers
(B) are noble lords
(C) together govern the church
(D) are characters in a play
(E) resemble one another in looks

23. In lines 25–27 the author most likely compares the movements of the Cardinal to those of a circling eagle in order to emphasize his

(A) flightiness
(B) love of freedom
(C) eminence
(D) sense of spirituality
(E) mercilessness

24. As used in line 48, the word bravo most nearly means

(A) a shout of approbation
(B) a medallion
(C) a clergyman
(D) a humanist
(E) a mercenary killer

25. The author of this passage assumes that the reader is

(A) familiar with the paintings of El Greco and Van Dyke
(B) disgusted with a world filled with cruelty and folly
(C) ignorant of the history of the Roman Catholic Church
(D) uninterested in psychological distinctions
(E) acquainted with the writing of Browning
26. Which of the following best characterizes the author's attitude toward the Cardinal?
   (A) He deprecates his inability to sustain warm familial relationships.
   (B) He esteems him for his spiritual and emotional control.
   (C) He admires his grace in movement and sure sense of personal authority.
   (D) He finds him formidable both as an opponent and as a dramatic character.
   (E) He is perturbed by his inconsistencies in behavior.

27. According to the passage, the explanation of Bosola's inner suffering lies in his
   (A) highly overwrought excesses of feeling
   (B) resentment against his lack of appropriate rank
   (C) suppression of his intellectual ambitions
   (D) revulsion towards his involvement in ignoble acts
   (E) compassion for those victimized by the Cardinal

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. AMELIORATION:
   (A) cancellation
   (B) worsening
   (C) forgetfulness
   (D) bribe
   (E) consideration

29. DISARRAY:
   (A) neaten
   (B) empower
   (C) combine
   (D) oscillate
   (E) select

30. DISPUTATIOUS:
   (A) repugnant
   (B) coy
   (C) conciliatory
   (D) infamous
   (E) composed

31. INUNDATE:
   (A) uproot
   (B) channel
   (C) wallow
   (D) embroil
   (E) drain

32. RETICENCE:
   (A) irascibility
   (B) loquaciousness
   (C) quiescence
   (D) patience
   (E) surrender

33. INCONGRUOUS:
   (A) geometric
   (B) prudent
   (C) legitimate
   (D) harmonious
   (E) efficacious

34. APOSTATE:
   (A) laggard
   (B) loyalist
   (C) martinet
   (D) predecessor
   (E) skeptic

35. TOPICAL:
   (A) general
   (B) disinterested
   (C) chronological
   (D) fallacious
   (E) imperceptible

36. FULMINATE:
   (A) authorize
   (B) dominate
   (C) edify
   (D) illuminate
   (E) praise

37. TURBID:
   (A) vigorous
   (B) limpid
   (C) turgid
   (D) viscous
   (E) rancid

38. TYRO:
   (A) zealot
   (B) prodigal
   (C) braggart
   (D) expert
   (E) nihilist

SECTION 3
Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
<th>Sample Answers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example 1: 2 × 6</td>
<td>2 + 6</td>
<td>● ○ ◯ ○ (E)</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to △ PQR.

\[
\begin{array}{cc}
P & N \\
N & Q
\end{array}
\]

Example 2: \[PN\quad NQ\] (since equal measures cannot be assumed, even though \(PN\) and \(NQ\) appear equal)

Example 3: \[x\quad y\] (since \(N\) is between \(P\) and \(Q\))

Example 4: \[w + z\quad 180\] (since \(PQ\) is a straight line)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
</tr>

<tbody>
<tr>
<td>1. [ \frac{31}{2} % ]</td>
<td>[ \frac{35}{1000} ]</td>
</tr>
</tbody>
</table>

2. The number of posts needed for a fence 144 feet long if posts are placed 12 feet apart

The houses on Jordan Drive are numbered as follows: west side (1801–1837), with consecutive odd numbers; east side has 18 houses.

3. Number of houses on the west side  
   Number of houses on the east side

\[ \text{Radius of circle } A = \frac{1}{2} \text{ radius of circle } B \]

4. Circumference of circle B  
   Twice the circumference of circle A

5. \[ \frac{BC \cdot AC}{AB \cdot BC} \]

\[ x = 40 \]

6. Length of side \( AB \)  
   Length of side \( BC \)

7. \[ y = z \text{ and } x = 100 \]

8. \( x \)  

9. \[ 7(10^4) + 3(10^3) + 2(10^2) + 5(10) + 6 \]
   \[ x + 5 = 7 \]
   \[ y - 5 = 8 \]

10. \( x + y \)

11. \[ \frac{(15)(16)}{x} = (5)(4)(3) \]

12. \( a + b + c + d \)

13. \( x + y \)
   \( y + z \)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

<table>
<thead>
<tr>
<th>Column A</th>

</thead>
<tbody>
<tr>
<td>$AC \perp AB$, $AC \perp DC$, $AB = 4$, $EB = 5$, $DC = 12$</td>
<td>$OA = OB = 6$</td>
</tr>
</tbody>
</table>

14. $AC$  

Directions: Each of Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. If $K = \frac{1}{m + n}$, then $\frac{5}{K}$ is equal to  
   (A) $5(m + n)$  
   (B) $\frac{5}{m + n}$  
   (C) $\frac{m + n}{5}$  
   (D) $\frac{m + n}{5mn}$  
   (E) $\frac{5}{m} + \frac{5}{n}$

17. If $r = \sqrt{\frac{3V}{\pi h}}$, by what number must we multiply $V$ in order to multiply $r$ by 9?  
   (A) 3  
   (B) $\frac{9}{2}$  
   (C) 9  
   (D) 18  
   (E) 81

18. In a group of 15, 7 have studied Latin, 8 have studied Greek, and 3 have not studied either. How many of these have studied both Latin and Greek?  
   (A) 0  
   (B) 3  
   (C) 4  
   (D) 5  
   (E) 7

19. If $13 = \frac{13w}{1 - w}$, then $(2w)^2 =$  
   (A) $\frac{1}{4}$  
   (B) $\frac{1}{2}$  
   (C) 1  
   (D) 2  
   (E) 4

20. If $a$ and $b$ are positive integers and $\frac{a - b}{3.5} = \frac{4}{7}$, then  
   (A) $b < a$  
   (B) $b > a$  
   (C) $b = a$  
   (D) $b \equiv a$  
   (E) $b \not\equiv a$
Questions 21–25 refer to the following table. This table shows how much money needs to be invested at a given rate of interest for a given number of years in order to grow to $1000.

21. At what rate will an investment double in less than 10 years?
   (A) 5%  (B) 6%  (C) 7%  (D) 8%  (E) 9%

22. How much more money must be invested at 5% than at 6% to attain the $1000 goal in 15 years?
   (A) $19  (B) $55  (C) $46  (D) $64  (E) $100

23. How can an investor make an investment of less than $100 grow to $1000?
   (A) Invest at 8% for 25 years.
   (B) Invest at 8% for 9 years.
   (C) Invest at 9% for 25 years.
   (D) Invest at 10% for 24 years.
   (E) Invest at 10% for 25 years.

24. How much money needs to be invested at 8% to reach the goal of $1000 in 18 years?
   (A) $194  (B) $212  (C) $232  (D) $250  (E) $317

25. Which of the following investments more than triples in value?
   (A) $339 at 7% for 16 years
   (B) $339 at 7% for 15 years
   (C) $317 at 7% for 17 years
   (D) $317 at 6% for 17 years
   (E) $340 at 8% for 14 years

26. In the figure above, in order for the line segment AB to be parallel to the line segment CD, the coordinates of D must be (3, x) with x equal to
   (A) 1  (B) 2  (C) 3  (D) 4  (E) 5
27. A farmer wishes to build a fence around a rectangular field. The field is 100 feet long and 60 feet wide. The fence will be of stone on one long side and of wire on the other three sides. Stone costs $5 a foot, and wire costs $2 a foot. How much will the fence cost?

(A) $320
(B) $620
(C) $760
(D) $800
(E) $940

28. A train covers the distance \(d\) between two cities in \(h\) hours arriving 2 hours late. What rate would permit the train to arrive on schedule?

(A) \(h - 2\)
(B) \(\frac{d}{h} - 2\)
(C) \(\frac{d}{h} - 2\)
(D) \(dh - 2\)
(E) \(\frac{d}{h} + 2\)

29. In June a baseball team that played 60 games had won 30% of its games played. After a phenomenal winning streak this team raised its average to 50%. How many games must the team have won in a row to attain this average?

(A) 12 (B) 20 (C) 24 (D) 30 (E) 45

30. \(M\) men agreed to purchase a gift for \(SD\). If 3 men drop out, how much more will each have to contribute toward the purchase of the gift?

(A) \(\frac{D}{M - 3}\)
(B) \(\frac{MD}{3}\)
(C) \(\frac{3D}{M^2 - 3M}\)
(D) \(\frac{3D}{3M - M^2}\)
(E) \(\frac{2M + DM}{3M - M^2}\)

SECTION 4
Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Since there are only four choices, NEVER MARK (E).

Examples 2-4 refer to \( \triangle PQR \).

<table>

Example 2: \( PN \) \( NQ \)

\( ( \text{since equal measures cannot be assumed, even though } PN \text{ and } NQ \text{ appear equal) } \)

\( x \) \( y \)

\( \text{(since } N \text{ is between } P \text{ and } Q \) \)

\( w + z \) \( 180 \)

\( \text{(since } PQ \text{ is a straight line) } \)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

\( n \) | M |
Directions: Each of Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. A triangular plot with sides of 28 feet, 35 feet, and 56 feet is to be surrounded by a fence built on posts set 7 feet apart. After posts are placed at each corner, how many additional posts will be needed?
   (A) 14  
   (B) 15  
   (C) 16  
   (D) 17  
   (E) 20

17. A box is made in the form of a cube. If a second cubical box has inside dimensions three times those of the first box, how many times as much does the second box contain?
   (A) 3  
   (B) 6  
   (C) 9  
   (D) 12  
   (E) 27

18. Which sign inserted in the parentheses will make the following statement correct?
   \[
   \frac{6}{14} \left( \frac{9}{21} \right) = \frac{3}{7}
   \]
   (A) +  
   (B) –  
   (C) ×  
   (D) ÷  
   (E) =

19. To which of the following is \( \frac{a}{b} - \frac{a}{c} \) equal?
   (A) \( \frac{a}{b-c} \)  
   (B) \( \frac{1}{b-c} \)  
   (C) \( \frac{1}{bc} \)  
   (D) \( \frac{ab-ac}{bc} \)  
   (E) \( \frac{ac-ab}{bc} \)

20. The two stars of a basketball team scored 416 points between them during a season. If one of them scored 192 points, what is the ratio of the points scored by this player to those scored by his teammate?
   (A) \( \frac{6}{13} \)  
   (B) \( \frac{7}{13} \)  
   (C) \( \frac{6}{7} \)  
   (D) \( \frac{19}{22} \)  
   (E) \( \frac{7}{6} \)

21. Which of the following can be inferred from the graphs?
   I. Excise and customs taxes provide more than half of the federal government’s revenue.
   II. Corporate taxes and individual income taxes provide more than half the federal government’s revenue.
   III. All taxes other than income taxes provide as much revenue as do income taxes.
   (A) I only  
   (B) II only  
   (C) III only  
   (D) I and III  
   (E) II and III

22. To accurately draw the sector to show government costs fixed by law the central angle of this sector should be
   (A) 22°  
   (B) 44°  
   (C) 55°  
   (D) 60°  
   (E) 80°

23. What part of all tax revenue comes from income taxes?
   (A) \( \frac{1}{3} \)  
   (B) \( \frac{1}{4} \)  
   (C) \( \frac{2}{5} \)  
   (D) \( \frac{1}{2} \)  
   (E) \( \frac{3}{4} \)
24. What percent of the federal government income is derived from individual income taxes?
   (A) 0.0043%
   (B) 0.043%
   (C) 0.43%
   (D) 4.3%
   (E) 43%

25. Of every $1000 received by the federal government, how much is received from sources other than income taxes?
   (A) $260
   (B) $310
   (C) $430
   (D) $570
   (E) $740

26. Nancy would like to complete all her homework before 10 P.M. in order to watch an important television program. She has 40-minute assignments in each of her five prepared subjects. What is the latest time at which she can start and still complete her homework in time for the program?
   (A) 6:30 P.M.
   (B) 6:40 P.M.
   (C) 7:10 P.M.
   (D) 7:20 P.M.
   (E) 8:00 P.M.

27. A club purchased novelties for $204.00 for resale at a benefit bazaar. During the first day they made sales amounting to $169.50. The inventory at the end of this day showed that they still had merchandise for which they paid $82.50. The gross profit at the end of the first day of the bazaar was
   (A) $34.60
   (B) $46.50
   (C) $48.00
   (D) $48.50
   (E) $121.50

28. A rectangular fish tank 25" by 9" has water in it to a level of 2". This water is carefully poured into a cylindrical container with a diameter of 10". How high (in terms of \( \pi \)) will the water reach in the cylindrical container?
   (A) 18\( \pi \)
   (B) \( \frac{\pi}{18} \)
   (C) \( \frac{18}{\pi} \)
   (D) \( \frac{9}{2\pi} \)
   (E) \( \frac{9\pi}{2} \)

29. Two hours after a freight train leaves Circleville a passenger train leaves the same station traveling in the same direction at an average speed of 60 miles per hour. After traveling four hours, the passenger train overtakes the freight train. The average speed of the freight train was
   (A) 30
   (B) 40
   (C) 58
   (D) 60
   (E) 120

30. Snowhite Paint Company contracts to paint three houses. Mr. Brown can paint a house in 6 days while Mr. Pinter would take 8 days and Mr. Slocum would take 12 days. After 8 days Mr. Brown goes on vacation and Mr. Pinter begins to work for a period of 6 days. How many days will it take Mr. Slocum to complete the contract?
   (A) 7
   (B) 8
   (C) 11
   (D) 12
   (E) 13

SECTION 5

Time—30 Minutes

38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Criticism that tears down without suggesting areas of improvement is not ------- and should be avoided if possible.
   (A) representative
   (B) constructive
   (C) mandatory
   (D) pertinent
   (E) sagacious

2. As I am not an ardent admirer of the work of George Eliot, simple justice demands a prefatory ------- her many admirable qualities.
   (A) skepticism regarding
   (B) effusion over
   (C) denial of
   (D) tribute to
   (E) dismissal of

3. You may wonder how the expert on fossil remains is able to trace descent through teeth, which seem ------- pegs upon which to hang whole ancestries.
   (A) novel
   (B) reliable
   (C) specious
   (D) inadequate
   (E) academic

4. An essential purpose of the criminal justice system is to enable purgation to take place; that is, to provide a ------- by which a community expresses its collective ------- the transgression of the criminal.
   (A) catharsis...outrage at
   (B) disclaimer...forgiveness of
   (C) means...empathy with
   (D) procedure...distaste for
   (E) document...disapprobation of

5. In the tradition of scholarly -------, the poet and scholar A.E. Housman once assailed a German rival for relying on manuscripts “as a drunkard relies on lampposts, for ------- rather than illumination.”
   (A) animosity...current
   (B) discourse...stability
   (C) erudition...shadow
   (D) invective...support
   (E) competition...assistance

6. According to the twelfth-century cosmologists, the natural philosopher must strive to ------- a state of detached objectivity in order to free his capacity for constructing useful hypotheses from the ------- of unquestioned assumptions and accepted opinions about nature.
   (A) capture...contemplation
   (B) achieve...tyranny
   (C) imitate...discipline
   (D) feign...pretense
   (E) attain...confusion

7. Unable to ------- his wholehearted distaste for media events and unnecessary publicity, Dean Brower continued to make ------- comments throughout the ceremony.
   (A) control...garbled
   (B) maintain...copious
   (C) conceal...effusive
   (D) disguise...caustic
   (E) express...vitriolic

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. YOLK : EGG::
   (A) rind : melon
   (B) nucleus : cell
   (C) stalk : corn
   (D) duck : fowl
   (E) web : spider

9. WOOD : SAND::
   (A) coal : burn
   (B) brick : lay
   (C) oil : polish
   (D) metal : burnish
   (E) stone : quarry

10. VINDICTIVE : MERCY::
    (A) avaricious : greed
    (B) insightful : hope
    (C) modest : dignity
    (D) skeptical : trustfulness
    (E) pathetic : sympathy
11. BOUQUET : WINE::
   (E) chaff : wheat
   (B) aroma : coffee
   (C) yeast : bread
   (D) octane : gasoline
   (E) decanter : brandy

12. RUFFLE : COMPOSURE::
   (M) flounce : turmoil
   (B) flourish : prosperity
   (C) provoke : discussion
   (D) adjust : balance
   (E) upset : equilibrium

13. Sextant : NAUTICAL::
   (M) octet : musical
   (B) therapy : physical
   (C) forceps : surgical
   (D) comet : astronomical
   (E) blueprint : mechanical

14. REFRACTORY : MANAGE::
   (M) redoubtable : impress
   (B) lethargic : stimulate
   (C) pedantic : convince
   (D) officious : arrange
   (E) aggrieved : distress

15. LATENT : MANIFESTATION::
   (H) torpid : hibernation
   (B) patent : appearance
   (C) perfunctory : inspiration
   (D) punctilious : continuity
   (E) dormant : awakening

16. PRECIPICE : STEEPNESS::
   (H) defile : narrowness
   (B) well : shallowness
   (C) plateau : depth
   (D) mountain : range
   (E) marsh : aridity

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

Given the persistent and intransigent nature of the American race system, which proved quite impervious to black attacks, Du Bois in his speeches and writings moved from one proposed solution to another, and the salience of various parts of his philosophy changed as his perceptions of the needs and strategies of black America shifted over time. Aloof and autonomous in his personality, Du Bois did not hesitate to depart markedly from whatever was the current mainstream of black thinking when he perceived that the conventional wisdom being enunciated by black spokesmen was proving inadequate to the task of advancing the race. His willingness to seek different solutions often placed him well in advance of his contemporaries, and this, combined with a strong-willed, even arrogant personality made his career as a black leader essentially a series of stormy conflicts.

Thus Du Bois first achieved his role as a major black leader in the controversy that arose over the program of Booker T. Washington, the most prominent and influential black leader at the opening of the twentieth century. Amidst the wave of lynchings, disfranchisement, and segregation laws, Washington, seeking the good will of powerful whites, taught blacks not to protest against discrimination, but to elevate themselves through industrial education, hard work, and property accumulation; then, they would ultimately obtain recognition of their citizenship rights. At first Du Bois agreed with this gradualist strategy, but in 1903 with the publication of his most influential book, Souls of Black Folk, he became the chief leader of the onslaught against Washington that polarized the black community into two wings—the "conservative" supporters of Washington and his "radical" critics.

17. The author’s primary purpose in the passage is to
   (E) explain how Du Bois was influenced by Washington
   (B) compare the personalities of Du Bois and Washington
   (C) explain why Du Bois gained power in the black community
   (D) describe Du Bois’ role in early twentieth-century black leadership
   (E) correct the misconception that Du Bois shunned polarization

18. Which of the following statements about W.E.B. Du Bois does the passage best support?
   (A) He sacrificed the proven strategies of earlier black leaders to his craving for political novelty.
   (B) Preferring conflict to harmony, he followed a disruptive course that alienated him from the bulk of his followers.
   (C) He proved unable to change with the times in mounting fresh attacks against white racism.
   (D) He relied on the fundamental benevolence of the white population for the eventual success of his movement.
   (E) Once an adherent of Washington’s policies, he ultimately lost patience with them for their inefficacy.
19. It can be inferred that Booker T. Washington in comparison with W.E.B. Du Bois could be described as all of the following EXCEPT

(A) submissive to the majority
(B) concerned with financial success
(C) versatile in adopting strategies
(D) traditional in preaching industry
(E) respectful of authority

20. The author’s attitude towards Du Bois’ departure from conventional black policies can best be described as

(A) skeptical
(B) derisive
(C) shocked
(D) approving
(E) resigned

Any successful theory in the physical sciences is expected to make accurate predictions. Given some well-defined experiment, the theory should correctly specify the outcome or should at least assign the correct probabilities to all the possible outcomes. From this point of view quantum mechanics must be judged highly successful. As the fundamental modern theory of atoms, of molecules, of elementary particles, of electromagnetic radiation and of the solid state it supplies methods for calculating the results of experiments in all these realms.

Apart from experimental confirmation, however, something more is generally demanded of a theory. It is expected not only to determine the results of an experiment but also to provide some understanding of the physical events that are presumed to underlie the observed results. In other words, the theory should not only give the position of a pointer on a dial but also explain why the pointer takes up that position. When one seeks information of this kind in the quantum theory, certain conceptual difficulties arise. For example, in quantum mechanics an elementary particle such as an electron is represented by the mathematical expression called a wave function, which often describes the electron as if it were smeared out over a large region of space.

This representation is not in conflict with experiment; on the contrary, the wave function yields an accurate estimate of the probability that the electron will be found in any given place. When the electron is actually detected, however, it is never smeared out but always has a definite position. Hence it is not entirely clear what physical interpretation should be given to the wave function or what picture of the electron one should keep in mind. Because of ambiguities such as this many physicists find it most sensible to regard quantum mechanics as merely a set of rules that prescribe the outcome of experiments. According to this view the quantum theory is concerned only with observable phenomena (the observed position of the pointer) and not with any underlying physical state (the real position of the electron).

It now turns out that even this renunciation is not entirely satisfactory. Even if quantum mechanics is considered to be no more than a set of rules, it is still in conflict with a view of the world many people would consider obvious or natural. This world view is based on three assumptions or premises that must be accepted without proof. One is realism, the doctrine that regularities in observed phenomena are caused by some physical reality whose existence is independent of human observers. The second premise holds that inductive inference is a valid mode of reasoning and can be applied freely, so that legitimate conclusions can be drawn from consistent observations. The third premise is called Einstein separability or Einstein locality, and it states that no influence of any kind can propagate faster than the speed of light. The three premises, which are often assumed to have the status of well-established truths, or even self-evident truths, form the basis of what I shall call local realistic theories of nature. An argument derived from these premises leads to an explicit prediction for the results of a certain class of experiments in the physics of elementary particles. The rules of quantum mechanics can also be employed to calculate the results of these experiments. Significantly, the two predictions differ, and so either the local realistic theories or quantum mechanics must be wrong.

21. This passage was most likely excerpted from a

(A) physics textbook focused on the mathematical foundations of quantum mechanics
(B) theoretical physics report urging further experiments to resolve current ambiguities
(C) scientific journal article informing a general audience of new findings in quantum mechanics
(D) pamphlet challenging the adequacy of quantum theory as a valid mathematical tool
(E) student log of a series of controversial experiments in the physics of elementary particles

22. Describing an electron on the basis of its mathematical expression is most like describing a

(A) paw from the cast of a pawprint
(B) pebble from the ripples it makes in a pond
(C) statue on the basis of its armature
(D) tree trunk from the pattern of its rings
(E) butterfly on the basis of its chrysalis

23. The author organizes the passage by

(A) explaining the wide applicability of quantum theory and contrasting it with the inapplicability of local realistic theories
(B) describing several assumptions underlying quantum theory and then refuting them consecutively
(C) making distinctions between experimental and nonexperimental methods of representing reality
(D) making a generalization about scientific theory and then applying it to the theory of quantum mechanics
(E) stating a specific idea and then moving from it to a sequence of generalizations about quantum theory
24. The author provides information that answers which of the following questions?

I. What are the presuppositions upon which the so-called local realistic theories are based?
II. Which premise of the local realistic theories of nature has been invalidated by current experimental predictions?
III. To what degree can one physically interpret a mathematical expression such as a wave function?

(A) I only
(B) III only
(C) I and II only
(D) I and III only
(E) I, II, and III

25. All of the following can be found in the author's discussion of quantum theory EXCEPT

(A) a concrete example of a specific observable phenomenon
(B) a generalization about the criteria for judging the value of a given theory
(C) a hypothesis based on the invalidity of Einstein separability
(D) an enumeration of the fundamental assumptions underlying the local realistic theories of nature
(E) a statement setting the local realistic theories and the quantum theory at variance

26. In terms of its tone and form, this passage can best be described as

(A) a doctrinaire appraisal
(B) a concrete proposal
(C) an iconoclastic observation
(D) a systematic exposition
(E) a cursory examination

27. Which of the following statements concerning physicists is most directly suggested by the passage?

(A) Physicists who gloss over discrepancies between quantum theory and the local realistic theories have yet to account for current experiments in elementary particle physics.
(B) Physicists may have overestimated the ability of quantum mechanics to provide experimental confirmation for theories.
(C) Physicists have not been sufficiently orthodox in their adherence to the three fundamental premises of the local realistic theories.
(D) Physicists see little basis for the conceptual difficulties suffered by laypersons in comprehending the underlying physical state of an observable phenomenon.
(E) Physicists exploring the physics of elementary particles fail to make explicit predictions about their experimental results.

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. ADULTERATED:

(A) solid
(B) immature
(C) exalted
(D) pure
(E) virtuous

29. DISTEND:

(A) deflate
(B) prolong
(C) commence
(D) forecast
(E) prevent

30. TRANSIENT:

(A) permanent
(B) desultory
(C) spontaneous
(D) subterranean
(E) obsequious

31. REVILE:

(A) compose
(B) awake
(C) deaden
(D) praise
(E) secrete

32. ELATED:

(A) crestfallen
(B) inebriated
(C) punctual
(D) insulted
(E) lamented

33. PROPITIOUS:

(A) adjacent
(B) clandestine
(C) contentious
(D) unfavorable
(E) coy

34. ENSUE:

(A) litigate
(B) precede
(C) arbitrate
(D) accentuate
(E) delay
35. RETROSPECTION:

- introversion
- deliberation
- anticipation
- gregariousness
- equivocation

36. EGRESS:

- deviation
- entrance
- approbation
- dilemma
- renown

37. MAUNDER:

- speak purposefully
- maintain silence
- appear unaware
- evade entanglement
- seek consensus

38. HUBRIS:

- impiety
- insouciance
- apathy
- mendacity
- humility

SECTION 6
Time—30 Minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4
Byram and Adoniram are code clerks at the Pentagon. They are also secret agents for foreign governments. One is in the pay of the Sulgravians and the other is in the pay of the Carolingians. If a document is stolen, it will take four days to reach the Sulgravian government and five days to reach the Carolingian government.

Byram is given top-secret documents to encode on October 19 and 22.

Adoniram is given a top-secret document to encode on October 21.

Byram and Adoniram have lunch together on October 20.

Agents of foreign governments do not transmit documents directly to governments that do not employ them, but may sell documents to an agent of another government. An agent who transmits a document always does so on the day he receives it.

1. If Adoniram is working for the Sulgravians, the Sulgravian government may receive documents on
   (I) October 24
   (II) October 25
   (III) October 26
   (A) I only
   (B) II only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

2. A top-secret document is received by the Carolingians on October 25. It could have been
   (A) stolen and transmitted by Byram
   (B) stolen and transmitted by Adoniram
   (C) stolen by Adoniram and sold to Byram, who transmitted it
   (D) stolen by Byram and sold to Adoniram, who transmitted it
   (E) stolen by either Byram or Adoniram and sold to the other, who transmitted it

3. If Adoniram is working for the Carolingians, which must be true?
   (A) The Sulgravians may receive documents only on October 23.
   (B) The Carolingians may receive documents only on October 26.
   (C) The Sulgravians may receive documents only on October 24, 26, and 27.
   (D) The Carolingians may receive documents only on October 24, 25, and 26.
   (E) No documents received by the Sulgravians can have been bought at Byram and Adoniram’s lunchtime meeting.

4. Which of the following is (are) possible given the conditions as stated?
   (H) Documents are received by one of the governments two days in a row.
   (I) Documents are received by both governments two days in a row.
   (III) Documents are received by one of the governments three days in a row.
   (A) I only
   (B) III only
   (C) I and III only
   (D) I, II, and III
   (E) neither I, II, nor III

5. Although there are no physical differences between the visual organs of the two groups, the inhabitants of the Bilge Islands, when shown a card displaying a spectrum of colors, perceive fewer colors than do most persons in the United States.

Which of the following conclusions can most reliably be drawn from the information above?
   (A) Human color perception is at least partly determined by factors other than the physical structure of the visual organs.
   (B) The Bilge Islanders are probably taught in childhood to recognize fewer colors than are persons in the United States.
   (C) Differences in social structure probably affect color perception.
   (D) Color perception in humans is influenced by differences in physical environment.
   (E) Bilge Islanders may have fewer terms denoting colors in their language than do English-speaking persons.

Questions 6 and 7

Ms. Brady: Mr. Flynn insists that the only way for our company to increase its profits is to double the advertising budget. That obviously is not the answer. Our two major competitors have operations similar to ours. Both are showing increased profits while spending less on advertising than we presently spend.

6. Which of the following statements would be Mr. Flynn’s most effective rebuttal to Ms. Brady’s argument?
   (A) Our two major competitors do not need to advertise as much as we do, because they are already much better known and have larger shares of the market.
   (B) I have been in this business for 30 years, during which time I have repeatedly proven my ability to identify and solve business problems.
(C) The only way for us to increase profits is to sell more of our products; the only way to sell more products is to convince people to buy them; the only way to convince people to buy them is through increased advertising.

(D) You have offered neither statistics to back up your claims nor any proposal for an alternative solution to our problem.

(E) My proposal is not "obviously" wrong. There is only one way to find out if it is wrong, and that is to try it.

7. Ms. Brady's primary method of making her point is to

(A) suggest a different underlying cause of the problem
(B) present evidence which was previously overlooked
(C) point out a logical flaw in Mr. Flynn's reasoning
(D) draw an analogy
(E) question Mr. Flynn's competence

Questions 8–12

(1) Ashland is north of East Liverpool and west of Coshocton.
(2) Bowling Green is north of Ashland and west of Fredericktown.
(3) Dover is south and east of Ashland.
(4) East Liverpool is north of Fredericktown and east of Dover.
(5) Fredericktown is north of Dover and west of Ashland.
(6) Coshocton is south of Fredericktown and west of Dover.

8. Which of the towns mentioned is furthest to the northwest?

(A) Ashland
(B) Bowling Green
(C) Coshocton
(D) East Liverpool
(E) Fredericktown

9. Which of the following must be both north and east of Fredericktown?

I. Ashland
II. Coshocton
III. East Liverpool

(A) I only
(B) II only
(C) III only
(D) I and II
(E) I and III

10. Which of the following towns must be situated both south and west of at least one other town?

(A) Ashland only
(B) Ashland and Fredericktown
(C) Dover and Fredericktown
(D) Dover, Coshocton, and Fredericktown
(E) Coshocton, Dover, and East Liverpool

11. Which of the following statements, if true, would make the information in the numbered statements more specific?

(A) Coshocton is north of Dover.
(B) East Liverpool is north of Dover.
(C) Ashland is east of Bowling Green.
(D) Coshocton is east of Fredericktown.
(E) Bowling Green is north of Fredericktown.

12. Which of the numbered statements gives information that can be deduced from one or more of the other statements?

(A) (1)
(B) (2)
(C) (3)
(D) (4)
(E) (6)

Questions 13–16

Spelunkers International offers exploring tours in eight caves: Abbott, Benny, Caesar, Dangerfield, Ewell, Fields, Guinness, and Hope.

(1) Class 1 spelunkers may not attempt cave Ewell, Fields, or Hope.
(2) Class 2 spelunkers may not attempt cave Hope.
(3) Class 3 spelunkers may attempt any cave.
(4) Cave Caesar may be attempted only by spelunkers who have previously explored cave Benny.
(5) Cave Fields may be attempted only by spelunkers who have previously explored cave Ewell.
(6) Only two of caves Benny, Caesar, Ewell, Fields, and Hope may be attempted by any explorer in a single tour.

13. Which tour is allowed for a class 2 spelunker who has never explored any of the eight caves before, if the caves are attempted in the order listed?

(A) Abbott, Fields, Ewell, Benny
(B) Dangerfield, Guinness, Caesar, Benny
(C) Guinness, Ewell, Dangerfield, Benny, Abbott
(D) Dangerfield, Ewell, Fields, Abbott, Caesar
(E) Guinness, Ewell, Fields, Dangerfield, Benny
14. A class 2 spelunker who has previously explored cave Ewell may be restricted in choosing a tour by which rule(s)?

I. Rule (4)
II. Rule (5)
III. Rule (6)

(A) I only
(B) II only
(C) I and III only
(D) II and III only
(E) I, II, and III

15. In how many different ways may a class 1 spelunker who has never explored any of the eight caves before set up a tour of three caves, if she wishes to explore caves Abbott and Caesar?

(A) 2
(B) 3
(C) 4
(D) 5
(E) 6

16. What is the maximum number of caves that a class 3 spelunker who has previously explored only cave Benny may include in a single tour?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

18. Pesth has the greatest number of choices for hiring as plumbers if the electricians he chooses are

(A) Mike, Nick, and Olive
(B) Mike and Nick
(C) Mike and Olive
(D) Nick and Olive
(E) Either Mike or Nick, plus Olive

19. If Rich is hired, the other persons hired must be

(A) Mike, Nick, Steve, and Tom
(B) Mike, Nick, Olive, and either Ulysses, Vic, or Wassily
(C) Mike and Nick, together with either Steve and Tom or Ulysses and Wassily
(D) Mike and Nick, together with either Ulysses and Vic or Vic and Wassily
(E) Mike and Nick, together with either Steve and Tom, Ulysses and Wassily, or Vic and Wassily

20. Pesth can put together the rest of his crew in the greatest number of different ways if he hires

(A) Steve and Tom
(B) Olive
(C) Ulysses
(D) Vic
(E) Wassily

21. If Mike is hired and Nick is not, which of the following statements must be true?

I. Steve and Tom are hired.
II. Either Ulysses or Vic is hired, but not both.

(A) I only
(B) II only
(C) either I or II, but not both
(D) both I and II
(E) neither I nor II

22. Which of the following statements must be true?

I. If only two electricians are hired, the plumbers must include Steve and Tom.
II. If Olive is not hired, Rich must be hired.
III. If either Mike or Nick is not hired, Steve and Tom must be hired.

(A) I only
(B) II only
(C) III only
(D) I and III only
(E) II and III only
23. The current trend toward specialization in nearly all occupational groups is exactly the opposite of what is needed. World problems today are so diverse, complex, and interrelated that only the generalist stands a chance of understanding the broad picture. Unless our schools stress a truly broad, liberal education, the world will crumble around us as we each expertly perform our own narrow functions.

Each of the following, if true, would weaken the conclusion drawn above, EXCEPT:

(A) Many of the world’s problems can be solved only by highly specialized experts working on specific problems.
(B) Relatively few generalists are needed to coordinate the work of the many specialists.
(C) Specialization does not necessarily entail losing the ability to see the broad picture.
(D) Increasingly complex problems require a growing level of technical expertise which can only be acquired through specialization.
(E) Even the traditional liberal education is becoming more highly specialized today.

Questions 24 and 25

All good athletes want to win, and all athletes who want to win eat a well-balanced diet; therefore, all athletes who do not eat a well-balanced diet are bad athletes.

24. Which of the following, if true, would refute the assumptions of the argument above?

(A) Ann wants to win, but she is not a good athlete.
(B) Bob, the accountant, eats a well-balanced diet, but he is not a good athlete.
(C) All the players on the Burros baseball team eat a well-balanced diet.
(D) No athlete who does not eat a well-balanced diet wants to win.
(E) Cindy, the basketball star, does not eat a well-balanced diet, but she is a good athlete.

25. If the assumptions of the argument above are true, then which of the following statements must be true?

(A) No bad athlete wants to win.
(B) No athlete who does not eat a well-balanced diet is a good athlete.
(C) Every athlete who eats a well-balanced diet is a good athlete.
(D) All athletes who want to win are good athletes.
(E) Some good athletes do not eat a well-balanced diet.
SECTION 7
Time—30 Minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
<th>Sample Answers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example 1:</td>
<td>$2 \times 6$</td>
<td>$2 + 6$</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to $\triangle PQR$.

Example 2:

<table>
<thead>
<tr>
<th>$PN$</th>
<th>$NQ$</th>
</tr>
</thead>
</table>

$\angle x^\circ$ $\angle y^\circ$ $\angle w^\circ$ $\angle z^\circ$

(Edited: If equal measures cannot be assumed, even though $PN$ and $NQ$ appear equal)

Example 3:

| $x$ | $y$ |

(Edited: Since $N$ is between $P$ and $Q$)

Example 4:

| $w + z$ | 180 |

(Edited: Since $PQ$ is a straight line)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

</table>
Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. If $9x - 3y = 12$ and $3x - 5y = 7$, then $6x - 2y$ equals
   (A) $-5$
   (B) $2$
   (C) $4$
   (D) $7$
   (E) $8$

17. The product of 8,754,896 and 48,933 equals
   (A) 428,403,325,965
   (B) 428,403,325,966
   (C) 428,403,325,967
   (D) 428,403,325,968
   (E) 428,403,325,969

18. If $2^{n+3} = 8$, then $n$ equals
   (A) $-1$
   (B) $+1$
   (C) $2$
   (D) $3$
   (E) $4$

19. If $x$ is an odd integer, which of the following is even?
   (A) $2x + 1$
   (B) $2x + 2$
   (C) $x + x - 1$
   (D) $(x - 2)(x + 2)$
   (E) $2(x + 1)$

20. $R$ and $T$ are points on straight line $PQ$ on which $PR = RT = TQ$. What percent of $PT$ is $PQ$?
   (A) $1 \frac{1}{2}\%$
   (B) $50\%$
   (C) $66 \frac{2}{3}\%$
   (D) $33 \frac{1}{3}\%$
   (E) $150\%$

Questions 21–25 refer to the following graphs.

FLORENCE DRESS SHOP
SALES AND EARNINGS REPORT (1980–1987)
21. What is the average (arithmetic mean) in thousands of dollars of the sales for the period 1982–1985?
   (A) $60.
   (B) $70.
   (C) $72.5
   (D) $80.
   (E) $80.5

22. Which of the following can be inferred from the graphs?
   I. Sales for 1982 and 1985 were the same.
   II. Sales for 1982 and 1987 were the same.
   III. Earnings for 1985 were twice those for 1980.
   (A) I only  (B) II only  (C) III only
   (D) I and III  (E) II and III

23. What was the ratio of sales to earnings in 1980?
   (A) 1/2
   (B) 2
   (C) 1/5
   (D) 5/1
   (E) 1/6

24. What was the percentage increase in earnings from 1984 to 1985?
   (A) 2%
   (B) 6%
   (C) 10%
   (D) 12%
   (E) 20%

25. If \( g \) represents the earnings in 1980 then the earnings in 1985 are expressed as
   (A) \( 2g \)
   (B) \( g/2 \)
   (C) \( g + 2 \)
   (D) \( 2/g \)
   (E) \( 3g \)

26. An official baseball diamond is a square 90 feet on each side. The shortest distance (to the nearest foot) from third base to first base is
   (A) 90 feet
   (B) 127 feet
   (C) 135 feet
   (D) 180 feet
   (E) less than 90 feet

27. Which of the following has the greatest value?
   (A) 0.3
   (B) \( \sqrt{0.3} \)
   (C) \( 2/5 \)
   (D) \( 1/3 \)
   (E) 0.01\( \pi \)

28. Mr. Nichols, who owns \( 66 \frac{2}{3} \% \) of a factory, sells half of his share for $33,333. The value of the entire factory is
   (A) $ 9,999
   (B) $ 66,666
   (C) $ 99,999
   (D) $100,000
   (E) $133,332

29. The price of a garment is reduced by 20 percent. During an “early-bird” special all garments are marked “Take an additional 30 percent off the reduced price.” The two reductions are equivalent to a single reduction of
   (A) 25%
   (B) 44%
   (C) 50%
   (D) 56%
   (E) 60%

30. One wheel rotates once every 7 minutes, and another rotates once every 5 minutes. How often will both begin to rotate at the same time?
   (A) every 6 minutes
   (B) every 12 minutes
   (C) every 17.5 minutes
   (D) every 35 minutes
   (E) every 70 minutes

Answer Explanations

Section 1

1–4. Analysis of this situation will indicate that G, J, L must not sit next to each other. The members of the football and the basketball teams must sit next to either G, J, or L.

1. A. In (A) G, J, and L are separated by varsity players on basketball or football teams.

2. D. M may sit next to either G, J, or L. All others are two-sport athletes.

3. B. The only ones that may sit next to N are G, J, L.

4. E. K may not sit next to H as in (A). K may not sit next to M as in (B), nor N as in (C) or (D).

5. E. The passage implies that the gun lobby might destroy the political future of a lawmaker who sponsors a gun control bill.

6. B. The gun lobby maintains that our Constitution gives the people (not only the militia) the right to keep and bear arms. It also says that the Fifth Amendment prohibits the confiscation of property without due process and that the Ninth Amendment guarantees all unspecified rights.

7. D. (A) is incorrect since it suggests a cause of violence and not a solution. (B) is incorrect. The fact that a state has the lowest crime rate may be due to factors having nothing to do with antigun laws. In (C) a sport, not a crime, is mentioned. In (E) police protection is not taken into account.

8–11. You may want to sketch a calendar showing each day of the week and the offices that are open on that day. Or you may want to just make simple notes on the requirements listed and when they can be satisfied, like this:

| Birth Cert. | MTh 9-5 |
| Nat. Papers | TuF 9-5 |
| Hosp. | Wed 12-5 |
| Bank | M-F 9-3 |
| Consulate | MWF 12-4 |

8. A. By starting Monday morning at Beryl Clinic, getting a birth certificate and bank statement before 3 P.M. and proceeding to the Consulate, a native-born citizen can complete the procedure in less than eight hours. The naturalized citizen starting anytime Tuesday (the specific- tion of Tuesday morning is simply a distracting detail) can't get to the Consulate until Wednesday at noon (B). The applicant in choice C can't get a birth certificate until Thursday; the applicant in choice D can't get naturalization papers until Friday; the applicant in choice E can't complete the procedure until Monday.

9. C. This applicant may acquire a birth certificate and a bank statement on Thursday, but cannot get a vaccination until Friday at 4 (at Beryl Clinic), too late to go to the Consulate before Monday afternoon.

10. C. Mr. Nikto could have acquired naturalization papers as late as Tuesday afternoon and then gone to his bank; he can be vaccinated Wednesday afternoon and get to the Consulate that day. If Mr. Nikto is choice A, the procedure will take from Monday morning to Wednesday afternoon; if he is choice B, from Tuesday at 4 P.M. to Friday afternoon; if he is choice D, from Monday afternoon to Wednesday afternoon; if he is choice E, from Tuesday afternoon until Friday.

11. D. The naturalized citizen can get his or her naturalization papers and bank statement on Tuesday afternoon. Nothing can be accomplished on Wednesday. Thursday morning the applicant can be vaccinated at Beryl Clinic and the procedure could be completed when the Consulate office opens on Friday.

12–18. A “tree” diagram makes everything simple. BC is an impossible leafleting team, since C won’t work without A; AC is a possible leafleting team, and so is AB, but only if C is the speaker. (Remember, F is not unwilling to work without E!)

```
  C  
 /   
|     |
A    B
 /   /   
FG  D  GH  FG  
 / 
E   
```

12. C. From the diagram, or even without it—choices A and B contain two speakers, choice D violates E's wishes and choice E violates both A's and C's wishes.

13. D. Either team including A can involve any of the three defense personnel. The personnel listed in choices A, B, and C are all possible selections, but others are possible. Choice E is definitely false.

14. B. See the diagram. All other combinations are shown to be all right by the diagram.
15. E. C must be present, and necessarily as a speaker (I); three defense teams are possible—all contain either F or G (III), but one does not contain F (II).

16. B. The bottom "branches" of the "tree" diagram all represent different possible teams, in combination with the other personnel shown.

17. A. Only A must be chosen. E is not necessary at all. F becomes a "must" only if E is the speaker.

18. E. Check the diagram—E appears in only two possible teams (ACEFG, ACEFH); A and C appear in all eight, B and D in three each.

19-22. Set up five lines symbolizing places at the table; A-E will be seated on one side and F-J on the other. The first three statements give you:

```
A/B    C/E    A/B
H/I/J
```

Statement (4) tells you, first, that the Wallachian military attachés must be opposite the two Rumelian trade experts; second, that the latter must be at the right side of their table and the Wallachian military attachés opposite, on the left side from their point of view. From this, you can deduce where B and therefore A sit. You can now fill in this information, plus the uncertain possibilities:

```
<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>trade</td>
<td></td>
<td>military</td>
</tr>
<tr>
<td>A</td>
<td>C/D/E</td>
<td>B</td>
</tr>
<tr>
<td>F/H/I/J</td>
<td>F/H/I/J</td>
<td>F/H/I/J</td>
</tr>
<tr>
<td></td>
<td>C/E</td>
<td></td>
</tr>
<tr>
<td></td>
<td>C/D/E</td>
<td></td>
</tr>
<tr>
<td></td>
<td>H/I/J</td>
<td></td>
</tr>
<tr>
<td></td>
<td>G</td>
<td></td>
</tr>
</tbody>
</table>
```

Statement (5) allows you to cross a lot of this out:

```
<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>trade</td>
<td>military</td>
<td></td>
</tr>
<tr>
<td>A</td>
<td>C</td>
<td>D</td>
</tr>
<tr>
<td>F/I/J</td>
<td>H</td>
<td>F/I/J</td>
</tr>
<tr>
<td></td>
<td>E</td>
<td></td>
</tr>
<tr>
<td></td>
<td>I/J</td>
<td></td>
</tr>
<tr>
<td></td>
<td>G</td>
<td></td>
</tr>
</tbody>
</table>
```

That’s as much as you can do, but it’s enough to answer all the questions.

19. A. We can’t tell exactly who or where F is. But choice A is a possibility. Choices B, C and D are ruled out by the placing of H; choice E is ruled out by the placing of G.

20. E. Three persons are possibilities. Choices A, C, and D are known exactly; for choice B there are two possibilities, so more is known than in choice E.

21. C. This supposition eliminates J as Rumelian chairperson (I); since I must be the chairperson, and J is a military attaché, F must be a trade expert (II); III therefore cannot be true.

22. E. Add back into your diagram the uncertainties that were eliminated by statement (3). The Wallachian chairperson can be either D or E; the military attaché seated to the Wallachian chairperson’s left can also be either D or E, since only identifying the chairperson as E allowed you to identify the military attaché as D. The Rumelian chairperson can be F as well as I or J. Choice E can be definitely known under these conditions, even though you cannot tell who is in which of the two seats. Choice A cannot be known; it could not be, even with statement (3). For choices B and D, there is in each case more than one possibility for one of the slots; for choice C, there are two possibilities.

23. E. Statements I, II, and IV all tend to strengthen Malthus’s argument, statements I and IV by helping to explain the causes of the phenomenon Malthus described, statement II by asserting that the phenomenon has, in fact, taken place. Statement III suggests that contraception might be used to invalidate Malthus’s prediction; therefore, it does weaken Malthus’s argument.

24. A. Malthus mentioned wars, famines, and other catastrophes as population checks. (B) and (C) would tend to increase food supply, but not to limit the demand for food. (D) and (E) would increase population.

25. C. The first part of the argument contains the premise: most people who do X (take GRE/APT) do Y (get headaches). From this, two possible incorrect conclusions can be drawn: if anyone does X, he/she must do Y; and, only those who do X can do Y. Choice A contains the first error, but the original argument and choice C both make the second error. Choice B makes a valid inference, whereas the original argument does not. Choice D has the basic structure: If X, then Y—if Y, then X. This is invalid, but it is a different error from the one made in the original argument. Choice E is an invalid inference from past to future, again a different kind of error from that in the original argument.
Section 2

1. C. The writer hopes that economics and politics will once more form the study known as political economy. Clearly, the subjects have been linked in the past. Thus, he hopes that the two separate fields will be reunited.

2. B. If bilingual education is more than a mere stopgap (a somewhat negative description), it must possess certain positive qualities. Thus it has advantages over education in a single tongue. Note the use of far from to signal the contrast between the negative and positive views on bilingual education presented in this sentence.

3. E. A disease in a latent state has yet to manifest itself and emerge into view. Therefore it is impossible to observe. Remember, in double-blank sentences, go through the answers, testing the first word in each choice and eliminating those that don’t fit. When a disease is in a critical or acute state, its existence is obvious. Therefore, you can eliminate Choices B and C.

4. A. Under certain circumstances scientists attack each other with ad hominem arguments (personal attacks) and shameless appeals. When is this likely to occur? When facts are established or demonstrable or ineluctable (unavoidable)? Hardly. Under such circumstances scientists would rely on facts to establish their case. It is when facts prove elusive that they lose control and, in doing so, abandon their pretense of objectivity.

5. D. The second clause presents an example of literary mockery. The abstract idea of preserving a nugget of pure truth is appealing; the concrete example of setting it up on the mantle makes fun of the whole idea.

6. B. If the rare earths are actually present to some degree in essentially all minerals, then they are not rare after all. Thus, the term “rare earths” is a misnomer (incorrect designation), for the rare earths are actually ubiquitous (omnipresent; found everywhere). Watch out for words that signal the unexpected. Note the use of “paradoxically” here.

7. E. Although it is the thrust of Clement’s argument that psychoanalysis must return to its healing offices, it is precisely here that her argument fails and her shafts glance away. Be on the lookout for extended metaphors that influence the writer’s choice of words. In this case, the use of “shafts” conjures up an image of javelins that do not strike home but instead glance off the foe.

8. C. A sheep bleats in its characteristic call. A sparrow chirps in its characteristic call.

9. E. When milk curdles, by definition it coagulates or thickens. Likewise, when blood clots, it too coagulates.

10. A. A bird molts or sheds its feathers. A snake casts off or sloughs its skin.

11. B. An offhand remark is made without forethought or premeditation. An aboveboard (open) deed is done without trickery or guile.

12. D. The larval (immature) stage of an insect best corresponds to the embryonic stage of a mammal.

13. C. A poltergeist (noisy, mischievous spirit) is a kind of apparition or ghost. An ogre is a kind of monster.

14. A. An austere style is severely simple and restrained. Controlled movement is restrained as well.

15. E. To aver or positively declare something is to indicate affirmation. To demur or object to something is to indicate protest.

16. B. To chide or scold someone is less extreme than to pillory him, exposing him to public scorn. To hum or indulge someone is less extreme than to mollycoddle or inordinately baby him.

17. E. The author first states that the reason for bioluminescence in underwater microorganisms is obscure and then proceeds to enumerate various hypotheses.
18. B. The author does not deny that predators make use of bioluminescence in locating their prey. Instead, he gives an example of human predators (fishers) who are drawn to their prey (the fish that prey on plankton) by the luminescence of the plankton.

19. B. As the preceding answer makes clear, the phenomenon of plankton bioluminescence does have practical applications. It is a valuable tool for fisheries interested in increasing their catch of fish that prey on plankton.

20. B. The author’s use of both italics and an exclamation mark indicates his extreme scorn of the notion that bioluminescence originated in plankton because it allowed the plankton to expose their predators to the attention of those predators’ predators. (Remember the rhyme about little fish having big fish to bite ‘em, and so on ad infinitum?) Here he derides what he considers an untenable hypothesis.

21. C. The author provides the reader both with physical details of dress and bearing and with comments about the motivations and emotions of Bosola and the Cardinal. Choice A is incorrect. The passage scarcely mentions the church.
Choice B is incorrect. The description of ecclesiastical costumes is only one item in the description of the Cardinal.
Choice D is incorrect. The persons described are characters in a play, not figures in paintings.
Choice E is incorrect. The author’s purpose is description, not accusation.

22. D. From the opening lines, in which the curtain rises and the two men “enter from the right” (as a stage direction would say), and from the later references to gaslight Victorian melodrama, we can infer that Bosola and the Cardinal are characters in a play.
Choice A is incorrect. The Cardinal’s brother is Duke Ferdinand.
Choices B and C are incorrect. Lines 55-66 describe Bosola as doing the work of a “hired ruffian” and playing a “lowly, despicable” role. He is a servant, not a noble lord or a lord of the church.
Choice E is unsupported by the passage.

23. E. The eagle is poised to strike “with exposed talons.” It, like the Cardinal, collects itself to strike with greater force. The imagery accentuates the Cardinal’s “mercylessness.”
Choice A is incorrect. The Cardinal is not flighty (light-headed and irresponsible); he is cold and calculating.
Choice B is incorrect. The Cardinal loves power, not freedom.
Choice C is incorrect. An eagle poised to strike with bare claws suggests violence, not eminence (fame and high position).
Choice D is incorrect. Nothing in the passage suggests that the Cardinal is spiritual.
Beware eye-catchers. “Eminence” is a title of honor applied to cardinals in the Roman Catholic church. Choice C may attract you for this reason.

24. E. Although Bosola is not a leather-jacketed hoodlum, he is a hired assassin (despite his scholarly taste).

25. A. The casual references to the elongated hands and features in El Greco’s work and to the trim beards and commanding stances in the work of Van Dyke imply that the author assumes the reader has seen examples of both painters’ art.

26. D. The author’s depiction of the Cardinal stresses his redoubtable qualities as a foe (calculation, duplicity, mercilessness) and as a challenge to an actor (“imperial repose,” “a commanding presence, smooth movements suggesting latent danger”).
Choice A is incorrect. The author portrays the Cardinal’s relations with his brother and mistress as cold, but he never apologizes for the Cardinal’s lack of warmth. Indeed, the author somewhat savors it.
Choices B and C are incorrect. Neither esteem for a nonexistent spirituality nor admiration for a villainous autocracy enters into the author’s depiction of the Cardinal.
Choice E is incorrect. A cause of perturbation to others, the Cardinal is never perturbed.

27. D. Lines 62-66 indicate that Bosola’s dominant emotion is disgust at an ignoble world and at himself for his despicable role in that world.
Choice A is incorrect. Not Bosola but Duke Ferdinand suffers from excessive emotionality.
Choice B is incorrect. It is not his lowly rank but his ignoble tasks that rankle Bosola.
Choices C and E are incorrect. They are unsupported by the passage.

28. B. The opposite of amelioration (improvement) is worsening.
Think of “a hoped-for amelioration.”

29. A. The opposite of to disarray (throw into disorder) is to neaten.
Think of “disarraying the blankets.”

30. C. The opposite of disputations (argumentative) is conciliatory (pacific, soothing). Note that you can spot the familiar dispute in disputations.
Think of “heated disputations debates.”
31. E. The opposite of to inundate (flood) is to drain. Beware eye-catchers. Do not be tempted to choose Choice C simply because inundate and wallow both have something to do with water. Think of being “inundated by the rising flood.”

32. B. The opposite of reticence (uncommunicativeness; restraint in speech) is loquaciousness (talkativeness). Think of “speaking without reticence.”

33. D. The opposite of incongruous (inconsistent, not fitting) is harmonious. Think of being startled by “incongruous behavior.”

34. B. An apostate (renegade; person faithless to an allegiance) is the opposite of a loyalist. Beware eye-catchers. Do not confuse apostate (renegade) with apostle (missionary; reformer). Think of “a faithless apostate.”

35. A. Topical (local, temporary) is the opposite of general. Remember that words may be used in several different ways. Here topical does not mean arranged according to topics (as in a topical index). Think of “a topical anesthetic,” one applied locally, not generally.

36. E. To fulminate (issue curses or censures; explode) is the opposite of to praise. Context Clue: “The wicked queen fulminated against Snow White.”

37. B. The opposite of turbid (muddy) is limpid (clear). Word Parts Clue: Turb- means disturb. A stream is turbid when the silt or sediment is disturbed. Think of “muddy, turbid waters.”

38. D. The opposite of tyro (beginner, novice) is expert. Think of “a mere tyro in the field.”

Section 3

1. C. \[ \frac{1}{2} \times 3.5\% = \frac{3.5}{100} = \frac{35}{1000} \]

2. A. The length of the fence (144 feet) \( \div \) the distance between the posts (12 feet) equals 12 spaces between posts. However, the first space has 2 posts and an additional post will appear at each subsequent space.

3. A. There are 37 houses on the west side. From #1 to #37 there are 19 odd numbers.

4. C. Circumference = \( 2\pi r \). If the radius of \( A = \frac{1}{2} \) the radius of \( B \), then circumference of \( A = \frac{1}{2} \) circumference of \( B \). This may be stated as follows: twice the circumference of \( A \) = the circumference of \( B \).

5. C. \[ \frac{BC}{AB} \times \frac{AC}{BC} = \frac{\tan \alpha}{\tan \theta} = 1 \]

6. A. Since \( x = 40 \), \( y = 50 \). Since \( AB \) lies opposite \( \angle ACB \), the larger of the 2 acute angles, \( AB > BC \).

7. C. \[ z + y = 80 \] since \( x = 100 \)
\[ y = z = 40. \]

8. B. Because \( ABCD \) is a square, \( AB = AD \).
Solve: \( 4x - 3 = 3x + 4 \)
\[ x = 7 \]

9. C. \[ 7(10^4) = 70,000 \]
\[ 3(10^3) = 3,000 \]
\[ 2(10^2) = 200 \]
\[ 5(10) = 50 \]
\[ 6 = \square \]
Total \[ 73,256 \]

10. C. Add the 2 equations:
\[ x + y = 15 \]

11. C. Since 15 is common to both columns, consider only \[ \frac{16}{x} = 4 \]. Since \( 4x = 16 \), \( x = 4 \).

12. C. The exterior angle of a triangle equals the sum of the measures of both remote interior angles. Therefore, \( x = a + b \) and \( x = c + d \). By addition, \( 2x = a + b + c + d \).

13. D. Note that \( y \) is common to both columns. Consider \( x \) and \( z \). No information is given about their relationship.
14. C. Since vertical angles 1 and 2 are equal, right triangle \( ABE \) is similar to right triangle \( DEC \), and \( \frac{AB}{DC} = \frac{AE}{EC} \). In \( ABE \), hypotenuse \( BE = 5 \), and \( AB = 4 \), then leg \( AE = 3 \). In \( DEC \), if \( AB = 4 \), then \( DC = 12 \), and since \( AE = 3 \), then \( EC = 9 \), and \( AC = AE + EC = 3 + 9 = 12 \).

15. D. Since radius = 6, area of circle = 36\( \pi \), but we do not know what part of the circle the segment \( AOB \) is.

16. A. \( K = \frac{1}{m+n} \)

\[ \frac{1}{K} = m + n \] [reciprocals of equals are equal]

\[ \frac{5}{K} = 5(m + n) \] [multiply by 5]

17. E. If \( r \) is multiplied by 9, \( V \) must be multiplied by 81, since \( \sqrt{81} = 9 \). Recall: If equals are multiplied by equals, the results are equal.

18. B. Observe the diagrammatic representation of the Latin and Greek students. Obviously we have accounted for 12 of these students. Three of them studied neither language. Observe that 3 of these classical language students took Latin and Greek.

19. C. \( 13 = \frac{13w}{l - w} \)

\( 13(l - w) = 13w \)

\( 13 - 13w = 13w \)

\( 13 = 26w \)

\( \frac{1}{2} = w \)

\( (2w)^2 = \left( \frac{1}{2} \right)^2 = (1)^2 = 1 \)

20. A. Since the relationship of the denominators is 1:2, the relationship of the numerators must be 1:2, so \( a - b \) must be 2. Therefore, \( a \) is larger than \( b \).

21. D. Observe that a \$500\) investment appears in the 9-year row under the 8\% column; that is, \$500 invested at 8\% will grow to \$1000 (double) in 9 years.

22. D. For the 15-year period, the investment at 5\% is \$481, while at 6\% it is \$417; \$481 - 417 = \$64.

23. E. Investments of less than \$100\) appear in two places in the table. The 25-year, 11\% investment is not included in the answer choices. Therefore, \$92\) invested for 25 years at 10\% is the only possible correct answer.

24. D. Move across the 18-year row to the number under the 8\% column. The correct answer is \$250.

25. C. \$317 invested at 7\% for 17 years increases to \$1000, which is more than three times as great as \$317.

26. A. If two lines are parallel, then the distance between the two lines along parallel lines must be equal. The easiest lines to use to calculate distances are lines parallel to the y-axis. The distance along the y-axis from \( C \) to \( AB \) is 4. \( AB \) intersects the y-axis at point (0,2). The distance from \( D \) to \( AB \) along the line parallel to the y-axis must also be 4. \( D \) must have coordinates (3,1), so \( x = 1 \).

27. E. The fence will consist of 100 feet of stone and 100 + 60 + 60 = 220 feet of wire. The cost will be \$5(100) + \$2(220) = \$500 + \$440 = \$940.

28. C. The present time \((h \text{ hours})\) must be reduced by 2 hours in order to insure promptness.

\[ \frac{\text{distance}}{\text{time}} = \text{rate} \]

\[ \frac{d}{h - 2} = \text{new rate to insure promptness} \]

29. C. To have averaged 30\% of 60 games, the team must have won 18 out of 60 games. Let \( x = \frac{18 + x}{60 + x} = 50\% \)

\[ \frac{18 + x}{60 + x} = \frac{1}{2} \]

\[ 36 + 2x = 60 + x \]

\[ x = 24 \]
30. \( \frac{SD}{M} = \text{amount each will pay when there are } M \text{ men} \)

\[ \frac{SD}{M-3} = \text{amount each will pay when there are } M-3 \text{ men} \]

The difference is

\[ \frac{D}{M-3} - \frac{D}{M} \]

\[ \frac{DM - D(M-3)}{M(M-3)} \]

\[ \frac{DM - DM + 3D}{M^2 - 3M} \]

\[ \frac{3D}{M^2 - 3M} \]

**Section 4**

1. C. \( \frac{1}{x} = \sqrt{0.09} \) and \( \frac{1}{x} = 0.3 \)

\[ 0.3x = 1 \]

\[ 3x = 10 \text{ and } x = 3 \frac{1}{3} \]

2. C. \( a + 2b = 1 \frac{1}{3} \)

\[ -a + b = -1 \frac{1}{3} \text{ (Multiply by -1)} \]

\[ 3b = 1 \]

3. C. Multiply by \( \frac{-1}{-1} \): \( \frac{x-y}{z} = \frac{-x+y}{z} \) or \( \frac{y-x}{z} \)

4. B. If \( x = 0 \), the numerator equals 0 and the value of the fraction equals 0 regardless of the value of \( y \).

5. C. 4 quarts = 1 gallon

\[ 1 \text{ quart} = \frac{1}{4} \text{ gallon} \]

\[ \frac{4}{5} \text{ quart} = \left( \frac{4}{5} \right) \left( \frac{1}{4} \right) \text{ or } \frac{1}{5} \text{ gallon} \]

6. C. \( a:b = c:d \) or \( \frac{a}{b} = \frac{c}{d} \). Because reciprocals of equals are equal, \( \frac{b}{a} = \frac{d}{c} \)

7. B. \( AC = CE \)

\[ AC - AB = BC; AC - 90 = BC \]

\[ CE - DE = CD; CE - 85 = CD \]

\[ CD > BC \]

8. A. Side of a square = \( \frac{1}{4} \) of perimeter \( \frac{1}{4} (4a + 4) = a + 1 \) (length of any side). \( a + 1 > a \)

9. B. \( m\angle B + m\angle C = \angle BAC > \angle BCA; \) therefore \( BC > AB \).

10. C. Since the measure of \( \angle A \) equals the measure of \( \angle C \) (45°), \( \angle B \) must be a right angle. Sides \( AB \) and \( BC \) lie opposite equal angles.

11. B. \( (a - 1)(a + 1) = a^2 - 1 = 0; a^2 = 1 \) (Column A)

\( (b - 2)(b + 2) = b^2 - 4 = 0; b^2 = 4 \) (Column B)

12. B. The sum \( x \), and \( \frac{3}{2}x = \frac{5}{2}x \)

The average = \( \frac{5}{2}x + 3 \) or \( \frac{5}{2}x \) (Column A)

13. B. \( 74 + x + 74 = 180 \)

\[ x = 180 - 148 \]

\[ x = 32 \] (Column A)

14. C. Area of \( ABC = \frac{bh}{2} \) or \( \frac{ac}{2} \). Therefore, \( bh = ac \).

15. D. We may not assume that this quadrilateral is a parallelogram and we have no basis for determining the value of \( n \), the angle opposite the one with the measure given as 110. We do know that \( k + l + m + n = 360 \).

16. A. \( AB \) will need 3 additional posts.

\( AC \) will need 4 additional posts.

\( BC \) will need 7 additional posts.
17. E. Assume $x, y, z$ are, respectively, sides of the original cube.
Then $3x, 3y, 3z$ will be sides of enlarged box.
Volume of original box = $xyz$
Volume of enlarged box = $(3x)(3y)(3z)$ or $27xyz$

18. E. Since $\frac{6}{14} = \frac{3}{7}$ and $\frac{9}{21} = \frac{3}{7}$, the sign to be inserted is $\cdot$.

19. E. $\frac{a}{b} - \frac{a}{c} = \frac{ac - ab}{bc}$

20. C. Ratio $= \frac{192}{224} = \frac{6}{7}$

21. B. I is not correct. Excise and customs taxes yield $22\%$ of the tax dollar or $22\%$.
II is correct. Corporate and individual income taxes yield $74\%$ of the tax dollar or $74\%$.
III is not correct. Taxes other than income taxes yield $4\% + 16\% + 6\%$ for a total of $26\%$ or $26\%$.

22. E. $\frac{22}{100}(360^\circ) = 79.2^\circ$. The closest correct choice is $80^\circ$.

23. E. The closest correct choice is $\frac{3}{4}$, since $\frac{74}{100}$ is close to $75\%$.

24. E. $\frac{43\%}{100} = \frac{43\%}{100} = \frac{43}{100} = 43\%$

25. A. Income taxes furnish $43\% + 31\%$ or $74\%$ of each tax dollar. Therefore 26\% of each tax dollar comes from other sources.

$\frac{26\%}{1.00} = \frac{0.26}{1.00} = \frac{\$260}{\$1000}$

26. B. (5)(40 minutes) = 200 minutes

$= 3\frac{1}{3}$ hours

$= 3$ hours and 20 minutes

6:40 P.M. is 3 hours and 20 minutes before 10 P.M.

27. C. Cost of merchandise sold = $204 - 82.50 = $121.50.
Gross profit for day was $169.50 - $121.50 or $48.$

28. C. Volume of water in rectangular tank = $(25\%)(9\%)(2\%)$
Let $x$ = height of this volume of water in cylindrical container.
Volume in cylindrical container = $(\pi)(\text{radius})^2$(height) or $(\pi)(5^2)(x)$ or $(25)(x)(\pi)$.
Since volumes are equal, $(25\%)(9\%)(2\%) = (25)(x)(\pi)$

29. B. The passenger train traveled 4 hours and covered 240 miles. When it overtook the freight train, the freight train had also covered 240 miles, but it traveled for 6 hours. The average rate of the freight train was $\frac{240}{6}$ or 40 miles per hour.

30. C. Mr. Brown completes a house and $\frac{1}{3}$ of a second house in 8 days. Mr. Pinter does $\frac{6}{8}$ or $\frac{3}{4}$ of a house in 8 days. Together they have done $1\frac{1}{3} + \frac{3}{4}$ or $\frac{25}{12}$ or 2 houses and $\frac{1}{12}$ of the third house. Mr. Slocum must do $\frac{11}{12}$ of the third house. In 1 day Mr. Slocum does $\frac{1}{12}$ of a house. He will therefore need 11 days to do $\frac{11}{12}$ of the house.

Section 5

1. B. Criticism that suggests areas of improvement is said to be constructive.
Remember, before you look at the answer choices, read the sentence and try to think of a word that makes sense.

2. D. Because the writer does not personally enjoy Eliot’s novels, before he criticizes her he feels he should, to be fair, pay tribute to her literary virtues. Look for signal words or phrases indicating that one thing causes another or logically determines another. In this instance, the conjunction as has the meaning because.

3. D. If “you may wonder” how the expert reaches his conclusions, it appears that it is questionable to rely on teeth for guidance in interpreting fossils. Choice D, inadequate, creates the element of doubt that the clause tries to develop.
Choice C, specious, also creates an element of doubt; however, nothing in the context justifies the idea that the reasoning is specious or false. Note that here you are dealing with an extended metaphor. Picture yourself hanging a heavy winter coat on a slim wooden peg. Wouldn’t you worry that the peg might prove inadequate or flimsy?
4. A. Here the task is to determine the communal reaction to crime. The writer maintains that the criminal justice system of punishments allows the community to purge itself of its anger, its sense of outrage at the criminal’s acts. Thus, it provides a catharsis or purgation for the community. Remember, in double-blind sentences, go through the answers, testing the first word in each choice and eliminating those that don’t fit. In this case, you can readily eliminate Choices B and E: it is unlikely that an essential purpose of the criminal justice system would be the provision of either a disclaimer (denial or disavowal, as in disavowing responsibility for a legal claim) or a document.

5. D. The key word here is assailed. Housman is attacking his rival. Thus he is in the tradition of scholarly invective (vehement verbal attack), criticizing his foe for turning to manuscripts merely for confirmation or support of old theories and not for enlightenment or illumination. Again, note the use of figurative language, in this case the simile of the drunkard.

6. B. Unquestioned assumptions and accepted opinions bind the natural philosopher, tyrannically restricting his ability to hypothesize freely. Thus, the philosopher must strive to achieve detachment in order to free himself from this tyranny.

7. D. Because the Dean was not able to disguise his distaste for the P.R. barrage, he failed to stifle his caustic or sarcastically biting remarks about the event. Note the implicit cause and effect relationship between the opening phrase and the central clause of the sentence.

8. B. Just as the yolk is central to the egg, the nucleus is central to the cell.

9. D. To sand wood is to smooth or polish it. To burnish metal is to polish it.

10. D. Someone vindictive or vengeful is lacking in mercy. Someone skeptical or suspicious is lacking in trustfulness.

11. B. The bouquet of wine is its distinctive fragrance. It is analogous to the aroma of coffee.

12. E. To ruffle someone’s composure is to disturb or trouble his self-possession. To upset someone’s equilibrium is to disturb or trouble his balance.

13. C. By definition, a sextant is a piece of equipment that is nautical. Similarly, a forceps is a piece of equipment that is surgical.

14. B. Someone refractory (stubborn; unmanageable) by definition is hard to manage. Likewise, someone lethargic (sluggish; drowsy) by definition is hard to stimulate.

15. E. Something latent has not yet emerged into view but has within it the potential for manifestation. Something dormant has not yet emerged from its sleep but has within it the potential for awakening into activity. As always, consider all the answer choices before making your selection. Choice C, for example, looks tempting: a perfunctory (mechanical; cursory) act lacks inspiration. However, something perfunctory does not necessarily have within it the potential for inspiration.

16. A. The defining characteristic of a precipice (very steep, sheer cliff) is steepness. The defining characteristic of a defile (long, narrow pass through which one files) is narrowness. Note, by the way, that you are dealing with a secondary meaning of defile, a meaning in which defile is a noun, not a verb. Even if you do not know this meaning of the word, you can still arrive at the correct answer by eliminating those answer choices which are patently incorrect. You know that a precipice is by definition characterized by steepness. Therefore, you can eliminate Choices C and E: a broad plateau is not characterized by depth, nor is a damp marsh characterized by aridity or dryness. Similarly, you can eliminate Choice B: while wells may sometimes be shallow, a well is not by definition characterized by shallowness. Finally, you can eliminate Choice D: range is not something that characterizes a mountain; a range is a chain of mountains. Thus, even without knowing the meaning of the noun defile you can satisfy yourself that Choice A is the correct answer.
17. D. The author first discusses Du Bois in relationship to black leaders in general and then provides the specific example of his relationship to Booker T. Washington. Choice A is incorrect. The author mentions Du Bois’ early support of Washington’s gradualist approach in order to contrast it with his later departure from Washington’s conservatism. Choice B is incorrect. The author discusses Du Bois’ personality only in passing; he discusses Washington’s personality not at all. Choice C is incorrect. The author’s chief concern is to describe Du Bois’ position, not analyze what lay behind his achieving this position. He spends more time showing why Du Bois angered his fellow blacks than he does showing why Du Bois attracted his fellow blacks. Choice E is incorrect. It is unsupported by the passage.

18. E. The last sentence points out that Du Bois originally agreed with Washington’s program. Choice A is incorrect. Nothing in the passage suggests that Du Bois sacrificed effective strategies out of a desire to try something new. Choice B is incorrect. Du Bois gained in influence, effectively winning away large numbers of blacks from Washington’s policies. Choice C is incorrect. Du Bois’ quickness to depart from conventional black wisdom when it proved inadequate to the task of advancing the race shows him to be well able to change with the times. Choice D is incorrect. Washington, not Du Bois, is described as seeking the good will of powerful whites.

19. C. The author does not portray Washington as versatile. Instead, he portrays Du Bois as versatile. Choice A is incorrect. The author portrays Washington as submissive to the majority; he shows him teaching blacks not to protest. Choice B is incorrect. The author portrays Washington as concerned with financial success; he shows him advocating property accumulation. Choice D is incorrect. The author portrays Washington as traditional in preaching industry; he shows him advocating hard work. Choice E is incorrect. The author portrays Washington as respectful of authority; he shows him deferring to powerful whites.

20. D. Although the author points out that Du Bois’ methods led him into conflicts, he describes Du Bois as “often...well in advance of his contemporaries” and stresses that his motives for departing from the mainstream were admirable. Thus, his attitude can best be described as approving.

21. C. The extremely general opening paragraphs and the careful use of simple examples imply that the passage most likely has been taken from a scientific journal article intended for a lay audience.

22. B. The mathematical expression of an electron “as if it were smeared out over a large region of space” describes the electron dynamically. Only Choice B possesses an analogous dynamic quality.

23. D. The opening two paragraphs about what is demanded of a physical theory give way to a discussion of quantum mechanics as a successful physical theory. Choice A is incorrect. While the author cites the wide applicability of quantum theory, nowhere does he openly assert that local realistic theories are inapplicable. Choice B is incorrect. The author describes the assumptions underlying local realistic theories, not those underlying quantum theory. Choice C is incorrect. It is unsupported by the passage. Choice E is incorrect. If anything, the author does the reverse.

24. A. Choice A is correct. You can arrive at it by the process of elimination. Question I is answerable based on the passage. The fourth paragraph enumerates the premises underlying the local realistic theories of nature. Therefore you can eliminate Choice B. Question II is unanswerable based on the passage. Nothing in the passage indicates that any premise of the local realistic theories has been invalidated. Therefore you can eliminate Choices C and E. Question III is also unanswerable based on the passage. Though mathematical expressions such as wave formulations are mentioned, no information is given regarding the degree to which one can interpret them physically. Therefore you can eliminate Choice D. Only Choice A is left. It is the correct answer.

25. C. The author does not assume the premise of Einstein separability to be invalid. Choice A is incorrect. The author gives the position of a pointer on a dial as an example of an observed phenomenon. Choice B is incorrect. The author’s opening paragraph presents such a generalization. Choice D is incorrect. The author lists the premises underlying local realistic theories. Choice E is incorrect. The passage concludes with the statement that one theory or the other must be wrong.

26. D. In its explanation of the two conflicting theories and its enumeration of the premises under-
lying the local realistic theories of nature, the passage can best be described as a systematic exposition.

27. A. The author mentions that many physicists find it sensible to limit the scope of quantum mechanics by regarding it "as merely a set of rules that prescribe the outcome of experiments." He then describes this limitation as unsatisfactory, given quantum mechanics' conflict with the so-called local realistic theories of nature and given the differences in predictions resulting from the current experiments he cites. Thus, the physicists who ignore these differences have not yet explained the results of the current experiments in elementary particle physics he cites.

28. D. Adulterated (made impure) is the opposite of pure.
Think of "adulterated food."

29. A. To distend (enlarge, as by swelling) is the opposite of to deflate.
Word Parts Clue: Dis- means apart; -tend means stretch. Something distended is enlarged by being stretched apart.
Think of "a distended stomach."

30. A. Transient (fleeting; temporary) is the opposite of permanent.
Think of "transient youth."

31. D. To revile (verbally abuse) something is the opposite of Praising it.
Think of "reviled as a traitor."

32. A. Elated (joyful, in high spirits) is the opposite of crestfallen (dejected).
Think of "elated by her success."

33. D. The opposite of propitious (favorable, advantageous) is unfavorable.
Think of being pleased by "propitious omens."

34. B. The opposite of to ensue (happen later, follow) is to precede.
Think of "the wedding that ensued."

35. C. Retrospection (looking backward; the act of surveying the past) is the opposite of anticipation (looking forward).
Think of "an old man lost in retrospection."

36. B. The egress (exit) is the opposite of the entrance.

Word Parts Clue: E- means out; -gress means go. The egress is the way you go out. Think of P. T. Barnum's sign, "This way to the egress."

37. A. To moulder (speak disconnectedly; talk without a clear purpose) is the opposite of to speak purposefully.
Think of "mouldering at random."

38. E. Hubris (overweening arrogance; pride that offends the gods) is the opposite of humility.
Think of "conceited hubris."

Section 6

1–4. To answer these questions, construct a calendar like the one below. The / mark indicates opportunities for the acquisition of documents; S and C indicate when each government could have received documents acquired on the days shown. B/A indicates the lunchtime meeting of the two traitors.

<table>
<thead>

</table>

1. C. Adoniram could acquire documents from Byram (who acquired them on October 19) at their lunch October 20, or on his own on the 21st. The Sulgraviants would receive them on the 24th or 25th, respectively (I, II). Adoniram cannot acquire and send any documents on the 22nd, so option III is out.

2. D. Work backwards from the calendar. On the 25th, the Carolingians can receive a document only if it was acquired on the 20th at lunch. But in that case, Adoniram must have bought it from Byram, since he had not received a document he could sell to Byram.
3. E. Adoniram can send documents only on the 20th or 21st; they could be received by the Carolingians only on the 25th or 26th. Choice B, therefore, is too narrow, while choice D includes an impossible date. Byram can send documents on the 19th, 20th, or 22nd—to the Sulgravians, who would receive them on the 23rd, 24th, or 26th. So choice A is too narrow and choice C includes an impossible date. But if Adoniram is working for the Carolingians and Byram for the Sulgravians, choice E is correct, since Adoniram had had no opportunity by the 20th to acquire anything to sell Byram.

4. A. Adoniram can acquire documents from Byram on the 20th and on his own on the 21st, so whichever government he works for can receive documents two days in a row (I). But Byram cannot acquire anything two days in a row, so both governments cannot receive documents two days in a row (II). Finally, the calendar should show you that either government could receive documents three days in a row only if they were sent both by Byram and by Adoniram, which is impossible under the rules stated.

5. A. The only inference that can logically be drawn is the one in choice A; since differences in perception do exist, but no physical differences, perception must depend partly on other factors. Choices B, C, and D all contain unsupported speculations about what those factors might be; choice E is irrelevant, since the data specify that the Bilge Islanders perceive fewer colors, not simply that they can name fewer colors. How this was determined we don’t know.

6. A. Since Ms. Brady makes her point by drawing an analogy, Mr. Flynn’s most effective rebuttal would be to undermine the strength of the analogy. He could do this by pointing out significant differences between the two situations that are supposed to be alike. That’s exactly what he does in choice A. In choice B, he simply asserts his own expertise, and in choice C he simply restates his argument. In choice D, he merely suggests that Brady’s argument may be weak, whereas in choice A he points out a specific weakness. In choice E, he does not even attempt a rebuttal.

7. D. Brady’s sole piece of evidence is the example of the two other companies that are like hers, i.e., that are analogous to hers (choice D). She never suggests what might be causing the problem of low profits (choice A). We do not know that the evidence she presents was previously overlooked (choice B). She discusses no flaw in Mr. Flynn’s reasoning (choice C). And opposing Mr. Flynn is not the same as questioning his competence (choice E).

8–12. Your first instinct may be to draw a map and try to place the towns on it directly. You’ll go hopelessly wrong if you try. (This is also true for other puzzles that contain two sets of ranked variables—John runs faster and jumps higher than Tom, and so on.) First place the towns on a north-south scale and on a separate east-west scale (Diagram 1). Then, if you wish, combine these into a two-dimensional map. This isn’t necessary, but it may make the questions a little easier. We’ve included it (Diagram 2).

8. B. Bowling Green is both farthest north and farthest west.

9. E. Ashland and East Liverpool are north of Fredericktown, while Coshocton is to the south. All three towns are east of Fredericktown.

10. D. This one may be easier to read from the two-dimensional map, but you can also read it from the two separate scales. Coshocton, Dover, and Fredericktown are all south and west of East Liverpool. Fredericktown is also south and west of Ashland. Bowling Green is not south of any town. Ashland is south of Bowling Green, but east of it.
11. A. The only ambiguous information in the statements concerns the north-south position of Dover. Statements (5) and (6) tell us that Dover and Coshocon are both south of Fredericktown, but not their positions in relation to each other. Choice A would clear this up. Choices B–E can be deduced from the statements as given.

12. C. Dover’s north-south position with respect to Ashland can be deduced from statements (1), (4), and (5), without statement (3). Dover’s east-west position with respect to Ashland can be deduced from statements (1) and (6). Each of the other choices is necessary to place the town it mentions either on the north-south scale, on the east-west scale, or on both.

13–16. You may not need to create a diagram for this fairly simple problem. If you do, it might look something like this:

```
     H
    /    \\
   F     E
  /  \    /  \\
 D    G   C
/  \  /  \  /  \\
C    B   A
```

16. B. He or she can explore any of the caves, provided the order is correct; but three out of the five caves Benny, Caesar, Ewell, Fields, and Hope may not be attempted in one tour. The spelunker may explore Abbott, Dangerfield, Guinness and any two of the restricted five.

17–22. Make a table showing which plumbers can work with which teams of electricians. A useful (but not essential) preliminary is to diagram the permissible combinations. A line shows that two persons must work together; a line with a cross through it, that they cannot work together.

```
Electricians:    Plumbers:
M N O            R S T U V W
```

In any case, four teams of electricians are possible, with the following possibilities for plumbers in each case:

- MNO: ST, UW, VW
- MN: RST, RUW, RVW, STU, STV, STW
- MO: STU, STV, STW
- NO: STU, STV, STW

A total of fifteen different combinations is possible, as this table shows. Now read the answers to the questions from the table.

17. D. By inspection of the table. Notice that choice B has an impossible combination—U and V. Also, choice E has a six-person team, which is impossible.

18. B. By inspection of the table.

19. E. Since Olive won’t work with Rich, he can work only with Mike and Nick as the two electricians; this eliminates choice B. The three possibilities for the other two plumbers are given in choice E.

20. A. This answer may be surprising—it might seem that filling two slots right away would reduce the number of choices. But as the table shows, Steve and Tom appear in eleven possible teams. Olive appears in nine, Wassily in seven, Ulysses and Vic in five each.
21. A. The electricians are Mike and Olive. Steve and Tom appear in all teams (I), but one team can be made up with neither Ulysses nor Vic (II).

22. C. Mike, Nick, Rich, Ulysses, Wassily and Mike, Nick, Rich, Vic, Wassily are two-electrician teams without Steve or Tom (I). There are three teams with neither Olive nor Rich (II). If Mike or Nick is not hired, the electricians must be Nick and Olive or Mike and Olive, respectively. Steve and Tom are in all teams which include Mike and Olive or Nick and Olive (III).

23. E. Choice A exposes the argument’s failure to admit that many specific problems may be solved by persons who don’t understand the broad picture; choice B exposes the assumption that because generalists are needed, all persons should be educated as generalists; choice C exposes the false dichotomy between specialization and seeing the broad picture; and choice D attacks the implicit assumption that fewer specialists are needed. Choice E, however, does not weaken the argument, because the argument is simply calling for a broad, liberal education, not necessarily the traditional liberal education.

24. E. The conclusion of the argument states that all good athletes eat a well-balanced diet. Choice E shows that this is not true; there is at least one good athlete who does not eat a well-balanced diet. Choices B and C are both possibly true, but do not weaken the original argument. Choice D can be deduced from the argument.

25. B. The logic of the argument is valid, and choice B is simply a rephrasing of the conclusion. Therefore, it must be true if the argument is true. It is possible for there to be some bad athletes who want to win (choices A and D), and for some bad athletes to eat a well-balanced diet (choice C). Choice E contradicts the argument’s conclusion.

**Section 7**

1. B. \[ a - b = 2 - 3 = -1; b - a = 3 - 2 = 1; \] \[-1 \text{ is less than 1.} \]

2. A. \[ \sqrt{14.4} = 3+ \text{ and } \sqrt{1.44} = 1+ \]

3. A. A straight line is the shortest distance between two points.

4. B. Circumference = \[ \pi d \]
   \[ \pi d = 9\pi \]
   \[ d = 9 \text{ and radius } = 4.5 \]
   Area = \[ \pi r^2 \]
   \[ \pi r^2 = 25\pi \]
   \[ r^2 = 25 \text{ and radius } = 5 \]

5. B. \[ \sqrt{100} = \sqrt{\frac{100}{2}} = \frac{10}{2} = 5 \text{ (Column A)} \]

6. C. Since \( b = c \) both fractions have equal denominators.

7. C. Between 10:55 P.M. and 11:25 P.M. 30 minutes or one-half hour elapses. Since the average rate is 50 miles per hour, the motorist covered 25 miles during this period.

8. B. Since \( z \) is positive, both denominators are positive, but \[ \frac{1}{z-1} \] has a smaller denominator and therefore has a greater value than \[ \frac{1}{z}. \]

9. C. Recall that in a proportion, the product of the means equals the product of the extremes.

10. D. If \( x = 1 \) and \( y = 2, \) \( 3x > y; \) but if \( x = 1 \) and \( y = 5, \) then \( 3x > y. \)

11. B. \[ \frac{1}{4} + \frac{3}{8} \text{ or } \frac{1}{4} \cdot \frac{8}{3} = \frac{2}{3} \text{ (Column A)} \]
   \[ \frac{1}{2} \text{ or } \frac{3}{2} > \frac{2}{3} \]

12. D. \((-2)^4 \) is negative if \( x \) is odd and positive if \( x \) is even. \( 1 \) raised to any power is \( 1. \) If \( x \) is even, then \((-2)^4 \) is greater than \( 1. \) If \( x \) is odd, then \((-2)^4 \) is negative.

13. D. Possible values of \( b \) range from 2 to 8. If \( b = 2, \) then \( 2b = 4, \) which is less than 6. If \( b = 3, \) \( 2b = 6. \) If \( b = 4, \) \( 2b = 8, \) which is more than 6.

14. C. The segment joining the midpoint of \( AC \) to the midpoint of \( CB \) consists of \( \frac{1}{2} \) of \( AC \) plus \( \frac{1}{2} \) of \( CB, \) or a total of \( \frac{1}{2} \) of \( AB \) (Column A).
   The segment from \( A \) to the midpoint of \( AB \) is also \( \frac{1}{2} \) of \( AB \) (Column B).

15. B. The lowest possible value of \( a \) will be reached when \( b^2 \) is at a minimum. The minimum value of \( b^2 \) could equal 0, in which case \( a^2 \) could equal 100 and \( a \) could have a value of \(-10. \)

16. E. Call \( 9x - 3y = 12 \) equation 1.
   Call \( 3x - 5y = 7 \) equation 2.
   Divide equation 1 by 3:
   \[ 3x - y = 4 \]
   Multiply by 2:
   \[ 6x - 2y = 8 \]

17. D. There is no time for lengthy multiplication.
   Note simply that the correct answer must end with the digit 8.
18. B. Since \(2^3 = 8\), then \(n + 2 = 3\) and \(n = 1\).

19. E. If 1 is added to an odd integer, the result is an even integer. Twice an even integer yields an even integer.

20. E. \( \frac{PQ}{PT} = \frac{3}{2}\) units \(= 1\frac{1}{2}\) = 150%

21. C.

<table>
<thead>
<tr>
<th>YEAR</th>
<th>SALES IN $1,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>1982</td>
<td>80</td>
</tr>
<tr>
<td>1983</td>
<td>70</td>
</tr>
<tr>
<td>1984</td>
<td>80</td>
</tr>
<tr>
<td>1985</td>
<td>60</td>
</tr>
</tbody>
</table>

SUM $290

AVERAGE = \(\frac{290}{4}\) = $72.5

22. D. I is correct. The sales for both 1982 and 1985 were $80,000. II is not correct. The sales for 1987 were $100,000. III is correct. The earnings for 1980 were $6,000, and the earnings for 1985 were $12,000.

23. D. Sales in 1980 were $30,000. Earnings in 1980 were $6,000.
\( \frac{30}{6} = \frac{5}{1} \)

24. E. The increase was from $10,000 to $12,000, or $2,000.
\( \frac{2,000}{10,000} = \frac{1}{5} = 20\% \).

25. A. If \(g = 6,000\), then \(2g = 12,000\).

26. B. Apply the Pythagorean theorem. Let \(x = \) distance from first base to third base.

\[
\begin{align*}
x^2 &= 90^2 + 90^2 \\
x^2 &= 8100 + 8100 \\
x^2 &= 16200 \\
x &= \sqrt{16200} \\
x &= 127
\end{align*}
\]

27. B. (A) \(0.3 = \frac{3}{10}\) \\
(B) \(\sqrt{0.3} = 0.5 + \) or more than \(\frac{5}{10}\) \\
(C) \(\frac{2}{5} = \frac{4}{10}\) \\
(D) \(\frac{1}{3} = \frac{3}{10}\) \\
(E) \(\left(\frac{22}{7}\right)\left(\frac{1}{100}\right) = \frac{22}{700} = \frac{3}{100} \) or \(0.3\)

28. C. \(66\frac{2}{3}\% = \frac{2}{3}\)
\(\frac{1}{2}\) of \(\frac{2}{3} = \frac{1}{3}\)
Mr. Nichols sells \(\frac{1}{3}\) of the value of the entire factory for $33,333.
Let \(x = \) value of entire factory.
\(\frac{1}{3}x = 33,333\)
\(x = 99,999\)

29. B. After a reduction of 20\%, the price of the garment is 80\% of the original price. The additional reduction, 30\% of the 80\%, results in a price of 56\% of the original price (note the incorrect Choice D). For the correct solution, consider that the price of 56\% of the original is actually a 44\% reduction of the original price.

30. D. The first wheel rotates once every 7, 14, 21, 28, 35, etc., minutes. The second wheel rotates once every 5, 10, 15, 20, 25, 30, 35, etc., minutes. They will both begin to rotate every 35 minutes.
Answer Sheet – MODEL TEST 3

Start with number 1 for each new section.
If a section has fewer than 38 questions, leave the extra spaces blank.

MODEL TEST 3

SECTION 1

Time—30 minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. The columnist was very gentle when he mentioned his friends, but he was bitter and even ________ when he discussed people who ________ him.

   (A) laconic…infuriated
   (B) acerbic…irritated
   (C) remorseful…encouraged
   (D) militant…distressed
   (E) stoical…alienated

2. Despite her ________ unwillingness, the promoters were still hopeful that, given sufficient diplomacy and flattery on their part, they could ________ her into signing the recording contract.

   (A) patent…entrap
   (B) extreme…intimidate
   (C) apparent…shame
   (D) painful…tantalize
   (E) obvious…inveigle

3. Although he was generally considered an extremely ________ individual, his testimony at the trial revealed that he had been very ________.

   (A) intrepid…valiant
   (B) guileless…hypocritical
   (C) abstemious…temperate
   (D) meek…timorous
   (E) ingenuous…obtuse

4. Reacting to Greene’s critical satire by stating that henceforth he will write to please himself, Orlando chooses obscurity; even ________ would be welcome.

   (A) notoriety
   (B) adulation
   (C) parody
   (D) anonymity
   (E) depreciation

5. Whereas off-Broadway theater over the past several seasons has clearly ________ a talent for experimentation and improvisation, one deficiency in the commercial stage of late has been its marked incapacity for ________.

   (A) manifested…spontaneity
   (B) lampooned…theatricality
   (C) cultivated…orthodoxy
   (D) disavowed…histrionics
   (E) betrayed…burlesque

6. The perpetual spinning of particles is much like that of a top, with one significant difference: unlike the top, the particles have no need to be wound up, for ________ is one of their ________ properties.

   (A) revolution…radical
   (B) motion…intangible
   (C) rotation…intrinsic
   (D) acceleration…lesser
   (E) collision…hypothetical

7. She conducted the interrogation not only with dispatch but with ________, being a person who is ________ in manner yet subtle in discrimination.

   (A) clan…enthusiastic
   (B) equanimity…abrupt
   (C) finesse…expeditious
   (D) zeal…doctrinaire
   (E) trepidation…cursory

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. REAM : PAPER::

   (A) skin : tissue
   (B) envelope : letter
   (C) cord : wood
   (D) swatch : cloth
   (E) chisel : stone

9. SMART : PAIN::

   (A) grieve : sorrow
   (B) wallow : misery
   (C) afflict : torment
   (D) mollify : anger
   (E) weaken : intensity

10. BAMBOO : SHOOT::

    (A) heather : spray
    (B) holly : shrub
    (C) bean : sprout
    (D) pepper : corn
    (E) oak : tree

11. DEFLECT : MISSILE::

    (A) defend : fortress
    (B) reflect : mirror
    (C) diversify : portfolio
    (D) dismantle : equipment
    (E) distract : attention

523
12. CLOY : PALATE::
(M) (A) sniff : nose
(B) slit : tongue
(C) surfeit : appetite
(D) cling : touch
(E) refine : taste

13. PRATFALL : EMBARRASSMENT::
(M) (A) deadlock : mortification
(B) checkup : reluctance
(C) downfall : penitence
(D) diehard : grievance
(E) windfall : jubilation

14. MULISH : PLANDY::
(M) (A) piggish : glutony
(B) sluggish : reluctance
(C) kittenish : motility
(D) apish : servility
(E) shrewish : amiability

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

During the 1930s, National Association for the Advancement of Colored People (NAACP) attorneys Charles H. Houston, William Hastie, James M. Nabrit, Leon Ransom, and Thurgood Marshall charted a legal strategy designed to end segregation in education. They developed a series of legal cases challenging segregation in graduate and professional schools. Houston believed that the battle against segregation had to begin at the highest academic level in order to mitigate fear of race mixing that could create even greater hostility and reluctance on the part of white judges. After establishing a series of favorable legal precedents in higher education, NAACP attorneys planned to launch an all-out attack on the separate-but-equal doctrine in primary and secondary schools. The strategy proved successful. In four major United States Supreme Court decisions, precedents were established that would enable the NAACP to construct a solid legal foundation upon which the Brown case could rest: Missouri ex rel. Gaines v. Canada, Registrar of the University of Missouri (1938); Sipuel v. Board of Regents of the University of Oklahoma (1948); McLaurin v. Oklahoma State Regents for Higher Education (1950); and Sweatt v. Painter (1950).

In the Oklahoma case, the Supreme Court held that the plaintiff was entitled to enroll in the university. The Oklahoma Regents responded by separating black and white students in cafeterias and classrooms. The 1950 McLaurin decision ruled that such internal separation was unconstitutional. In the Sweatt ruling, delivered on the same day, the Supreme Court held that the maintenance of separate law schools for whites and blacks was unconstitutional. A year after Herman Sweatt entered the University of Texas law school, desegregation cases were filed in the states of Kansas, South Carolina, Virginia, and Delaware, and in the District of Columbia asking the courts to apply the qualitative test of the Sweatt case to the elementary and secondary schools and to declare the separate-but-equal doctrine invalid in the area of public education.

The 1954 Brown v. Board of Education decision declared that a classification based solely on race violated the 14th Amendment to the United States Constitution. The decision reversed the 1896 Plessy v. Ferguson ruling which had established the separate-but-equal doctrine. The Brown decision more than any other case launched the “equalitarian revolution” in American jurisprudence and signaled the emerging primacy of equality as a guide to constitutional decisions; nevertheless, the decision did not end state-sanctioned segregation. Indeed, the second Brown decision, known as Brown II and delivered a year later, played a decisive role in limiting the effectiveness and impact of the 1954 case by providing southern states with the opportunity to delay the implementation of desegregation.

The intervention of the federal government and the deployment of the National Guard in the 1954 Little Rock crisis, and again in 1963 when the enrollment of James Meredith desegregated the University of Mississippi, highlight the role of federal power in promoting social change during this era. While black local and national leaders organized and orchestrated the legal struggles, and students joined in freedom rides and staged sit-ins, another equally important dimension of the rights quest took shape: the battle between federal and state authority and the evolution of the doctrine of federalism. The fact remains that the United States Supreme Court lacked the power to enforce its decisions. President Dwight D. Eisenhower’s use of federal troops in Little Rock was a major departure from the reluctance of past presidents to display federal power in the South, especially to protect the lives and rights of black citizens.
17. According to the passage, Houston aimed his legislative challenge at the graduate and professional school level on the basis of the assumption that
   (A) the greatest inequities existed at the highest academic and professional levels
   (B) the separate-but-equal doctrine applied solely to the highest academic levels
   (C) there were clear precedents for reform in existence at the graduate school level
   (D) the judiciary would feel less apprehension at desegregation on the graduate level
   (E) the consequences of desegregation would become immediately apparent at the graduate school level

18. The passage suggests that the reaction of the Oklahoma Regents to the 1948 Sipuel decision was one of
   (A) resigned tolerance
   (B) avowed uncertainty
   (C) moderate amusement
   (D) distinct displeasure
   (E) unquestioning approbation

19. Which of the following best describes the relationship between the McLaurin decision and the 1954 Brown v. Board of Education decision?
   (A) The McLaurin decision superseded the Brown decision.
   (B) The Brown decision provided a precedent for the McLaurin decision.
   (C) The Brown decision reversed the McLaurin decision.
   (D) The McLaurin decision limited the application of the Brown decision.
   (E) The McLaurin decision provided legal authority for the Brown decision.

20. To the claim that judicial decisions without executive intervention would have assured desegregation in education, the author would most probably respond with which of the following?
   (A) Marked disagreement
   (B) Grudging acquiescence
   (C) Studied neutrality
   (D) Complete indifference
   (E) Unqualified enthusiasm

21. The passage suggests that Brown v. Board of Education might have had an even more significant impact on segregation if it had not been for which of the following?
   (A) The deployment of the National Guard
   (B) The Plessy v. Ferguson decision
   (C) The 1955 Brown II decision
   (D) James Meredith’s enrollment in Mississippi
   (E) The Sweath v. Painter decision

22. Which of the following titles best describes the content of the passage?
   (A) Executive Intervention in the Fight against Segregated Education
   (B) The Brown Decision and the Equalitarian Revolution
   (C) A Long War: The Struggle to Desegregate American Education
   (D) The Emergence of Federalism and the Civil Rights Movement
   (E) Education Reform and the Role of the NAACP

23. Which of the following statements is most compatible with the principles embodied in Plessy v. Ferguson as described in the passage?
   (A) Internal separation of whites and blacks within a given school is unconstitutional.
   (B) Whites and blacks may be educated in separate schools so long as the schools offer comparable facilities.
   (C) The maintenance of separate professional schools for blacks and whites is unconstitutional.
   (D) The separate-but-equal doctrine is inapplicable to the realm of private education.
   (E) Blacks may be educated in schools with whites whenever the blacks and whites have equal institutions.

24. The aspect of Houston’s work most extensively discussed in the passage is its
   (A) psychological canniness
   (B) judicial complexity
   (C) fundamental efficiency
   (D) radical intellectualism
   (E) exaggerated idealism

One simple physical concept lies behind the formation of the stars: gravitational instability. The concept is not new; Newton first perceived it late in the 17th century. Imagine a uniform, static cloud of gas in space. Imagine then that the gas is somehow disturbed so that one small spherical region becomes a little denser than the gas around it so that the small region’s gravitational field becomes slightly stronger. It now attracts more matter to it and its gravity increases further, causing it to begin to contract. As it contracts its density increases, which increases its gravity even more, so that it picks up even more matter and contracts even further. The process continues until the small region of gas finally forms a gravitationally bound object.

25. The primary purpose of the passage is to
   (A) demonstrate the evolution of the meaning of a term
   (B) depict the successive stages of a phenomenon
   (C) establish the pervasiveness of a process
   (D) support a theory considered outmoded
   (E) describe a static condition
26. It can be inferred from the passage that the author views the information contained within it as
   (A) controversial but irrefutable
   (B) speculative and unprofitable
   (C) uncomplicated and traditional
   (D) original but obscure
   (E) sadly lacking in elaboration

27. The author provides information that answers which of the following questions?
   I. How does the small region’s increasing density affect its gravitational field?
   II. What causes the disturbance that changes the cloud from its original static state?
   III. What is the end result of the gradually increasing concentration of the small region of gas?
   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II and III

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. HAMPER:
   (A) feed
   (B) animate
   (C) facilitate
   (D) treat lightly
   (E) caution tactfully

29. URBANE:
   (A) civic
   (B) remote
   (C) deceptive
   (D) conventional
   (E) naive

30. DEMISE:
   (A) integrity
   (B) irritation
   (C) birth
   (D) excess
   (E) surmise

31. PARIAH:
   (A) miser
   (B) nomad
   (C) servant
   (D) idol
   (E) renegade

32. PROSTRATE:
   (A) divert
   (B) strengthen
   (C) depreciate
   (D) scrutinize
   (E) reassure

33. CONTENTIOUS:
   (A) amenable
   (B) inactive
   (C) dispassionate
   (D) callow
   (E) severe

34. DEBACLE:
   (A) effort
   (B) success
   (C) drought
   (D) transience
   (E) dominance

35. HAPLESS:
   (A) fortuitous
   (B) fortunate
   (C) fortified
   (D) forbidden
   (E) forestalled

36. EXACERBATE:
   (A) alleviate
   (B) bewilder
   (C) contemplate
   (D) intimidate
   (E) economize

37. PROBITY:
   (A) fallacy
   (B) improbability
   (C) conviction
   (D) depravity
   (E) avidity

38. BANEFUL:
   (A) susceptible
   (B) incongruous
   (C) impulsive
   (D) salubrious
   (E) desultory

SECTION 2
Time—30 minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Even though previous reporters had lampooned the candidate throughout the campaign, he ------- further interviews.
   (A) resisted  
   (B) halted  
   (C) sidestepped  
   (D) welcomed  
   (E) dreaded

2. Soap operas and situation comedies, though given to distortion, are so derivative of contemporary culture that they are inestimable ------- the attitudes and values of our society in any particular decade.
   (A) contraventions of  
   (B) antidotes to  
   (C) indices of  
   (D) prerequisites for  
   (E) determinants of

3. Perry’s critics in the scientific world ------- that many of the observations he has made during more than a decade of research in Costa Rica have been reported as ------- in popular magazines rather than as carefully documented case studies in technical journals.
   (A) intimate…hypotheses  
   (B) charge…anecdotes  
   (C) applaud…rumors  
   (D) claim…scholarship  
   (E) apologize…fabrications

4. The homeless wino crouched over the subway grating for warmth, the bag lady groping for recyclable bottles in the garbage can, the line of hungry men waiting at the soup kitchen’s door—all these scenes of suffering ------- the ------- of the economic boom proclaimed by the prophets of affluence.
   (A) avouch…existence  
   (B) belie…reality  
   (C) challenge…legality  
   (D) predicate…validity  
   (E) minimize…gravity

5. Slander is like counterfeit money: many people who would not coin it ------- it without qualms.
   (A) waste  
   (B) denounce  
   (C) circulate  
   (D) withdraw  
   (E) invest

6. Compromise is ------- to passionate natures because it seems a surrender; and to intellectual natures because it seems a -------.
   (A) odious…confusion  
   (B) inherent…fabrication  
   (C) welcome…fulfillment  
   (D) unsuited…submission  
   (E) intimidating…dichotomy

7. Although we might ------- Milton’s remark that he wrote prose with his left hand as characteristically ironic, we have tended to accept uncritically an apparent Renaissance prejudice against prose, using comments like Milton’s to ------- our own prejudices against prose as a less immediately artful medium than poetry or drama.
   (A) refute…countervail  
   (B) dismiss…invalidate  
   (C) challenge…illuminate  
   (D) expurgate…exacerbate  
   (E) discount…buttress

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. CONFINE : PRISONER::
   (A) impeach : governor  
   (B) trace : fugitive  
   (C) detain : suspect  
   (D) testify : witness  
   (E) ambush : sentry

9. SWATCH : FABRIC::
   (A) chip : paint  
   (B) slag : metal  
   (C) mortar : brick  
   (D) essence : perfume  
   (E) loaf : bread
10. TENDRIL : VINE::
   (A) trunk : tree
   (B) pollen : flower
   (C) pseudopod : amoeba
   (D) trellis : honeysuckle
   (E) cobra : snake

11. BATTEN : HATCH::
    (A) shatter : window
    (B) unload : cargo
    (C) pack : chest
    (D) latch : door
    (E) repair : cupboard

12. CONTEMPORANEOUS : EVENTS::
    (A) adjacent : objects
    (B) modern : times
    (C) temporary : measures
    (D) gradual : degrees
    (E) repetitive : steps

13. LIMERICK : POEM::
    (A) motif : symphony
    (B) prologue : play
    (C) catch : song
    (D) sequence : sonnet
    (E) epigraph : novel

14. RETAINER : RETINUE::
    (A) servant : mansion
    (B) witch : coven
    (C) director : corporation
    (D) miser : hoard
    (E) vassal : homage

15. HERO : ACCOLADE::
    (A) mentor : advice
    (B) suitor : proposal
    (C) clodhopper : grace
    (D) laughingstock : ridicule
    (E) defendant : indictment

16. RIDER : BILL::
    (A) purchase : receipt
    (B) endorsement : policy
    (C) violation : ordinance
    (D) consignment : invoice
    (E) summons : citation

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

With Meredith’s *The Egoist* we enter into a critical problem that we have not yet before faced in these studies. That is the problem offered by a writer of recognizably impressive stature, whose work is informed by a muscular intelligence, whose language has splendor, whose “view of life” wins our respect, and yet for whom we are at best able to feel only a passive appreciation which amounts, practically, to indifference. We should be unjust to Meredith and to criticism if we should, giving in to the inertia of indifference, simply avoid dealing with him and thus avoid the problem along with him. He does not “speak to us,” we might say; his meaning is not a “meaning for us”; he “leaves us cold.” But do not the challenge and the excitement of the critical problem as such lie in that ambivalence of attitude which allows us to recognize the intelligence and even the splendor of Meredith’s work, while, at the same time, we experience a lack of sympathy, a failure of any enthusiasm of response?

17. According to the passage, the work of Meredith is noteworthy for its elements of
    (A) sensibility and artistic fervor
    (B) ambivalence and moral ambiguity
    (C) tension and sense of vitality
    (D) brilliance and linguistic grandeur
    (E) wit and whimsical frivolity

18. All of the following can be found in the author’s discussion of Meredith EXCEPT
    (A) an indication of Meredith’s customary effect on readers
    (B) an enumeration of the admirable qualities in his work
    (C) a selection of hypothetical comments at Meredith’s expense
    (D) an analysis of the critical ramifications of Meredith’s effect on readers
    (E) a refutation of the claim that Meredith evokes no sympathy

19. It can be inferred from the passage that the author finds the prospect of appraising Meredith’s work critically to be
    (A) counterproductive
    (B) extremely formidable
    (C) somewhat tolerable
    (D) markedly unpalatable
    (E) clearly invigorating
20. It can be inferred from the passage that the author would be most likely to agree with which of the follow-
ing statements about the role of criticism?

(A) Its prime office should be to make our enjoy-
ment of the things that feed the mind as con-
scious as possible.
(B) It should be a disinterested endeavor to learn and
propagate the best that is known and thought in
the world.
(C) It should enable us to go beyond personal preju-
dice to appreciate the virtues of works anti-
pathetic to our own tastes.
(D) It should dwell upon excellences rather than
imperfections, ignoring such deficiencies as
irrelevant.
(E) It should strive both to purify literature and to
elevate the literary standards of the reading
public.

Genetic variation is also important in the evolu-
tion of lower organisms such as bacteria, and here
too it arises from mutations. Bacteria have only
one chromosome, however, so that different alleles
or variant forms of a gene are not normally present
within a single cell. The reshuffling of bacterial
genes therefore ordinarily requires the introduc-
tion into a bacterium of DNA carrying an allele that
originated in a different cell. One mechanism
accomplishing this interbacterial transfer of genes
in nature is transduction: certain viruses that can
infect bacterial cells pick up fragments of the bac-
terial DNA and carry the DNA to other cells in the
course of a later infection. In another process,
known as transformation, DNA released by cell
death or other natural processes simply enters a
new cell from the environment by penetrating the
cell wall and membrane. A third mechanism, con-
jugation, involves certain of the self-replicating cir-
cular segments of DNA called plasmids, which can
be transferred between bacterial cells that are in
direct physical contact with each other.

Whether the genetic information is introduced
into a bacterial cell by transduction, transformation
or conjugation, it must be incorporated into the
new host’s hereditary apparatus if it is to be propa-
gated as part of that apparatus when the cell divides. As in the case of higher organisms, this
incorporation is ordinarily accomplished by the
exchange of homologous DNA; the entering gene
must have an allelic counterpart in the recipient
DNA. Because homologous recombination
requires overall similarity of the two DNA seg-
ments, it can take place only between structurally
and ancestraly related segments. And so, in bacte-
ria as well as in higher organisms, the generation
of genetic variability is limited to what can be attained by exchanges between different alleles of the same
genes or between different genes that have
stretches of similar nucleotide sequences. This
requirement imposes severe constraints on the rate
of evolution that can be attained through homolo-
gous recombination.

Until recently mutation and homologous recombi-
nation nevertheless appeared to be the only important
mechanisms for generating biological diversity. They
seemed to be able to account for the degree of diversity
observed in most species, and the implicit constraints of homologous recombination—which prevent the
exchange of genetic information between unrelated
organisms lacking extensive DNA-sequence similarity
—appeared to be consistent with both a modest rate of
biological evolution and the persistence of distinct spe-
cies that retain their basic identity generation after
generation.

Within the past decade or so, however, it has become
increasingly apparent that there are various “illegiti-
mate” recombinational processes, which can join
together DNA segments having little or no nucleotide-
sequence homology, and that such processes play a sig-
nificant role in the organization of genetic information
and the regulation of its expression. Such recombinna-
tion is often effected by transposable genetic elements: struc-
urally and genetically discrete segments of DNA that
have the ability to move around the chromosomes and
the extrachromosomal DNA molecules of bacteria and
higher organisms. Although transposable elements have
been studied largely in bacterial cells, they were origi-
nally discovered in plants and are now known to exist in
animals as well. Because illegitimate recombination can
join together DNA segments that have little, if any,
ancestral relationship, it can affect evolution in quantum
leaps as well as in small steps.

21. The passage supplies information for answering
which of the following questions?

I. Why are interbacterial transfer mechanisms
important for genetic variation in bacteria?
II. What is the role of cell death in the interbacterial
transfer of genes?
III. How do the so-called “illegitimate” recombinational processes differ from homologous
recombination?

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II and III

22. The primary purpose of the passage is to

(A) examine the evidence supporting the existence of transposable genetic elements in bacteria
(B) report on the controversy over the use of illegitimate recombinational processes in bacteria
(C) discuss evolutionary theory and some hypotheses proposed to account for its anomalies
(D) explain established mechanisms for genetic change and introduce a newly discovered one
(E) restrict the scope of the investigation of the causes of genetic variation in bacteria
23. The authors use the term “illegitimate” recombinational processes” (lines 57–58) to refer to
   (A) biological processes outlawed by federal regulation
   (B) processes requiring similarity of nucleotide sequences
   (C) processes that break the rules of homologous recombination
   (D) processes that cannot be found among higher organisms
   (E) processes exceeding the permissible amount of mutation

24. In terms of its tone and form, the passage can best be characterized as
   (A) an angry refutation
   (B) a partisan interpretation
   (C) an equivocal endorsement
   (D) a reflective meditation
   (E) a dispassionate explication

25. A necessary precondition for the process known as transformation to take place is that the cell wall and membrane be
   (A) contiguous
   (B) pliant
   (C) permeable
   (D) homologous
   (E) self-replicating

26. The function of viruses in the mechanism of transduction in bacteria is most like the function of
   (A) caterpillars in the process of metamorphosis
   (B) bees in the process of pollination
   (C) germs in the process of immunization
   (D) pores in the process of perspiration
   (E) atoms in the process of fission

27. It can be inferred from the passage that the paragraph immediately preceding this excerpt most likely dealt with the
   (A) probability of mutations in colonies of bacteria
   (B) significance of genetic diversity in higher organisms
   (C) discovery of transposable genetic elements in plants
   (D) relationship between bacteria and higher organisms
   (E) evidence supporting the theory of evolution

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. CONDONE:
   (A) denounce
   (B) endure
   (C) imagine
   (D) remember
   (E) grieve

29. ANTITHETICAL:
   (A) qualitative
   (B) unnatural
   (C) deceptive
   (D) supportive
   (E) noncommittal

30. OMNISCIENCE:
   (A) power
   (B) extravagance
   (C) magnanimity
   (D) conscience
   (E) ignorance

31. MOLLIFY:
   (A) acquit
   (B) forbid
   (C) embarrass
   (D) provoke
   (E) demolish

32. GAUCHE:
   (A) grotesque
   (B) tactful
   (C) rightful
   (D) fashionable
   (E) inane
33. DIATRIBE:
   (A) medley
   (B) dilemma
   (C) afterthought
   (D) rebuttal
   (E) praise

34. GAINSAIY:
   (A) estimate
   (B) corroborate
   (C) forfeit
   (D) expend
   (E) neglect

35. PROLIXITY:
   (A) proximity
   (B) disinclination
   (C) circuitousness
   (D) extremity
   (E) terseness

36. AVID:
   (A) veracious
   (B) forgetful
   (C) insignificant
   (D) turgid
   (E) loath

37. REPINE:
   (A) endure grudgingly
   (B) maintain composure
   (C) express satisfaction
   (D) arouse hostility
   (E) attract attention

38. SALIENCE:
   (A) insipidity
   (B) immutability
   (C) incongruity
   (D) intransigence
   (E) inconspicuousness

DO NOT WORK ON ANY OTHER SECTION IN THE TEST.

SECTION 3
Time—30 Minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>

10. Area of square \(ABCD = \text{Area of triangle } RST\)

\[ST = 6\] \[M\]

Circleville is 23 kilometers from Center City and Centerville is 46 kilometers from Center City.

11. Distance from Circleville to Centerville: \[23\] \[M\]

12. Area of square III: \[\text{Twice the area of triangle } ABC\] \[M\]

Area of triangle \(ABC + \text{area of square } BCDE = 125\) and perimeter of square = 40

13. The shortest distance from point \(A\) to \(ED\): \[\text{Twice the length of } EB\] \[M\]

\[\frac{\text{Radius of circle } A}{\text{Radius of circle } B} = \frac{1}{2}\]

14. Four times the area of circle \(A\) \[Area of circle \(B\)\] \[M\]

\[BD = DC = AC\] and \[x = 50\]

15. \[x\]  
   \[y\] \[H\]
Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. An American tourist in Paris finds that he weights 70 kilograms. When he left the United States he weighed 144 pounds. If 1 kilogram = 2.2 pounds, his net change in weight (in pounds) is
   (A) - 31.8
   (B) - 10
   (C) 0
   (D) + 10
   (E) + 31.8

17. The ratio of boys to girls in a class is \(a:b\). What part of the class is made up of girls?
   (A) \(\frac{b}{ab}\)
   (B) \(\frac{a}{ab}\)
   (C) \(\frac{b}{a + b}\)
   (D) \(\frac{a}{b + a}\)
   (E) \(\frac{a + b}{b}\)

18. Which of the following is greater than \(\frac{1}{4}\)?
   (A) \((0.25)^2\)
   (B) \(\sqrt{\frac{1}{4}}\)
   (C) \((\frac{1}{4})^3\)
   (D) 0.04
   (E) \(\frac{1}{250}\)

19. If \(xyz = 240\), which of the following CANNOT be a value of \(y\)?
   (A) 0
   (B) 2
   (C) 5
   (D) 3
   (E) 8

20. A piece of paper with an area of 60 square inches is divided into two pieces so that the area of one is \(\frac{2}{3}\) the area of the other. What is the area (in square inches) of one of the pieces?
   (A) 15
   (B) 20
   (C) 24
   (D) 30
   (E) 45

Questions 21-25 refer to the following graph.

21. How many cases of tuberculosis per 100,000 population were reported for Central Harlem for 1979?
   (A) 50
   (B) 55
   (C) 60
   (D) 65
   (E) 500

22. During what year was there the greatest difference between the cases per 100,000 of tuberculosis in New York City and in the rest of the country?
   (A) 1969
   (B) 1972
   (C) 1980
   (D) 1985
   (E) 1990

23. When did Central Harlem experience the sharpest rise in tuberculosis cases?
   (A) 1972–1973
   (B) 1973–1974
   (C) 1975–1976
   (D) 1976–1977
   (E) 1980–1981
24. When did New York City and the rest of the country have ALMOST the same number of tuberculosis cases per 100,000 population?

(A) 1975
(B) 1976
(C) 1977
(D) 1978
(E) 1979

25. In 1990, how many new cases of tuberculosis per 1,000 population occurred in New York City?

(A) 0.5
(B) 5.0
(C) 5.5
(D) 50.0
(E) 50.5

26. A rectangle $l$ inches long and $w$ inches wide is made 3 inches longer. The area (in square inches) has increased by

(A) $3w$
(B) $3l$
(C) $3w$
(D) $3(l + w)$
(E) $3l + 3w + 9$

27. If $x + 2y = 1\frac{1}{3}$ and $x - y = \frac{1}{3}$, then $3y =$

(A) $-\frac{1}{3}$
(B) 0
(C) $\frac{1}{3}$
(D) 1
(E) $1\frac{2}{3}$

28. City X is 200 miles east of City Y, and City Z is 150 miles directly north of City Y. What is the shortest distance (in miles) between X and Z?

(A) $50\sqrt{7}$
(B) 175
(C) 200
(D) 250
(E) 300

29. The price of a balcony seat in a theater is $\frac{1}{3}$ the price of a seat in the orchestra. When the theater is completely sold out, the total receipts from the 600 orchestra seats and the 450 balcony seats are $4,500. What is the price of one orchestra seat?

(A) $2.00$
(B) $2.30$
(C) $4.00$
(D) $6.00$
(E) $10.00$

30. In the figure above, $ABCD$ is a square of side 10. $AFC$ is an arc of a circle with the center at $D$ and radius 10. $AGC$ is an arc of a circle with the center at $B$ and radius 10. What is the area of the shaded region?

(A) $50\pi - 100$
(B) $25\pi - 100$
(C) $100 - 25\pi$
(D) $100 - 50\pi$
(E) $100\pi - 100$

21. To have periodic investments grow to $1,000 in 7 years, how much more will need to be invested annually at the 7% rate than at the 6% rate?
   (A) $4.05
   (B) $4.09
   (C) $4.20
   (D) $4.22
   (E) $5.00

22. How many years will it take for annual investments of $25.65, invested at 6%, to grow to $1,000?
   (A) 12
   (B) 14
   (C) 16
   (D) 18
   (E) 20

23. At a rate of 14%, how much more is the annual investment for a 10-year period than for a 14-year period?
   (A) $22.
   (B) $23.
   (C) $23.34
   (D) $45.
   (E) $45.36

24. What is the total amount that must be invested at 9% over a period of 4 years to have $1,000 at the end of this period?
   (A) $200
   (B) $352
   (C) $400
   (D) $502
   (E) $802
25. For how many years and at which rate should periodic payments of less than $20 a year be invested in order to grow to $1,000?
   (A) 18 years at 8%
   (B) 18 years at 9%
   (C) 18 years at 10%
   (D) 20 years at 7%
   (E) 20 years at 8%

26. A graduating class of 356 votes to choose a president. With 5 candidates seeking office, what is the least number of votes a successful candidate could receive and yet have more votes than any other candidate?
   (A) 71
   (B) 72
   (C) 89
   (D) 178
   (E) 179

27. The wheel of a bicycle is 28 inches in diameter. How many feet will the bicycle cover in 9 turns of the wheel? (Use \( \pi = \frac{22}{7} \)).
   (A) 66
   (B) 252
   (C) 396
   (D) 462
   (E) 792

28. A dress shop marked down all merchandise as follows:

Which group of merchandise was offered at the greatest rate of discount from its original price?
   (A) A
   (B) B
   (C) C
   (D) D
   (E) E

29. \( AB = AC, DB = DC, \angle ABC = \frac{1}{2} \angle DBC \), and \( m\angle D = 70 \). How many degrees are there in \( \angle A \)?
   (A) 55
   (B) 70
   (C) 105
   (D) 110
   (E) 125

30. In a group of 15, 7 can speak Spanish, 8 can speak French, and 3 can speak neither. What fraction of the group can speak both French and Spanish?
   (A) \( \frac{1}{5} \)
   (B) \( \frac{4}{15} \)
   (C) \( \frac{1}{3} \)
   (D) \( \frac{7}{15} \)
   (E) \( \frac{2}{3} \)

25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

John is undecided which of four popular novels to buy. He is considering a spy thriller, a murder mystery, a Gothic romance, and a science fiction novel. The books are written by Rothko, Gorky, Burchfield, and Hopper, not necessarily in that order, and published by Heron, Pigeon, Bluejay, and Sparrow, not necessarily in that order.

1. The book by Rothko is published by Sparrow.
2. The spy thriller is published by Heron.
3. The science fiction novel is by Burchfield and is not published by Bluejay.
4. The Gothic romance is by Hopper.

1. Pigeon publishes
   (A) the murder mystery
   (B) the science fiction novel
   (C) the spy thriller
   (D) the Gothic romance
   (E) the novel by Rothko

2. The novel by Gorky is
   (A) a science fiction novel published by Bluejay
   (B) a Gothic romance published by Bluejay
   (C) published by Heron and is a murder mystery
   (D) published by Pigeon and is a Gothic romance
   (E) published by Heron and is a spy thriller

3. John purchases books by the two authors whose names come first and third in alphabetical order. He does not buy
   (A) the murder mystery
   (B) the book published by Pigeon
   (C) the science fiction novel
   (D) the book published by Bluejay
   (E) the Gothic romance

4. On the basis of the first paragraph and statements (2), (3), and (4) only, it is possible to deduce that
   I. Rothko wrote the murder mystery or the spy thriller
   II. Sparrow published the murder mystery or the spy thriller
   III. the book by Burchfield is published by Sparrow or Pigeon
   (A) I only
   (B) II only
   (C) III only
   (D) I and III only
   (E) I, II, and II

Questions 5–7

When a farmer cultivates his land with an investment of $x for machinery, fertilizer, and labor, his average yield per dollar of investment is 10 bushels of potatoes. The next year he doubles his investment of labor and capital on the same land and he finds that his yield per dollar of investment is 15 bushels of potatoes. The next year he doubles that investment and his yield per dollar of investment is 12 bushels of potatoes.

5. The increase in yield per dollar of investment during the second year was most probably due to
   (A) better, more expensive equipment
   (B) more efficient use of all available soil
   (C) greater incentive to farm workers
   (D) better supervision of larger labor force
   (E) greater efficiency because of higher salaries

6. What accounts for the decrease in yield per dollar during the third year?
   (A) Bad weather reduces profits regardless of efficiency.
   (B) Poor irrigation with crowded crops reduces the size of a crop.
   (C) The limit of efficiency per unit of land was reached.
   (D) Increased costs of production decreased proportionate yield.
   (E) Inflation was a factor.

7. The situation in this passage illustrates the fact that
   (A) farmers must receive federal subsidies
   (B) increasing capital investment results in lower cost of production per unit of product
   (C) there is a point in investment when a greater total yield results, but the increased yield is less than proportionate
   (D) many factors influence profitable farming
   (E) there is a limit to profit in agriculture

Questions 8–12

On Sunday, December 23, four ships were berthed at the New York City Municipal Pier at West 55 Street. All four ships were beginning their series of winter cruises to various ports in the Atlantic and the Caribbean.

Ship W left at 4 P.M. on Sunday, December 23, for a series of 8-day cruises to Bermuda and Nassau.
Ship X left at 4:30 P.M. on Sunday, December 23, for a series of alternating 11- and 13-day cruises.
Ship Y sailed at 5 P.M. on Sunday, December 23, for a series of 5-day cruises to Bermuda.
Ship Z sailed on Monday, December 24, for a series of 7-day cruises to Nassau.
Each cruise officially begins on the day after departure. Each ship is scheduled to return to New York City early in the morning after the last day of the cruise, and leave again late in the afternoon of the same day.

8. On December 31, which ships will be sailing from New York on a New Year’s Eve cruise?
   (A) W and X
   (B) X and Y
   (C) W and Z
   (D) X and Z
   (E) X, Y, and Z

9. On how many sailing dates between Dec. 24 and Feb. 28 will ship W be moored alongside another ship?
   (A) 0
   (B) 2
   (C) 4
   (D) 5
   (E) 6

10. On how many occasions between Dec. 24 and Feb. 28 will three ships be moored at the pier?
    (A) 0
    (B) 1
    (C) 2
    (D) 3
    (E) 4

11. On which day of the week will these four ships make most of their departures?
    (A) Sunday
    (B) Monday
    (C) Tuesday
    (D) Thursday
    (E) Saturday

12. On which days of the week in the period between Dec. 24 and Feb. 28 will the pier be least crowded?
    (A) Tuesday and Friday
    (B) Tuesday and Thursday
    (C) Friday and Saturday
    (D) Wednesday and Thursday
    (E) Thursday and Saturday

Questions 13–16

Sanitation pick-up in Monday-Wednesday-Friday pickup areas will be cancelled Friday in New Albion and New Shetland, and Monday in New Wales; pickup in Tuesday-Thursday-Saturday areas will be cancelled Saturday in all three states.

The post office and other federal offices, normally open Monday through Saturday, will be closed Saturday but open Friday and Monday in all three states.

(Banks are normally open on Saturday only in New Albion; state government offices are normally open Saturday only in Wales.)

13. Which is not available Friday, Saturday, or Monday in New Wales?
    (A) Banking services
    (B) State government office services
    (C) Sanitation pickup in some areas
    (D) Postal services
    (E) Federal government office services

14. Mrs. Semkow goes to the post office, the bank, and the state income tax bureau on Monday. She may live in
    I. New Albion
    II. New Shetland
    III. New Wales
    (A) I only
    (B) II only
    (C) I or III only
    (D) II or III only
    (E) I, II, or III

15. Mr. Rudolph finds all but one of the listed services available Friday. He lives in
    (A) New Shetland or New Albion
    (B) a Monday-Wednesday-Friday pickup area in New Wales
    (C) any area in New Albion or New Wales
    (D) a Tuesday-Thursday-Saturday pickup area in any of the three states
    (E) a Monday-Wednesday-Friday area in New Albion

16. In which area(s) is there no deviation from normal service on Monday for any of the services listed?
    (A) All of New Albion
    (B) Monday-Wednesday-Friday pickup areas in New Albion and New Wales
    (C) Tuesday-Thursday-Saturday pickup areas in New Shetland and New Wales
    (D) All of New Wales
    (E) Mondays-Wednesday-Friday areas in New Shetland

Observance of Memorial Day, which falls on a Saturday this year, will be as follows for the tristate area (New Albion, New Shetland, New Wales):

Banks and government departments which are normally open on Saturdays will close.

Those normally closed Saturdays will close as follows:

Banks will close Friday in New Wales and Monday in New Shetland.

State government offices will close Friday in New Albion and New Shetland.
Questions 17–22

(1) An Airedale, a boxer, a collie, and a Doberman win the top four prizes in the Kennel Show. Their owners are Mr. Edwards, Mr. Foster, Mr. Grossman, and Ms. Huntley, not necessarily in that order. Their dogs’ names are Jack, Kelly, Lad, and Max, not necessarily in that order.

(2) Mr. Grossman’s dog wins neither first nor second prize.

(3) The collie wins first prize.

(4) Max wins second prize.

(5) The Airedale is Jack.

(6) Mr. Foster’s dog, the Doberman, wins fourth prize.

(7) Ms. Huntley’s dog is Kelly.

17. First prize is won by

(A) Mr. Edwards’s dog
(B) Ms. Huntley’s dog
(C) Max
(D) Jack
(E) Lad

18. Mr. Grossman’s dog

(A) is the collie
(B) is the boxer
(C) is the Airedale
(D) wins second prize
(E) is Kelly

19. In which of the following statements are the dogs correctly listed in descending order of their prizes?

I. Kelly; the Airedale; Mr. Edward’s dog
II. The boxer; Mr. Grossman’s dog; Jack
III. Mr. Edward’s dog; the Airedale; Lad

(A) I only
(B) II only
(C) III only
(D) I and III only
(E) II and III only

20. Lad

(A) is owned by Mr. Foster
(B) is owned by Mr. Edwards
(C) is the boxer
(D) is the collie
(E) wins third prize

21. On the basis of statements (1), (3), (4), (5), and (6)

(A) I and II only
(B) I and III only
(C) II and III only
(D) I, II, and III
(E) Neither I, II, nor III

22. On the basis of statements (1), (2), (3), (4), and (7) only, which of the following may be deduced?

I. Mr. Grossman’s dog is Jack or Lad.
II. Mr. Edward’s dog wins first or second prize.
III. Kelly is the collie.

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

Questions 23 and 24

(1) All students who major in philosophy wear Clavert Kreem jeans.

(2) None of the students in the Marching and Chowder Society wears Calvert Kreem jeans or majors in history.

(3) If Jack majors in philosophy, Mary majors in history.

23. If the statements above are all true, which of the following must also be true?

(A) If Jack majors in philosophy, Mary does not wear Calvert Kreem jeans.
(B) None of the students in the Marching and Chowder Society majors in philosophy.
(C) If Jack wears Clavert Kreem jeans, he majors in philosophy.
(D) If Mary majors in history, Jack is not in the Marching and Chowder Society.
(E) Either Jack or Mary wears Calvert Kreem jeans.

24. The conclusion “Jack does not major in philosophy” could be validly drawn from the statements above if it were established that

I. Mary does not major in history
II. Jack does not belong to the Marching and Chowder Society
III. Jack does not wear Calvert Kreem jeans

(A) I only
(B) II only
(C) III only
(D) I and III only
(E) II and III only
25. Spokesman for a chemical company to residents of a nearby town: We have conducted tests and have found no evidence that the fumes leaking from our waste disposal site are harmful to humans. There is no reason to be alarmed, much less to begin evacuating people from their homes.

Which of the following would be the least relevant question for the head of the residents’ committee to direct to the chemical company spokesman?

(A) What steps are being taken to correct the situation?
(B) Are further tests being conducted?
(C) How much will it cost you to stop the leaks?
(D) Do the fumes have an adverse effect on plants or animals?
(E) What are the possible long-term effects of exposure to the fumes?

SECTION 6
Time—30 minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

(1) All G’s are H’s.
(2) All G’s are J’s or K’s.
(3) All J’s and K’s are G’s.
(4) All L’s are K’s.
(5) All N’s are M’s.
(6) No M’s are G’s.

1. If no P’s are K’s, which of the following must be true?
(A) All P’s are J’s.
(B) No P is a G.
(C) No P is an H.
(D) If any P is an H it is a G.
(E) If any P is a G it is a J.

2. Which of the following can be logically deduced from the conditions stated?
(A) No M’s are H’s.
(B) No M’s that are not N’s are H’s.
(C) No H’s are M’s.
(D) Some M’s are H’s.
(E) No N’s are G’s.

3. Which of the following is inconsistent with one or more of the conditions?
(A) All H’s are G’s.
(B) All H’s that are not G’s are M’s.
(C) Some H’s are both M’s and G’s.
(D) No M’s are H’s.
(E) All M’s are H’s.

4. The statement “No L’s are J’s” is
I. logically deductible from the conditions stated
II. consistent with but not deducible from the conditions stated
III. deducible from the stated conditions together with the additional statement “No J’s are K’s”

(A) I only
(B) II only
(C) III only
(D) II and III only
(E) Neither I, II, nor III

Questions 5 and 6

5. The argument above is most like which of the following arguments?

(A) Empiricism must have developed later than rationalism, because it developed as a reaction to rationalism.
(B) Drug X increases fertility in humans. Every woman given the drug in tests gave birth to more than one child.
(C) The dumping of chemicals into the lake two months ago caused the present dying off of the fish. No fish died in the lakes into which no chemicals were dumped.
(D) The committee’s report must have been valid, because it predicted that a crisis would develop, and that is exactly what has happened.
(E) Joe’s fiancee must be allergic to roses. Every time he takes her roses, she becomes weepy.

6. Ellen’s argument would be most strengthened if it is also true that

(A) Ralph also sneezes after playing with his cat
(B) Ellen never sneezes just before playing with Ralph’s cat
(C) Ellen also sneezes after playing with Dan’s dog
(D) Ellen sneezes only after playing with Ralph’s cat
(E) Ralph’s cat also sneezes after playing with Ellen

7. But the number of flights has increased by 30% in the last ten years.

The statement above would be a logical rebuttal to which of the following claims?

(A) The airlines must be losing money. The cost of jet fuel has tripled in the last ten years.
(B) Airline ticket prices have increased so fast in the last ten years that some people who could once afford to fly no longer can.
(C) Flying is getting more unsafe. The number of airplane accidents per year has increased by over 10% in the last decade.
(D) More air travelers are taking “short hop,” commuter flights. The average number of miles traveled per flight has decreased by 20% in the last ten years.
(E) The flight industry is being taken over by a few large airlines. There are 25% fewer airlines today than there were ten years ago.
Questions 8–11

At a formal dinner for eight, the host and hostess are seated at opposite ends of a rectangular table, with three persons along each of the other two sides. Each man must be seated next to at least one woman, and vice-versa.

Allan is opposite Diane, who is not the hostess.

George has a woman on his right and is opposite a woman.

Helga is at the hostess’s right, next to Frank.

One person is seated between Belinda and Carol.

8. Eric is the eighth person present. Eric must be
   I. the host
   II. seated to Diane’s right
   III. seated opposite Carol

   (A) I only
   (B) III only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

9. If each person is placed directly opposite his or her spouse, which of the following pairs must be married?
   (A) George and Helga
   (B) Belinda and Frank
   (C) Carol and Frank
   (D) George and Belinda
   (E) Eric and Helga

10. Which person cannot be seated next to a person of the same sex?
    (A) Allan
    (B) Belinda
    (C) Carol
    (D) Diane
    (E) Eric

11. George is bothered by the cigarette smoke of his neighbor and exchanges seats with the person four places to his left. Which of the following must be true following the exchange?
    I. No one is seated between two persons of the opposite sex.
    II. One side of the table consists entirely of persons of the same sex.
    III. Either the host or the hostess has changed seats.

    (A) I only
    (B) III only
    (C) I and II only
    (D) II and III only
    (E) Neither I, II, nor III

Questions 12–18

For a panel of professors to assess the State of the Union Message on public TV, the producer must choose two Republicans and two Democrats. At least one professor must be an economist and at least one a military expert. Available Republicans are Abbott, Bartlett, Catlett, Dorset, and Everett; available Democrats are Fawcett, Gantlett, Helfet, and Insett. Catlett, Fawcett, and Gantlett are economists, Dorset and Insett are military experts. Fawcett will not sit in the same room with Catlett, and will take part only if Abbott is on the panel. Dorset refuses to take part with Gantlett, and Everett refuses to take part with Insett.

12. Which of the following is not an acceptable panel?
    (A) Fawcett, Helfet, Abbott, Dorset
    (B) Fawcett, Insett, Abbott, Dorset
    (C) Gantlett, Helfet, Abbott, Catlett
    (D) Gantlett, Insett, Abbott, Catlett
    (E) Helfet, Insett, Bartlett, Catlett

13. If Abbott and Bartlett are chosen as the Republicans, who can be chosen as the Democrats?
    (A) Fawcett and Insett only
    (B) Fawcett and Insett or Gantlett and Insett only
    (C) Fawcett and Gantlett or Gantlett and Helfet only
    (D) Fawcett and Insett, Gantlett and Insett, or Helfet and Insett
    (E) Gantlett and Helfet, Gantlett and Insett, or Helfet and Insett

14. If Gantlett is chosen, which of the following must be true?
    I. Any acceptable panel must contain Insett.
    II. Any acceptable panel must contain Abbott.
    III. There is no acceptable panel which contains Bartlett.

    (A) I only
    (B) II only
    (C) I and II only
    (D) II and III only
    (E) I, II, and III

15. How many acceptable panels can the producer put together?
    (A) 6
    (B) 7
    (C) 8
    (D) 9
    (E) 10
16. Which of the following pairs cannot be part of an acceptable panel?

I. Fawcett and Gantlet
II. Bartlett and Dorset
III. Catlett and Dorset

(A) I only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III

17. Which Republican belongs to the smallest number of different acceptable panels?

(A) Abbott
(B) Bartlett
(C) Catlett
(D) Dorset
(E) Everett

18. Which professor belongs to the greatest number of different acceptable panels?

(A) Abbott
(B) Bartlett
(C) Gantlet
(D) Helfet
(E) Insett

Questions 19–22

The Hotel Miramar has two wings, the East Wing and the West Wing. Some East Wing rooms, but not all, have an ocean view. All West Wing rooms have a harbor view. The charge for all rooms is identical, except as follows:

There is an extra charge for all harbor view rooms on or above the third floor.
There is an extra charge for all ocean view rooms, except those without balcony.
Some harbor view rooms on the first two floors and some East Wing rooms without ocean view have kitchen facilities, for which there is an extra charge.
Only the ocean view and harbor view rooms have balconies.

19. A guest may avoid an extra charge by requesting

(A) a West Wing room on one of the first two floors
(B) a West Wing room on the fourth floor without balcony
(C) an East Wing room without an ocean view
(D) an East Wing room without balcony
(E) any room without kitchen facilities

20. Which of the following must be true if all the conditions are as stated?

(A) All rooms above the third floor involve an extra charge.
(B) No room without an ocean or harbor view or kitchen facilities involves an extra charge.
(C) There is no extra charge for any East Wing room without an ocean view.
(D) There is no extra charge for any room without kitchen facilities.
(E) There is an extra charge for all rooms with an ocean or harbor view.

21. Which of the following must be false if all conditions are as stated?

(A) Some ocean view rooms do not involve an extra charge.
(B) All rooms with kitchen facilities involve an extra charge.
(C) Some West Wing rooms above the second floor do not involve an extra charge.
(D) Some harbor view rooms do not involve an extra charge.
(E) Some rooms without a balcony or kitchen facilities involve an extra charge.

22. Which of the following cannot be determined on the basis of the information given?

I. Whether there are any rooms without a balcony for which an extra charge is imposed
II. Whether any room without a kitchen or a view involves an extra charge
III. Whether two extra charges are imposed for any room

(A) I only
(B) II only
(C) I and III only
(D) II and III only
(E) I, II, and III

Question 23 and 24

The people do not run the country; neither do elected officials. The corporations run the country. Heads of corporations routinely and imperiously hand down decisions that profoundly affect millions of people. The people affected do not vote on the decisions, or for the corporate oligarchs. Yet we are supposed to believe we live in a democracy.
23. Which of the following statements, if true, would support the author’s views?

I. Corporate lobbies strongly influence the introduction and passage of legislation at all levels of government.

II. Growing numbers of the most talented college graduates are going to work for private corporations rather than for the government.

III. Few legal requirements are imposed on corporations as to the responsibilities they must fulfill to their employees and their communities.

(A) I only
(B) II only
(C) I and III only
(D) II and III only
(E) I, II, and III

24. Which of the following statements most closely parallels the reasoning of the argument above?

(A) The Police Department just laid off ten policemen. Yet we are supposed to believe this is a safe neighborhood.

(B) He has lied to us many times. Yet we are supposed to believe he is now telling the truth.

(C) The quality of television programs continues to decline. Yet we are supposed to believe they are still worth watching.

(D) He has no training or experience in this profession. Yet we are supposed to believe he is qualified for this job.

(E) We are asked to do nothing but regurgitate facts. Yet we are supposed to believe we are getting an education.

25. Anthony is standing to the right of Beth. Caroline is standing on the opposite side of Beth. Since the opposite of right is wrong, Caroline must be standing on the wrong side of Beth.

Which of the following logical errors has the author of the argument above committed?

(A) He has used a single term to mean two different things.

(B) He has confused cause and effect.

(C) He has assumed to be true what he wants to prove to be true.

(D) He has provided no factual evidence for his conclusion.

(E) He has drawn a general conclusion from an insufficient number of examples.

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 7
Time—30 minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the question. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>

<tbody>
<tr>
<td>Example 1: 2 × 6</td>
<td>2 + 6</td>
<td>● ○ ○ ○ ○</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to △ PQR.

Example 2: PN NQ  A ○ ● ○ ○
(since equal measures cannot be assumed, even though PN and NQ appear equal)

Example 3: x y  A ● ○ ○ ○
(since N is between P and Q)

Example 4: w + z 180  A ○ ● ○ ○
(since PQ is a straight line)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

Legs $EC$ and $EB$ of right $\triangle BEC$ are equal in length and $ABCD$ is a straight line.
Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. If a roast that requires 1 hour and 40 minutes of roasting time has been in the oven for 55 minutes, how many more minutes of roasting time are required?
   (A) 15  
   (B) 20  
   (C) 30  
   (D) 45  
   (E) 50

17. City A is 200 miles west of City B and City C is 150 miles directly north of City B. What is the shortest distance (in miles) between City C and City A?
   (A) $50\sqrt{7}$  
   (B) 175  
   (C) 250  
   (D) 300  
   (E) 350

18. A square carpet with an area of 169 square feet must have 2 feet cut off one of its edges in order to be a perfect fit for a rectangular room. What is the area (in square feet) of this rectangular room?
   (A) 117  
   (B) 121  
   (C) 143  
   (D) 165  
   (E) 167

19. A pile of steel plates is 2.75 feet high. If each plate is 0.375 inch thick, the number of steel plates in this pile is
   (A) 7  
   (B) 8  
   (C) 14  
   (D) 88  
   (E) more than 88

20. At $c$ cents per orange, what is the price (in dollars) for 1 dozen oranges?
   (A) $12c$  
   (B) $\frac{c}{12}$  
   (C) $\frac{12}{100c}$  
   (D) $\frac{c}{100}$  
   (E) $\frac{12c}{100}$

Questions 21–25 refer to the following table and graph.

**HOW THE BROWNS SPENT THEIR MONEY LAST YEAR**

</tr>
<tr>
<td><strong>Total expenditures</strong></td>
<td><strong>$35,000</strong></td>
</tr>
</tbody>
</table>
21. For a family with an annual income of $30,000, how much would be put into savings according to the figures for the average American?

(A) $90
(B) $300
(C) $900
(D) $3000
(E) $9000

22. How much, out of every dollar spent, does the average American spend for housing?

(A) 5¢
(B) 7 1/2¢
(C) 10¢
(D) 12 1/2¢
(E) 15¢

23. What part of the Browns’ expenditures is spent for medical care and medical insurance?

(A) 15/350
(B) 41/350
(C) 26/350
(D) 35/100
(E) 41/100

24. Which of the following can be inferred from the graph?

I. Out of every dollar spent, the average American spends 2¢ less for food than for housing.
II. The average American spends more for medical care, transportation, and electricity than for food and housing.
III. The average American saves $3.00 of every $100 earned.

(A) I only (B) II only (C) III only (D) I and III (E) II and III

25. How does the expenditure for food by the Browns compare with the way the average American spends for food?

(A) The Browns spend 5.6% less.
(B) The Browns spend 5.6% more.
(C) The Browns spend 9% less.
(D) The Browns spend 13% less.
(E) The Browns spend 13% more.

26. A pipe can fill a swimming pool in $h$ hours. What part of the pool is filled in $x$ hours?

(A) $hx$
(B) $\frac{h}{x}$
(C) $\frac{x}{h}$
(D) $h + x$
(E) $\frac{hx}{2}$
27. A lamp is manufactured to sell for $35.00, which yields a profit of 25% of cost. If the profit is to be reduced to 15% of cost, the new retail price will be
   (A) $21.00
   (B) $28.00
   (C) $31.50
   (D) $32.20
   (E) $43.00

28. In the square $QRST$ above, $QR = 4$. Find the shaded area if $Q, R, S$, and $T$ are the centers of the arcs that constitute the figure.
   (A) 16
   (B) $4\pi$
   (C) $16 - 4\pi$
   (D) $16 - 2\pi$
   (E) $16 - 16\pi$

29. When 6 gallons of gasoline are put into a car, the indicator goes from $\frac{1}{4}$ to $\frac{5}{8}$. The total capacity of the gasoline tank (in gallons) is
   (A) 12
   (B) 14
   (C) 15
   (D) 16
   (E) 30

30. How many cubic centimeters of water must be added to 100 cc of 80% solution of boric acid to reduce it to a 50% solution?
   (A) 30
   (B) 40
   (C) 50
   (D) 60
   (E) 84

STOP

IF YOU FINISH BEFORE TIME HAS ELAPSED, CHECK YOUR WORK ON THIS SECTION OF THE TEST ONLY. DO NOT GO ON TO THE NEXT SECTION OF THE TEST UNTIL TIME IS UP FOR THIS SECTION.
Answer Key

Note: The answers to the quantitative sections are keyed to the corresponding review areas in the Mathematics Review (Chapter 11). The numbers in parentheses after each answer refer to the math topic(s) covered by that particular question.

Section 5  Analytical

6. C  13. C  20. A

Section 6  Analytical

Section 7  Quantitative

7. C (II-A)  15. C (III-A)  23. B (I-B, IV)

Answer Explanations

Section 1

1. B. The columnist was acerbic (bitingly sarcastic) in writing of those who provoked or irritated him. Note the use of but to establish the contrast between the two clauses, and the use of even to indicate that the missing word is stronger than bitter.

2. E. By using diplomacy and flattery, the promoters hope to inveigle (beguile; cajole) the obviously unwilling performer. Inveigle has overtones of persuading someone against his or her better judgment. Choices B and C are clearly incorrect. The use of tact and flattery would not intimidate (frighten) or shame someone into taking an action. Similarly, Choices A and D are incorrect, since the use of tact and flattery would not necessarily lure the person into a hopeless or compromising position (entrapment) or tease and torment that person into giving in (tantalization).

3. B. In reputation he was a guileless or undeceitful person; in real life he showed himself to have been hypocritical or deceptive. Note the use of although to signal the contrast.

4. D. Orlando shuns criticism, preferring obscurity or inconspicuousness. His reaction is so strong that even anonymity (obscurity carried to an extreme) would be preferable to further critical exposure. Note how the intensifier even indicates that Orlando’s desire is being taken to an extreme.

5. A. The off-Broadway and Broadway theaters are contrasted here. The former has manifested or shown a talent for improvisation, extemporaneous or spontaneous performance. The latter has manifested no such talent for spontaneity. Note the use of whereas to establish the contrast.
6. C. Particles have no need to be wound up because the property of spinning (rotation) is built into their makeup: it is intrinsic.

7. C. That the interrogator is subtle in discrimination or judgment indicates her ability to conduct matters with finesse; that she is expeditious (efficient and prompt) in manner indicates her ability to conduct matters with "dispatch" (speed).

8. C. A ream is a unit of quantity for paper; a cord is a unit of quantity for wood.

   (Defining Characteristic)

9. A. To smart is to feel pain; to grieve is to feel sorrow. Note that in this instance smart is a verb, not an adjective. Remember, you can always tell what parts of speech the capitalized words are by identifying the parts of speech in the answer choices.

   (Action and Significance)

10. C. A new growth of bamboo is a shoot; a new growth of a bean plant is a sprout.

   (Defining Characteristic)

11. E. By definition, a missile is deflected when it turns aside from its original direction. Likewise, someone's attention is distracted when it turns aside from its original direction.

   (Definition)

12. C. By definition, an excess of once-pleasing flavors cloy or sates the palate (seat of the sense of taste). An excess of once-tempting foodstuffs surfeits or sates the appetite.

   (Definition)

13. E. A pratfall is a humiliating mishap that causes you to feel embarrassment. A windfall is an unexpected piece of good fortune that causes you to feel jubilation.

   (Cause and Effect)

14. E. Someone mulish (stubborn) is not characterized by pliancy (readiness to yield). Someone shrewish (ill-tempered) is not characterized by amiability.

   (Antonym Variant)

15. B. By definition, a minatory statement menaces or threatens. A laudatory statement praises or commends.

   (Definition)

16. C. When clouds scud, they move swiftly, as if driven. When water races, it moves swiftly as well.

   (Definition)

17. D. Houston believed that the battle had to begin at the graduate level "to mitigate fear" (relieve apprehension) of race-mixing and miscegenation that might otherwise have caused the judges to rule against the NAACP-sponsored complaints.

18. D. Since the Regents responded to their defeat in Sipuel v. Board of Regents of the University of Oklahoma by separating black and white students in cafeterias and classrooms (thus subverting the effect of the decision), it seems likely that their reaction to the decision was one of distinct displeasure.

19. E. The 1950 McLaughlin decision was one of the decisions which provided legal precedents for the 1954 Brown decision. Choice A is incorrect. McLaughlin preceded Brown I. Therefore, it could not have superseded a decision that had yet to be made. Choice B is incorrect. Brown I followed McLaughlin. Therefore, it could not have set a precedent for McLaughlin. Choice C is incorrect. Brown I reversed Plessy v. Ferguson. It built on McLaughlin. Choice D is incorrect. McLaughlin preceded Brown I. Therefore, it could not have limited the application of a decision that had yet to be made.

20. A. The author states plainly that the United States Supreme Court lacked the power to enforce its decisions and implies that without federal power (intervention by the executive) the desired social changes would not have taken place. Therefore, it seems probable that the author would view such a claim with marked disagreement.

21. C. The author states that Brown II limited the effectiveness of Brown I by allowing southern states a chance to delay desegregating. This suggests that, but for Brown II, Brown I might have had a more significant impact on segregation.
22. C. Taken as a whole, the passage deals with the entire struggle to desegregate American education, from the NAACP legal maneuvers of the 30’s to the executive actions of the 50’s and 60’s. Only this title is broad enough to cover the passage as a whole.
Choice A is incorrect. The passage deals with the long legal maneuvers far more than it deals with executive intervention.
Choice B is incorrect. The passage deals with much more than Brown v. Board of Education. Choices D and E are incorrect. They ignore the central subject of desegregation.

23. B. The separate-but-equal doctrine established by Plessy v. Ferguson allows the existence of racially segregated schools.

24. A. In assessing the possible effects on judges of race-mixing in the lower grades, Houston was psychologically canny, shrewd in seeing potential dangers and in figuring strategies to avoid these dangers.

25. B. The bulk of the passage records step by step what happens in the process of the formation of a star from a small region of interstellar gas.
Thus, it depicts the successive stages of the process.

26. C. To the author the concept is both simple and traditional, dating as it does from Newton’s time.

27. D. You can answer this question by the process of elimination.
Question I is answerable on the basis of the passage. As the region’s density increases, its gravitational field increases in strength. Therefore, you can eliminate Choice B.
Question II is not answerable on the basis of the passage. The passage nowhere states what disturbs the gas. Therefore, you can eliminate Choices C and E.
Question III is answerable on the basis of the passage. The end result of the process is the formation of a gravitationally bound object. Therefore, you can eliminate Choice A. Only Choice D is left. It is the correct answer.

28. C. The opposite of to hamper (impede or hinder) is to facilitate (make easy).
Think of “hampering progress.”

29. E. The opposite of urbane (worldly; suave; sophisticated) is naive (unsophisticated).
Think of “an urbane suavity.”

30. C. The opposite of demise (death) is birth.
Think of “lamenting someone’s demise.”

31. D. The opposite of a pariah or person rejected by society is an idol or person greatly loved by society.
Think of being “shunned as a pariah.”

32. B. To prostrate someone is to overcome him, to weaken him. Its opposite is to strengthen.
Note that a quick glance at the answer choices reveals that you are dealing with prostrate the verb, not prostrate the adjective.
Think of being “prostrated by grief.”

33. A. The opposite of contentious (quarrelsome, bellicose) is amenable (readily brought to yield, tractable).
Note that contentious derives from the verb to contend (to struggle or argue), not the adjective content.
Think of “a contentious argument.”

34. B. The opposite of a debacle (downfall; failure; collapse) is a success.
Think of “the Wall Street debacle of 1987.”

35. B. The opposite of hapless (unlucky) is fortunate.
Think of “hapless unfortunates.”

36. A. The opposite of to exacerbate (to worsen or make more harsh) is to alleviate or lighten.
Think of “exacerbating a quarrel.”

37. D. The opposite of probity (uprightness; integrity) is depravity (debasement; corruption).
Think of “unimpeachable probity.”

38. D. The opposite of baneful (pernicious; ruinous; deadly) is salubrious (healthful; beneficial).
Think of “the baneful effects of slander.”

Section 2

1. D. In contrast to what might have been expected, the candidate welcomed further interviews.
Note how the use of even though indicates a contrast between one idea and another, setting up a reversal of a thought.
2. C. Soap operas and situation comedies are derivative of contemporary culture: they take their elements from that culture. Therefore, they serve as indices (signs or indications) of what is going on in that culture; they both point to and point up the social attitudes and values they portray. Note that the soap operas and comedies here cannot be determinants of our society's attitudes and values: they derive from these attitudes and values; they do not determine them.

3. B. The critics charge that Perry has published only anecdotes of his observations and not detailed analyses. Note that critics would be unlikely to applaud the publication of rumors or apologize for Perry's publication of fabrications or lies. Thus, you can eliminate Choices C and E. Similarly, popular magazines would be unlikely to publish scientific hypotheses or examples of scholarship. You therefore can rule out Choices A and D as well.

4. B. The scenes of suffering belie (contradict) the reality of the proclamations of wealth.

5. C. Whatever word you choose here must apply equally well both to slander and to counterfeit money. People who would not make up a slanderous statement circulate slander by passing it on. So too people who would not coin or make counterfeit money circulate counterfeit money by passing it on. Note how the extended metaphor here influences the writer's choice of words.

6. A. A passionate nature hates compromise (finds it odious) because it seems a surrender. An intellectual nature hates compromise because it seems a confusion, mixing together things that to the intellect are inherently distinct.

7. E. Milton's comment that he wrote prose with his left hand appears to belittle the writing of prose. We might discount or lessen the strength of this apparent criticism if we said Milton meant the remark ironically. However, we have not done so. Instead, we have used apparently negative comments like Milton's to buttress or support our own prejudices against prose.

8. C. One confines a prisoner to keep him in prison. One detains a suspect to keep him in custody.

9. A. A swatch is a sample patch of fabric. A chip is a sample of paint.

10. C. A tendril is a slender extension reaching out from a vine. A pseudopod is a slender extension reaching out from an amoeba.

11. D. One battens or fastens a hatch (door leading down to a ship compartment) to close it. One latches a door to close it.

12. A. Events that are contemporaneous (occurring within the same time frame) exist in temporal reference to one another. Objects that are adjacent exist in spatial reference to one another.

13. C. A limerick is a kind of poem. A catch is a kind of song. Note how simple the relationship of the original pair of words is. Questions toward the end of an analogy set seldom appear this easy. This should alert you to be on the lookout for something particularly deceptive among the answer choices. In this case, catch is used in an uncommon manner.

14. B. A retainer or attendant is part of a retinue (body of attendants). A witch is part of a coven (group of witches).

15. D. A hero is greeted with an accolade or laudatory notice. A laughingsketch is greeted with ridicule or mockery.

16. B. A rider is an attachment added to a legislative bill to meet a particular purpose. An endorsement is an attachment added to an insurance policy to meet a particular purpose. Note the use of secondary meanings of rider, endorsement, and bill.

17. D. The author cites Meredith's intelligence (brilliance) and his splendor of language (linguistic grandeur).
18. E. Rather than refuting the claim, the author clearly acknowledges Meredith’s inability to evoke the reader’s sympathy. Choice A is incorrect. From the start the author points out how Meredith leaves readers cold. Choice B is incorrect. The author reiterates Meredith’s virtues, citing muscular intelligence and literary merit. Choice C is incorrect. The author quotes several such imagined criticisms. Choice D is incorrect. The author indicates that if readers choose to avoid dealing with Meredith they will be doing a disservice to the cause of criticism. Only Choice E remains. It is the correct answer.

19. E. Speaking of the “challenge and excitement of the critical problem as such,” the author clearly finds the prospect of appraising Meredith critically to be stirring and invigorating.

20. C. The author wishes us to be able to recognize the good qualities of Meredith’s work while at the same time we continue to find it personally unsympathetic. Thus, she would agree that criticism should enable us to appreciate the virtues of works we dislike. Choices A, B, and E are unsupported by the passage. Choice D is incorrect. While the author wishes the reader to be aware of Meredith’s excellences, she does not suggest that the reader should ignore those qualities in Meredith that make his work unsympathetic. Rather, she wishes the reader to come to appreciate the very ambivalence of his critical response.

21. E. You can answer this question by the process of elimination. Question I is answerable on the basis of the passage. Because different alleles of a gene are not normally present within a single cell, DNA carrying an allelic that originated in a different cell must be introduced into a bacterium via interbacterial transfer mechanisms in order for genetic variation to take place. Therefore, you can eliminate Choices B and D. Question II is answerable on the basis of the passage. Cell death releases DNA into the environment; this free-floating DNA then makes its way into a new cell through the mechanism of transformation. Therefore, you can eliminate Choice A. Question III is answerable on the basis of the passage. The illegitimate recombinational processes differ from homologous recombination in their ability to join together DNA segments that have little, if any, ancestral relationship. Therefore, you can eliminate Choice C. Only Choice E is left. It is the correct answer.

22. D. The passage serves as an introduction to the concept of illegitimate recombination in cells. To introduce this concept properly, the authors first must explain the other mechanisms which previously seemed to be “the only important mechanisms for generating biological diversity.” Choice A is incorrect. The passage introduces the concept of transposable genetic elements; it does not examine the evidence for their existence. Choice B is incorrect. The passage indicates no such controversy. Choice C is incorrect. It is far too vague. Choice E is incorrect. It is unsupported by the passage.

23. C. The so-called illegitimate recombinational processes are illegitimate because they do not follow the “legitimate” or accepted patterns for generating biological diversity. They break the rules of homologous recombination by joining together DNA segments that are not closely linked by ancestral relationship.

24. E. The passage objectively explains the nature of a scientific phenomenon. Thus, it can best be described as a dispassionate explication (detailed description or exposition). Choice A is incorrect. The main thrust of the passage is not to refute or disprove anything. In addition, its tone is far from angry. Choice B is incorrect. The passage takes no sides; it is not partisan. Choice C is incorrect. The passage does not vacillate; it is not equivocal. Neither does it support a position; it is not an endorsement. Choice D is incorrect. The passage is expository and descriptive rather than meditative.

25. C. In transformation, “free-floating” DNA enters a new cell by penetrating the cell wall and membrane. Thus, for transformation to occur, the cell wall and membrane must be permeable, capable of being penetrated.

26. B. In transduction, the function of the virus is to “pick up fragments of the bacterial DNA” of one cell and “carry the DNA to other cells.” This is analogous to the function of the bee, which picks up fragments of pollen from one flower and carries the pollen to other flowers in the process known as pollination.

27. B. The passage opens with the statement that “genetic variation is also important in the evolution of lower organisms such as bacteria.” From this one can reasonably infer that the authors have just been discussing the importance of genetic variation in the evolution of other sorts of organisms, specifically higher organisms.
28. A. To condone is to excuse. Its opposite is to
denounce.
Think of “condoning a minor offense.”

29. D. The opposite of antithetical (opposing) is
supportive.
Think of “warring antithetical elements.”

30. E. The opposite of omniscience (the quality of
knowing everything) is ignorance.
Word Parts Clue: Omni- means all. Sci- means
to know. Omniscience is the quality of knowing
all.
Think of “divine omniscience.”

31. D. The opposite of to mollify or soothe is to
provoke.
Think of “mollifying hurt feelings.”

32. B. The opposite of gauche (awkward; lacking in
social grace or tact) is tactful.
Think of being embarrassed by “a gauche
remark.”

33. E. The opposite of a diatribe (abusive criticism) is
praise.
Think of “a bitter diatribe.”

34. B. The opposite of to gainsay or contradict is to
corroborate or support.
Beware eye-catchers. To gainsay derives from
to say against, not from to gain.
Think of “gainsaying an assertion.”

35. E. The opposite of proximity (wordiness) is terse-
ness or brevity.
Think of “long-winded prolixity.”

36. E. The opposite of avid (very eager) is loath
(reluctant). Note that Choice E is the relatively
uncommon adjective loath, not the verb to
loathe or detest.
Think of “an avid reader.”

37. C. To repine is to complain or express discontent.
Its opposite is to express satisfaction.
Think of “repining the pains of old age.”

38. E. The opposite of salience (prominence; notice-
ableness; emphasis) is inconspicuousness.
Think of “striking salience.”

2. D. \(a\) could be equal to zero, or some positive
fraction less than 1.
\(b\) could be some negative fraction more than
-1.

3. C. 
\[
\begin{align*}
2x - \frac{y-5}{6} + \frac{y-5}{3} &= -4x \\
12x - y + 5 &= y - 5 - 12x \\
\frac{12x - y + 5}{6} &= \frac{y - 5 - 12x}{3} \\
\frac{12x - y + 5}{3} &= \frac{1}{2} \\
12x - y + 5 &= \frac{1}{2} \\
12x - y + 5 &= -1 \\
12x - y + 5 &= \frac{1}{2} \text{ or } -0.5
\end{align*}
\]

4. C. In right triangle ABC, \(x = 45\). In right triangle
ADC, \(y = 45\). Therefore, \(z = 45\).

5. B. 83x = 8383
\(x = 101\) (Column A)

6. B. \[x^2 - 5x + 6 = 0\]
\[(x - 3)(x - 2) = 0\]
\(x = 3.2\)
The sum of the roots = 5.
The product of the roots = 6.

7. A. \(a = d\) (vertical angles), and \(c = f\).
\(c = f = 50, a = d = c = f = 50,\)
\(b = 180 - 100 = 80, b = e = 80.\)

8. A. \(\sqrt{144} = 12, \text{ and } \sqrt{145} = 12 + \sqrt{45} = 6 + \)
\(\text{Sum} = 18 + \)

9. C. In triangle I, because the exterior angles have
the same measure, each interior angle has
the measure \(\frac{1}{3}\) of 180° or 60°. In triangle II
the measure of \(a\) is 180 – 120 or 60°.

Section 3

1. A. The percent saved on one trip is the same as
the percent saved on any number of trips.
\[
\text{Saving} = \frac{30e}{150e} = \frac{1}{5} \text{ or } 20\%.
\]
10. A. Area of $ABCD = (6)(6) = 36$
   Area of $RST = 36$
   Let $x = ST$.
   \[
   \left(\frac{1}{2}\right)(9)(x) = 36
   \]
   \[9x = 72\]
   \[x \text{ (or } ST) = 8\]

11. D. Center City is located at point $O$. Circleville could be located at any point on the circumference of the circle with the radius of 23 kilometers. Centerville could be located at any point on the circumference with radius of 46 kilometers. The distance from Circleville and Centerville could be the straight line distance from any point on the circumference of one of these circles to the other circle. Obviously there are innumerable possibilities.

12. A. The area of triangle $ABC = \frac{1}{2}(\text{leg} \times \text{leg}) = 12.5 \text{ or } (\text{leg})^2 = 25$. Therefore leg = 5. Area of square I or II = $5^2$ or 25. Since $AB = BC = 5$, hypotenuse $AC = 5\sqrt{2}$. Area of square III = $(5\sqrt{2})^2$ or 50. Twice the area of $ABC = 25$ (given).

13. B. Each side of square $BCDE = 10$
   Area of $BCDE = 100$
   Area of $ABC = 125 - 100$ or 25
   Area of $ABC = \frac{1}{2}(BC)(AF) = 25$
   \[\frac{1}{2}(10)(AF) = 25\]
   $AF = 5$
   $FG = BE = CD = 10$
   $AFG = 15$ and 2 $(EB) = 20$

14. C. Area of circle = $\pi r^2$
   If the radius of circle $B$ is twice the radius of circle $A$, then area of circle $B$ is four times the area of circle $A$. Stated differently, four times the area of circle $A = $ the area of circle $B$.

15. B. If $BD = DC$, then $y = x + z$ and $y > x$.

16. D. 1 kilogram = 2.2 pounds
   70 kilograms = $(70)(2.2)$ or 154 pounds
   154 - 144 = 10 pounds increase

17. C. Class consists of $a + b$ pupils.
   Class consists of $b$ girls.
   \[\frac{b}{a+b} = \text{part of class made of girls}\]

18. B. \[(0.25)^2 = 0.0625\]
   \[(B) \frac{1}{\sqrt{4}} = \frac{1}{2}\]
   \[(C) \left(\frac{1}{4}\right)^2 = \frac{1}{256}\]
   \[(D) 0.04 = \frac{4}{100}\]
   \[(E) \frac{1}{250} = \frac{1}{250}\]
19. A. The product of zero and any whole number is zero. If $y = 0$, then $xyz$ cannot be equal to 240.

20. C. Let $x = \text{area of one piece.}$
   \[ \frac{2}{3}x = \text{area of the other piece.} \]
   \[ x + \frac{2}{3}x = 60 \]
   \[ 3x + 2x = 180 \]
   \[ 5x = 180 \]
   \[ x = 36 \]
   Other piece = $60 - 36 = 24$

21. A. Using a straightedge, follow the line from the 1979 point to the Central Harlem line.

22. E. Observe the distance between the lines (for U.S. and for New York City) at the 1990 point. Except for 1969, the difference between the two lines is slight until the mid-80s, when it begins to increase.

23. E. The dates given in choices A, C, and D show decreases in the number of cases. Choice B shows a very slight rise in cases. In choice E, however, there is a sharp increase from 50 to 75 cases per 100,000 population.

24. D. The two lower lines almost touch at the 1978 point.

25. A. Notice that this question refers to per 1,000 population, while the chart shows new cases per 100,000 population. In 1990 New York City had 50 cases per 100,000, or 0.5 case per 1000.

26. A. Area of original rectangle = $lw$
   Area of new rectangle = $(el + 3)(w)$
   \[ = lw + 3w \]
   Increase = $3w$

27. D. \[ (1) \frac{x}{2} + 2\frac{y}{3} = 1 \frac{1}{3} \]
   \[ (2) x - y = \frac{1}{3} \]
   \[ -x + y = -\frac{1}{3} \text{ [multiply (2) by } -1] \]
   \[ x + 2y = 1 \frac{1}{3} \text{ [equation (1)]} \]
   \[ 3y = 1 \text{ [addition]} \]

28. D. \[ (XZ)^2 = (150)^2 + (200)^2 \]
   Or note the ratio of legs:
   \[ \frac{150}{200} = \frac{3}{4} \]
   Therefore, the ratio of the sides of $XYZ$ is 3:4:5. Since $YZ = 3(50)$ and $YX = 4(50)$, then $XZ = 5(50)$ or 250.

29. D. Let $x = \text{price of orchestra seat.}$
   Then \[ \frac{3}{4} = \text{price of balcony seat.} \]
   \[ 600x = \text{price of all orchestra seats.} \]
   \[ 450 \left( \frac{3}{4} \right) = \text{price of all balcony seats.} \]
   \[ 600x + 150x = 600x + 150x = 4500 \]
   \[ 750x = 4500 \]
   \[ x = 6 \]

30. A. Draw $AC$. Area of right triangle $ADC = \frac{10 \times 10}{2} = 50$
   Area of sector $AFCD = \frac{1}{4}$ of the circle, whose center is $D$, having $DA$ and $DC$ as radii.
   Area of this \[ \frac{1}{4} \text{ of circle } = \frac{\pi(10)^2}{4} = 25\pi \]
   Shaded half above $AC = 25\pi - \triangle ACD$ or $25\pi - 50$
   Likewise shaded half below $AC = 25\pi - 50$
   Entire shaded area = $50\pi - 100$
Section 4

1. D. We know that \( a + b = 90 \), that \( 90 - b = a \), and that \( 90 - a = b \).
Because we are told that \( a \neq b \), the correct answer is D.

2. B. \[
\frac{4 \cdot \sqrt{2}}{\sqrt{2}} = \frac{4\sqrt{2}}{2} = 2\sqrt{2}
\]
\( 2\sqrt{2} > \sqrt{2} \)

3. C. Because \( s = a - 4 \), then \( a = s + 4 \); and since \( t = a + 5 \), then \( a = t - 5 \).
Therefore \( s + 4 = t - 5 \).
(Things equal to the same thing are equal to each other)

4. D. The value of \( x \) could be 40 or 80.

5. B. The information given tells us that the measure of \( \angle A \) > the measure of \( \angle B \). Since \( A + B = 120 \), the measure (in degrees) of \( \angle A \) is greater than 60, and \( \angle B \) has a measure of less than 60.
Side \( AC \) lies opposite the smallest angle of the triangle.

6. C. The sum of the lengths of 2 adjacent sides of a parallelogram equals one-half the perimeter.

7. C. The sum = 30 + x
The average = \( \frac{30 + x}{6} = 6 \)
30 + x = 36
x = 6

8. A. The distance on the x axis for \( R \) is the same as
The distance on the y axis for \( R \) is the same as \( Q \) (a = 6).
9. C. Since \( x + y = 9 \), then \( x = 9 - y \).
Multiply by 2: 2x = 18 - 2y.
10. C. \( AB + BC = 2 \) units
\( AD - CD = 3 \) units - 1 unit
11. A. \( a = 5 \). Substitute \( a = 5 \): \( 5 + b = 5 \), and \( b = 0 \).
12. C. Side \( BC = \frac{1}{4} \) of the perimeter, or \( \frac{z}{4} \).
Apply the Pythagorean theorem:
\[
\left( \frac{z}{4} \right) = y^2 + x^2, \text{ or } \frac{z^2}{16} = y^2 + x^2
\]
13. C. A circle with area \( 25\pi \) has radius = 5 and diameter = 10.
14. B. \[
x = 90 - 80 = 10
y = 90 - 70 = 20
\]
15. C. If \( y = 50 \), then the measure of \( \angle DCB = 100 \),
the measure of \( \angle ABC = 80 \), and \( x = 40 \).
Therefore \( x + y = 90 \).
16. B. Find the value of \( D \) in terms of \( C \).
Since \( C = \frac{2}{3} D \), then \( \frac{3}{2} C = D \).
Since \( \frac{2}{3} C = B \) (given) we now have values of \( D \) and \( B \) in terms of \( C \). What part of \( D \) is \( B \) can be found as follows:
\[
\frac{B}{D} = \frac{\frac{2}{3} C}{\frac{3}{2} C} = \frac{2}{3} \text{ or } \frac{2 \times 2}{3 \times 3} \text{ or } \frac{4}{9}
\]
17. C. quantity removed = part removed = \( \frac{a}{g} \)
18. E. The difference is obtained by subtracting the lowest temperature, -41, from the highest,
+22. In order to subtract -41, change its sign to + and proceed as in addition:
+22
\( \oplus \)
+41
+63
The absolute value is the value without regard to sign; thus, the absolute value of +63 is 63.
The absolute value of the difference is 63.
19. C. If the perimeter = 16, each side = 4 and the area = \( (4)^2 \)
\( (4)^2 = 16 \)
20. B. Area of picture = (24 inches) (16 inches) = 384 sq. in.
Area of picture and frame = (26 inches)
(18 inches) = 468 sq. in.
Area of frame = 468 - 384 = 84 sq. in.
Let \( x = \) number of times the area of the picture is greater than the area of the frame.
84x = 384
\( x = 4.5 \)
21. D. For the 7-year period at the 7% rate, an annual investment of $107.99 is required. For the same period at 8%, only $103.77 is required. The difference is $4.22.

22. E. An investment of $25.65 annually is listed under the 6% column in the 20-year row.

23. A. At 14%, for the 10-year investment the annual amount required is $45.36. At the same rate, a 14-year period requires an annual investment of $23.34. The difference is $22.02. The closest correct answer is A.

24. E. From the table (9% column, 4% row), the annual investment is $200.61, and over a period of 4 years the sum would be $802.44. The closest correct answer is E.

25. C. An investment of $19.94 annually at 10% for 18 years will grow to $1,000.

26. B. If a candidate received 71 votes, there could be a tie among 4 candidates. If one candidate received 72 votes, there could be no tie, and thus it is possible for that candidate to have received more votes than any other candidate.

27. A. The distance covered by a wheel when it makes one revolution is equal to the circumference of the wheel. Note 28 inches = \( \frac{28}{12} \) feet.

\[
\text{Circumference} = \pi \text{(diameter)} = \left( \frac{22}{7} \right) \left( \frac{28}{12} \right) \left( \frac{9}{1} \right) = \text{distance (in feet) covered by nine turns.}
\]

\[
\frac{22}{7} \times \frac{28}{12} \times \frac{9}{1} = 66 \text{ feet}
\]

28. A. Notice that each group was reduced by $10. The greatest rate of discount would be for the group which was originally the least expensive.

\[
\frac{10}{60} = 16.6% \\
\frac{10}{65} = 15.4% \\
\frac{10}{70} = 14.3% \\
\frac{10}{75} = 13.3% \\
\frac{10}{80} = 12.5%
\]

29. E. \( \angle D = 70^\circ \) \( \angle B + \angle C = 110^\circ \) \( \angle B = \angle C = 55^\circ \) \( \angle ABC = 27^\circ \) \( \angle ABC = \angle ACB = 27^\circ \) \( \angle ABC = \angle ACB = 55^\circ \) \( \angle A = 180^\circ - 55^\circ = 125^\circ \)

30. A. We must account for 12 who speak these languages. Note that 3 must speak both languages.

\[
\frac{3}{15} = \frac{1}{5}
\]
Section 5

1–4. When all the variables are mentioned in a problem of this kind, there’s a very easy way to attach the right names to the right things. Make a chart with three columns: type of book, author, and publisher. As you read through the puzzle, fill in the chart, putting names that belong together on the same line. After reading the four statements, your chart will look like this:

<table>
<thead>
<tr>
<th>Type</th>
<th>Author</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spy</td>
<td>R</td>
<td>S</td>
</tr>
<tr>
<td>Sci Fi</td>
<td>B</td>
<td>not B</td>
</tr>
<tr>
<td>Gothic</td>
<td>H</td>
<td></td>
</tr>
</tbody>
</table>

By the process of elimination, you can now fill in the chart completely. The result will look like this:

<table>
<thead>
<tr>
<th>Type</th>
<th>Author</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Murder</td>
<td>R</td>
<td>S</td>
</tr>
<tr>
<td>Spy</td>
<td>G</td>
<td>H</td>
</tr>
<tr>
<td>Sci Fi</td>
<td>B</td>
<td>P</td>
</tr>
<tr>
<td>Gothic</td>
<td>H</td>
<td>B</td>
</tr>
</tbody>
</table>

1. B. By inspection of the completed chart shown above.

2. E. Can also be read directly from the chart.

3. A. John buys books by Burchfield and Hopper, and does not buy Gorky and Rothko. Choice A applies to Rothko; all others, to Burchfield or Hopper.

4. D. The only disadvantage of the chart we constructed above is that you may have to construct it again to solve a question like this. If you do so, leaving out statement (1), you can get options I and III, but for option II, you can’t get further than knowing that Sparrow published the mystery, the spy thriller, or the Gothic romance.

5–7. Basically this selection and its questions illustrate the general law of diminishing returns. If increasing amounts of capital are applied to constant amounts of land and labor, the total return may increase, but beyond a certain point the increase will not be in proportion to the increase in investment.

5. B. The limit of diminishing returns has not yet been reached.

6. C. The limit of diminishing returns has been reached.

7. C. This actually states that the law of diminishing returns is operating in the situation described in the passage.

8–12. The construction of a calendar for the months of December, January and February may seem to be the best way to answer these questions. However, we may avoid this time-consuming activity by constructing the following table of the days when each ship will be in port. Thus,

<table>
<thead>
<tr>
<th>Ship W</th>
<th>In port on days 1, 9, 17, 25, 33, 41, 49, 57, and 65.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ship X</td>
<td>In port on days 1, 12, 25, 36, 49, 60, and 73.</td>
</tr>
<tr>
<td>Ship Y</td>
<td>In port on days 1, 6, 11, 16, 21, 26, 31, 36, 41, 46, 51, 56, 61, and 66.</td>
</tr>
<tr>
<td>Ship Z</td>
<td>In port on days 1, 2, 9, 16, 23, 30, 37, 44, 51, 58, and 65.</td>
</tr>
</tbody>
</table>

An examination of this table will enable us to answer the questions.

8. C. Since December 23 was a Sunday, December 31 will be a Monday and will be the 9th day. Ships W and Z will be in port on December 31.

9. D. Ship W will be moored alongside ship Z on the 9th day, ship X on the 25th day, ship Y on the 41st day, ship X on the 49th day, and ship Z on the 65th day.

10. A. On no occasion will three ships be moored at the pier.

11. B. More departures will take place on Monday than on any other day. Sundays come on days 1, 8, 15, 22, 29, 36, 43, 50, 57, and 64. Including the sailings on December 23, there will be 7 Sunday sailings. Similarly, there will be 13 Monday sailings, 3 Tuesday sailings, 5 Wednesday sailings, 4 Thursday sailings, 3 Friday sailings, and 4 Saturday sailings.

12. A. From the list above, we can see that Tuesday and Friday will be least busy.

13–16. This welter of confusing information can be reduced to a table showing what services are available on Friday and Monday in each state. You don’t have to include Saturday—everything is closed Saturday everywhere.

<table>
<thead>
<tr>
<th></th>
<th>Friday:</th>
<th>Monday:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Banks</td>
<td>NA, NS</td>
<td>NA, NW</td>
</tr>
<tr>
<td>State gov’t offices</td>
<td>NW</td>
<td>NA, NS, NW</td>
</tr>
<tr>
<td>Sanit—MWF areas</td>
<td>NW</td>
<td>NA, NS</td>
</tr>
<tr>
<td>Sanit—TTS areas</td>
<td>—</td>
<td>—</td>
</tr>
<tr>
<td>P.O./fed. offices</td>
<td>NA, NS, NW</td>
<td>NA, NS, NW</td>
</tr>
</tbody>
</table>
13. C. A glance at the table will show you that each service is available on either Friday or Monday, or both, in New Wales, except TTS sanitation pickup.

14. C. The post office and state government offices are open Monday in all three states, but banks are open only in New Albion and New Wales.

15. B. For MWF pickup areas in New Wales, all services are available Friday except banking. In MWF pickup areas in the other two states, neither trash pickup nor state government offices are available, though banking is. In TTS areas in all three states, sanitation pickup is not available Friday; banking is not available in New Wales, and state government offices are closed in the other two states. (The fact that sanitation pickup is not normally available Friday in TTS areas is irrelevant—the question states that Mr. Rudolph found all services but one available.)

16. A. This question is different. Everything is available Monday in New Albion except trash pickup in TTS areas—but this is not a "deviation from normal service." The table will confirm that there is some deviation from normal service for all of the other choices given.

17-22. A four-by-four grid listing prizes, breeds, owners, and dog names will be needed. Using the information given and the process of elimination, you can come up with the following chart:

<table>
<thead>
<tr>
<th>PRIZE</th>
<th>BREED</th>
<th>OWNER</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>C</td>
<td>H</td>
<td>K</td>
</tr>
<tr>
<td>2</td>
<td>B</td>
<td>E</td>
<td>M</td>
</tr>
<tr>
<td>3</td>
<td>A</td>
<td>G</td>
<td>J</td>
</tr>
<tr>
<td>4</td>
<td>D</td>
<td>F</td>
<td>L</td>
</tr>
</tbody>
</table>

The questions themselves are fairly straightforward.

17. B. Once statement (6) identifies the fourth prize winner and you determine that Mr. Grossman's dog therefore won third prize, it follows that, since Max won second prize, Ms. Huntley's Kelly was the collie that won first prize.

18. C. The same reasoning process used in question 17 makes Mr. Grossman's dog the Airedale that won third prize.

19. C. Here it's possible for more than one statement to give correct information. It turns out that I is false because Mr. Edward's dog won second prize and the Airedale third. II is false because Mr. Grossman's dog is Jack. III correctly identifies the winners of second, third, and fourth prizes.

20. A. This can be read from the diagram.

21. D. The easiest procedure is to jot down the information given in the specified statements:

<table>
<thead>
<tr>
<th>PRIZE</th>
<th>BREED</th>
<th>OWNER</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>C</td>
<td>M</td>
<td>J</td>
</tr>
<tr>
<td>2</td>
<td>A</td>
<td>D</td>
<td>F</td>
</tr>
</tbody>
</table>

Although much remains ambiguous without statements (2) and (7) (for example, who owns which dog), statements I, II, and III all follow by a process of elimination.

22. C. As for question 21, jot down a simple chart based only on the specified statements:

<table>
<thead>
<tr>
<th>PRIZE</th>
<th>BREED</th>
<th>OWNER</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>C</td>
<td>M</td>
<td>J</td>
</tr>
<tr>
<td>2</td>
<td>A</td>
<td>D</td>
<td>F</td>
</tr>
<tr>
<td>3 or 4</td>
<td>B</td>
<td>E</td>
<td>M</td>
</tr>
<tr>
<td>1, 3 or 4</td>
<td>B</td>
<td>F</td>
<td>L</td>
</tr>
</tbody>
</table>

Given the ambiguities arising from the incomplete nature of the information, statement III cannot be deduced. Statements I and II may be deduced, however.

23-24. Engrave this in your memory indelibly: from a statement in the form "All A are B" or "If A, then B," one and only one valid conclusion can be drawn: "If not B, then not A." So: from statement (1), the only valid conclusion is, "A student who does not wear Calvert Kream jeans does not major in philosophy," and from statement (3), the only valid conclusion is, "If Mary doesn't major in history, Jack doesn't major in philosophy." The statements, "If not A, then not B" and "If B, then A" are not valid.

23. B. Statement (2) says that none of the students in the Marching and Chowder Society wears Calvert Kream jeans, so they are "not B" in statement (1); the conclusion that they do not major in philosophy is valid. Choice A is incorrect: it means only that Mary is not in the Marching and Chowder Society (statement 2) and says nothing about her jeans. Choice C is an "if B, then A" inference, "If Mary majors in history, Jack Majors in philosophy" (and therefore can't be in the Marching and Chowder Society because of his jeans). There's no basis for E.

24. D. I and III are correct "if not B, then not A" conclusions based on statements (3) and (1), respectively. II can establish only that Jack may wear Calvert Kream Jeans or major in history, neither of which validly implies that he does not major in philosophy.
25. C. The cost to the chemical company (choice C) would be a concern of the company, not of the residents. The residents are primarily concerned about the possible negative effects of the fumes. They might reasonably be expected to be concerned about stopping the fumes (choice A), the adequacy of the original tests (choice B), possible harm to plants and animals (choice D), and possible long-term effects of the fumes (choice E).

3. C. This statement is inconsistent with the condition that no M’s are G’s. Choice A is possible—we could draw the G circle so that it coincided with the H circle. Choices B, D, and E are all possible, since we can draw M anywhere outside G.

4. D. If you thought that statement (2) meant that no J’s are K’s, you were wrong; it states that all G’s are J’s or K’s, but doesn’t exclude the possibility that some G’s are both and that J and K overlap. (Consider an analogous statement like “All voters in my town voted for Republicans or Democrats.”) So statement (4) doesn’t imply the statement given here, and I is out. It is possible that no L’s are J’s, however, even if J and K do overlap (II). Finally, the additional statement would mean that if L’s were K’s, they couldn’t be J’s (III).

5. B. Ellen assumes a causal relationship on the basis of inference (three times, therefore every time). She commits two logical errors: she fails to exclude alternative causes, and she uses too small a number of “tests” for a valid conclusion. Choice B commits the first error, and may commit the second (we aren’t told how many women took the drug). Choice A, a valid argument, concludes that an event must have occurred after its cause. Choice C includes evidence that does tend to rule out alternative explanations. Choice D fails to consider alternative explanations, but involves no inference. Choice E involves sufficient “tests” (she weeps every time) but fails to consider all possible explanations.

6. D. This would tend to rule out alternative explanations (like the other lakes in choice C of question 5), thereby strengthening the argument. Choice A is wrong because Ralph could sneeze for a different reason. Choice B does strengthen the argument (by suggesting that Ellen is not generally sneezy), but not as much as choice D. Choice C weakens the argument (Ellen is sneezy). Choice E implies that Ellen may make herself sneeze.

7. C. If the number of accidents has increased by only 10%, while the number of flights has increased by 30%, then flying is actually getting safer. Thus, the original statement serves to rebut choice C. The increase in the number of flights need not imply that the airlines must be making more money (choice A), that all those who used to fly can still afford to fly (choice B), or that a few large airlines are not taking over the industry (choice E). The only way the statement in choice D could be countered would be to dispute the figure given.
8-11. To diagram this, just fill in places around the table. Start with Helga, the first person who can be placed definitely. (Make an arbitrary choice as to which end the hostess is at—it will make no difference.) Frank must be at Helga’s right. Diane must occupy the third place on Frank and Helga’s side of the table because of the seating rule about the sexes, with Allan opposite Diane. You now have:

```
    - - -
  hostess A
    H F D
```

George cannot be the host, since a man is on the host’s right, and he cannot be opposite Frank, so he must be opposite Helga. He is the one person between Belinda and Carol, but we don’t know which of these is on his left and which is on his right (in the hostess’s chair). But we can fill in this much information and answer the questions.

8. C. The only slot left for a male is the host’s; the host is to Diane’s right; but the person opposite him, the hostess, may be either Belinda or Carol.

9. A. George is definitely opposite Helga. He is not opposite Belinda (D), nor is Eric opposite Helga (E). Frank may be opposite Belinda or Carol, but we don’t know which (B,C).

10. D. By inspection. All the others are next to at least one person of the same sex, and Belinda or Carol could be sitting next to Helga.

11. A. If you shift George four places to the left, he changes place with Diane. I can be verified, II and III ruled out by inspection of the new, altered diagram.

12-18. Your basic solution step is to make a table of the possible persons and qualifications on the Democratic side, with the possible combinations on the Republican side. Note that Fawcett insists on Abbott being present, but the reverse is not true. Remember that there must be at least one economist and at least one military expert. The valid combinations are as follows:

<table>
<thead>
<tr>
<th>DEM.</th>
<th>REPUB.</th>
</tr>
</thead>
<tbody>
<tr>
<td>FH</td>
<td>AD</td>
</tr>
<tr>
<td>FI</td>
<td>AB, AD</td>
</tr>
<tr>
<td>GI</td>
<td>AB, AC, BC</td>
</tr>
<tr>
<td>HI</td>
<td>AC, BC, CD</td>
</tr>
</tbody>
</table>

Note that no combinations containing Democrats FG or GH are acceptable because the presence of G would rule out Republican D, the only available military expert. GI is an acceptable pair of Democrats, since I can fill the military expert’s role.

12. C. By inspection of the table.

13. B. Democrats AB figure in acceptable panels with FI and GI.

14. A. GI is the only pair containing G that may be included in any acceptable panels (I). One of these does not contain A (II) and two do contain B (III).

15. D. Count the combinations listed on your table.

16. C. Republicans CD can serve with Democrats HI. There are no acceptable BD or FG combinations.

17. E. Republican E figures in no acceptable panels; all others can serve on more than one.

18. E. Democrat I serves on eight acceptable panels (count them).

19-22. The information becomes a little easier to keep straight with a “tree” diagram showing the various possibilities, like the one given here.
19. D. Simply read the information from the diagram. Some rooms described in choices A and C have kitchen facilities; the rooms described in choice B all involve an extra charge; and ocean view rooms with balcony but without kitchen facilities (E) involve an extra charge.

20. B. The only extra charges are for: ocean view with balcony; harbor view, third floor and up; and rooms with kitchen facilities, no matter where. But some ocean view rooms without balcony and some no-view, no-kitchen East Wing rooms may be above the third floor (A). Choices C, D, and E are all false.

21. C. This directly contradicts the first extra-charge condition. The other choices are all definitely true.

22. A. We don’t know whether any West Wing rooms above the second floor or with kitchen facilities have balconies (I). But we do know that East Wing rooms without view or kitchen have no extra charge attached (II) and that all kitchen facilities are in rooms not otherwise subject to an extra charge (III). (Remember, the first paragraph says the charges are identical “except as follows.” This means there are no extra charges we weren’t told about.)

23. C. The author asserts that the corporations, rather than people or elected officials, run the country. The author’s evidence is that corporation heads make important decisions without being subject to popular controls. Option I strengthens the conclusion by giving evidence of corporate influence in an area not dealt with in the argument. Option III strengthens the evidence by giving additional data suggesting corporate autonomy. Option II is unrelated to either the evidence or the conclusion.

24. E. The original argument contains an implicit but unstated definition of a term—democracy—and depends for its force on the contrast between the definition (popular control of all decisions affecting our lives) and the facts as alleged by the author. Choice E also involves an implicit definition of education as involving more than “regurgitating facts,” and depends on the contrast between this and the alleged facts. Choice A involves no definition of “safe neighborhood,” implicit or otherwise. Choices B, C, and D all involve direct, explicit contrasts.

25. A. First, the author uses the word “right” to mean “the opposite of left.” Then he uses “right” to mean “correct” or “proper.” This is illogical, as choice A points out. (Technically, this is known as the fallacy of equivocation.) There is no cause or effect to be confused (choice B). And the author does provide evidence for his conclusion (choice D); it’s just not very convincing evidence.

Section 7

1. C. \( \frac{2a}{5b} = \frac{3}{4} \)

Multiply by \( \frac{5 \cdot 5b}{2} \):

\[
\frac{26}{2} \cdot \frac{5}{5b} = \left( \frac{3}{4} \right) \frac{5}{2}
\]

\[
a = \frac{15}{8}
\]

2. D. It is possible that \( x \) is a fraction. If \( x = \frac{1}{2} \), Column A = \( \frac{1}{4} \) and Column B = \( \frac{1}{2} \sqrt{2} \).

If \( x > 1 \), other values are possible. If \( x = 2 \), Column A = 4 and Column B = \( \sqrt{2} \).

3. A. \[
\sqrt{\frac{1}{4} - \frac{1}{2}} = \sqrt{\frac{1}{25} = \frac{1}{5^2} + \frac{5}{5}} = \frac{7}{10}
\]

\[
\sqrt{\frac{1}{4} + \frac{1}{25} = \frac{25}{100} + \frac{4}{100}} = \sqrt{\frac{29}{100} = 5 + \frac{9}{10}}
\]

4. C. \( 2x - 18y \)

\[
2(3) - 18(\frac{1}{6}) = 6 - 3 = 3x - 36y
\]

\[
(3)(3) - (36)(\frac{1}{6}) = 9 - 6
\]

5. C. \( \sqrt{0.49} = 0.7; \frac{3}{4} = 0.75 \). Sum of 0.7, 0.75, and 0.8 = 2.25. Average = 0.75 = 75%

6. B. Since \( B = 0, 2B(A + C) = 0 \).

In Column B, A is positive and C is positive. Therefore, A(B + C) or A(0 + C) is positive.

7. C. \( \frac{n + a}{a} = \frac{n}{a} + \frac{a}{a} = \frac{n}{a} + 1 \)

8. B. \( y = 13 - 3 \) or \( y = 10 \) (Column B)

\( x + 10 = 17 \) or \( x = 7 \) (Column A)

9. B. Since \( x \) and \( y \) have negative values, \( x + y \) will be negative. However, in \( -x - (-y) \), \( y \) will be positive.

10. C. \( \angle 4 + \angle 1 = 180 \) (supplementary angles)

\( \angle 1 + \angle 2 + \angle 3 = 180 \) (the measure of the three angles of a triangle)
11. C. \[ RS = 6 \text{ and } SP = SO + OP \text{ or } 2 + 5 = 7 \]
For triangle \( RSP\) apply the Pythagorean theorem:
\[ (RS)^2 + (SP)^2 = (RP)^2, \text{ or } (6)^2 + (7)^2 = (PR)^2 \]
\[ (PR)^2 = 85 \text{ and } PR = \sqrt{85} \]
Perimeter = \( 6 + 7 + \sqrt{85} \)

12. A. \( \angle ADB \) is an exterior angle of triangle \( ADC \).
\( \angle ADB = \angle ACB + \angle BCA \), therefore
\( x = z + y \). Therefore \( x > y \).

13. A. \[ x + y = 100 \]
\[ r + s = 90 \]

14. D. Because chord \( AB \equiv chord DC \), arc \( AB = arc DC \). \( BAD = AB + AD \) and \( DCB = DC + BC \).
\( AB = DC \), but we may not assume that \( AD = BC \).

15. C. Since \( EB = EC \),
\( \angle EBC = \angle ECB \)
\( \angle ABE \) (\( x^\circ \)) is the supplement of \( \angle EBC \)
\( \angle DCE \) (\( y^\circ \)) is the supplement of \( \angle ECB \)
Thus \( x = y \) (supplements of equal angles are equal)

16. D. 1 hour 40 minutes = 100 minutes
\[ 100 - 55 = 45 \text{ minutes} \]

17. C. The easiest way to do this type of problem is to draw a diagram like the one here. Note that a 3-4-5 right triangle is formed, with legs 3(50) and 4(50) and the hypotenuse of 5(50) or 250.

18. C. Note that the dimensions of the cut carpet are \( (13)(11) = 143 \) square feet.

19. D. Note change in units. Change all to inches.
\[ \frac{(2.75)(12)}{0.375} = \text{number of steel plates} \]
\[ \frac{11}{0.375} \]
\[ \frac{11}{0.375} = \frac{375}{275} \]
\[ \frac{11}{0.375} = 15 \]
\[ \frac{11}{0.375} = 15 \cdot \frac{275}{375} \]
\[ \frac{11}{0.375} = 88 \]

20. E. This is a direct proportion. Observe shift in units. In dollars, price per orange is
\[ \frac{100}{12} = \frac{c}{100} \]
\[ x = 12 \left( \frac{c}{100} \right) \]
\[ x = 12 \cdot \frac{c}{100} \]

21. C. Either calculate \$30,000 \((0.03) = \$900\) or note that 1% of \$30,000 = \$300 and 3% = \$900.

22. E. If 15% = \( \frac{15}{100} \) then \( \frac{15}{100} \) or 15¢ out of every $1.00 is the amount the average American spends for housing.

23. B. Medical care includes medical insurance (\$1500) and medical costs (\$2600) for a total of \$4100 out of a total of \$35,000. \( \frac{4100}{35000} = \frac{41}{350} \).

24. E. The data from the graph may be summarized as follows:
The average American spends 15% for housing and 17% for food (I is not true). The average American spends 35% for medical care, transportation, and electricity and 32% for food and housing (II is true). The average American saves 3% of earnings (III is true).

25. A. The Browns spend \( \frac{4000}{35000} \) or 11.4%. The average American spends 17%. The difference is 5.6%.

26. C. In one hour the pipe fills \( \frac{1}{n} \) of the pool.
In \( x \) hours the pipe fills \( \frac{x}{n} \) of the pool.

27. D. Find cost and calculate new selling price. Let \( x = \text{cost} \).
\[ x + \frac{1}{4}x = 35 \]
\[ 4x + x = 140 \]
\[ 5x = 140 \]
\[ x = 28 \]
(Cost) \$28 + (profit) 15% of \$28 or \$4.20 = \$32.20
28. C. The 4 arcs (unshaded portion of the square) together constitute 1 circle with radius = 2 and area = $4\pi$. The shaded portion = area $QRST$ minus $4\pi$, or $16 - 4\pi$.

29. D. The rise is $\frac{3}{8}$, by the addition of 6 gallons.
   Let $x$ = the total capacity.
   $\frac{3}{8}x = 6$
   $x = 16$ gallons

30. D. The original solution of 100 cc contains 80% boric acid or 80 cc.
   Let $x$ = amount of water to be added to make a 50% solution.
   Note that the amount of boric acid (80 cc) remains the same.
   $\frac{80}{100 + x} = 50\%$.

MODEL TEST FOUR

SECTION 1
Time—30 minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. The dean tried to retain control of the situation on campus, but his attempt was ______ by the board of trustees.
   (A) endorsed (B) frustrated (C) disclosed (D) witnessed (E) justified

2. The current dispute between analytic and nonanalytic philosophers ______ mere ideas, for in academia success in such disputes leads to position and prestige, which lead to control over jobs, money, and publication.
   (A) accentuates (B) transcends (C) invalidates (D) exacerbates (E) precedes

3. Book publishing has long been ______ profession, partly because for younger editors the best way to win a raise or a promotion was to move on to another publishing house.
   (A) an innovative (B) a prestigious (C) an itinerant (D) a rewarding (E) an insular

4. For centuries, physicists have had good reason to believe in the principle of equivalence propounded by Galileo: it has ______—many rigorous tests that ______—its accuracy to extraordinary precision.
   (A) endured...compromised (B) passed...presupposed (C) borne...postulated (D) survived...proved (E) inspired...equated

5. Among contemporary writers of fiction, Mrs. Woolf is ______ figure, in some ways as radical as James Joyce, in others no more modern than Jane Austen.
   (A) a doctrinaire (B) an introspective (C) a peripheral (D) a disinterested (E) an anomalous

6. To the embittered ex-philanthropist, all the former recipients of his charity were ______, as stingy with their thanks as they were wasteful of his largesse.
   (A) louts (B) misers (C) ingrates (D) prigs (E) renegades

7. Physicists' dream of a unified theory of matter that could replace the current ______ of mutually inconsistent theories that clutter the field.
   (A) bonanza (B) concord (C) dearth (D) integration (E) welter

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. FOOTBALL : GRIDIRON::
   (A) soccer : goal (B) rugby : arena (C) wrestling : mat (D) baseball : diamond (E) bowling : pin

9. LAUREL WREATH : VICTORY::
   (A) rosebud : charity (B) maple leaf : sweetness (C) blindfold : visibility (D) palm tree : idleness (E) olive branch : peace

10. AGITATOR : FIREBRAND::
    (A) miser : spendthrift (B) renegade : turncoat (C) anarchist : backslider (D) maverick : scapegoat (E) reprobate : hothead

11. GEOLOGIST : GNEISS::
    (A) herpetologist : liver (B) archaeologist : architectonics (C) entomologist : anteater (D) meteorologist : asteroid (E) botanist : zinnia

12. CALLOW : MATURITY::
    (A) incipient : fruition (B) eager : anxiety (C) youthful : senility (D) apathetic : disinterest (E) pallid : purity
Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

Mary Shelley herself was the first to point to her fortuitous immersion in the literary and scientific revolutions of her day as the source of her novel *Frankenstein*. Her extreme youth, as well as her sex, have contributed to the generally held opinion that she was not so much an author in her own right as a transparent medium through which passed the ideas of those around her. “All Mrs. Shelley did,” writes Mario Praz, “was to provide a passive reflection of some of the wild fantasies which were living in the air about her.”

Passive reflections, however, do not produce original works of literature, and *Frankenstein*, if not a great novel, was unquestionably an original one. The major Romantic and minor Gothic tradition to which it *should* have belonged was to the literature of the overreachers: the superman who breaks through normal human limitations to defy the rules of society and infringe upon the realm of God. In the Faust story, hypertext of the individual will is symbolized by a pact with the devil. Byron’s and Balzac’s heroes; the Wandering Jew; the chained and unchained Prometheus: all are overreachers, all are punished by their own excesses—by a surplus of sensation, of experience, of knowledge and, most typically, by the doom of eternal life.

But Mary Shelley’s overreach is different. Frankenstein’s exploration of the forbidden boundaries of human science does not cause the prolongation and extension of his own life, but the creation of a new one. He defies mortality not by living forever, but by giving birth.

17. The primary purpose of the passage is to

(A) discount Mary Shelley’s contribution to the realm of fantastic literature
(B) trace Mary Shelley’s familiarity with the scientific and literary theories of her day
(C) rehabilitate Mary Shelley’s reputation by stressing the innovative qualities in her work
(D) clarify the nature of the literary tradition to which *Frankenstein* belonged
(E) demonstrate the influence of Shelley’s *Frankenstein* on other examples of the genre

18. The author quotes Mario Praz primarily in order to

(A) support her own perception of Mary Shelley’s uniqueness
(B) illustrate recent changes in scholarly opinions of Shelley
(C) demonstrate Praz’s unfamiliarity with Shelley’s *Frankenstein*
(D) provide an example of the predominant critical view of Shelley
(E) contrast Praz’s statement about Shelley with Shelley’s own self-appraisal

19. The author of the passage concedes which of the following about Mary Shelley as an author?

(A) She was unaware of the literary and mythological traditions of the overreacher.
(B) She intentionally parodied the scientific and literary discoveries of her time.
(C) She was exposed to radical artistic and scientific concepts which influenced her work.
(D) She lacked the maturity to create a literary work of absolute originality.
(E) She was not so much an author in her own right as an imitator of the literary works of others.

20. According to the author, *Frankenstein* parts from the traditional figure of the overreacher in

(A) his exaggerated will
(B) his atypical purpose
(C) the excesses of his method
(D) the inevitability of his failure
(E) his defiance of the deity

The distinction often made between learning and instinct is exemplified by two theoretical approaches to the study of behavior: ethology and behaviorist psychology. Ethology is usually thought of as the study of instinct. In the ethological world view most animal behavior is governed
by four basic factors: sign stimuli (instinctively recognized cues), motor programs (innate responses to cues), drive (controlling motivational impulses) and imprinting (a restricted and seemingly aberrant form of learning).

Three of these factors are found in the egg-rolling response of geese, a behavior studied by Konrad Z. Lorenz and Nikolaas Tinbergen, who together with Karl Frisch were the founders of ethology. Geese incubate their eggs in mound-shaped nests built on the ground, and it sometimes happens that the incubating goose inadvertently knocks an egg out of the nest. Such an event leads to a remarkable behavior. After settling down again on its nest, the goose eventually notices the errant egg. The animal then extends its neck to fix its eyes on the egg, rises and rolls the egg back into the nest gently with its bill. At first glance this might seem to be a thoughtful solution to a problem. As it happens, however, the behavior is highly stereotyped and innate. Any convex object, regardless of color and almost regardless of size, triggers the response; beer bottles are particularly effective.

In this example the convex features that trigger the behavior are the ethologists’ sign stimuli. The egg-rolling response itself is the motor program. The entire behavior is controlled by a drive that appears about two weeks before the geese lay eggs and persists until about two weeks after the eggs hatch. Geese also exhibit imprinting: during a sensitive period soon after hatching, goslings will follow almost any receding object that emits an innately recognized “kum-kum” call and thereafter treat the object as a parent.

Classical behaviorist psychologists see the world quite differently from ethologists. Behaviorists are primarily interested in the study of learning under strictly controlled conditions and have traditionally treated instinct as irrelevant to learning. Behaviorists believe nearly all the responses of higher animals can be divided into two kinds of learning called classical conditioning and operant conditioning.

Classical conditioning was discovered in dogs by the Russian physiologist Ivan P. Pavlov. In his classic experiment he showed that if a bell is rung consistently just before food is offered to a dog, eventually the dog will learn to salivate at the sound of the bell. The important factors in classical conditioning are the unconditioned stimulus (the innately recognized cue, equivalent to the ethological sign stimulus, which in this case is food), the unconditioned response (the innately triggered behavioral act, equivalent to the ethological motor program, which in this case is salivation) and the conditioned stimulus (the stimulus the animal is conditioned to respond to, which in this case is the bell). Early behaviorists believed any stimulus an animal was capable of sensing could be linked, as a conditioned stimulus, to any unconditioned response. In operant conditioning, the other major category of learning recognized by most behaviorists, animals learn a behavior pattern as the result of trial-and-error experimentation they undertake in order to obtain a reward or avoid a punishment. In the classic example a rat is trained to press a lever to obtain food. The experimenter shapes the behavior by rewarding the rat at first for even partial performance of the desired response. For example, at the outset the rat might be rewarded simply for facing the end of the cage in which the lever sits. Later the experimenter requires increasingly precise behavior, until the response is perfected. Early behaviorists thought any behavior an animal was capable of performing could be taught, by means of operant conditioning, as a response to any cue or situation.

21. The passage is chiefly concerned with
   (A) comparing the effectiveness of ethology with that of other behavioral theories
   (B) presenting a new theory to replace ethology and behaviorist psychology
   (C) discussing how two differing theories explain behavioral processes
   (D) disputing the hypotheses of Pavlov and other classical behaviorists
   (E) explaining the processes that control innate behavior

22. The author cites Lorenz, Tinbergen, and Frisch for their
   (A) studies of the egg-rolling response in geese
   (B) pioneering work studying instinctual behavior
   (C) rejection of imprinting as a form of learning
   (D) use of stringently controlled laboratory settings
   (E) invalidation of the behaviorist approach

23. It can be inferred from lines 24 – 29 that the goose’s behavior in replacing the egg is “remarkable” because it
   (A) appears purposeful and intelligent
   (B) is triggered by the egg
   (C) refutes current ethological theories
   (D) is a response to sign stimuli
   (E) lasts for only four weeks

24. According to the passage, behaviorist learning theories take into account which of the following characteristics of animals?
   I. Their unconditioned response to certain fundamental stimuli, such as food
   II. Their ability to learn through being imprinted at an early age
   III. Their tendency to shun negative stimuli
   (A) I only
   (B) II only
   (C) III only
   (D) I and II only
   (E) I and III only
25. In exploring these two theoretical approaches to the study of behavior, the author does all of the following except

(A) define a term
(B) point out functional parallels
(C) refer to an experimental study
(D) illustrate through an example
(E) settle an argument

26. According to the passage, the experimental nature of operant conditioning necessarily involves

(A) the exposure to punishment of the subject of the experiment
(B) the introduction of increasingly greater rewards by the experimenter
(C) an increasing refinement of behavior on the part of the experimental animal
(D) the use of increasingly subtle cues to trigger the behavioral pattern
(E) an unwillingness to accept marginal execution of the desired behavior

27. The tone of the author’s discussion of the egg-rolling response as an example of instinct is one of

(A) derision  (B) condescension  (C) neutrality  
(D) exasperation  (E) enthusiasm

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. SEDATE:

(E) unify  (B) immunize  (C) recuperate  (D) stimulate  (E) injure

29. APATHETIC:

(E) healthy  (B) sincere  (C) enthusiastic  (D) troubled  (E) hasty

30. DISLODGE:

(E) restore  (B) secure  (C) wander  (D) transport  (E) anticipate

31. CELIBACY:

(E) informality  (B) promiscuity  (C) gluttony  (D) garrulity  (E) vanity

32. FLEDGLING:

(M) experienced  (B) shy  (C) cautious  (D) pedestrian  (E) fleeting

33. INSIPIDNESS:

(M) wisdom  (B) cowardice  (C) lividity  (D) savorness  (E) tentativeness

34. SEQUESTER:

(M) precede in sequence  (B) permit to mingle  (C) alter in composition  (D) free from doubt  (E) attempt to better

35. EQUANIMITY:

(M) clamor  (B) disparity  (C) agitation  (D) propensity  (E) indivisibility

36. ANATHEMATIZE:

(M) appraise  (B) reciprocate  (C) patronize  (D) insinuate  (E) bless

37. MORIBUND:

(H) mortal  (B) vital  (C) transient  (D) precarious  (E) tangential

38. DISTILL:

(H) provoke  (B) subordinate  (C) adulterate  (D) conjure  (E) deflate

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 2
Time---30 minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Bernard Shaw’s goal as an anchorman is -------: when he covered the attempted assassination of President Reagan in 1981, his eyes were not enlarged and his voice was not high-pitched.
   (A) accuracy  (B) eloquence  (C) dispassion
   (D) credibility  (E) sensitivity

2. The epiphyte plants of the rain forest use trees for physical support but do not, like -------, sap nutrients from their hosts.
   (A) fauna  (B) predators  (C) parasites
   (D) insectivores  (E) stumps

3. Her employers could not complain about her work because she was ------- in the ------- of her duties.
   (A) derelict...performance  (B) importunate...observance
   (C) meticulous...postponement  (D) assiduous...execution
   (E) hidebound...conception

4. Although he did not consider himself -------, he felt that the inconsistencies in her story ------- a certain degree of incredulity on his part.
   (A) an apostate...justified  (B) an optimist...intimated
   (C) a hypocrite...demonstrated  (D) a charlatan...dignified
   (E) a skeptic...warranted

5. Critics were misled by Williams' obvious ------- exaggerated theatrical gestures into ------- his plays as mere melodramas, “full of sound and fury, signifying nothing.”
   (A) disinclination for...disparaging  (B) repudiation of...misrepresenting
   (C) indulgence in...acclaiming  (D) penchant for...denigrating
   (E) indifference to...lauding

6. Mr. Southern is a historian who has entered so thoroughly into the spirit of the age that even its paradoxes leave him -------.
   (A) nonplussed  (B) indifferent  (C) undaunted
   (D) ambivalent  (E) intransigent

7. What is at the heart of Korzybski’s thought is the perception that language, far from being a tool ------- thought and communication, carries within itself a whole body of assumptions about the world and ourselves which go a long way toward shaping and ------- the kinds of thoughts we are able to have.
   (A) incidental to...determining  (B) requisite for...interpreting
   (C) subordinate to...invalidating  (D) independent of...correlating
   (E) fundamental to...expurgating

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. BARGE : VESSEL::
   (A) cargo : hold  (B) brake : automobile
   (C) shovel : implement  (D) squadron : plane
   (E) link : chain

9. RAMSHACKLE : SOUNDNESS::
   (A) garbled : clarity  (B) decrepit : demolition
   (C) humdrum : monotony  (D) flimsy : transparency
   (E) steadfast : speed

10. DAMPEN : ENTHUSIASM::
    (A) moisten : throat  (B) test : commitment
    (C) distract : attention  (D) reverse : direction
    (E) mute : sound

11. BURST : SOUND::
    (A) ebb : tide  (B) tinder : fire
    (C) blast : wind  (D) glimmer : light
    (E) shard : pottery

12. DOVE : COTE::
    (A) sheep : fleece  (B) pig : sty
    (C) goose : flock  (D) duck : bill
    (E) fox : den
Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

*There can be no doubt that the emergence of the Negro writer in the post-war period stemmed, in part, from the fact that he was inclined to exploit the opportunity to write about himself. It was more (5) than that, however. The movement that has variously been called the “Harlem Renaissance,” the “Black Renaissance,” and the “New Negro Movement” was essentially a part of the growing interest of American literary circles in the immediate and pressing social and economic problems. This growing interest coincided with two developments in Negro life that fostered the growth of the New Negro Movement. These two factors, the keener realization of injustice and the improvement of the (10) capacity for expression, produced a crop of Negro writers who constituted the “Harlem Renaissance.”

The literature of the Harlem Renaissance was, for the most part, the work of a race-conscious group. Through poetry, prose, and song, the writers cried out against social and economic wrongs. They protested against segregation and lynching. They demanded higher wages, shorter hours, and better conditions of work. They stood for full social equality and first-class citizenship. The new vision of social and economic freedom which they had did not force them to embrace the several foreign ideologies that sought to sink their roots in some American groups during the period.

The writers of the Harlem Renaissance, bitter (20) and cynical as some of them were, gave little attention to the propaganda of the socialists and communists. The editor of the Messenger ventured the opinion that the New Negro was the “product of the same world-wide forces that have brought into (25) being the great liberal and radical movements that are now seizing the reins of power in all the civilized countries of the world.” Such forces may have produced the New Negro, but the more articulate of the group did not resort to advocating the type of political action that would have subverted American constitutional government. Indeed, the writers of the Harlem Renaissance were not so much revolting against the system as they were protesting its inefficient operation. In this approach (45) they proved as characteristically American as any writers of the period. Like his contemporaries, the Negro writer was merely becoming more aware of America’s pressing problems; and like the others, he was willing to use his art, not only to contribute to the great body of American culture but to improve the culture of which he was a part.

It seems possible, moreover, for the historian to assign to the Negro writer a role that he did not assume. There were doubtless many who were not immediately concerned with the injustices heaped on the Negro. Some contrived their poems, novels, and songs merely for the sake of art, while others took up their pens to escape the sordid aspects of their existence. If there is an element of race in (55) their writings, it is because the writings flow out of their individual and group experiences. This is not to say that such writings were not effective as protest literature, but rather that not all the authors were conscious crusaders for a better world. As a matter of fact, it was this detachment, this objectivity, that made it possible for many of the writers of the Harlem Renaissance to achieve a nobility of expression and a poignancy of feeling in their writings that placed them among the masters of recent (65) American literature.

The author is primarily concerned with (70) (A) arguing that the literature of the Harlem Renaissance arose from the willingness of black writers to portray their own lives
(B) depicting the part played by socially conscious black writers in a worldwide ideological and literary crusade
(C) providing examples of the injustices protested by the writers of the Harlem Renaissance
(D) describing the social and political background that led to the blossoming of the Harlem Renaissance
(E) analyzing stages in the development of the New Negro Movement into the Harlem Renaissance

*Note that this passage is representative of the time it discusses, and therefore uses the terminology commonly accepted in that period.
18. In reference to the achievements of the Harlem Renaissance, the passage conveys primarily a sense of
   (A) protest    (B) betrayal   (C) nostalgia
   (D) urgency    (E) admiration

19. Which of the following is implied by the statement that the writers of the Harlem Renaissance “were not so much revolting against the system as they were protesting its inefficient operation” (lines 41 – 44)?
   (A) Black writers played only a minor part in protesting the injustices of the period.
   (B) Left to itself, the system was sure to operate efficiently.
   (C) Black writers in general were not opposed to the system as such.
   (D) In order for the system to operate efficiently, blacks must seize the reins of power in America.
   (E) Black writers were too caught up in aesthetic philosophy to identify the true nature of the conflict.

20. With which of the following statements regarding the writers of the Harlem Renaissance would the author most likely agree?
   (A) They needed to increase their commitment to international solidarity.
   (B) Their awareness of oppression caused them to reject American society.
   (C) They transformed their increasing social and political consciousness into art.
   (D) Their art suffered from their overinvolvement in political crusades.
   (E) Their detachment from their subject matter lessened the impact of their works.

21. The information in the passage suggests that the author is most likely
   (A) a historian concerned with presenting socially conscious black writers of the period as loyal Americans
   (B) a literary critic who questions the conclusions of the historians about the Harlem Renaissance
   (C) an educator involved in fostering creative writing projects for minority youths
   (D) a black writer of fiction interested in discovering new facts about his literary roots
   (E) a researcher with questions about the validity of his sources

22. Which of the following statements best describes the organization of lines 29 – 41 of the passage (“The writers… constitutional government”)?
   (A) The author cites an authority supporting a previous statement and then qualifies the original statement to clarify its implications.
   (B) The author makes a point, quotes an observation apparently contradicting that point, and then resolves the inconsistency by limiting the application of his original statement.

23. The passage supplies information for answering which of the following questions?
   (A) What factors led to the stylistic improvement in the literary works of black writers in the post-war period?
   (B) Who were the leading exponents of protest literature during the Harlem Renaissance?
   (C) Why were the writers of the Harlem Renaissance in rebellion against foreign ideological systems?
   (D) How did black writers in the postwar period define the literary tradition to which they belonged?
   (E) With what specific socioeconomic causes did the black writers of the postwar period associate themselves?

(This passage was written before 1967.)

The coastlines on the two sides of the Atlantic Ocean present a notable parallelism: the easternmost region of Brazil, in Pernambuco, has a convexity that corresponds almost perfectly with the concavity of the African Gulf of Guinea, while the contours of the African coastline between Rio de Oro and Liberia would, by the same approximation, match those of the Caribbean Sea. Similar correspondences are also observed in many other regions of the Earth. This observation began to awaken scientific interest about sixty years ago, when Alfred Wegener, a professor at the University of Hamburg, used it as a basis for formulating a revolutionary theory in geological science. According to Wegener, there was originally only one continent or land mass, which he called Pangea. Inasmuch as continental masses are lighter than the base on which they rest, he reasoned, they must float on the substratum of igneous rock, known as sima, as ice floes float on the sea. Then why, he asked, might continents not be subject to drifting? The rotation of the globe and other forces, he thought, had caused the cracking and, finally, the breaking apart of the original Pangea, along an extensive line represented today by the longitudinal submerged mountain range in the center of the Atlantic. While Africa seems to have remained static, the Americas apparently drifted toward the west until they reached their present position.
after more than 100 million years. Although the phenomenon seems fantastic, accustomed as we are to the concept of the rigidity and immobility of the continents, on the basis of the distance that separates them it is possible to calculate that the continental drift would have been no greater than two inches per year.

24. The primary purpose of the passage is to
   (A) describe the relative speed of continental movement
   (B) predict the future configuration of the continents
   (C) refute a radical theory postulating continental movement
   (D) describe the reasoning behind a geological theory
   (E) explain how to calculate the continental drift per year

25. The author's attitude toward Wegener's theory can best be described as
   (A) derisive
   (B) indignant
   (C) judicious
   (D) partisan
   (E) naive

26. It can be inferred from the passage that evidence for continental drift has been provided by the
   (A) correspondences between coastal contours
   (B) proof of an original solitary land mass
   (C) level of sima underlying the continents
   (D) immobility of the African continent
   (E) relative heaviness of the continental masses

27. The passage presents information that would answer which of the following questions?
   (A) In what ways do the coastlines of Africa and South America differ from one another?
   (B) How much lighter than the substratum of igneous rock below them are the continental masses?
   (C) Is the rotation of the globe affecting the stability of the present-day continental masses?
   (D) According to Wegener's theory, what direction have the Americas tended to move?
   (E) How does Wegener's theory account for the apparent immobility of the African continent?

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. SMART:
   (A) soothe
   (B) tickle
   (C) support
   (D) shorten
   (E) question

29. LUCID:
   (A) ornate
   (B) arrogant
   (C) embroiled
   (D) hapless
   (E) obscure

30. PERIPHERY:
   (A) authority
   (B) distance
   (C) velocity
   (D) center
   (E) sequence

31. ENIGMATIC:
   (A) frenetic
   (B) genuine
   (C) unambiguous
   (D) vulnerable
   (E) antagonistic

32. REPUDIATE:
   (A) mislead
   (B) minimize
   (C) ascertain
   (D) isolate
   (E) accept
33. ALOOFNESS:
   (A) exaggeration
   (B) simplicity
   (C) concern
   (D) complacency
   (E) disingenuousness

34. EXHUME:
   (A) decay
   (B) inhale
   (C) fertilize
   (D) restrain
   (E) inter

35. DESPOTIC:
   (A) erratic
   (B) impertinent
   (C) reflective
   (D) insouciant
   (E) humble

36. OBFUSCATE:
   (A) insinuate
   (B) exacerbate
   (C) protract
   (D) clarify
   (E) placate

37. PAEAN:
   (A) dirge
   (B) prologue
   (C) chorale
   (D) anthem
   (E) coda

38. CONCATENATE:
   (A) disclaim
   (B) impede
   (C) unlink
   (D) derail
   (E) vacillate

DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 3
Time—30 Minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>
<tr>
<th>Column A</th>
<th>Column B</th>
<th>Sample Answers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example 1: 2 \times 6</td>
<td>2 + 6</td>
<td>● ○ ○ ○ ○</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to $\triangle PQR$.

Example 2: $PN$ $NQ$  

Example 3: $x$ $y$  

Example 4: $w + z$ 180  

(since equal measures cannot be assumed, even though $PN$ and $NQ$ appear equal)

(since $N$ is between $P$ and $Q$)

(since $PQ$ is a straight line)
A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

<tr>
<td>( l_2 )</td>
<td>((3x - 50)^\circ)</td>
</tr>
</tbody>
</table>

1. \( l_1 \parallel l_2 \) \( x \) \( 25 \) \[E\]

2. Amount (to nearest $) spent for food and beverages plus medical care Amount (to nearest $) spent for apparel and upkeep plus transportation \[E\]

3. Area of triangle \( ABC \) \( 15 \) \[E\]

4. \( x + y \) \( 180 \) \[E\]

5. The average of \( \sqrt{0.81} \)
\[60\%, \ 1 \frac{1}{2}\] \[E\]

6. \( \frac{x}{7} \) \( 4 \) \[E\]

7. \( (2)(4)(6)(8)(10)(12)(14) \)
\( (16)(14)(12)(10)(8)(6) \)
\[A > B \]
\[B > C \] \[E\]

8. \( 2A \) \( B + C \) \[E\]

9. \( T \) \( 10 \) \[E\]

\[\text{Area of circle } A = \frac{1}{4} \]
\[\text{Area of circle } B = \frac{1}{4} \]

10. Four times the radius of circle \( A \) \[E\]

Point \( O (5,3) \) is the center of a circle. Point \( P (5,7) \) lies on the circle.

11. The circumference of the circle \( 8\pi \) \[E\]

12. \[\left( \frac{X}{Z} \right) \left( \frac{Z}{Y} \right) \] \( 0 \) \[E\]
13. $x \quad 5 \quad E$

14. Length of $BC \quad 5 \quad E$

15. $a + x \quad x + y \quad M$

Directions: Each of Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. If $3x - 6 = 1$, then $x - 2 =$
   (A) $\frac{1}{3}$
   (B) $\frac{1}{2}$
   (C) 2
   (D) $2\frac{1}{3}$
   (E) 3

17. Mr. Jones can mow his lawn in $x$ hours. After 2 hours it begins to rain. What part of the lawn is left unmowed?
   (A) $\frac{2 - x}{x}$
   (B) $\frac{x}{2}$
   (C) $x - 2$
   (D) $\frac{x - 2}{2}$
   (E) $\frac{x - 2}{x}$

18. $(146 \times 117) + (173 \times 146) + (146 \times 210)$ equals
   (A) 69,000
   (B) 70,000
   (C) 71,000
   (D) 72,000
   (E) 73,000

19. If $7x - 5y = 13$, and $2x - 7y = 26$, then $5x + 2y =$
   (A) 39
   (B) 13
   (C) 13
   (D) 19.5
   (E) 39

20. A man covers $d$ miles in $t$ hours. At that rate how long (in hours) will it take him to cover $m$ miles?
   (A) $\frac{dmt}{d}$
   (B) $\frac{md}{t}$
   (C) $\frac{mt}{d}$
   (D) $\frac{dt}{m}$
   (E) $\frac{d}{t}$

Questions 21–25 refer to the following table.

<table>
<thead>
<tr>
<th>RELATIVE SWEETNESS OF DIFFERENT SUBSTANCES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lactose</td>
</tr>
<tr>
<td>Maltose</td>
</tr>
<tr>
<td>Glucose</td>
</tr>
<tr>
<td>Sucrose</td>
</tr>
<tr>
<td>Fructose</td>
</tr>
<tr>
<td>Saccharin</td>
</tr>
</tbody>
</table>
21. About how many times sweeter than lactose is fructose?
   (A) 0.09  
   (B) 0.1  
   (C) 1.54  
   (D) 1.86  
   (E) 10.6

22. What percent increase in sweetness is obtained by substituting equal amounts of maltose for lactose?
   (A) 16  
   (B) 50  
   (C) 100  
   (D) 200  
   (E) 500

23. How many grams of sucrose (to the nearest gram) must be added to one gram of saccharin to make a mixture that will be 100 times as sweet as glucose?
   (A) 7  
   (B) 8  
   (C) 9  
   (D) 10  
   (E) 100

24. What is the ratio of glucose to lactose in a mixture as sweet as maltose?
   (A) 8:21  
   (B) 21:8  
   (C) 25:9  
   (D) 29:8  
   (E) 32:5

25. Approximately how many times sweeter than sucrose is a mixture of glucose, sucrose, and fructose in the ratio of 1:2:3?
   (A) 0.6  
   (B) 1  
   (C) 1.3  
   (D) 2.3  
   (E) 2.9

26. One-half of the student body at Cetco School study French and one-third of the others study Spanish. The remaining 300 do not study any foreign language. How many students are there in this school?
   (A) 360  
   (B) 550  
   (C) 900  
   (D) 1350  
   (E) 1800

27. If the hypotenuse of isosceles right triangle ABC is \(6\sqrt{2}\), then the area of ABC equals
   (A) 6  
   (B) 9  
   (C) 12  
   (D) 18  
   (E) 36

28. In right triangle ABC, if \(\angle A > \angle B > \angle C\), then
   (A) \(\angle C > 45^\circ\)  
   (B) \(\angle B = 90^\circ\)  
   (C) \(\angle A > 170^\circ\)  
   (D) \(\angle A > 90^\circ\)  
   (E) \(\angle A = 90^\circ\)

29. The area of a square 18 feet on a side is equal to the area of a rectangle with a length of 3 yards. The width of this rectangle (in feet) is
   (A) 2  
   (B) 9  
   (C) 18  
   (D) 27  
   (E) 36

30. In the figure above, the area of each circle is \(4 \pi\). The perimeter of \(ABCD =\)
   (A) 16  
   (B) \(16 \pi\)  
   (C) 32 \(\pi\)  
   (D) 32  
   (E) 64 \(\pi\)

Area of circle I = 25\(\pi\), area of circle II = 16\(\pi\), area of circle III = 9\(\pi\)

12. **Perimeter of triangle \(ABC\)** 12 M

The average of \(x, y,\) and \(z\), three consecutive integers, is \(M\).

13. \(x + z\) 2y M
14. Area of each circle $\pi$ \( \text{H} \)

15. Area of shaded portion $6\pi - 9\sqrt{3}$ \( \text{H} \)

Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. A piece of cloth \( y \) yards long had \( f \) feet cut from one end and \( i \) inches cut from the other end. The present length (in feet) of the piece of cloth is

(A) $\frac{y}{3}(f + 12i)$

(B) $3y - f + \frac{1}{12}i$

(C) $3y - \left(\frac{f + i}{12}\right)$

(D) $36y - 12f - i$

(E) $\frac{y}{3} - f + 12i$

17. A company reports that 2,000 electronic parts are found defective. If this represents 6.25 percent of the total shipment, how many of these parts were shipped?

(A) 3,200

(B) 17,000

(C) 32,000

(D) 34,000

(E) 320,000

18. On a diagram of a camp site drawn to scale of 1:120, the size of a building is $7 \frac{1}{5}$ inches. The actual length (in feet) of this building is

(A) 7.2

(B) 72

(C) 120

(D) 720

(E) 864

19. The number of feet in \( c \) inches is

(A) $\frac{1}{12c}$

(B) $12c$

(C) $\frac{12}{c}$

(D) $36c$

(E) $\frac{c}{12}$

20. Which of the following represents the area of a rectangle whose length is \( x + 1 \) and whose width is \( x - 1 \)?

(A) $x^2 + 1$

(B) $2x$

(C) $x^2 - 1$

(D) $4x$

(E) $x^2$

Questions 21–25 refer to the following graphs.

PORTION OF WAGE EARNERS ENGAGED IN VARIOUS OCCUPATIONS IN BONNEVILLE CITY IN 1986
(Number of degrees represent angles on circle graph.)

![Circle Graph]

YEARLY INCOME OF BONNEVILLE MANUFACTURING COMPANY

![Line Graph]
21. What percent of the wage earners in Bonneville were engaged in transportation in 1986?

(A) 6
(B) \( \frac{1}{3} \)
(C) \( \frac{2}{3} \)
(D) 30
(E) 60

22. About what was the average annual income of the company from 1970 to 1980?

(A) $15,000,000
(B) $20,000,000
(C) $25,000,000
(D) $30,000,000
(E) $35,000,000

23. If 1,980 workers were engaged in commerce, how many were engaged in manufacturing?

(A) 1,485
(B) 1,782
(C) 2,200
(D) 2,640
(E) 7,920

24. The average income of professional workers was 50 percent greater than that of the transportation workers. If the total income of the transportation workers was $2,376,000, what was the total income of the professional workers?

(A) $1,056,000
(B) $2,376,000
(C) $3,168,000
(D) $3,564,000
(E) $7,128,000

25. Which of the following can be inferred from the graphs?

I. Higher prices were charged by the manufacturing company in 1985 than in preceding years.
II. The company’s income increased more rapidly in the 1980–1985 period than in the preceding 5 years.
III. The number of sales of the company has been increasing since 1970.

(A) I only  (B) II only  (C) III only  (D) I and III  (E) II and III

26. Which of the following must be added to \( 2x - 4 \) to produce a sum of 0?

(A) 0
(B) \( x + 4 \)
(C) \( 2x + 4 \)
(D) \( x + 2 \)
(E) \( -2x + 4 \)

27. The expression \( \frac{6}{x} + \frac{3}{x} \) is equivalent to

(A) \( \frac{1}{2} \)
(B) \( 2x \)
(C) \( \frac{x^2}{18} \)
(D) \( \frac{18}{x^2} \)
(E) 2

28. The number line above shows the solution set of which of the following inequalities?

(A) \(-3 < x < 5\)
(B) \(3 \leq x < 5\)
(C) \(-3 \leq x < 5\)
(D) \(-3 < x \leq 5\)
(E) \(-3 \leq x \leq 5\)

29. If \( xyz = 1 \) and \( x = z, y = \)

(A) \( 1 - x^2 \)
(B) \( x^2 \)
(C) \( 1 - 2x \)
(D) \( \frac{1}{x^2} \)
(E) \( \frac{1}{2x} \)

30. A sports jacket marked $48 is offered at a discount of 25 percent during a storewide sale. At this reduced price the dealer makes a profit of 20 percent on the cost. The cost to the dealer is

(A) $29
(B) $30
(C) $32
(D) $36
(E) $40

SECTION 5
Time — 30 minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

In order to conduct the work of a mail order concern it is necessary to have a minimum of three workers each day. The staff consists of five persons who work on a part-time basis. Alice can work on Mondays, Wednesdays, and Fridays. Betty cannot report for work on Wednesdays. Carol can report for work on Tuesdays and Wednesdays only. Dorothy cannot work on Fridays. Edith is available anytime except on the first Monday and Thursday of the month.

1. Which three are available on any Monday?
   (A) Dorothy, Betty, and Alice
   (B) Alice, Edith, and Carol
   (C) Betty, Edith, and Carol
   (D) Edith, Carol, and Dorothy
   (E) Betty, Carol, and Dorothy

2. Which three could you count on to report for work on Friday?
   (A) Alice, Betty, and Dorothy
   (B) Alice, Carol, and Dorothy
   (C) Betty, Carol, and Edith
   (D) Carol, Betty, and Alice
   (E) Alice, Betty, and Edith

3. During which day of the week might it be impossible to obtain a full complement of workers?
   (A) Monday
   (B) Tuesday
   (C) Wednesday
   (D) Thursday
   (E) Friday

4. During which day of the week would it be necessary to call on Alice to complete the full complement of workers?
   (A) Monday
   (B) Tuesday
   (C) Wednesday
   (D) Thursday
   (E) Friday

Questions 5–7

Strict gun control laws cause a decrease in violent crime; in the six months since the city council passed a gun control law, armed robberies in City X have dropped by 18 percent.

5. All of the following, if true, are valid objections to the argument above EXCEPT:
   (A) A decrease in crime in one city does not mean that such a decrease would occur anywhere a gun control law was enacted.
   (B) Other factors may have caused the drop in armed robberies.
   (C) Armed robbery is only one category of violent crime that might be affected by a gun control law.
   (D) The gun control law has made it more difficult for citizens to purchase guns for legitimate purposes of self-defense.
   (E) Since the law was passed, murders involving guns in City X have increased by 22 percent.

6. Which of the following statements, if true, would strengthen the argument above?
   I. Before the law was passed, the number of armed robberies had been steadily increasing.
   II. The more that laws are used to prevent a crime, the less likely that crime is to occur.
   III. Three-fourths of all violent crimes involve the use of a gun.
   (A) I only
   (B) III only
   (C) I and II only
   (D) II and III only
   (E) I, II, and III

7. Which of the following statements, if true, would weaken the argument above?
   I. In the six months since the law was passed, 40 percent more police have been hired.
   II. In the six months since the law was passed, accidental deaths by firearms have increased by 10 percent.
   III. Only 30 percent of those indicted under the new law have been convicted.
   (A) I only
   (B) III only
   (C) I and II only
   (D) I and III only
   (E) II and III only
Questions 8–11

(1) Each word in a horizontal row must begin with a successive letter.
(2) Each word in a vertical column must begin with a different letter.
(3) Each word in a horizontal row must have the same number of letters.
(4) Each word in a vertical column must have a different number of letters.
(5) Each word in a vertical column must be the same part of speech. (NOTE: Many English words are more than one part of speech; for example, cry is both a noun and a verb.)

I.    II.    III.    IV.    V.
1.  endear  filter  garish  hotter  intake
2.  chatter  destiny  endless  fester  gradual
3.  bend     calf    death   edge   flow
4.  dread    elbow  fetid    greed   heave
5.  ask     bet     coy     dam    ebb

8. Word 3 in column III would satisfy all rules if it was changed to
   (A) deters   (B) dirty   (C) deaf
   (D) dash    (E) dry

9. How many rows and columns satisfy all rules for rows and columns, respectively?
   (A) Four rows and three columns
   (B) Four rows and two columns
   (C) Three rows and two columns
   (D) Three rows and four columns
   (E) Two rows and two columns

10. How many rules are not violated by any row or column in the grid?
    (A) 2    (B) 3    (C) 4    (D) 5    (E) 6

11. What is the minimum number of words that must be changed for the grid to satisfy all rules?
    (A) 2    (B) 3    (C) 4    (D) 5    (E) 6

Questions 12–18

Only July 4, the Pops Orchestra will perform ten works by nine U.S. composers.
Beach’s Quintet will be heard immediately after Della Joio’s Fantasies.
Ives’s Fourth of July will be heard later than the Della Joio. It will be followed immediately by Foster’s Summer Longings.

The third selection following Copland’s Lincoln Portrait will be Ellington’s New World A-Coming; the next will be an aria from Hanson’s Merry Mount.
Gottschalk’s Grand Tarantelle will be heard earlier than the Della Joio.
Antes’s Trio is the second work following the Hanson, and does not end the program.

12. Which of the following lists the composers mentioned in the order in which their works are heard?
   (A) Foster, Ives, Antes, Ellington, Beach, Gottschalk
   (B) Copland, Della Joio, Beach, Ellington, Hanson, Foster
   (C) Gottschalk, Della Joio, Beach, Foster, Antes, Ives
   (D) Copland, Gottschalk, Della Joio, Beach, Ellington, Hanson
   (E) Beach, Ellington, Hanson, Foster, Ives, Antes

13. The Della Joio Fantasies is
   (A) the second work on the program
   (B) the second work after the Copland
   (C) the work immediately preceding the Ellington
   (D) followed by two other works before the Hanson
   (E) heard immediately following the Gottschalk

14. If the intermission occurs immediately after the Beach Quintet, the fourth work after the intermission is by
    (A) Antes    (B) Copland    (C) Ives
    (D) Foster    (E) Hanson

15. The number of works to be heard between the Beach and the Foster is
    (A) 1    (B) 2    (C) 3    (D) 4    (E) 5

16. The soloist who will perform during the Antes, the Gottschalk, and the Ellington must begin tuning up just prior to the start of her first performance. She will begin tuning up
    (A) during the fourth work on the program
    (B) during the Della Joio
    (C) during the sixth work on the program
    (D) during the Hanson
    (E) before the start of the program

17. One composer is represented by two works, separated by four other selections. This composer is
    (A) Antes    (B) Beach    (C) Copland
    (D) Della Joio    (E) Ellington

18. If the total number of works played were eleven instead of ten, which of the following would be possible without violating the stated conditions?
   I. The Copland Lincoln Portrait being played first
   II. The Antes Trio being played after Foster’s Summer Longings
   III. The Antes Trio being played before Gottschalk’s Grand Tarantelle
    (A) I only
    (B) III only
    (C) I and II only
    (D) II and III only
    (E) I, II, and III
Questions 19–22

A, B, C, or W may cause D.
B, C, or W may cause E.
W or X may cause F.
D or E may cause G or H only if D and E are caused by
B or C. D or E may cause I only if D and E are caused
by C.
Only E and F together may cause M or N.
F may cause H only if it is caused by W or X.

19. Which can result from the largest number of imme-
diately preceding events?
(A) D
(B) E
(C) F
(D) M
(E) N

20. Which can result in the smallest number of subse-
quent events, counting both those that follow imme-
diately and those that follow after another event?
(A) A
(B) B
(C) C
(D) W
(E) X

21. How many different events or combinations of events
may cause H?
(A) 5
(B) 6
(C) 7
(D) 8
(E) 9

22. Which may be a result of the smallest number of dif-
ter combinations of events?
(A) G
(B) H
(C) I
(D) M
(E) N

Questions 23–25

Statistics indicate that, on the average, women execu-
tives’ salaries are about 20% lower than the salaries of
men in comparable jobs. This is true in spite of the job
discrimination suits filed by the U.S. government against
firms such as A.T.&T. and the Bank of America in the
early 1970s, as well as the passage of laws forbidding job
discrimination by gender in many states and localities. In
the face of this unrelenting prejudice against women, it
is plain that only an amendment to the U.S. Constitution
can fully remedy the iniquities under which today’s
women are laboring.

23. Which of the following is assumed by the author of
the above argument?

(A) All women executives are more qualified than
their male counterparts.
(B) A constitutional amendment is more likely to
influence employment practices than sepa-
rate state laws and court actions.
(C) Legal remedies for discrimination can be effec-
tive only when coupled with a sincere desire
for reform.
(D) Average salaries are often misleading as indica-
tors of the real status of a particular social
group.
(E) Discrimination against women is as serious and
widespread as discrimination against mem-
bers of racial and ethnic minorities.

24. Which of the following would be the most relevant
question to ask the author of the above argument?

(A) What employment practices are currently fol-
lowed by A.T.&T. and the Bank of America
in relation to their female executives?
(B) Don’t female executives in the United States
have a far better lot than the millions of im-
poverished women now living in the under-
developed nations of the Third World?
(C) Which states and localities have passed laws
forbidding job discrimination by gender?
(D) Isn’t “equal pay for equal work” a cardinal prin-
ciple of law in Slavonia, a well-known totali-
tarian and repressive state?
(E) Is a constitutional amendment the most effective
way to remedy the problem of job discrimina-
tion by gender?

25. All of the following are weaknesses of the above
argument except that

(A) it makes generalizations concerning the status
of women based on the plight of a single
group of women
(B) it draws conclusions from statistical evidence
which the data themselves may not support
(C) it disregards efforts being made by some
employers to end job discrimination within
their own firms
(D) it fails to fully consider possible remedies other
than the one proposed
(E) it ignores other possible explanations for the
cited difference in average salaries

25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

Six school board members—Allenby, Broome, Chatsworth, Doggett, Edson, and Frem—are seated at a conference table in the auditorium of Westfield High School, to run a community budget meeting. They take six seats, numbered 1 through 6 from left to right, on the same side of the table. However, there has been some tension among the board members during the current budget crisis, and this affects the seating.

Allenby has openly clashed with Broome over staff cuts, and cannot be seated immediately to the left or immediately to the right of Broome.

Chatsworth has a hearing impairment that only Doggett knows about, and so must be immediately to the left of Doggett.

Fream knows that the angry head of a tax group will be seated on the right side of the auditorium, so he will not occupy seat 6 at the table.

1. Which of the following board members cannot be seated in seat 1?
   (A) Allenby
   (B) Broome
   (C) Chatsworth
   (D) Doggett
   (E) Fream

2. If Doggett is seated in seat 3, Chatsworth must be seated in seat
   (A) 1
   (B) 2
   (C) 4
   (D) 5
   (E) 6

3. If Allenby is seated in seat 5, which of the remaining board members must be seated in seat 6?
   (A) Broome
   (B) Chatsworth
   (C) Doggett
   (D) Edson
   (E) Fream

4. If Fream is seated in seat 3, immediately to the right of Doggett, which of the remaining board members must be seated in seat 5?
   (A) Allenby
   (B) Broome
   (C) Chatsworth
   (D) Doggett
   (E) Edson

5. Gary: I wish you wouldn’t drink so much beer. It’s bad for your health.
   Nancy: How can you say that? I don’t weigh a pound more than I did a year ago.
   Which of the following responses would most strengthen Gary’s argument?
   (A) You weigh ten pounds more than you did six years ago.
   (B) Most people who drink a lot of beer do put on weight.
   (C) If you keep drinking so much beer, you will soon put on weight.
   (D) Putting on weight is not the only harmful effect of drinking beer.
   (E) You can put on weight in other ways than by drinking beer.

Questions 6 and 7

Students who are excused from Freshman Composition write better than those who take the course. Thus, we can encourage better writing by our students by dropping the Freshman Composition course.

6. The major flaw in the reasoning used in the argument above is that the author
   (A) bases the argument on a purely subjective judgment
   (B) does not cite evidence for the statements given
   (C) confuses cause and effect
   (D) fails to take into account any long-term effects of the course
   (E) assumes that all Freshman Composition courses are essentially alike

7. Each of the following, if true, would weaken the argument above EXCEPT
   (A) schools with no Freshman Composition course do not generally produce better student writers
   (B) most students who take the Freshman Composition course do not appreciably improve their writing skills
   (C) to be excused from Freshman Composition, a student must pass a rigorous writing test
   (D) each of the English department’s best instructors teaches at least one Freshman Composition class each semester
   (E) 65 percent of the students surveyed reported that they learned a great deal about grammar and rhetoric from taking Freshman Composition
Questions 8–12

Five executives of a European corporation hold a conference in Rome.

Mr. A converses in Spanish and Italian.
Mr. B converses in Spanish and English.
Mr. C converses in English and Italian.
Mr. D converses in French and Spanish.
Mr. E, a native Italian, can also converse in French.

8. Which of the following, can act as interpreter when Mr. C and Mr. D wish to confer?
   (A) Only Mr. A  (B) Only Mr. B  (C) Only Mr. E  (D) Mr. A or Mr. B  (E) Any of the other three executives

9. Which of the following cannot converse without an interpreter?
   (A) Mr. B and Mr. E  (B) Mr. A and Mr. B  (C) Mr. A and Mr. C  (D) Mr. B and Mr. D  (E) Mr. A and Mr. E

10. Besides Mr. E, which of the following can converse with Mr. D without an interpreter?
    (A) Only Mr. A  (B) Only Mr. B  (C) Only Mr. C  (D) Messrs. A and B  (E) Messrs. A, B, and C

11. Of the languages spoken at this conference, which are the two least common?
    (A) English and Spanish  (B) English and French  (C) Italian and Spanish  (D) English and Italian  (E) French and Spanish

12. If a sixth executive is brought in, to be understood by the maximum number of the original five, he should be fluent in
    (A) English and French  (B) Italian and English  (C) French and Italian  (D) Italian and Spanish  (E) English and Spanish

Questions 13–16

All A’s, B’s, C’s, D’s, E’s, and F’s are Q’s.
All A’s are B’s.
No B that is not an A is an F.
Some C’s are A’s.
All D’s are C’s.
Some C’s are not B’s.
No D is an A.
All Q’s and only Q’s that are neither B’s nor C’s are E’s.

13. Which of the following can be deduced from the information given?
    (A) All F’s are A’s.  (B) Some F’s are A’s.  (C) Some F’s are E’s.  (D) Some F’s are C’s.  (E) All F’s are A’s, C’s, or E’s.

14. Which must be false if the information given is true?
    (A) No D’s are B’s.  (B) Some B’s are D’s.  (C) Some F’s are both B’s and C’s.  (D) Some Q’s are neither B’s nor E’s.  (E) Some F’s are D’s.

15. Which cannot be shown to be true or false on the basis of the information given?
    I. No B or C is an E.  II. Some C’s are B’s but not A’s.  III. No B is both an A and a D.
    (A) I only  (B) II only  (C) III only  (D) I and II  (E) II and III

16. P is not a B. Which of the following must be true?
    (A) P is an E.  (B) If P is a C, it is neither an A nor a D.  (C) If P is a Q, it is an E or a C.  (D) If P is not an E, it is a C.  (E) If P is a Q, it may be a C or an A, but not both.

Questions 17–22

At a congress of the Progressive Federal Party, the seven top party leaders, who are all cabinet ministers, are seated on the platform in order of rank. The Prime Minister, the party leader, is in the center. The closer a person is to the Prime Minister, the higher is his or her rank, with a person on the Prime Minister’s right outranking one equidistant from the Prime Minister on her left. The seven leaders are Arning, Brenner, Civili, Dornen, Eckland, Fentz, and Grell.

Fentz is four places to the left of the Minister of Agriculture, who is two places to the right of Civili. Brenner’s neighbors are Arning and the Minister of Agriculture.

Grell is two places to the left of Dornen.

The Ministers of Education, Mining, and Culture are seated together, in that order, from left to right.

The remaining ministers are those of Social Welfare and Defense.

17. The Minister of Culture is
    (A) Arning  (B) Brenner  (C) Civili  (D) Dornen  (E) Eckland
18. The fifth-ranking person in the party hierarchy is
(A) Grell, the Minister of Mining
(B) Fentz, the Minister of Culture
(C) Dorner, the Prime Minister
(D) Eckland, the Minister of Defense
(E) Arning, the Minister of Education

19. The Minister of Social Welfare
I. outranks the Minister of Defense
II. is outranked by the Minister of Mining
(A) I only
(B) II only
(C) I and II only
(D) I or II, but not both
(E) Neither I nor II

20. How many of the seven party leaders outrank the Minister of Education?
(A) 2
(B) 3
(C) 4
(D) 5
(E) 6

21. If, during the congress, the Minister of Agriculture and the Minister of Education are ordered to exchange positions, which is true?
(A) Arning will move to a seat six places away from his original seat.
(B) Fentz will move up five places in the leadership ranking.
(C) Eckland will move to a seat three places away from his original seat.
(D) Grell will move up four places in the leadership ranking.
(E) Eckland will move from the Prime Minister’s left side to his right.

22. If, during the congress, Eckland is demoted two places in the party leadership ranking, which is true?
(A) The Minister of Defense moves up one place in the leadership ranking.
(B) Civili becomes the second-ranking leader in the party.
(C) The Minister of Mining moves up two places in the leadership ranking.
(D) Dorner is demoted within the leadership.
(E) The positions of five persons within the leadership remain unchanged.

23. Lillian, who has just celebrated her 107th birthday, attributes her longevity to her lifelong habit of drinking a double shot of whiskey each night and smoking three cigars each morning.

The best way to counter her argument would be to point out that
(A) smoking has been proved to be a causative factor in several life-threatening diseases
(B) other factors besides those mentioned may have caused her to live 107 years
(C) not all centenarians drink alcohol and smoke tobacco
(D) Lillian should not be consuming the substances mentioned without medical advice
(E) alcohol has been shown to kill brain cells

Questions 24 and 25

If Dr. Seymour’s theory is correct, then the events she predicts will happen. The events she predicted did happen. Therefore, her theory must be correct.

24. Which of the following arguments has a logical structure that most nearly resembles that of the argument above?
(A) If we win the game, we will be the league champions. We won the game; therefore, we are the league champions.
(B) If the fan is running, then the electricity must be on. The electricity is on; therefore, the fan must be running.
(C) If the store is open, I will buy a shirt. I think the store is open; therefore, I should be able to buy a shirt.
(D) If Alice answers her phone, then my prediction is correct. I predict that she is at home; therefore, she will answer her phone.
(E) If Ted’s flight is delayed, he will miss his appointment. He kept his appointment; therefore, his flight must have been on time.

25. The conclusion drawn in the argument above would be valid if which of the following were true?
(A) Only Dr. Seymour’s theory fully explains the events which happened.
(B) If the events Dr. Seymour predicted happen, then her theory is correct.
(C) If Dr. Seymour’s theory is correct, then the events she predicted may happen.
(D) Only Dr. Seymour predicted the events which happened.
(E) If the events Dr. Seymour predicted happen, then Dr. Seymour’s theory may be correct.

38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Because the ice grains in slush are so loosely bonded, it is ______ and thus can cause an avalanche even on gentle slopes.
   (A) compact
   (B) flexible
   (C) interdependent
   (D) paradoxical
   (E) unstable

2. While some of the drawings are well rendered, others are mere ______; nonetheless, nearly all possess a sort of rude ______ that catches the eye.
   (A) portraits...grandeur
   (B) illustrations...inesse
   (C) daubs...vigor
   (D) caricatures...polish
   (E) mementoes...familiarity

3. With their pea-sized brains and giant bodies, dinosaurs became a symbol of lumbering stupidity; their extinction seemed only to ______ their ______ design.
   (A) betray...fundamental
   (B) hypothesize...incongruous
   (C) invalidate...conscious
   (D) embody...ultimate
   (E) confirm...flawed

4. The shortcomings of Mr. Brooks’s analysis are ______ his ______ in explaining financial complexity and the sheer importance of this text.
   (A) alleviated by...ineptitude
   (B) offset by...clarity
   (C) magnified by...precision
   (D) demonstrated by...adroitness
   (E) mitigated by...incompetence

5. To a person ______ natural history, his country or seaside stroll is a walk through a gallery filled with wonderful works of art, nine-tenths of which have their faces turned to the wall.
   (A) enamored of
   (B) uninstructed in
   (C) responsive to
   (D) disillusioned with
   (E) dependent on

6. Do not be ______ by that fiery formula which springs from the lips of so many ______ old gentlemen: “I shall write to The Times about this outrage!”
   (A) dissuaded...indefatigable
   (B) daunted...irresolute
   (C) intimidated...choleric
   (D) discredited...crotchety
   (E) exasperated...apathetic

7. Despite John’s somewhat ______ undergraduate career, as undistinguished by academic brilliance as by dissolute excesses, nothing could convince his anxious though doting mother that her son was neither a genius nor a ______.
   (A) ordinary...prodigy
   (B) colorful...profligate
   (C) anomalous...zealot
   (D) lackluster...libertine
   (E) indifferent...miser

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. STAR : CLUSTER::
   (A) orange : rind
   (B) comet : orbit
   (C) tree : clump
   (D) mirror : reflection
   (E) bulb : lamp

9. GUFFAW : LAUGH::
   (A) sip : drink
   (B) squabble : quarrel
   (C) whimper : cry
   (D) sneeze : cough
   (E) lope : run

10. LOBSTER : POT::
    (A) sardine : tin
    (B) goldfish : bowl
    (C) sparrow : nest
    (D) oyster : shell
    (E) rabbit : snare

11. PISTON : CYLINDER::
    (A) elevator : shaft
    (B) vertex : triangle
    (C) bullet : revolver
    (D) kitchen : colander
    (E) valve : bearing
12. ERUDITE : SCHOLAR::
   (A) remote : hermit
   (B) pliant : beggar
   (C) meandering : traveler
   (D) mendacious : liar
   (E) vindictive : conqueror

13. DRUM : TYPMANI::
   (A) cornet : percussion
   (B) oboe : woodwind
   (C) piano : orchestra
   (D) violin : concerto
   (E) coda : symphony

14. GIBBER : SENSE::
   (A) jabber : noise
   (B) toddle : mobility
   (C) dawdle : deference
   (D) vacillate : resolution
   (E) disobey : order

15. MITIGATE : PUNISHMENT::
   (A) aggregate : wealth
   (B) execute : mandate
   (C) commute : sentence
   (D) collect : fine
   (E) set : penalty

16. SENTENTIOUS : APHORISM::
   (A) redundant : criticism
   (B) deprecatory : panegyric
   (C) allegorical : maxim
   (D) symbolic : adage
   (E) laudatory : eulogy

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in the passage.

(This passage was written prior to 1950.)

We now know that what constitutes practically all of matter is empty space; relatively enormous voids in which revolve with lightning velocity infinitesimal particles so utterly small that they have never been seen or photographed. The existence of these particles has been demonstrated by mathematical physicists and their operations determined by ingenious laboratory experiments. It was not until 1911 that experiments by Sir Ernest Rutherford revealed the architecture of the mysterious atom. Moseley, Bohr, Fermi, Millikan, Compton, Urey, and others have also worked on the problem.

Matter is composed of molecules whose average diameter is about 1/125 millionth of an inch. Molecules are composed of atoms so small that about 5 million could be placed in a row on the period at the end of this sentence. Long thought to be the ultimate, indivisible constituent of matter, the atom has been found to consist roughly of a proton, the positive electrical element in the atomic nucleus, surrounded by electrons, the negative electric elements swirling about the proton.

17. The primary purpose of the passage is to
   (A) honor the pioneering efforts of Sir Ernest Rutherford and his followers
   (B) refute the existence of submicroscopic particles
   (C) illustrate how scientists measure molecular diameter
   (D) summarize the then current findings on the composition of matter
   (E) analyze evidence against one theory of atomic structure

18. According to the passage, all of the following are true of the center of the atom EXCEPT that it
   (A) has not yet been seen by the naked eye
   (B) contains elements that are positively charged
   (C) is very little larger than a molecule
   (D) follows experimentally determinable processes
   (E) is smaller than 1/125 millionth of an inch

19. By referring to the period at the end of the sentence (lines 16-17), the author intends to point up the atom’s
   (A) density
   (B) mystery
   (C) velocity
   (D) consistency
   (E) minuteness

20. Which of the following relationships most closely parallels the relationship between the proton and the electrons described in the passage?
   (A) A hawk to its prey
   (B) A blueprint to a framework
   (C) A planet to its satellites
   (D) A magnet to iron filings
   (E) A compound to its elements

No one can be a great thinker who does not realize that as a thinker it is her first duty to follow her intellect to whatever conclusions it may lead. Truth gains more even by the errors of one who, with due study and preparation, thinks for herself, than by the true opinions of those who only hold them because they do not suffer themselves to think. Not that it is solely, or chiefly, to form great thinkers that freedom of thinking is required. On the contrary, it is as much or even more indispensable to enable average human beings to attain the mental stature which they are capable of. There have been, and may again be, great individual thinkers in a general atmosphere of mental slavery. But there never has been, nor ever will be, in that atmosphere an intellectually active people. Where any people has made a temporary approach to such a character, it has been because the dread of heterodoxy speculation was for a time suspended. Where
20. There is a tacit convention that principles are not to be disputed; where the discussion of the greatest questions which can occupy humanity is considered to be closed, we cannot hope to find that generally high scale of mental activity which has made some periods of history so remarkable. Never when controversy avoided the subjects which are large and important enough to kindle enthusiasm was the mind of a people stirred up from its foundations and the impulse given which raised even persons of the most ordinary intellect to something of the dignity of thinking beings.

She who knows only her own side of the case knows little of that. Her reasons may be good, and no one may have been able to refute them. But if she is equally unable to refute the reasons of the opposite side; if she does not so much as know what they are, she has no ground for preferring either opinion. The rational position for her would be suspension of judgment, and unless she contents herself with that, she is either led by authority, or adopts, like the generality of the world, the side to which she feels the most inclination. Nor is it enough that she should hear the arguments of adversaries from her own teachers, presented as they state them, and accompanied by what they offer as refutations. That is not the way to do justice to the arguments, or bring them into real contact with her own mind. She must be able to hear them from persons who actually believe them; who defend them in earnest, and do their very utmost for them. She must know them in their most plausible and persuasive form; she must feel the whole force of the difficulty which the true view of the subject has to encounter and dispose of; else she will never really possess herself of the portion of truth which meets and removes that difficulty. Ninety-nine in a hundred of what are called educated persons are in this condition; even of those who can argue fluently for their opinions. Their conclusion may be true, but it might be false for anything they know: they have never thrown themselves into the mental position of those who think differently from them and considered what such persons may have to say; and consequently they do not, in any proper sense of the word, know the doctrines which they themselves profess. They do not know those parts of the doctrine which explain and justify the remainder; the considerations which show that a fact which seemingly conflicts with another is reconcilable with it, or that, of two apparently strong reasons, one and not the other ought to be preferred.

21. According to the author, it is always advisable to

(A) have opinions which cannot be refuted
(B) adopt the point of view to which one feels the most inclination
(C) be acquainted with the arguments favoring the point of view with which one disagrees
(D) suspend heterodox speculation in favor of doctrinaire approaches
(E) ignore the accepted opinions of the vast majority

22. According to the author, in a great period such as the Renaissance we may expect to find

(A) acceptance of truth
(B) controversy over principles
(C) inordinate enthusiasm
(D) a dread of heterodox speculation
(E) a suspension of judgment

23. According to the author, which of the following statements is true?

(A) Most educated people study both sides of a question.
(B) Heterodox speculation will lead to many unnecessary errors of thinking.
(C) In debatable issues, we should rely on the opinions of the experts for guidance.
(D) It is wise to hear both sides of a debatable issue from one's teachers.
(E) The majority of those who argue eloquently truly know only one side of an issue.

24. As it is used in line 7 of the passage, the word "suffer" most nearly means

(A) endure
(B) undergo
(C) permit
(D) support
(E) force

25. It can be inferred from the passage that a person who knows only her own side of an issue is regarded by the author as

(A) timorous
(B) opinionated
(C) heterodox
(D) educated
(E) rational

26. According to the author, the person who holds orthodox beliefs without examination may be described in all of the following ways EXCEPT as

(A) enslaved by tradition
(B) less than fully rational
(C) determined on controversy
(D) having a closed mind
(E) unwilling to adopt new ideas

27. It can be inferred from the passage that the author would be most likely to agree with which of the following statements?

(A) A truly great thinker makes no mistakes.
(B) Periods of intellectual achievement are periods of unorthodox reflection.
(C) The refutation of accepted ideas can best be provided by one's own teachers.
(D) Excessive controversy prevents clear thinking.
(E) In a period of mental slavery, no true intellectual thought is possible.
Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. RECOLLECT:  
\[E\]  
(A) comprise  
(B) misplace  
(C) settle  
(D) forget  
(E) administer

29. MISAPPREHENSION:  
\[E\]  
(A) indignation  
(B) derision  
(C) intense speculation  
(D) approximate estimation  
(E) correct interpretation

30. ABIDE:  
\[E\]  
(A) retract an offer  
(B) refuse to endure  
(C) shield from harm  
(D) exonerate  
(E) welcome

31. BENEVOLENT:  
\[E\]  
(A) tense  
(B) intrepid  
(C) malicious  
(D) prominent  
(E) disinterested

32. PRECIPITATE:  
\[M\]  
(A) intricate  
(B) devious  
(C) posthumous  
(D) dilatory  
(E) contradictory

33. ACERBITY:  
\[M\]  
(A) noteworthiness  
(B) hypocrisy  
(C) mildness of temperament  
(D) lack of anxiety  
(E) thirst for pleasure

34. APLOMB:  
\[M\]  
(A) discomposure  
(B) righteousness  
(C) temerity  
(D) disapprobation  
(E) parsimoniousness

35. TORTUOUS:  
\[M\]  
(A) merciful  
(B) direct  
(C) dangerous  
(D) legal  
(E) tawdry

36. EXTIRPATE:  
\[H\]  
(A) dilate  
(B) implicate  
(C) proliferate  
(D) expostulate  
(E) incriminate

37. BEATIFIC:  
\[H\]  
(A) unattractive  
(B) arrhythmic  
(C) enormous  
(D) fiendish  
(E) radical

38. ODIMUM:  
\[H\]  
(A) fragrance  
(B) monotony  
(C) idiosyncrasy  
(D) veneration  
(E) vigilance

STOP

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY. DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
# Answer Key

Note: The answers to the quantitative sections are keyed to the corresponding review areas in the Mathematics Review (Chapter 11). The numbers in parentheses after each answer refer to the math topic(s) covered by that particular question.

Answer Explanations

Section 1

1. B. The use of but indicates that the dean’s attempt to keep control failed. It did so because it was frustrated by the board of trustees. None of the other possible actions of the board of trustees would necessarily have caused the dean’s attempt to fail.

2. B. The dispute goes beyond or transcends mere ideas, for it influences the financial and professional futures of the disputants. Note the use of mere to downplay the importance of ideas to the essence of the dispute.

3. C. The key phrase here is “move on.” If editors have to travel from firm to firm to succeed in their field, then publishing can be classified as an itinerant profession, a profession marked by traveling.

4. D. The physicists have had good reason to believe in the principle because it has survived rigorous or strict tests. These tests have proved that the principle is accurate. Note how the second clause supports the first, explaining why the physicists have had reason to be confident in the principle.

5. E. If Mrs. Woolf combines both radical and non-radical elements in her fiction, then she presents an anomalous or contradictory image.

6. C. The embittered benefactor thinks of the recipients as ingrates (ungrateful persons) because they do not thank him sufficiently for his generosity. He does not think of them as misers (hoarders of wealth); although they are stingy in expressing thanks, they are extravagant in spending money. He certainly does not think of them as louts (clumsy oafs), prigs (self-righteous fuss-budgets), or renegades (traitors): the specific attribute he resents in them is ingratitude, not clodishness, self-satisfaction, or perfidy.

7. E. The field is cluttered by a welter or chaotic jumble of contradictory theories. Choice A is incorrect. While bonanza means abundance, it is an abundance of good things, a desired abundance. Here the abundance of theories is undesired; it is a confusion, not a blessing.

8. D. The playing field in football is called the gridiron. The playing field in baseball is called the diamond.

9. E. A laurel wreath is the symbol of victory. An olive branch is the symbol of peace. Beware eye-catchers. We may associate idleness with the notion of lying under a palm tree; however, this is not an essential or necessary relationship.

10. B. Agitator (trouble-maker) is a synonym for firebrand. Renegade (traitor) is a synonym for turncoat.

11. E. A geologist studies rocks; gneiss is a type of rock. A botanist studies plants; a zinnia is a type of plant. Beware eye-catchers. A meteorologist deals with weather and other atmospheric phenomena, not with asteroids and other astronomical phenomena. Likewise, an entomologist deals with ants, not anteaters.

12. A. Someone callow is immature and will not reach full development till maturity. Something incipient is beginning to become apparent and will not reach full development till fruition.

13. C. Inoculation (introduction of a serum or vaccine into a living creature) results in immunity. Exposure to the elements results in weathering.

14. C. Someone dispassionate or temperate in judgment is lacking in partisanship or bias. Someone intemperate or immoderate is lacking in moderation.

15. D. Something grisly or gruesome causes one to recoil or flinch. Something heartrending or severely distressing causes one to weep.

16. E. A tocsin is the ringing of a bell that signals danger. A knell is the ringing of a bell that signals death. Beware eye-catchers. Tocsin and tocsin sound alike but are unrelated. Similarly, beware tempting marginal relationships. A clarion call of a trumpet may summon one to battle; it does not by definition do so.
17. C. The author first establishes the general picture of unoriginal, passive Mary Shelley and then goes about demolishing it by bringing out just how innovative Shelley was in departing from the traditional model of the overreacher. Thus, the author’s purpose is to rehabilitate Shelley’s literary reputation.
Choice A is incorrect. Others have discounted Shelley’s contribution; this author esteems it.
Choice B is incorrect. The author mentions, but does not trace, Shelley’s familiarity with the then current scientific and literary revolution.
Choice D is incorrect. While the author deals with this question, she does so as part of her general attempt to reevaluate Shelley.
Choice E is incorrect. It is unsupported by the passage.

18. D. Immediately before quoting Praz, the author states that the general view of Shelley depicts her as “a transparent medium through which passed the ideas of those around her.” The quotation from Praz provides an excellent example of this particular point of view.
To answer this question correctly, you do not need to reread the passage in its entirety. Quickly scan the passage for the name Praz; reread only the context in which it appears.

19. C. The opening sentence points out that Shelley herself acknowledged the influence of her unplanned immersion in the scientific and literary revolutions of her time. Clearly, the author of the passage concedes this as true of Shelley.

20. B. The concluding paragraph distinguishes Frankenstein from the other overreachers in his desire not to extend his own life but to impart life to another (by creating his monster). Thus, his purpose is atypical of the traditional overreacher.
To say that someone parts from the traditional figure of the overreacher is to say that he differs from it. Thus, to answer this question quickly, scan the passage looking for overreacher and different (or their synonyms).

21. C. Choice C is correct. The opening sentence states that ethology and behaviorist psychology (two differing theories) illustrate the distinction between learning and instinct (behavioral processes). The discussion of these two theories that follows explains the behavioral processes.
Choice A is incorrect. The passage does not suggest that one behavioral theory is more effective than another.
Choice B is incorrect. The passage sums up current theories; it does not propose a new one in their place.
Choice D is incorrect. The passage presents Pavlov’s arguments in the course of explaining behaviorist psychology; it does not dispute them.
Choice E is incorrect. The passage is concerned with learned behavior as well as instinctive or innate behavior.

22. B. Choice B is correct. In lines 13–16, the author states that Lorenz and Tinbergen were, with Frisch, the founders of ethology (defined in the passage as the study of instinct).
Choice A is incorrect. Only Lorenz and Tinbergen are cited for their work with the egg-rolling response in gese; nothing in the passage suggests that Frisch worked with egg-rolling.
Choice C is incorrect. It is unsupported by the passage.
Choice D is incorrect. Behaviorists, not ethologists, are cited as favoring strictly controlled conditions (lines 42–44).
Choice E is incorrect. Nothing in the passage suggests the ethologists have invalidated the behaviorists’ approach.

23. A. Choice A is correct. What is remarkable about the goose’s response is that “at first glance [it] might seem to be a thoughtful solution to a problem.” This suggests that the appearance of purpose and intelligence is what makes the act remarkable or noteworthy.
Choice B is incorrect. This is an aspect of the goose’s response; it is not what makes the goose’s response noteworthy. It is not remarkable for an egg-rolling response to be triggered by an egg.
Choice C is incorrect. The egg-rolling response supports ethological theories; it does not refute or disprove them.
Choice D is incorrect. This is an aspect of the goose’s response, not what makes the goose’s response noteworthy.
Choice E is incorrect. It is both inaccurate factually (the response lasts longer than four weeks) and not an aspect of the goose’s response that would be noteworthy.

24. E. Choice E is correct. You can arrive at it by the process of elimination.
Statement I is true. Behaviorists such as Pavlov worked with the unconditioned responses of animals. Therefore, you can eliminate Choices B and C.
Statement II is untrue. Imprinting is a term current among ethologists, not behaviorists (lines 36–40). Therefore, you can eliminate Choice D.
Statement III is true. Behaviorists assume animals act in order to obtain rewards or avoid punishments (shun negative stimuli). Therefore, you can eliminate Choice A.
Only Choice E is left. It is the correct answer.

25. E. The author does not settle any arguments; he merely presents differing theories without attempting to resolve their differences.
Choice A is incorrect. The author defines terms throughout the entire passage.
Choice B is incorrect. The author points out equivalents (functional parallels) between the two systems (lines 55-64).
Choice C is incorrect. The author refers to experimental studies involving both classical and operant conditioning.
Choice D is incorrect. The author uses the example of beer bottles to illustrate what sort of convex objects evoke the egg-rolling response from geese (lines 27-29).

26. C. The trial-and-error method of experimentation first rewards the animal for even partial performance of the desired response but later rewards only increasingly precise behavior. Thus, this method requires an increasing refinement of behavior from the experimental animal.
Choice A is incorrect. Although both rewards and punishments may be used in operant conditioning, the animal does not have to be exposed to punishment for the experiment to succeed.
Choice B is incorrect. The experimenter asks for increasingly precise behavior. Nothing suggests he or she gives increasingly greater rewards.
Choice D is incorrect. Nothing suggests that the cues necessarily change.
Choice E is incorrect. At the onset of the experiment, the experimenter rewards even partial performance of the desired behavior.

27. C. Although the author reports that behaviorists view instinct as “irrelevant to learning,” his description of the egg-rolling process shows no such bias against the ethologists’ point of view. Instead, he focuses on pointing out correspondences between the two approaches to behavior in an unbiased, dispassionate manner; the tone of his discussion is one of neutrality.

28. D. The opposite of to sedate or tranquilize is to stimulate or arouse.
Beware eye-catchers. Note the abundance of medical terms among the answer choices here. Think of “sedating a restless patient.”

29. C. The opposite of apathetic or indifferent is enthusiastic.
Word Parts Clue: A- means without; path- means feeling. Someone apathetic is without feeling; he or she does not care.
Think of “sadly apathetic voters.”

30. B. The opposite of to dislodge or cause something to shift is to secure or fasten it in place.
Think of “dislodging a boulder” from its position.

31. B. The opposite of celibacy or chastity is promiscuity or indiscriminate sexual union.
Think of “vows of celibacy.”

32. A. The opposite of fledgling or untried is experienced. The image is of a young bird just capable of leaving the nest.
Think of “fledgling pilots trying their wings.”

33. D. The opposite of insipidness or lack of flavor is savorness, the quality of being flavorful.
Think of the “insipidness of overcooked boiled cabbage.”

34. B. The opposite of to sequester or segregate is to permit to mingle.
Word Parts Clue: Se- means apart. To sequester someone means to set him apart.
Think of “sequestered jurors.”

35. C. The opposite of equanimity (emotional balance or composure) is agitation.
Word Parts Clue: Equi- means even; anim- means mind or spirit. Equanimity is an evenness of mind; composure.
Think of “something shattering one’s equanimity.”

36. E. The opposite of to anathematize or curse is to bless.
Think of “anathematizing one’s foes.”

37. B. The opposite of moribund or approaching death is vital or full of life.
Word Parts Clue: Mori- means die. Moribund means dying.
Think of “a moribund patient.”

38. C. The opposite of to distill or concentrate in purity is to adulterate or make impure (as by adding inessentials).
Think of “distilling strong brandy.”

Section 2

1. C. While all the answer choices are plausible goals for an anchorman, only one is acceptable in light of the second clause: dispassion or calm. Shaw’s maintenance of his composure is illustrated by his ability to maintain the normal pitch of his voice.

2. C. By definition, parasites sap or drain nutrients from their hosts.

3. D. The assiduous or diligent execution of one’s job would give one’s employer no cause for complaint.

4. E. Inconsistencies in a story would warrant or justify disbelief or incredulity on anyone’s part, whether or not he considered himself a skeptic (doubter).
5. D. It was Williams' penchant or liking for theatricality that caused critics to denigrate or belittle his plays as mere melodrama. Note how the use of mere and the sense of the Shakespearean quotation convey the idea that Williams' plays have been sullied or belittled.

6. C. Because Mr. Southern so understands the spirit of the age, he is unafraid of or undaunted by its paradoxes. To say that a historian has entered thoroughly into the spirit of an age is a compliment. Thus, the missing word must be complimentary in meaning.

7. A. If language shapes and determines the very thoughts we are able to have, then it is certainly far more than merely incidental to or accidentally linked with thought and communication. Note how the phrase far from being signals the basic contrast of the sentence.

8. C. A barge is a kind of vessel or ship. A shovel is a kind of implement or tool.

(Class and Member)

9. A. Something ramshackle or rickety lacks soundness or solidity. Something garbled or jumbled lacks clarity.

(Antonym Variant)

10. E. To dampen enthusiasm is to diminish it. To mute (muffle) sound is to diminish it. Note that Choice C is incorrect: to distract attention is not to diminish it but to divert it in a new direction.

(Defining Characteristic)

11. C. A burst is a sudden violent outbreak of sound. A blast is a sudden violent outbreak (heavy gust) of wind. Beware eye-catchers. Choice D is incorrect. A glimmer is a feeble or intermittent light, not a sudden violent flare or blast of light.

(Degree of Intensity)

12. B. Domesticated doves are kept in an enclosure called a cote. Domesticated pigs are kept in an enclosure called a sty. Note that Choice E is incorrect. While foxes live in dens, foxes are not domestic animals and dens are not manmade enclosures.

(Defining Characteristic)

13. C. A shot is part of a salvo (a simultaneous discharge of shots). An arrow is part of a volley (a simultaneous discharge of arrows). Beware eye-catchers. Salvo is unrelated to salve or ointment.

(Part to Whole)

14. D. A crab is an example of a crustacean. A spider is an example of an arachnid.

(Class and Member)

15. C. Skullduggery or dishonest, unscrupulous behavior is the mark of the swindler. Chicanery or trickery is the mark of the trickster.

(Defining Characteristic)

16. E. Self-respecting is less extreme than vainglorious or excessively proud. Careful is less extreme than punctilious or excessively attentive to fine points.

(Degree of Intensity)

17. D. The concluding sentence of the opening paragraph mentions factors that produced the crop of black writers who made up the Harlem Renaissance. The subsequent paragraph continues the discussion of these social and political factors. Choice A is incorrect. Although the opening sentence indicates that the willingness of black writers to portray their own lives was a contributing factor to the Harlem Renaissance, the next sentence makes it clear that this willingness was only part of what was going on. Choice B is incorrect. The author is concerned with these writers as part of an American literary movement, not a worldwide crusade. Choice C is incorrect. The author cites examples of specific injustices in passing. Choice E is incorrect. It is unsupported by the passage.

18. E. The author's use of such terms as "nobility of expression" and "masters of recent American literature" makes it clear his attitude is one of admiration.

19. C. The fact that the writers were more involved with fighting problems in the system than with attacking the system itself suggests that fundamentally they were not opposed to the democratic system of government. Choice A is incorrect. The fact that the writers did not revolt against the system does not necessarily imply that they played a minor part in fighting abuses of the system. Choices B, D, and E are incorrect. None is suggested by the statement.
20. C. In lines 8-10, the author mentions the growing interest in social and economic problems among the writers of the Harlem Renaissance. They used poetry, prose, and song to cry out against social and economic wrongs. Thus, they transformed their growing social and political interest into art.
Choice A is incorrect. The author distrusts the “foreign ideologies” (lines 26-27) with their commitment to international solidarity.
Choice B is incorrect. The author states that the writers wished to improve American culture.
Choices D and E are incorrect. Neither is implied by the author.

21. A. Both the author’s reference to historical interpretations of the Negro writer’s role (lines 52-54) and the author’s evident concern to distinguish Negro writers from those who “embraced” socialist and communist propaganda (lines 24-28) suggest he is a historian interested in presenting these writers as loyal Americans.
Choice B is incorrect. The author touches on literature only in relationship to historical events.
Choices C, D and E are incorrect. There is nothing to suggest any of these interpretations in the passage.

22. B. The author’s point is that the writers essentially ignored socialist and communist propaganda. This is apparently contradicted by the Messenger quote asserting that the New Negro (and thus the new black writer) was produced by the same forces that produced socialism and communism. The author gives qualified assent to that assertion (“Such forces may have produced the New Negro”).

23. E. The passage cites the battles for better working conditions, desegregation, and social and political equality, among others.
Choice A is unanswerable on the basis of the passage. The passage mentions an “improvement in the capacity for expression” in the period, but cites no factors leading to this stylistic improvement.
Choice B is unanswerable on the basis of the passage. It mentions no specific names.
Choice C is unanswerable on the basis of the passage. The passage states the writers did not “embrace the several foreign ideologies that sought to sink their roots” in America. However, it nowhere suggests that the writers were in rebellion against these foreign ideologies.
Choice D is unanswerable on the basis of the passage. No such information is supplied.

24. D. The author takes the reader through Wegener’s reasoning step by step, describing what led Wegener to reach his conclusions.

25. C. The author both notes that Wegener’s theory is revolutionary and indicates that it defies our conventional notions of the rigidity and immobility of the continents. At the same time, he presents Wegener’s reasoning fully and objectively, neither mocking him nor adulating him. Thus, the author displays a judicious attitude, a level-headed, academically respectable approach to a then controversial theory.

26. A. Since the existence of the correspondences between the various coastal contours was used by Wegener as a basis for formulating his theory of continental drift, it can be inferred that the correspondences provide evidence for the theory.
Choice B is incorrect. The passage does not indicate that Pangea’s existence has been proved.
Choice C is incorrect. It is the relative heaviness of sima, not the level or depth of sima, that suggested the possibility of the lighter continents drifting.
Choice D is incorrect. Mobility rather than immobility would provide evidence for continental drift.
Choice E is incorrect. The continents are lighter than the underlying sima.

27. D. Choice D is answerable on the basis of the passage. The next-to-the-last sentence of the second paragraph states that the Americas “apparently drifted toward the west.”

28. A. The opposite of to smart or cause a sharp stinging pain is to soothe.
Think of “a cut that smarts.”

29. E. The opposite of lucid (clear) is obscure.
Think of “lucid thinking.”

30. D. The opposite of the periphery (outward boundary) is the center.
Think of the “periphery or outskirts of a city.”

31. C. The opposite of enigmatic (puzzling; mysterious) is unambiguous or clear.
Think of the Mona Lisa’s “enigmatic smile.”

32. E. The opposite of to repudiate (disown; refuse to acknowledge) is to accept.
Think of “repudiating a debt.”

33. C. The opposite of aloofness (remoteness, indifference) is concern.
Think of “haughty aloofness.”

34. E. The opposite of to exhume or disinter is to bury or inter.
Word Parts Clue: Ex- means out. Humus means earth. To exhume is to dig out of the earth.
Think of “exhuming a corpse.”
35. E. The opposite of despotic (imperious, domineering) is humble. Think of “a despotist tyrant.”

36. D. The opposite of to obfuscate or confuse is to clarify.
Word Parts Clue: Ob- means completely; fuse- means dark; -ate means to make. To obfuscate is to beclou or make completely dark. Think of “obfuscating the issue.”

37. A. The opposite of a paean or song expressing exultation is a dirge or song expressing grief. Think of “a triumphant paean.”

38. C. The opposite of to concatenate or link together is to detach or unlink.
Word Parts Clue: Concat- means together; catena- means chain. Concatenate means to link together as in a chain. Think of “sonnets concatenated in a sequence.”

Section 3

1. C. Because alternate angles have the same measure, \( x = 3x - 50 \); then 50 = 2x and x = 25.

2. A. Column A: \( 17.40 + 6.93 = 24.33 \)
Column B: \( 6.01 + 17.01 = 23.02 \)

3. A. \( AB = 6, BO = 2, OC = 5 \)
\( BC = BO + OC = 7 \)
Area of triangle \( ABC = \frac{1}{2} \times (6) \times (7) = 21 \)

4. C. \( a + y = 180 \) (angles on the same side of the transversal)
\( a = x \) (vertical angles)
Therefore \( x + y = 180 \)

5. B. \( \sqrt{0.81} = 0.9 \)
60% = 0.6
\( \frac{1}{2} = 1.5 \)
3.0
Sum average = \( \frac{3.0}{3} = 1 \)

6. C. \( 7x = 196 \)
\( x = 28 \)
\( \frac{x}{7} = 4 \)

7. B. Both columns have in common: 14, 12, 10, 8, and 6. Column A has, in addition, (2)(4) or 8. Column B has, in addition, 16.

8. A. From the given information \( 2A > 2B \). But \( 2B > B + C \), since \( C < B \).

9. B. \( 5^4 = 625 \)
\( 625 = 100T \)
\( 6.25 = T \)
Therefore, 10 > T.

10. A. If the area of a circle is four times a smaller circle its radius is two times as much.

11. C. The distance from (5,3) to (5,7) = 4. The radius of the circle is 4 and the circumference is \( 8\pi \).

12. A. \( \left( \frac{X}{Z} \right) \left( \frac{Z}{Y} \right) = \frac{X}{Y} \)
\( X \) and \( Y \) are opposite equal angles and therefore \( X = Y \) and \( \frac{X}{Y} = 1 \)

13. B. The triangle is a 3-4-5 triangle.
Hypotenuse = \( 2x + x = 3x \)
Hypotenuse = 5
\( 3x = 5 \)
\( x = \frac{5}{3} \) (Column A)

14. C. Since the measure of \( \angle C = 45^\circ \), the measure of \( \angle A = 45^\circ \) and \( \angle B = BC \).
Let \( x = AB = BC \)
Area \( ABC = \frac{1}{2}(x)(x) = 12.5 \)
\( x^2 = 25 \) and \( x = 5 \)
\( AB = 5; BC = 5 \)

15. C. If \( a = 20 \) then \( x = 160 \)
If \( b = 160 \) then \( y = 20 \)
\( a + x = 180 \)
\( y + x = 180 \)

16. A. (1) \( 3x - 6 = 1 \)
(2) \( x - 2 = ? \)
Observe equation (2) = \( \frac{1}{3} \) of equation (1)
\( x = \frac{1}{3} (3x) \)
\( -2 = \frac{1}{3} (-6) \)
? = \( \frac{1}{3} (1) \)
? = \( \frac{1}{3} \)

17. E. In 2 hours Mr. Jones completed \( \frac{2}{x} \) part of the lawn. He left unmown 1 - \( \frac{2}{x} \) or \( \frac{x - 2}{x} \).
18. E. Factor out 146.
\[146(117 + 173 + 210) = 146 \times 500 = 73,000\]

19. B. (1) \[7x - 5y = 13\]
(2) \[2x - 7y = 26\]
(3) \[5x + 2y =\]
Observe equation (3) is the difference between equation (1) and (2). Therefore \[13 - 26 = -13\].

20. C. Rate = \(\frac{\text{distance}}{\text{time}}\) or \(\frac{d}{t}\)
Let \(x = \text{time required to cover} \ m \text{ miles} \)
Distance = rate \times time
\[m = \frac{d}{t} \times x\]
\[m = \frac{dx}{t} \text{ or } \frac{mt}{x} = x\]

21. E. Lactose = 0.16
Fructose = 1.70
Fructose is about 10.6 times sweeter.

22. C. The increase is from 0.16 to 0.32.
Change is 0.16.
\[\text{change} = \frac{0.32 - 0.16}{0.16} = 100\%\]

23. B. 100 times as sweet as glucose = 74
Let \(x = \text{number of grams of sucrose to be added to saccharin} \)
1 gram of saccharin = 675
\[x \text{ grams of sucrose} = (1.00)(x) = x\]
\[\frac{\text{sweetness}}{\text{number of grams}} = \frac{x + 675}{1 + x} = 74\]
\[74 + 74x = x + 675\]
\[74x = 601\]
\[x = 8.2 \text{ grams}\]

24. A. Obviously we must use less of the glucose than lactose to get 0.32, since glucose is sweeter than lactose. Observe the answers.

25. C. To make mixture:
1 gram glucose = 0.74
2 grams sucrose = 2.00
3 grams fructose = 5.10
Total of 6 grams = 7.84
1 gram sucrose = 1.00
6 grams sucrose = 6.00
Let \(x = \text{number of times mixture is sweeter than sucrose} \)
7.84 = 6\(x\)
\[1.3 = x\]

26. C. \(\frac{1}{2}\) study French.
\(\frac{1}{3}\) of \(\frac{1}{2}\) or \(\frac{1}{6}\) study Spanish.
The remainder \(\frac{2}{6}\) or \(\frac{1}{3}\) do not study any foreign language.

Let \(x = \text{the total number of students in this school} \)
\[\frac{1}{3}x = 300\]
\[x = 900\]

27. D. Let \(x = AB = BC\).
By the Pythagorean theorem,
\[x^2 + x^2 = (6\sqrt{2})^2\]
\[2x^2 = (36)(2)\]
\[x^2 = (36)\]
\[x = 6\]
Area = \(\frac{(6)(6)}{2} = 18\)
Or, recall that in 45°, 45° right triangles, the hypotenuse = leg \(\sqrt{2}\).

28. E. Since \(\angle A\) is the largest angle and since this is a right triangle, \(\angle A = 90^\circ\).

29. E. Area of square = 324 square feet
Area of rectangle = 324 square feet
Length of rectangle = 3 yards = 9 feet
Let \(x = \text{width of rectangle} \)
Area of rectangle = 9\(x\) = 324\(x\) = 36.

30. D. Since the area of each circle is \(4\pi\), the radius of each circle is \(2(\pi r^2 = 4\pi)\). The diameter of each circle is 4. Since each side of \(ABCD\) equals two diameters, \(AB = BC = DC = AD = 8\) and the perimeter of \(ABCD = (4)(8)\) or 32.

Section 4

1. B. \[\frac{1}{4} - \frac{3}{16} = \frac{4}{16} - \frac{3}{16} = \frac{1}{16} = \frac{1}{4} \times \frac{1}{4} = \frac{1}{2}\]

2. C. \[\frac{1}{5} - \frac{10}{5} = 2\] and \(\sqrt{4} = 2\)

3. A. \[\left(\frac{1}{0.07}\right)^2 = \frac{1}{0.0049} = 204 +\]

4. B. \(3^{n+1} = 27\) or \(3^n = 27\)
Since \(n + 2 = 3, n = 1\)
\[3 > 1\]

5. C. \(y + x = 180\)
\(z + x = 180\)
\(y + z = 90\) (given)
\(y = z\)
\(y = 45\)
6. B. Since \( x \) has a negative value, \( x^4 \) will have a negative value and \( \frac{1}{x^3} \) will have a negative value. In Column B, \( x^4 \) will have a positive value.

7. C. \( \frac{x + y}{y} = \frac{x}{y} + 1 \)

8. B. The fraction \( \frac{x}{y} \) has a positive value since the numerator and the denominator are positive. If this fraction were equal to 2, then \( x \) would equal 2\( y \). However, since the fraction is equal to more than 2, then \( x \) is greater than 2\( y \).

9. A. \( \sqrt{0.25} = 0.5 = \frac{1}{2} \)
\( \frac{1}{2} > \frac{1}{4} \)

10. C. Since \( ODC \) is equilateral, \( DC = \frac{1}{3} \) of 12 or 4.
Since \( AB = DC \), and \( BC = AD \), perimeter \( ABCD = 22 \).

11. B. Since \( x = 20 \), \( \angle FCD = 40 \)
\( \angle FCB = 140 \) (supplement)
\( \angle FAB = \angle FCB \) (opposite angles of a parallelogram)
Therefore, \( y = 140 \) and \( y > 6x \)

12. A. Radius of I = 5
Radius of II = 4
Radius of III = 3
\( AB = 5 + 3 = 8 \)
\( BC = 3 + 4 = 7 \)
\( AC = 5 + 4 = 9 \)
Perimeter of \( ABC \) = 24

13. C. In any 3 consecutive integers, the sum of the first and third is equal to twice the second.

![Diagram](image)

14. C. If the area of \( ABCD \) = 36, each side = 6, the length of 6 radii = 6, and each radius = 1. The area of each circle = \((1)^2\pi\) or \(\pi\).

15. D. Since radius = 6, area of circle = 36\( \pi \), but we do not know what part of the circle the segment \( AO \) is.

16. C. Change all dimensions to feet.
Piece of cloth was 3\( y \) feet long; \( f \) feet and \( \frac{i}{12} \) feet were cut.
The present length is \( 3y - \left( f + \frac{i}{12} \right) \).

17. C. Let \( x \) = number of articles shipped.
\( 0.0625x = 2,000 \)
\( 625x = 20,000,000 \)
\( x = 32,000 \)

18. B. \( 7\frac{1}{2} \) inches \( \times 120 \) = 864 inches = 72 feet

19. E. There are 12 inches in one foot. To change inches to feet, we would have to divide the inches into groups of 12. Thus, 36 inches contains 36 \( \div \) 12, or 3 groups of 12, or 3 feet. In like manner, \( c \) inches contains \( c \div 12 \) or \( \frac{c}{12} \) feet.

20. C. \( (x + 1)(x - 1) = x^2 - 1 \)

21. B. \( 30^\circ = \frac{30^\circ}{360^\circ} = \frac{1}{12} = 8 \frac{1}{3} \% \)

22. B. \$30 million + \$11 million = \$41 million \div 2 = \$20 \frac{1}{2} \) million. The closest choice is (B).

23. D. This is a direct proportion. Let \( x \) = number of workers engaged in transportation.
\( \frac{90^\circ}{1980} = \frac{120^\circ}{x} \)
\( 90x = (120)(1980) \)
\( x = \frac{(120)(1980)}{90} \)
\( x = \frac{660}{(30)(\frac{1}{3})} = 2640 \)

24. B. There are 50% more transportation workers (30° on chart) than professional workers (20° on chart). The 50% greater income of the professional workers makes their total income equal to the transportation workers' total income.

25. B. I is not correct. The increased company income in 1985 ($50 million) did not necessarily result from price increases.
II is correct. The increase for the 1980–1985 period over the previous period was $20 million. In the preceding 5 years the increase was $11 million.
III is not correct. The increase in income could be due to other factors, such as price increases.

26. E. If the sum of two numbers is known (here it is 0), subtracting one of the numbers from the sum will give the other number: Subtract:
\[ 2x - 4 \]
To subtract polynomials, change the signs of the subtrahend (polynomial being subtracted) and proceed as in addition:
\[ 2x + 4 \]
The other number is: \( -2x + 4 \)

27. E. To divide two fractions, invert the divisor (here, the divisor is \( \frac{3}{x} \)), and change the operation to multiplication:
\[ \frac{6}{x} \times \frac{x}{3} \]
“Cancel” or divide numerator and denominator by factors that will go evenly into both. In this case, 3 and x are such factors. Note that \( x \div x = 1 \):

\[
\begin{array}{c}
2 \\
\frac{x}{3} \\
1 \\
\hline \\
1 \\
1 \\
1 \\
\end{array}
\]

Multiply together the remaining factors of the numerator to obtain the numerator of the answer, and multiply together the remaining factors of the denominator to obtain the denominator of the answer.

\[
\begin{array}{c}
2 \\
1 \\
1 \\
\hline \\
1 \\
1 \\
1 \\
\end{array}
\]

Simplify: 2

28. C. The darkened line extends to the right of –3 and includes –3. Therefore, the solution set contains numbers greater than or equal to –3. The darkened line extends to the left of 5, but the open, unshaded dot at 5 indicates that 5 is not included in the solution set; therefore, numbers less than 5 but not including 5 are in the solution set. If \( x \) stands for any member of the solution set, the two conditions above may be represented by \(-3 \leq x \leq 5\).

29. D. \( xyz = 1 \)
   Since \( x = z \)
   \( x^2z = 1 \)
   \( x^2y = 1 \)
   \( y = \frac{1}{x^2} \)

30. B. $48.00 (market price) – \frac{1}{4} \times ($48.00) or $12.00 = $36.00 selling price
   Let \( x = \text{cost} \),
   \( (\text{cost}) x + \frac{1}{5} x = 36 \)
   \( 5x + x = 180 \)
   \( 6x = 180 \)
   \( x = $30 \)

Section 5

1-4. Summarize the availability of the staff.

\textit{Monday} Alice, Betty, Dorothy, Edith (except first Monday of month)

\textit{Tuesday} Carol, Betty, Dorothy, Edith

\textit{Wednesday} Alice, Carol, Dorothy, Edith

\textit{Thursday} Betty, Dorothy, Edith (except first Thursday of month)

\textit{Friday} Alice, Betty, Edith

1. A. Observe that Alice, Betty, and Dorothy are available on any Monday.

2. E. Observe summary above.

3. D. Dorothy and Betty are available on any Thursday but Edith is available on all Thursdays except the first Thursday of the month.

4. E. Observe summary. Only Alice, Betty, and Edith are available on Fridays.

5. D. The argument states that gun control laws reduce violent crime; the evidence is a drop in armed robberies in one city. This involves unwarranted generalizations (A, C), a failure to consider alternative explanations (B), and a possible failure to consider contrary evidence (E). D, however, raises an objection to gun control laws unrelated to either the validity of the evidence or the validity of the conclusion in the argument.

6. C. Option I partly answers the objection given in choice B above; this makes it appear more likely that the law directly caused the drop in armed robberies. Option II strengthens the argument in a somewhat more general way; if this statement is true, those violent crimes committed with a gun will be more strongly deterred by the additional punishment mandated for violation of the gun control law. Option III would strengthen the argument only \textit{if} an additional assumption were made, that gun control laws make gun crimes less likely.

7. A. Option I weakens the argument by suggesting an alternative explanation for the drop in the crime rate. Option II has nothing to do with the crime rate. Option III does not, in itself, suggest that the gun control law is an ineffective \textit{deterrent}.

8-11. You might first examine the grid and circle the words which seem to violate one or more rules. They are: \textit{death} [violates rules (3) and (4), as well as (5), because it is not an adjective]; \textit{hotter} [violates rule (5), since all other words in column IV are either nouns or verbs; violates rule (4) unless \textit{fester} is changed]; \textit{fester} [violates rule (3); violates rule (4) unless \textit{hotter} is changed — but if \textit{fester} is changed to satisfy rule (3), it will no longer violate rule (4), may violate rule (5), depending on whether \textit{dam} and \textit{edge} are read as nouns or verbs]; \textit{greed} [may violate rule (5), depending, again, on \textit{dam} and \textit{edge}; \textit{gradual} [violates rule (5)]. Now you should be able to answer the questions dealing only with the trouble spots in the grid.

8. C. \textit{Death} must be changed to a four-letter word, according to rule (3); this will also bring it into conformity with rule (4); and the new word must be an adjective, according to rule (5).
9. C. Two rules, (1) and (3), apply to rows; rule (1) is satisfied by all rows, rule (3) by rows 1, 4, and 5. Three rules, rules (2), (4), and (5), apply to columns. Rule (2) is satisfied by all columns; rules (4) and (5) only by columns I and II.

10. A. Rules (1) and (2) are not violated by any row or column; the others are (see above).

11. C. This is tricky. *Death* and *gradual* must be changed (*deaf* and *glitter* will do). *Hotter* must be changed to the right part of speech—but what is that? If *dam* and *edge* are verbs, *hotter* can become *hanker*, but *greed* must become a verb (*groan*), while *fester* must become a seven-letter verb (flicker). This is a total of five changes. But if *dam* and *edge* are nouns, *hotter* can be a noun (heater), *fester* can become a seven-letter noun (*failure*), and *greed* can remain unchanged. This is a total of four changes. Of course, you are not required to supply words which will fit the rules; the examples we’ve given are simply to clarify the puzzle for you.

12. B. This can be answered by inspection of the diagram. Note that choice A is correct in reverse order.

13. D. This can also be answered by inspection. Note that choice C contradicts a stated condition.

14. A. This can also be answered by inspection.

15. E. Again, simply inspect the diagram. Five works, including one whose name we don’t know, will be heard between the Beach and the Foster.

16. E. Since the soloist’s first performance will be during the Gottschalk—the first work to be heard—she will begin tuning up before the start of the program.

17. C. This is just a matter of counting back from the blank space. Works H, E, B, and D are the four that intervene.

18. C. This is the only really hard item in this set. Inserting G into the blank following C, we would have: C G — E H — A D B I F, a total of 11 (I). Inserting I and F into the blanks after C, we would have: G D B C I F E H — A —, a total of 11 (remember that Antes can’t end the program) (II). But if A preceded G (III), six composers would precede A and five would follow, for a total of 12.

19-22. A diagram showing which events may lead to which will help you here. We have used broken and dotted lines with B, C, and the events which follow from them in order to distinguish which combinations lead to which results. Your diagram need not be this elaborate (or neat); you are the only person who must be able to read it.

19. A. D results from A, B, C, or W. E results from B, C, or W; F from W or X; M or N from E + F. Your only problem might have come if you failed to notice the stipulation of immediately preceding events—so you can’t count C or W among the causes of M in this question.

20. A. A results in D only; but D may cause another event only if it is caused by B or C, so no subsequent event follows after the AD sequence. B, C, and W all have more than one immediate result; X has only one, F, but F caused by X may cause H.

21. B. BDH, BEH, CDH, CEH, WFH, and XFH are the combinations that cause H. Notice that H may not result from any of the immediately preceding events unless these resulted from an earlier event.
22. C. I results from two combinations only—CDI and CEI. G results from four combinations—BDG, BEG, CDG, CEG. H results from six, as we just saw. M and N result from either five or six combinations—in the case of M, BEXFM, CEXFM, WEXFM, BEWFM, CEWFM, and possibly WEWFM (we don’t know if W can act twice, but it doesn’t matter—choice C is still lowest by far).

23. B. This can be deduced from the fact that the author believes that a constitutional amendment will succeed where lawsuits and local statutes have failed.

24. E. This question raises an issue the author has failed to address adequately: given the fact that job discrimination by gender is a real problem, does it necessarily follow that only a constitutional amendment can solve the problem?

25. C. The fact that some employers do not discriminate against women does not undermine the argument as presented, since it does not imply that no problem of discrimination exists.

4. E. If Freem is in seat 3 and Doggett is in seat 2, then Chatsworth, who must sit to the left of Doggett, must be in seat 1. Allenby, Broome, and Edson remain as candidates for seats 4–6. If Allenby occupied seat 5, Broome would have to be next to him; if Broome occupied seat 5, Allenby would have to be next to him—both impossible since Allenby and Broome will not sit next to each other. This means that Edson must occupy seat 5.

5. D. Analyze Nancy’s logic: she assumes that the only harmful effect of beer drinking is gaining weight. The best way to strengthen Gary’s argument and refute Nancy’s is to dispute this assumption. D points out the obvious and explodes her argument. The other choices all fail to challenge Nancy’s illogical reasoning.

6. C. It is most likely that students are excused from Freshman Composition if they demonstrate superior writing ability. Thus, being excused is an effect, not a cause, of their writing well; but the argument, in assuming that dropping the course will improve everyone’s writing, treats it as if it were a cause. Choice A is incorrect—the first sentence in the argument is a factual statement, whether true or false. Choice B is incidental—the reasoning would be invalid even if the statements were backed by miles of evidence. Choices D and E similarly focus on incidental features which might be important if the basic reasoning were valid.

7. B. All choices except choice B suggest that Freshman Composition has educational value and can help to improve writing skills. Choice B suggests just the opposite.

8-12. Summarize the facts.
- Spanish is spoken by 3—A,B,D.
- Italian is spoken by 3—A,C,E.
- English is spoken by 2—B,C.
- French is spoken by 2—D,E.

8. E. When C and D converse they can use English, Italian, French, and Spanish between them. Mr. A speaks Spanish and Italian. Mr. B speaks English and Spanish. Mr. E speaks French and Italian.

9. A. Mr. B understands English and Spanish, while Mr. E speaks two other languages, French and Italian.

10. D. Mr. A and Mr. B can converse in Spanish.

11. B. English is spoken by two executives (Messrs. B and C) and French is spoken by two executives (Messrs. D and E). English and Spanish are spoken by 5. Italian and Spanish are spoken by 6. English and Italian are spoken by 5. French and Spanish are spoken by 5.
12. Three executives speak Spanish (Messrs. A, B, and D). The other executives (Messrs. C and E) speak Italian.

13-16. Problems like this, which are almost impossible to figure out without a diagram, become relatively simple with a circle diagram like the one shown. Broken lines are used for uncertain relations; shading is used for E; F is shown in various possible positions.

13. All we know about F's is that they are Q's and that the non-A part of the B circle does not contain any. They must be A's, C's, or E's because these groups define the rest of the Q's. Choice A can be seen to be wrong from the diagram. Choices B, C, and D are all possible, but not necessarily true.

14. B's, C's, and E's define all the Q's. Choices A and B are possible, but not necessarily true. Choice C would fit an F that was within the A/C overlap. Choice E seems false only if you are hypnotized by the F we have drawn in the A circle, which is also a B. Remember that F is only one possibility.

15. E's are defined as not B or C, so I is definitely true. III is true because no D is an A. II cannot be known; the fact that C's appear both outside the B's and inside the A's does not mean that there are any in the non-A part of B, where our broken line shows them.

16. The question does not say P is a Q, so choice A is out. Choice B is only a possibility—P could be in the non-B portion of the D circle as drawn. Choice C is correct—E and C together define the non-B portions of Q (remember that A's are B's). Choice D fails to account for the fact that P may be outside Q altogether. If not a B, P cannot be an A (choice E).

17-22. As usual with puzzles about seating arrangements, begin with a series of blanks—at first, more than you will eventually need. You might put initials above the blanks and cabinet positions below. The statement about Fenzt gives:

```
  F  C  __  __  __  __
  Ag.
```

Brenner must be to the right of the Minister of Agriculture since, if he or she were to the left, Civili would be one of his or her neighbors. This gives you a stretch of seven persons between Fenzt and Arning, and so you can trim the ends of your diagram. Put the Prime Minister in the center spot. Grell can be two places to the left of Dorner only if Dorner is the Prime Minister. The three ministers seated in a row must be on the left of the Prime Minister, since the Agriculture Minister is on the right. Eckland is placed by elimination. We cannot determine which of the two right-hand places the last two ministers occupy. The completed diagram looks like this:

```
F G C D E B A
Educ. Min. Cult. P.M. Ag. SW or D SW or D
```

17. This information may be easily gleaned from the diagram.

18. Remember the rules about rank. The top five leaders are Dorner, Eckland, Civili, Brenner, and Grell.

19. We don't know whether Brenner or Arning is Minister of Social Welfare. If Brenner, he outranks the Minister of Defense, who (by elimination) is Arning. If Arning, he is outranked by the Minister of Mining, Grell. Thus, either I or II may be true. Both together (C) is impossible.

20. The extreme left-hand seat is the lowest in rank.

21. According to the question, Minister of Education Fenzt will exchange positions with Minister of Agriculture Eckland. As a result, Fenzt will move up from seventh to second in the leadership ranking. Choice E would be correct if the directions mentioned were reversed.

22. Eckland, previously second in rank, becomes fourth; Civili, previously third, becomes second; and Brenner, previously fourth, becomes third. The positions of the Ministers of Defense, Mining, and Education, who rank lower than fourth, and Dorner, who ranks first, are unaffected.
23. B. Lillian’s argument is flawed because she fails to consider all the possible factors that could explain her longevity; B points this out. Choices A and C do not weaken Lillian’s argument, because they do not prove that tobacco and whiskey have bad effects in all cases (choice E may even be considered an ad hominem argument!). Choice C doesn’t directly answer Lillian, because it proves only that other factors may explain other centenarians’ survival. Choice D does not get to the flaw in Lillian’s reasoning—and besides, she may have had medical advice.

24. B. The logical structure of the argument is: If P, then Q; Q, therefore P. This is fallacious reasoning, and we’re asked to find the same fallacious reasoning in one of the choices. Choice B commits exactly the same error. Choice A says: If P, then Q; P, therefore Q (which is valid). Choice E says: If P, then Q; Not Q, therefore not P (also valid). Neither of these structures matches that of the original argument. Neither choice C nor choice D can be symbolized using just two letters; thus neither can match the original.

25. B. Choice B states the hidden assumption on which the original, fallacious argument was based. If it were true, the original conclusion (“her theory must be correct”) would be valid.

Section 7

1. E. The unstableness of slush makes it unlikely to cling to even gentle slopes. Instead, it starts to slide; it may even cause an avalanche. Things that are tightly bonded stick together securely; things that are loosely bonded stick together less well. Note that the loose bonding of the ice grains lessens their stability.

2. C. The writer contrasts well-rendered works of art with poorly executed daubs or crude pictures. However, he qualifies his criticism by stating that almost all these artworks possess a vigor or liveliness that attracts the viewer.

3. E. Extinction or destruction of the species appears to confirm a flawed design that combines an extremely small brain in an extremely huge body. (Actually, current studies of reptiles indicate that the dinosaur’s brain was in proper proportion to its body mass.)

4. B. Clarity in explaining complicated financial matters would do a great deal to offset or compensate for shortcomings in a text. Note the use of and linking the positive phrase “sheer importance of his text” with the second blank. This indicates that the second missing word must be a positive term.

5. B. If nine tenths of the works of art in the gallery have their faces turned to the wall, then the visitor to the gallery has no clue whatsoever to what wonders they contain. Similarly, a person uninstructed in natural history wanders through the world with no clue whatsoever to nine tenths of the natural wonders that surround him.

6. C. Choleric or irascible old men are likely to issue fiery proclamations. However, such formulas should not intimidate or frighten anyone. The use of terms such as “fiery formula” and “outrage” conveys the image of an elderly gentleman who gets hot under the collar or choleric.

7. D. John’s mother is at once excessively optimistic and excessively pessimistic. Optimistically she thinks her son is a genius (person showing “academic brilliance”). Pessimistically she thinks he is a libertine (person given to “disolute excesses”). In both instances she is wrong: John’s career has not been distinguished by genius or depravity; it has merely been lackluster (dull, uninspired). Note that an undergraduate career undistinguished by genius and depravity would not be likely to be described as either colorful or anomalous (abnormal). Thus, you could immediately eliminate choices B and C.

8. C. A cluster is a group of stars. A clump is a group of trees. (Group and Member)

9. B. To guffaw is to laugh in a noisy manner. To squabble is to quarrel in a noisy manner. (Manner)

10. E. A lobster is trapped by lobstermen in a pot. A rabbit is trapped by hunters in a snare. (Function)

11. A. A piston moves up and down within a cylinder. An elevator moves up and down within a shaft. Beware eye-catchers. A bullet is fired from a revolver; it does not merely move up and down the barrel of the revolver. (Location)

12. D. Erudition or learnedness characterizes the scholar. Mendacity or dishonesty characterizes the liar. (Defining Characteristic)
13. B. A drum is an instrument in the tympani or percussion section of an orchestra. An oboe is an instrument in the woodwind section of an orchestra.

(Class and Member)

14. D. To gibber (chatter foolishly) is to speak without sense. To vacillate (waver) is to act without resolution (firmness of resolve).

(Antonym Variant)

15. C. To mitigate a punishment is to lessen or reduce it. To commute a sentence is to lessen or reduce it.

(Function)

16. E. An aphorism or concise formulation of a truth is by definition sententious (pithy; concise). A eulogy or expression of praise is by definition laudatory.

(Defining Characteristic)

17. D. In the opening and closing sentences of the passage, the author sums up what “we now know” and informs the reader what “has been found” about the composition of matter (what constitutes matter).

18. C. The passage states that molecules are made of atoms; logically, therefore, an atom is smaller, not larger, than the molecule to which it belongs.

Choice A is incorrect. Line 5 states atoms “have never been seen or photographed.”
Choice B is incorrect. Lines 19-20 mention the presence of positive electric elements.
Choice D is incorrect. Lines 5-8 note the ingenious laboratory experiments that determine the atom’s operations or processes.
Choice E is incorrect. Lines 13-14 mention the average diameter of a molecule is 1/125 millionth of an inch. Atoms are smaller yet.

19. E. The comparison emphasizes the smallness or minuteness of atoms.

20. C. The satellites circle the planet. The electrons swirl around the proton. As depicted, the relationships are comparable.

Choice A is incorrect. A hawk swoops down upon its prey. The proton does not swoop down upon the electrons.
Choice B is incorrect. A blueprint is an outline or plan. A framework is a skeletal structure, possibly constructed in accordance with a blueprint. The relationships are not comparable.
Choice D is incorrect. Iron filings are drawn or attracted to a magnet. Electrons swirl around a proton.
Choice E is incorrect. A compound is made up of elements. A proton is not made up of electrons.

21. C. In the second paragraph, the author emphasizes the need for being able to refute the arguments of the opponents of the side of an issue which an individual supports.

22. B. In the next-to-the-last sentence of the first paragraph we are told that when principles cannot be disputed, a period of history cannot achieve the level of brilliance which has made some periods of history so noteworthy.

23. E. The second paragraph states that “ninety-nine in a hundred” of so-called educated people do not have a full sense of the force of the arguments that favor their opponents’ side.

24. C. The opening sentence states that it is a duty to follow one’s intellect to whatever conclusions it may lead. Those who do not do so are not suffering or permitting themselves to think.

25. B. The third sentence of the second paragraph states that the kind of person described in this question “has no ground for preferring either opinion.” If she chooses either side, she is acting out of bias or prejudice, and so is opinionated.

26. C. A person who holds orthodox ideas without subjecting them to examination cannot be determined on controversy (bent on getting into an argument). For her ideas will not be in conflict with those of a majority of her contemporaries.

27. B. If it is the suspension of the dread of heterodox speculation that characterizes such periods of intellectual achievement, then such periods must be characterized by unorthodox thought and reflection.

28. D. The opposite of to recollect or remember is to forget.
Think of “recollecting someone’s name.”

29. E. The opposite of a misapprehension or incorrect understanding is a correct interpretation.
Think of “being under an unfortunate misapprehension.”

30. B. The opposite of to abide or bear patiently is to refuse to endure.
Think of being “unable to abide punk rock.”

31. C. The opposite of benevolent or well-meaning is malicious or wicked.
Word Parts Clue: Bene- means well; vol- means wish. Someone benevolent wishes people well.
Think of “a benevolent philanthropist.”

32. D. The opposite of precipitate or hasty is dilatory or tardy.
Think of “a precipitate departure.”
33. C. The opposite of acerbity or sharpness of temper is mildness of temperament. Think of “biting acerbity.”

34. A. The opposite of aplomb (equanimity or poise) is discomposure or agitation. Think of “the aplomb of a diplomat.”

35. B. The opposite of tortuous or winding is direct. Beware eye-catchers. Tortuous has nothing to do with torture. Think of “a tortuous mountain road.”

36. C. The opposite of to extirpate or eradicate is to proliferate or cause to increase in numbers. Think of “extirpating endangered species.”

37. D. The opposite of beatific or saintly is fiendish. Beware eye-catchers. Choice A is incorrect. Beatific is not a synonym for beautiful. Think of “beatific angels.”

38. D. The opposite of odium or detestation is veneration or great respect. Beware eye-catchers. Choice A is incorrect. Odium is unrelated to odor. Think of “despicable odium.”
Answer Sheet – MODEL TEST 5

Start with number 1 for each new section.
If a section has fewer than 38 questions, leave the extra spaces blank.

MODEL TEST 5

SECTION 1
Time—30 Minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. Language, culture, and personality may be considered independently of each other in thought, but they are ______ in fact.
   (A) autonomous  (B) pervasive  (C) equivocal  (D) inseparable  (E) immutable

2. Since depression seems to result when certain cells in the brain receive too little of two key chemicals, the neurotransmitters norepinephrine and serotonin, one goal of treatment is to make more of the chemicals ______ the nerve cells that need them.
   (A) analogous to  (B) dependent on  (C) available to  (D) regardless of  (E) interchangeable with

3. Wildlife managers and conservationists have gradually come to recognize that ______ methods of protecting the flock by maintaining refuges and regulating hunting are no longer sufficient, and in their dissatisfaction they are ______ a new approach.
   (A) radical…incapable of  (B) innovative…cognizant of  (C) conventional…pressing for  (D) previous…chagrined by  (E) conservative…dubious of

4. Neutron stars are believed to be the highly compressed remnants of exploding stars (supernovas) and thus ______ of one of the most ______ processes in nature.
   (A) causes…cataclysmic  (B) products…violent  (C) examples…equivocal  (D) justifications…harsh  (E) precursors…dynamic

5. The sudden shift from ______ to ______ in Hugo’s novels can startle readers, especially when he abruptly juxtaposes a scene of chaste and holy love with one of coarse and profane licentiousness.
   (A) devotion…frivolity  (B) piety…ribaldry  (C) vulgarity…adultery  (D) decorum…salubrity  (E) purity…maturity

6. Isozaki’s eye for detail is apparent everywhere in the new museum, but fortunately the details are ______ to the building’s larger formal composition, which is ______ by the busyness of much recent architecture.
   (A) important…harmful  (B) irrelevant…fragmented  (C) appropriate…echoed  (D) subordinated…unencumbered  (E) incidental…nullified

7. Instead of taking exaggerated precautions against touching or tipping or jarring the costly bottle of wine, the waitress handled it quite ______, being careful only to use a napkin to keep her hands from the cool bottle itself.
   (A) fastidiously  (B) capriciously  (C) nonchalantly  (D) tentatively  (E) imprudently

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. LODGE : BEAVER::
   (A) sty : pig  (B) nest : bird  (C) shell : turtle  (D) pelt : rabbit  (E) walnut : squirrel

9. RUSTLE : CATTLE::
   (A) bleat : sheep  (B) swim : fish  (C) pan : gold  (D) speculate : stock  (E) hijack : cargo

10. GLAND : ENZYME::
    (A) muscle : spasm  (B) generator : current  (C) organ : kidney  (D) brain : cortex  (E) silo : grain

Directions: Each passage in this group is followed by questions based on its content. After reading a passage, choose the best answer to each question. Answer all questions following a passage on the basis of what is stated or implied in that passage.

The notion of a tranquil abyss had been so generally held that many investigators were initially reluctant to accept the evidence for strong currents and storms in the deep sea. The first argument for the existence of such currents came from theory. Cold water is denser than warm water, and models of ocean circulation showed that the sinking of cold water near the poles should generate strong, deep and steady currents flowing toward the Equator. Subsequent observations not only confirmed the presence of the deep currents but also disclosed the existence of eddies on the western side of ocean basins that can be some 300 times as energetic as the mean current. Photographs of the sea floor underlying the deep currents also revealed extensive graded beds indicative of the active transport of sediment. The final evidence for dynamic activity at great depths came from direct measurements of currents and sediments in the North Atlantic carried out in the HEBBLE program.

Before we describe the HEBBLE findings in some detail let us briefly review the sources and sinks of deep-sea sediments and the forces that activate the global patterns of ocean circulation. The sediments that end up on the ocean floor are of two main types. One component is the detritus whose source is the weathering of rocks on continents and islands. This detritus, together with decaying vegetable matter from land plants, is carried by rivers to the edge of the continent and out onto the continental shelf, where it is picked up by marine currents. Once the detritus reaches the edge of the shelf it is carried to the base of the continental rise by gravitational processes. A significant amount of terrestrial material is also blown out to sea in subtropical regions by strong desert winds. Every year some 15 billion tons of continental material reaches the outlets of streams and rivers. Most of it is trapped there or on the continental shelves; only a few billion tons escapes into the deep sea.

The second major component arriving at the sea floor consists of the shells and skeletons of dead microscopic organisms that flourish and die in the sunlit waters of the top 100 meters of the world’s oceans. Such biological material contributes to the total inventory at the bottom about three billion tons per year. Rates of accumulation are governed by rates of biological productivity, which are controlled in part by surface currents. Where surface currents meet they are said to converge, and where they part they are said to diverge. Zones of divergence of major water masses allow nutrient-rich deeper water to “outcrop” at the sunlit zone where photosynthesis and the resulting fixation of organic carbon take place. Such belts of high productivity and high rates of accumulation are normally around the major oceanic fronts (such as the region around the Antarctic) and along the edges of major currents (such as the Gulf Stream off New England and the Kuroshio currents off Japan). Nutrient-rich water also outcrops in a zone along the Equator, where there is a divergence of two major, wind-driven gyres.
17. The primary purpose of the passage is to
   (A) contrast surface currents with marine currents
   (B) question the methods of earlier investigators
   (C) demonstrate the benefits of the HEBBLE program
   (D) describe a replicable laboratory experiment
   (E) summarize evidence supporting oceanic circulation

18. Which of the following best describes the attitude of many scientists when they first encountered the theory that strong currents are at work in the deep sea?
   (A) Somber resignation
   (B) Measured approbation
   (C) Marked skepticism
   (D) Academic detachment
   (E) Active espousal

19. According to the passage, the earliest data supporting the idea that the sea depths were dynamic rather than placid came from
   (A) underwater photographic surveys
   (B) the activities of the HEBBLE program
   (C) analysis of North Atlantic sea-bed sediments
   (D) direct measurement of undersea currents
   (E) models showing how hot and cold water interact

20. This passage most likely would be of particular interest to
   (A) navigators of sailing vessels
   (B) students of global weather patterns
   (C) current passengers on ocean liners
   (D) designers of sea-floor structures
   (E) researchers into photosynthesis

21. As defined in the passage, the second type of deep-sea sediment consists of which of the following?
   I. Minute particles of rock
   II. Fragmentary shells
   III. Wind-blown soil
   (A) I only
   (B) II only
   (C) I and II only
   (D) I and III only
   (E) I, II, and III

22. In the passage the authors do all of the following EXCEPT
   (A) approximate an amount
   (B) refer to a model
   (C) give an example
   (D) propose a solution
   (E) support a theory

23. The style of the passage can best be described as
   (A) oratorical
   (B) epigrammatic
   (C) expository
   (D) digressive
   (E) metaphorical

   Unlike the carefully weighted and planned compositions of Dante, Goethe’s writings have always the sense of immediacy and enthusiasm. He was a constant experimenter with life, with ideas, and with forms of writing. For the same reason, his works seldom have the qualities of finish or formal beauty which distinguish the masterpieces of Dante and Virgil. He came to love the beauties of classicism but these were never an essential part of his make-up. Instead, the urgency of the moment, the spirit of the thing, guided his pen. As a result, nearly all his works have serious flaws of structure, of inconsistencies, of excesses and redundancies and extranities.

   In the large sense, Goethe represents the fullest development of the romanticist. It has been argued that he should not be so designated because he so clearly matured and outgrew the kind of romanticism exhibited by Wordsworth, Shelley, and Keats. Shelley and Keats died young; Wordsworth lived narrowly and abandoned his early attitudes. In contrast, Goethe lived abundantly and developed his faith in the spirit, his understanding of nature and human nature, and his reliance on feelings as man’s essential motivating force. The result was an all-encompassing vision of reality and a philosophy of life broader and deeper than the partial visions and attitudes of other romanticists. Yet the spirit of youthfulness, the impatience with close reasoning or “logic-chopping,” and the continued faith in nature remained his to the end, together with an occasional waywardness and impulsive-ness and a disregard of artistic or logical propriety which savor strongly of romantic individualism. Since so many twentieth-century thoughts and attitudes are similarly based on the stimulus of the Romantic Movement, Goethe stands as particularly the poet of modern times as Dante stood for medieval times and as Shakespeare for the Renaissance.

24. The title that best expresses the ideas of this passage is
   (A) Goethe and Dante
   (B) The Characteristics of Romanticism
   (C) Classicism versus Romanticism
   (D) Goethe, the Romanticist
   (E) Goethe’s Abundant Life

25. A characteristic of romanticism NOT mentioned in this passage is
   (A) elevation of nature
   (B) preference for spontaneity
   (C) modernity of ideas
   (D) unconcern for artistic decorum
   (E) simplicity of language
26. It can be inferred from the passage that classicism has which of the following characteristics?
   I. Sensitivity toward emotional promptings
   II. Emphasis on formal aesthetic criteria
   III. Meticulous planning of artistic works
   (A) II only    (B) III only    (C) I and II
   (D) II and III    (E) I, II, and III

27. The author's attitude towards Goethe's writings is best described as
   (A) unqualified endorsement
   (B) lofty indifference
   (C) reluctant tolerance
   (D) measured admiration
   (E) undisguised contempt

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. SUPERFICIAL:
   (A) profound
   (B) exaggerated
   (C) subjective
   (D) spirited
   (E) dense

29. NAIVETE:
   (A) originality
   (B) sensitivity
   (C) sophistication
   (D) antipathy
   (E) vigor

30. TETHER:
   (A) fetch
   (B) demand
   (C) estrange
   (D) neglect
   (E) loose

31. PANDEMONIUM:
   (A) amusement
   (B) indolence
   (C) deceleration
   (D) tranquility
   (E) tolerance

32. ENERVATE:
   (A) aggravate
   (B) stimulate
   (C) edify
   (D) applaud
   (E) disregard

33. DESTITUTION:
   (A) civilization
   (B) recompense
   (C) affluence
   (D) reformation
   (E) parsimony

34. BEREAVE:
   (A) commiserate
   (B) antagonize
   (C) restore
   (D) evade
   (E) clarify

35. ESCHEW:
   (A) gnaw
   (B) reproach
   (C) transform
   (D) preserve
   (E) seek

36. RECONDITE:
   (A) immediate
   (B) opportune
   (C) inherent
   (D) obvious
   (E) diverse

37. OBVIATE:
   (A) becloud
   (B) necessitate
   (C) rationalize
   (D) execute
   (E) assuage

38. CONTUMACIOUS:
   (A) laudatory
   (B) taciturn
   (C) fastidious
   (D) impassive
   (E) tractable

IF YOU FINISH BEFORE TIME IS CALLED, YOU MAY CHECK YOUR WORK ON THIS SECTION ONLY.
DO NOT WORK ON ANY OTHER SECTION IN THE TEST.
SECTION 2
Time—30 Minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

<table>
<thead>

<th>Column B</th>
<th>Sample Answers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example 1: 2 × 6</td>
<td>2 + 6</td>
<td>• B C D E</td>
</tr>
</tbody>
</table>

Examples 2-4 refer to \( \triangle PQR \).

Example 2: \( PN \) \( \overrightarrow{NQ} \) (since equal measures cannot be assumed, even though \( PN \) and \( NQ \) appear equal)

Example 3: \( x \) \( y \) (since \( N \) is between \( P \) and \( Q \))

Example 4: \( w + z \) 180 (since \( PQ \) is a straight line)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

13. \(3x\) \(2z\) \(\text{M}\)

14. \(x\) \(\frac{AB \parallel CD}{75}\) \(\text{M}\)

Directions: Each of the Questions 16-30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. How many 5¢ stamps can be purchased for \(c\) cents?
   (A) \(5c\)  
   (B) \(\frac{c}{5}\)  
   (C) \(\frac{5}{c}\)  
   (D) \(500c\)  
   (E) \(\frac{5c}{100}\)

17. Points \(B\) and \(C\) lie on line \(AD\) so that \(AB = BC = CD\). What part of \(AD\) is \(AC\)?
   (A) \(\frac{1}{4}\)  
   (B) \(\frac{1}{3}\)  
   (C) \(\frac{2}{4}\)  
   (D) \(\frac{2}{3}\)  
   (E) \(\frac{3}{4}\)

18. If \(3x = \frac{5}{6}y\), then \(5y = \)
   (A) \(\frac{1}{2}x\)  
   (B) \(2x\)  
   (C) \(3.6x\)  
   (D) \(5x\)  
   (E) \(18x\)

19. What is the radius of the largest circular disc that can be cut from a strip of metal \(15'' \times 21''\)?
   (A) \(7''\)  
   (B) \(7\frac{1}{2}''\)  
   (C) \(15''\)  
   (D) \(15\frac{1}{2}''\)  
   (E) \(157\frac{1}{2}''\)
20. By how much is \( \frac{3}{7} \) larger than 20 percent of 2?

(A) \( \frac{1}{3} \)  \( \frac{1}{7} \)  \( \frac{4}{7} \)  \( \frac{3}{7} \)  \( \frac{4}{7} \)

**WHERE THE SCHOOL TAX GOES**

21. What is the ratio of taxpayers' money spent for teachers' salaries to taxpayers' money for the salaries of other school personnel?

(A) 1:2  
(B) 1:3  
(C) 3:1  
(D) 2:3  
(E) 3:2

22. How many times greater is the tax rate for schools than the tax rate for the community college?

(A) 4  
(B) 6  
(C) 24  
(D) 38  
(E) 48

23. What is the annual tax paid for schools by a property owner whose house has a taxable value of $10,000?

(A) $24.85  
(B) $248.50  
(C) $2,485.00  
(D) $24,850.00  
(E) $248,500.00

24. What part of the school budget is allocated for textbooks and other teaching material?

(A) \( \frac{1}{25} \)  
(B) \( \frac{1}{5} \)  
(C) \( \frac{1}{4} \)  
(D) \( \frac{1}{8} \)  
(E) \( \frac{3}{8} \)

25. If the amount of money spent for maintenance of school buildings is represented by $D$, then the amount of money spent for miscellaneous school items is expressed as

(A) $20D  
(B) $15D  
(C) \( $\frac{3}{4}D \)  
(D) \( $\frac{2}{3}D \)  
(E) \( $\frac{1}{3}D \)

26. In the figure above, how many square units are there in the shaded triangle?

(A) 4  
(B) 6  
(C) 8  
(D) 9  
(E) 12
27. How many 3-gallon cans can be filled with the milk from 165 one-pint containers? (2 pints = 1 quart; 4 quarts = 1 gallon)
   (A) 3
   (B) 4
   (C) 5
   (D) 6
   (E) 7

29. How many ounces of water must be added to 48 ounces of alcohol to make a solution that is 25% alcohol?
   (A) 16
   (B) 48
   (C) 64
   (D) 144
   (E) 192

28. The size of the smaller angle between the hands of the clock at half past six, expressed in degrees, is
   (A) $7\frac{1}{2}$
   (B) 15
   (C) $22\frac{1}{2}$
   (D) 30
   (E) more than $22\frac{1}{2}$ but less than 30

30. In the figure above, if $BC = 26, AE = 4, AB = DC = 5, AE \perp BC$ and $AD$ is parallel to $BC; AD = ?$
   (A) 3
   (B) 6
   (C) 20
   (D) 23
   (E) none of these

SECTION 3
Time—30 Minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–4

Mrs. F, official hostess of New York City, has invited several wives of delegates to the United Nations for an informal luncheon. She plans to seat her eleven guests so that each lady will be able to converse with at least the person directly to her right or left. She has prepared the following list.

Mrs. F speaks English only.
Mrs. G speaks English and French.
Mrs. H speaks English and Russian.
Mrs. J speaks Russian only.
Mrs. K speaks English only.
Mrs. L speaks French only.
Mrs. M speaks French and German.
Mrs. N speaks English and German.
Mrs. O speaks English and French.
Mrs. P speaks German and Russian.
Mrs. Q speaks French and German.
Mrs. R speaks English only.

1. Which of the following arrangements will meet Mrs. F’s requirement?

   I. FOLMPHJKGONR
   II. FRLPKHJGMOQ
   III. FRJHOMQPKGN

   (A) I only
   (B) II only
   (C) III only
   (D) I and II only
   (E) I and III only

2. If the ladies seated to the right of Mrs. P are, respectively, MGHKFO, who must sit at Mrs. P’s left hand?

   (A) J
   (B) L
   (C) N
   (D) Q
   (E) R

3. If seven of the ladies have seated themselves in the following order: NGFROMQ, who must be the next lady seated?

   (A) H
   (B) J
   (C) K
   (D) L
   (E) P

4. Mrs. F has decided upon the following seating arrangement:

   R K G Q N F O L M P J H

   At the last minute, Mrs. H and Mrs. P inform the hostess that they will not be able to attend. Which of the following adjustments will allow Mrs. F’s seating requirements to be met?

   I. Seat Mrs. J between Mrs. K and Mrs. G
   II. Seat Mrs. J between Mrs. Q and Mrs. F
   III. Seat Mrs. J to the right of Mrs. N

   (A) I only
   (B) III only
   (C) I or II only
   (D) II or III only
   (E) Neither I, II, nor III

5. Senator Johnson: No argument for this bill is valid, because no one would argue for this bill without having an ulterior motive: namely, the desire for personal gain.

   The bill’s sponsors would be committing the same error in reasoning as Senator Johnson if they responded by saying:

   (A) Of course we have ulterior motives. It is perfectly reasonable to support a bill in order to promote our personal interests.
   (B) The fact that passing a bill would benefit its sponsors does not mean that the bill should not be passed.
   (C) The fact that Senator Johnson has substituted a personal attack for a discussion of the merits of the bill leads us to suspect that he can offer no strong arguments against it.
   (D) Senator Johnson has no valid reason for opposing our bill; he is doing so only because we helped defeat his pork-barrelling bill last month.
   (E) Everyone is always motivated in part by a desire for personal gain; Senator Johnson is no exception.
6. Father: My daughter could be a star on Broadway if she could only get one big break. Why, you should see the rave reviews she received when she was the lead in her high school play.

The best way to counter the argument above would be to point out that

(A) big breaks are hard to come by on Broadway
(B) one big break does not ensure continued success in the theater
(C) the standards on Broadway are much higher than they are at the high school level
(D) fewer plays are being produced on Broadway today than in the past
(E) relatively few aspiring actors ever become Broadway stars

7. Most persons who oppose gun control are conservatives; therefore, since Kathleen favors gun control, she is probably not a conservative.

The above argument most resembles which of the following?

(A) Most sociology professors are liberals; therefore Dr. Williams, who is a liberal, is probably a sociology professor.
(B) Most corporation presidents own country homes; if Ms. Steeples is a corporation president, she may or may not have a country home.
(C) Few major publishing firms publish much poetry; since Flame Press publishes only poetry, it is probably not a major publishing firm.
(D) Most sports cars are extremely expensive; since the new Venus Leopard is not a sports car, it is probably inexpensive.
(E) Most desert plants are cacti; therefore the cholla, a desert plant, is probably a cactus.

Questions 8–11

The Homer Museum of American Art is open daily except Monday from 11 A.M. to 5 P.M. Tuesdays and Thursdays the museum remains open until 8 P.M. The spring special exhibitions are: "Albert Pinkham Ryder, A Retrospective," which is on view from Friday, April 24, through Sunday, May 31, in the Pollock Wing; "Precursors of Thomas Eakins," from Friday, May 8, through Sunday, July 6, in the Third Floor Gallery; and "The Hudson River School," in the John Twachtman Gallery, which is closed Tuesdays, from Friday, May 1, through Sunday, May 24 only. The Pollock wing is closed Thursdays during May.

8. If Dan can visit the museum only after 5 P.M. or on Saturday, and does not wish to view more than one special exhibition in a day, he can see all three special exhibitions in the briefest time by starting with

(A) "The Hudson River School" on a Thursday
(B) the Ryder Retrospective on a Saturday
(C) "Precursors of Eakins" or the Ryder Retrospective on a Tuesday
(D) "Precursors of Eakins" on a Thursday
(E) any exhibition on a Saturday

9. Ellen wishes to visit the three special exhibitions on successive Thursdays. This is possible only if she visits

I. the Ryder Retrospective in April
II. "The Hudson River School" second
III. "Precursors of Eakins" immediately following the Ryder Retrospective

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

10. Ralph can visit all three special exhibitions on one day if he goes on

I. any Saturday in May
II. the second, third, or fourth Saturday in May
III. any Tuesday or Friday between May 5 and May 22

(A) I only
(B) II only
(C) III only
(D) I and III only
(E) II and III only

11. Terry visits the museum on an afternoon six days after the opening of "The Hudson River School." Which of the special exhibitions may he visit?

I. The Ryder Retrospective
II. "Precursors of Eakins"
III. "The Hudson River School"

(A) I only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III
Questions 12–18

At a symposium on the possible dangers of the industrial chemical PBX, three pro-industry spokespersons are to be seated to the left of the moderator and three critics of PBX to the right of the moderator. The speakers are Drs. Albert, Burris, Cathode, Durand, Ettis, and Felsenstein.

1. The person delivering the paper “Epidemiological Aspects of PBX” is seated immediately between Dr. Albert and Dr. Durand.

2. The persons delivering “Public Health and PBX” and “Radiological Aspects of PBX” are close friends and insist on sitting together.

3. Felsenstein is placed two seats to the left of the moderator.

4. As heavy smoking is repugnant to the moderator, she insists that the person delivering “PBX: Benign or Malignant,” a heavy smoker, be seated at one end of the table.

5. Cathode, delivering “The Impact of PBX on the Environment,” is seated to the left of Felsenstein.

6. Albert, a critic of PBX, is seated to the left of Ettis.

12. The pro-industry spokespersons are

(A) Albert, Felsenstein, Durand
(B) Felsenstein, Burris, Albert
(C) Cathode, Felsenstein, Ettis
(D) Albert, Burris, Durand
(E) Cathode, Felsenstein, Burris

13. The person seated immediately to the left of the moderator is

(A) Albert
(B) Burris
(C) Cathode
(D) Durand
(E) Ettis

14. Assuming it is one of the papers delivered at the symposium, “PBX and the Digestive Tract” must be by

(A) Albert
(B) Burris
(C) Cathode
(D) Ettis
(E) Felsenstein

15. Given the seating rules as stated, which of the numbered statements are logically sufficient to establish the position of Dr. Ettis and the title of the paper she delivers?

(A) 1, 3
(B) 1, 6
(C) 1, 3, 6
(D) 1, 4, 5, 6
(E) 1, 3, 4, 5

16. The symposium is expanded to include a seventh speaker. If he is seated exactly midway between Cathode and the moderator, he will sit

(A) to the left of the author of “Radiological Aspects of PBX”
(B) one seat to the right of the moderator
(C) two seats to the right of Durand
(D) three seats to the left of Albert
(E) four seats to the left of the author of “PBX: Benign or Malignant”

17. The symposium is expanded to include two more speakers. The seventh speaker is seated at one end of the table. If the eighth speaker is seated exactly midway between Durand and the author of “Public Health and PBX,” which of the following must be true?

(A) The eighth speaker must be seated at one end of the table.
(B) Burris must be the author of “Radiological Aspects of PBX.”
(C) The eighth speaker must be seated on the same side of the moderator as Felsenstein.
(D) The moderator must be seated next to the author of “Public Health and PBX.”
(E) The eighth speaker must be seated immediately to the left of Ettis.

18. Which of the following cannot be determined on the basis of the information given?

I. The author of “Public Health and PBX”
II. The title of the paper delivered by Durand
III. The identity of the two friends who insist on being together

(A) I only
(B) I only
(C) III only
(D) I and II only
(E) II and III only

Questions 19–22

A is the father of two children. B and D, who are of different sexes.

C is B’s spouse.

E is the same sex as D.

B and C have two children: F, who is the same sex as B, and G, who is the same sex as C.

E’s mother, H, who is married to L, is the sister of D’s mother, M.

E and E’s spouse, I, have two children, J and K, who are the same sex as I.

No persons have married more than once, and no children have been born out of wedlock. The only restrictions on marriage are that marriage to a sibling, to a direct descendant, to a person of the same sex, or to more than one person at the same time is forbidden.

19. F is

(A) G’s brother
(B) G’s sister
(C) B’s daughter
(D) D’s niece or nephew
(E) the same sex as H
20. According to the rules, D can marry
   (A) F only
   (B) G only
   (C) J only
   (D) J or K only
   (E) F, J, or K

21. If L and H divorced, H could marry
   I. D only
   II. F
   III. D or G
   (A) I only
   (B) II only
   (C) III only
   (D) I or II, but not both
   (E) II or III, but not both

22. If the generation of F and K’s parents and their sib-
   lings contains more females than males, which of the
   following must be true?
   (A) There are more females than males in F and K’s
       generation.
   (B) J is male.
   (C) A is the same sex as D
   (D) K and G are the same sex.
   (E) D is H’s nephew.

Questions 23–25

The internal combustion engine, which powers all private motorized vehicles, should be banned. It burns up petroleum products that are needed to produce plastics, synthetics, and many medicines. Once all the oil is gone, we will no longer be able to produce these valuable commodities. Yet we do not have to burn gasoline to satisfy our transportation needs. Other kinds of engines could be developed if the oil companies would stop blocking research efforts.

23. The argument above depends on which of the follow-
   ing assumptions?
   I. We are in imminent danger of running out
    of oil.
   II. Alternative methods of producing plastics will
    not be found before the oil runs out.
   III. If they so desired, the oil companies could
    develop methods of transportation not based on
    the burning of petroleum.
   (A) I only
   (B) II only
   (C) I and II only
   (D) II and III only
   (E) I, II and III

24. The argument above would be most weakened by the
   development of which of the following?
   (A) An internal combustion engine that operated on
       one-tenth the gasoline used in a normal
       engine
   (B) A car that operated on solar energy stored in
       special batteries
   (C) A method of producing plastic that used no
       petroleum products
   (D) A synthetic oil with all the properties of natural
       oil
   (E) A means of locating numerous undiscovered oil
       fields

25. The argument above would be most strengthened if
    which of the following were true?
    (A) One of the oil companies has suppressed the
        discovery of an engine that burns only
        alcohol.
    (B) Some of the medicines that require petroleum
        for their production help to control and cure
        several of the world’s most deadly diseases.
    (C) The world’s current oil reserves are about half
        of what they were 30 years ago.
    (D) In high-pollution areas, automobile exhaust
        fumes have been shown to cause high rates of
        lung cancer and heart disease.
    (E) When gasoline is burned inside an auto engine,
        less than one-fourth of the energy produced is
        used to propel the vehicle.

SECTION 4
Time—30 Minutes
30 Questions

Numbers: All numbers used are real numbers.

Figures: Position of points, angles, regions, etc., can be assumed to be in the order shown; and angle measures can be assumed to be positive.

Lines shown as straight can be assumed to be straight.

Figures can be assumed to lie in a plane unless otherwise indicated.

Figures that accompany questions are intended to provide information useful in answering the questions. However, unless a note states that a figure is drawn to scale, you should solve these problems NOT by estimating sizes by sight or by measurement, but by using your knowledge of mathematics (see Example 2 below).

Directions: Each of the Questions 1-15 consists of two quantities, one in Column A and one in Column B. You are to compare the two quantities and choose

A if the quantity in Column A is greater;
B if the quantity in Column B is greater;
C if the two quantities are equal;
D if the relationship cannot be determined from the information given.

Note: Since there are only four choices, NEVER MARK (E).

Common Information: In a question, information concerning one or both of the quantities to be compared is centered above the two columns. A symbol that appears in both columns represents the same thing in Column A as it does in Column B.

</tbody>
</table>

Examples 2-4 refer to △ PQR.

Example 2: \( PN \) \( NQ \) ● ⑩ ② ③ ⑥ (since equal measures cannot be assumed, even though \( PN \) and \( NQ \) appear equal)

Example 3: \( x \) \( y \) ● ⑩ ② ③ ⑥ (since \( N \) is between \( P \) and \( Q \))

Example 4: \( w + z \) 180 ● ⑩ ② ③ ⑥ (since \( PQ \) is a straight line)
A if the quantity in Column A is greater;  
B if the quantity in Column B is greater;  
C if the two quantities are equal;  
D if the relationship cannot be determined from the information given.

Directions: Each of the Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. Potassium nitrate is composed of 39 parts potassium, 14 parts nitrogen, and 48 parts oxygen. Find the percentage (to the nearest %) of potassium in potassium nitrate.

(A) 14
(B) 39
(C) 45
(D) 48
(E) 62

17. A rectangular field 100 feet long is twice as long as it is wide. The number of feet of fencing needed to enclose the field is

(A) 150
(B) 300
(C) 400
(D) 500
(E) 600

18. In the triangle above, BC equals one half of AB. The area of right triangle ABC equals 64 square feet. To the nearest foot, what is the length of hypotenuse AC?

(A) 12
(B) 14
(C) 18
(D) 24
(E) 32

19. In the figure above, if \( x = ky \), and \( k \) is a constant, what is the missing value of \( y \) in the table?

\[
\begin{array}{ccc}
 x & 5 & \frac{5}{9} \\
 y & 3 & \ ? \\
\end{array}
\]

(A) \( \frac{3}{27} \)
(B) \( \frac{1}{3} \)
(C) \( \frac{25}{27} \)
(D) \( \frac{27}{25} \)
(E) 3

20. Which of the following numbers does not have a reciprocal?

(A) 1
(B) -2
(C) \( \frac{1}{3} \)
(D) 0
(E) 3

Questions 21–25 refer to the following chart.

**NUTRITIONAL VALUE OF SOME DAIRY PRODUCTS**

<table>

<tr>
<td>Ice cream, as for a la mode</td>
<td>Medium scoop (( \frac{1}{2} ) pint)</td>
<td>50</td>
</tr>
</tbody>
</table>

21. How many tablespoons of light cream have the same number of calories as 8 ounces of buttermilk?

(A) 2
(B) 3
(C) 4
(D) 5
(E) 6

22. How many calories of cream cheese would there be in the amount needed to furnish the same number of grams of protein as there are in 4 ounces of chocolate milk?

(A) 55
(B) 95
(C) 110
(D) 220
(E) 330
23. Which of the following has the greatest number of calories per pound?
   (A) Whole milk
   (B) Buttermilk
   (C) Swiss cheese
   (D) Cottage cheese
   (E) Chocolate milk

24. Which of the following has the smallest number of calories per ounce?
   (A) Cottage cheese
   (B) Cheddar-type cheese
   (C) Swiss cheese
   (D) Butter
   (E) Whole milk

25. Which of the following furnishes the greatest number of grams of protein per unit weight?
   (A) Whole milk
   (B) Cottage cheese
   (C) Butter
   (D) Chocolate milk
   (E) American cheese

26. If \( x + y = 16 \), then \( x - z = \)
   (A) \( z + 16 \)
   (B) 8
   (C) \( 16 - y \)
   (D) \( z(16 - y) \)
   (E) \( 16 - y - z \)

27. The ingredients for making 5 dozen cookies, as given in a recipe, are 1 egg, \( \frac{1}{2} \) cup shortening, \( \frac{3}{4} \) cup sugar, 1 teaspoon flavoring, \( 1 \frac{1}{2} \) cup sifted flour. How much flour would be needed in order to make 20 cookies?
   (A) \( \frac{1}{4} \) cup
   (B) \( \frac{1}{2} \) cup
   (C) \( 3 \frac{3}{4} \) cups
   (D) \( 4 \frac{1}{2} \) cups
   (E) 6 cups

28. Which of the following statements is (are) always true?
   I. A root of a negative number may be a real number.
   II. The positive square root of a number is smaller than the number.
   III. A binomial multiplied by a binomial yields a trinomial.
   (A) I only
   (B) II only
   (C) III only
   (D) II and III only
   (E) all are true

29. If \( a \) and \( b \) are positive integers and \( \frac{a - b}{3.5} = \frac{4}{7} \), then
   (A) \( b < a \)
   (B) \( b > a \)
   (C) \( b = a \)
   (D) \( b \geq a \)
   (E) \( b \leq a \)

30. \( 10^x \) means the 10 is to be used as a factor \( x \) times, and \( 10^{-x} \) means \( \frac{1}{10^x} \). A very large or very small number, therefore, is frequently written as a decimal multiplied by \( 10^x \), where \( x \) is a positive or a negative integer. Which, if any, of the following is false?
   (A) \( 470,000 = 4.7 \times 10^5 \)
   (B) \( 450 \) billion = \( 4.5 \times 10^{11} \)
   (C) \( 0.00000000075 = 7.5 \times 10^{-10} \)
   (D) \( 86 \) hundred-thousandths = \( 8.6 \times 10^{-2} \)
   (E) None of these

\(AB = 4, EB = 5, DC = 12\)

Radius of circle \(A = \frac{1}{2}\) radius of circle \(B\)

Circumference of circle \(B\) Twice the circumference of circle \(A\)

\(AD\) is parallel to \(BC\).

Area of \(ABC\) Area of \(DBC\) M
14. The area of the lot on the corner of Chester Street and Newport Avenue is 200,000 square feet.

Directions: Each of Questions 16–30 has five answer choices. For each of these questions, select the best of the answer choices given.

16. A 41 $\frac{1}{2}$-foot string is to be cut into 6 approximately equal lengths. The average length of each piece will be:
   (A) 6'1"
   (B) 6'9"
   (C) 6'11"
   (D) 7'9"
   (E) 8'3"

17. A shirt marked $12.50 was sold for $10.00. The rate of discount on the marked price was:
   (A) 2%
   (B) 2.5%
   (C) 20%
   (D) 25%
   (E) 80%

18. A radio marked $96 is offered for $72. The percent discount is:
   (A) 4%
   (B) 24%
   (C) 25%
   (D) 33 $\frac{1}{3}$%
   (E) 66 $\frac{2}{3}$%

19. The fraction $\frac{t+n}{n}$ equals:
   (A) $\frac{t}{n} + n$
   (B) $\frac{t+n}{n}$
   (C) $\frac{t}{n} + 1$
   (D) $t^2 + 1$
   (E) $t$

20. What is a percent of $b$ divided by $b$ percent of $a$?
   (A) $a$
   (B) $b$
   (C) 1
   (D) 10
   (E) 100

Questions 21–25 refer to the following graphs:

EMPLOYMENT
BASED ON SEASONALLY ADJUSTED NONAGRICULTURAL PAYROLLS.
(Figures represent millions of jobs.)

UNEMPLOYMENT
BASED ON SEASONALLY ADJUSTED NONAGRICULTURAL PAYROLLS
(Figures represent millions of jobs.)

Source: Bureau of Labor Statistics
21. How many jobs (in millions) were reported for July 1990?
   (A) 50
   (B) 108
   (C) 109
   (D) 110
   (E) 150

22. In April 1992 the Labor Department reported that the unemployment rate for the previous month remained at a seven-year high. What was the unemployment rate for March 1992?
   (A) 5%
   (B) 6%
   (C) 7%
   (D) 7.3%
   (E) 10.9%

23. According to the Bureau of Labor Statistics, which of the following months showed the healthiest state of economy?
   (A) July 1990
   (B) October 1990
   (C) January 1991
   (D) April 1991
   (E) July 1991

24. For the 1990–1992 period what was the maximum number of jobs (in millions) held during any one particular month, as reported by the Bureau of Labor Statistics?
   (A) 109.5
   (B) 110
   (C) 110.5
   (D) 111
   (E) 112

25. When the two graphs are compared, which statement best describes their general trends?
   (A) As one rises, the other also rises.
   (B) As one rises, the other falls.
   (C) They remain parallel.
   (D) As one falls, the other also falls.
   (E) None of the above.

26. How many gallons of paint should be purchased to cover 760 square feet if a gallon will cover 200 square feet?
   (A) 3
   (B) 4
   (C) 5
   (D) 6
   (E) 7

27. Which of the following fractions is next smaller in value than one-half?
   (A) \( \frac{1}{5} \)
   (B) \( \frac{1}{4} \)
   (C) \( \frac{2}{5} \)
   (D) \( \frac{16}{25} \)
   (E) \( \frac{3}{10} \)

28. A car uses a gallon of gasoline in traveling 15 miles. Another automobile can travel \( m \) miles on a gallon of gasoline. How many miles can the second travel on the amount of gasoline required by the first car in going 60 miles?
   (A) \( \frac{m}{4} \)
   (B) \( m \)
   (C) \( 4m \)
   (D) \( \frac{m}{9} \)
   (E) \( 9m \)

29. A cow is grazing in a pasture bordered by two fences more than 10 feet long that meet at an angle of 60°. If the cow is tethered by a 10-foot-long rope to the post at which the two fences meet, it can graze in an area of
   (A) \( 20\pi \)
   (B) \( \frac{5\pi}{3} \)
   (C) \( \frac{20\pi}{3} \)
   (D) \( \frac{50\pi}{3} \)
   (E) \( 100\pi \)

30. A certain recipe makes enough dough to fill two cake tins, each 7 inches in diameter and 1 inch deep. How many inches deep will the cake dough be if put into one cake tin 10 inches in diameter?
   (A) 0.51
   (B) 0.71
   (C) 0.98
   (D) 1.02
   (E) 1.40

SECTION 6
Time - 30 Minutes
38 Questions

Directions: Each sentence below has one or two blanks, each blank indicating that something has been omitted. Beneath the sentence are five lettered words or sets of words. Choose the word or set of words for each blank that best fits the meaning of the sentence as a whole.

1. With few exceptions, explorers now are not individuals setting out alone or in pairs to some remote destination but are instead members of -------, often international, undertaking.
   (A) a singular
   (B) a collaborative
   (C) an objective
   (D) an insular
   (E) a private

2. Anthropologists who have dismissed Villa’s notion of prehistoric “social cannibalism” ------- that Villa’s research was carefully done but stress that other interpretations of the evidence are possible.
   (A) deny
   (B) ignore
   (C) preclude
   (D) refute
   (E) grant

3. Surprisingly to those who view the ocean floor as a uniformly ------- waste, each vent in the floor, where sea water is heated by the earth’s interior magma, has been found to be an island-like ------- with its own distinctive fauna.
   (A) teeming...habitat
   (B) lifeless...enclave
   (C) barren...oasis
   (D) sunken...grotto
   (E) hazardous...environment

4. Rather than allowing these dramatic exchanges between her characters to develop fully, Ms. Norman unfortunately tends to ------- the discussions involving the two women.
   (A) exacerbate
   (B) protract
   (C) augment
   (D) truncate
   (E) elaborate

5. A ------- of recent cases of scientific fraud in which gross errors of fact and logic have slipped past the review panels that scrutinize submissions to journals suggests that the review system is seriously -------.
   (A) plethora...intended
   (B) lack...strained
   (C) dearth...compromised
   (D) spate...taxed
   (E) preponderance...substantiated

6. Egocentric, at times vindictive when he believed his authority was being questioned, White could also be kind, gracious, and even ------- when the circumstances seemed to require it.
   (A) authoritarian
   (B) taciturn
   (C) vainglorious
   (D) self-deprecating
   (E) self-assured

7. Many of Updike’s characters live to ------- the assurances they give one another glibly or sincerely; they define themselves by their betrayals of their spouses or their children or their parents.
   (A) flaunt (B) underscore (C) fulfill
   (D) deplore (E) belie

Directions: In each of the following questions, a related pair of words or phrases is followed by five lettered pairs of words or phrases. Select the lettered pair that best expresses a relationship similar to that expressed in the original pair.

8. BOOK : CHAPTER::
   (A) painting : frame
   (B) sentence : verb
   (C) building : story
   (D) tree : root
   (E) movie : scenario

9. INAUGURATE : PRESIDENT::
   (A) abdicate : king
   (B) promote : student
   (C) campaign : candidate
   (D) install : officer
   (E) succeed : governor

10. ADJUST : TINKER::
    (A) invent : design
    (B) improve : hamper
    (C) throw : hurl
    (D) analyze : repair
    (E) write : scribble

11. ZINC : ELEMENT::
    (A) gold : bullion
    (B) uranium : fission
    (C) quark : particle
    (D) electron : molecule
    (E) light : photosynthesis

12. UPROARIOUS : AMUSING::
    (A) treacherous : steadfast
    (B) tumultuous : windy
    (C) menacing : aghast
    (D) repugnant : disagreeable
    (E) devious : clever
Parallelizing the growth of interest among professional historians during the early 1960s was a simultaneous groundswell of popular interest in the Afro-American past that was directly stimulated by the drama of the protest movement. Sensing the “Negro Mood,” the journalist Lerone Bennett wrote a series of articles on Afro-American history for Ebony and soon after brought them together in his popular volume, Before the Mayflower (1962). As the nonviolent direct action movement attained its crest in 1963-64, movement activists introduced black history units into the curricula of the “freedom schools” that accompanied the school integration boycotts. Meanwhile, boards of education began to address themselves to “the racial imbalance and neutralism of pusillanimous textbooks designed to appeal to Southern as well as Northern school adoption committees.” In 1964 New York City’s school board published The Negro in American History; Detroit’s social studies teachers produced The Struggle for Freedom and Rights: Basic Facts about the Negro in American History. Franklin, surveying the activities among publishers, teachers, and school boards, called these beginnings of curriculum revision “one of the most significant by-products of the current Civil Rights Revolution.”

The relationship between these developments at the grass roots level and what was occurring in the scholarly world is of course indirect. Yet given the context of social change in the early 1960s, Negro history was now the object of unprecedented attention among wide segments of the American population, black and white. In academe nothing demonstrated this growing legitimacy of black history better than the way in which certain scholars of both races, who had previously been ambivalent about being identified as specialists in the field, now reversed themselves.

Thus Frenise Logan, returning to an academic career, decided to attempt to publish his doctoral dissertation on blacks in late nineteenth-century North Carolina. A 1960 award encouraged him to do further research, and his expanded The Negro in North Carolina, 1876-1894 appeared in 1964. It is true that as late as 1963 a white professor advised John W. Blassingame to avoid black history if he wanted to have “a future in the historical profession.” Yet more indicative of how things were going was that 1964-65 marked a turning point for two of Kenneth Stampp’s former students—Nathan Huggins and Leon Litwack. The changing intellectual milieu seems to have permitted Huggins, whose original intention of specializing in African and Afro-American history had been overruled by practical concerns, to move into what became his long-range commitment to the field. By 1965 when his interest in intellectual history found expression in the idea of doing a book on the Harlem Renaissance, the factors that earlier would have discouraged him from such a study had dissipated. For Litwack the return to Negro history was an especially vivid experience, and he recalls the day he spoke at the University of Rochester, lecturing on Jacksonian democracy. Some students in the audience, sensing that his heart was just not in that topic, urged him to undertake research once again in the field to which he had already contributed so significantly. He settled on the study that became Been in the Storm So Long (1979). In short, both Huggins and Litwack now felt able to dismiss the professional considerations that had loomed so large in their earlier decision to work in other specialties and to identify themselves with what had hitherto been a marginal field of inquiry.

17. The author indicates that the growth of scholarly involvement in the study of black history was

(A) unappreciated in academic circles
(B) encouraged by the civil rights movement
(C) systematically organized
(D) unaffected by current events
(E) motivated by purely financial concerns

18. The author’s account is based on all of the following

(E) EXCEPT

(A) personal anecdotes
(B) magazine articles
(C) curricular materials
(D) public opinion polls
(E) scholarly publications
19. The author cites Logan, Huggins, and Litwack for their
   (A) work on curriculum reform in the public schools
   (B) participation in the Freedom Summer in Mississippi
   (C) return to the field of Afro-American history
   (D) research on blacks in nineteenth century North Carolina
   (E) identification with nonviolent direct action

20. The author suggests that the advice given to John W. Blassingame was
   (A) meant maliciously
   (B) inappropriate to the times
   (C) acted on in good faith
   (D) vital to his career
   (E) verified by research

21. Which of the following best describes the purpose of the passage?
   (A) To document the sacrifices made by black and white scholars in the field
   (B) To defend the validity of black history as a legitimate scholarly pursuit
   (C) To investigate the origins of Afro-American studies in American universities
   (D) To encourage the return to the study of black history at the grass roots level
   (E) To describe black history’s coming of age as an academically respectable field

22. The passage suggests that Bennett’s work was similar to Logan’s work in which of the following ways?
    I. Both Bennett’s and Logan’s books recorded a then relatively unfamiliar aspect of Afro-American history.
    II. Both Bennett’s and Logan’s work were designed to appeal to a primarily academic audience.
    III. Both Bennett’s and Logan’s work were published in a variety of formats.
   (A) I only
   (B) III only
   (C) I and II only
   (D) I and III only
   (E) II and III only

23. It can be inferred that prior to 1950 for a historian to choose to specialize in black history
   (A) was encouraged by the academic establishment
   (B) established his academic conventionality
   (C) afforded him special opportunities for publication
   (D) was detrimental to his professional career
   (E) enhanced his contact with his colleagues

A few species demonstrate conditions which are neither complete hibernation nor aestivation. Instead of going into a long “sleep” during the most adverse season, they become torpid for a few hours each day. This kind of behavior is known in other animals — bats become torpid during daytime, and hummingbirds at night. The first time I appreciated this phenomenon was while working with fat mice (Statomys) in Africa. These mice, incidentally, have a most appropriate name, for their bodies are so full of fat they resemble little furry balls. Fat storage as a method of survival has rebounded to some extent as far as the fat mice are concerned. They are regarded as a succulent delicacy by many African tribes who hunt them with great tenacity; when captured, the mice are skewered and fried in their own fat. A captive fat mouse was once kept without food or water for thirty-six days; at the end of that time it had lost a third of its weight but appeared quite healthy. During the dry season, some captives spent the day in such a deep state of torpor that they could be roughly handled without waking. The body temperature was a couple of degrees above room temperature and the respiration was most irregular, several short pants being followed by a pause of up to three minutes. Just before dusk the mice woke up of their own accord and inspired normally. In this case the torpid state was not induced by shortage of food or abnormal temperatures. The forest dormouse of southern Asia and Europe also undergoes periods of torpidity during the day; this species has been recorded as having pauses of up to seventeen minutes between breaths. There is also a record of a leaf-eared mouse of the Peruvian desert which became torpid under severe conditions.

24. The primary focus of the passage is on
   (A) the inhumane treatment of laboratory specimens
   (B) irregularities of respiration in mammals
   (C) conditions that induce rodents to hibernate
   (D) species that exhibit brief periods of dormancy
   (E) the similarities among rodent species

25. It can be inferred from the passage that fat storage as a method of survival “has rebounded” for fat mice for which of the following reasons?
   (A) It has enabled them to go without food and water for long periods of time.
   (B) It has made them particularly tempting to human predators.
   (C) It has made them so spherical they cannot move easily.
   (D) It has caused them to adopt abnormal patterns of sleep.
   (E) It has made them susceptible to abnormal temperatures.

26. This passage would most likely appear in which of the following types of publications?
   (A) A geographical atlas
   (B) A history of African exploration
   (C) A textbook on rodent biology
   (D) A guide to the care of laboratory animals
   (E) A general-interest periodical
27. It can be inferred that in the paragraph preceding this passage the author most likely discussed
(A) his initial journey to Africa
(B) the problem caused by sleep deprivation
(C) other types of dormant states
(D) the physical appearance of rodents
(E) methods for measuring rodent respiration

Directions: Each question below consists of a word printed in capital letters, followed by five lettered words or phrases. Choose the lettered word or phrase that is most nearly opposite in meaning to the word in capital letters.

Since some of the questions require you to distinguish fine shades of meaning, be sure to consider all the choices before deciding which one is best.

28. SAP:
   E (A) divert
   (B) educate
   (C) invigorate
   (D) liquefy
   (E) polish

29. UNFEIGN:
   E (A) pretentious
   (B) cautious
   (C) simulated
   (D) controlled
   (E) designed

30. VACILLATION:
   E (A) coarseness
   (B) simplicity
   (C) retraction
   (D) firmness
   (E) tedium

31. SWATHE:
   E (A) fondle
   (B) nourish
   (C) anoint
   (D) unwrap
   (E) refresh

32. COGNIZANCE:
   M (A) ignobility
   (B) disbelief
   (C) impotence
   (D) illegality
   (E) unawareness

33. NEBULOUS:
   M (A) hypothetical
   (B) querulous
   (C) lamentable
   (D) piquant
   (E) distinct

34. DENIGRATE:
   M (A) emancipate
   (B) examine
   (C) desecrate
   (D) mollify
   (E) extol

35. DECORUM:
   M (A) lucidity
   (B) flexibility
   (C) impropriety
   (D) duplicity
   (E) severity

36. CONDIGN:
   H (A) intentional
   (B) unbiased
   (C) obdurate
   (D) inevitable
   (E) unmerited

37. PUISSANCE:
   H (A) effortlessness
   (B) powerlessness
   (C) recklessness
   (D) timeliness
   (E) wholeness

38. PALLIATE:
   H (A) exacerbate
   (B) immunize
   (C) oscillate
   (D) rarefy
   (E) precipitate

Time - 30 Minutes
25 Questions

Directions: Each question or group of questions is based on a passage or set of conditions. In answering some of the questions, it may be useful to draw a rough diagram. For each question, select the best answer choice given.

Questions 1–5

In a certain society, only two forms of marriage are recognized. In Prahtu marriage, several brothers marry a single woman, while in Brihtu marriage, several sisters marry a single man. All members of a given married group are regarded as the parents of any children of the marriage. Marriage between male and female children of the same parents is forbidden.

E is a son of A.
G is a daughter of B.
F is a daughter of C.
E, F, M, and N have a daughter, H.
E and F have the same paternal grandmother, Q.
A and B are the only grandfathers of H; C, J, K, and L are the only grandmothers of H.
No one has married more than once; all children were born in wedlock.

1. G is a sister of
   (A) N only
   (B) M only
   (C) E
   (D) F
   (E) E or F, but not both

2. N is a sibling of
   I. M only
   II. M and E
   III. M and F
   (A) I only
   (B) II only
   (C) III only
   (D) II or III, but not both
   (E) Neither I, II, nor III

3. One of Q’s children may be
   (A) A
   (B) C
   (C) J
   (D) K
   (E) M

4. Which of the following is an offspring of a Brihtu marriage?
   (A) H
   (B) E
   (C) A
   (D) B
   (E) J

5. If E, F, M, and N had not married, which would be a permissible marriage?
   (A) N marries M and others of M’s sex.
   (B) N and M marry E.
   (C) N and M marry G and F.
   (D) G marries E only.
   (E) E marries G and F.

Questions 6–9

Seven varsity basketball players are to be honored at a special luncheon. The players will be seated on the dais along one side of a single rectangular table. Adams and Goldberg have to leave the luncheon early and so must be seated at the extreme right end of the table, which is closest to the exit.

Baker will receive the Most Valuable Player’s trophy and so must be in the center chair to facilitate the presentation.

Cooper and D’Amato, who were bitter rivals for the position of center during the basketball season, dislike one another and should be seated as far apart as is convenient.

Edwards and Farley are best friends and want to sit together.

6. Which of the following may not be seated at either end of the table?
   (A) Cooper
   (B) D’Amato
   (C) Goldberg
   (D) Farley
   (E) Adams

7. Which of the following pairs may not be seated together?
   (A) Cooper and Farley
   (B) Baker and D’Amato
   (C) Edwards and Adams
   (D) Goldberg and D’Amato
   (E) Edwards and Cooper

8. Which of the following pairs may not occupy the seats on either side of Baker?
   (A) Farley and D’Amato
   (B) D’Amato and Edwards
   (C) Edwards and Goldberg
   (D) Farley and Cooper
   (E) Cooper and Edwards
9. If neither Edwards nor D'Amato is seated next to Baker, how many different seating arrangements are possible?
   (A) 1
   (B) 2
   (C) 3
   (D) 4
   (E) 5

Questions 10–15

Number series questions provide psychologists with a means of testing a person’s ability to determine quantitative patterns. Below are seven number series:

I. 4, 64, 5, 125, 6, x
II. 6, 37, 7, 50, 8, 65, 9, x
III. 5, 25, 125, 7, 49, 343, 9, 81, x
IV. 9, –7, 18, –18, 31, x
V. 4, 16, 80, 480, 3360, x
VI. 25, 24, 22, 19, 15, 10, x
VII. 100, 81, 64, 49, 36, x

10. In which of the above number series is the third power of a number the determining factor?
   (A) I and III
   (B) I, IV, and V
   (C) I, III, and VII
   (D) II, III, and VI
   (E) I, III, IV, and VII

11. In which of the above number series is $n^2 + 1$ the determining factor?
   (A) II
   (B) III
   (C) V
   (D) VII
   (E) None

12. In which of the above number series is it necessary to consider a pattern of three elements?
   (A) I
   (B) II
   (C) III
   (D) IV
   (E) V

13. In which of the above number series is the use of powers of a number NOT a determining factor?
   (A) I
   (B) II
   (C) IV
   (D) V
   (E) VII

14. In which of the above number series is the determining factor the addition and subtraction of squares?
   (A) II
   (B) IV
   (C) VI
   (D) VII
   (E) None

15. In which of the above number series is the recognition of increasing multiples significant?
   (A) II
   (B) V
   (C) VI
   (D) II and IV
   (E) II and VI

Questions 16–20

Mr. Pict must accommodate seven tour group passengers in two four-person cabins on the S.S. Gallia. Each passenger in a cabin must be able to converse with at least one other passenger, though not necessarily in the same language.

A, an Etruscan, also speaks Gothic and Hittite.
B and F are Hittites and speak only that language.
C, an Etruscan, also speaks Gothic.
D and G are Goths and speak only Gothic.
E, an Etruscan, also speaks Hittite.
Hittites refuse to share rooms with Goths.

16. Which combination of passengers in one of the cabins will result in a rooming arrangement that satisfies all conditions for both cabins?
   (A) B, C, F
   (B) D, E, G
   (C) A, D, E, G
   (D) C, D, E, G
   (E) A, B, C, F

17. Which CANNOT be true, given the conditions as stated?
   I. C cannot room with A.
   II. Any cabin containing three persons must include A.
   III. E must always room with a Hittite.
   (A) I only
   (B) II only
   (C) I and III only
   (D) II and III only
   (E) I, II, and III

18. How many different combinations of cabin mates satisfy all conditions?
   (A) 2
   (B) 3
   (C) 4
   (D) 5
   (E) 6
19. If E objects to sharing a cabin with A, with whom can Mr. Pict place him in order to arrive at an arrangement that satisfies all conditions?
   I. D and G, with no fourth cabin mate
   II. B and F, with no fourth cabin mate
   III. C, D, and G
   (A) I only
   (B) II only
   (C) I and III only
   (D) II and III only
   (E) Neither I, II, nor III

20. At the last minute, a new person applies to join the group. Mr. Pict can place her with any of the following except
   (A) C, D, and G if she is a Goth
   (B) A, B, and F if she is an Etruscan
   (C) B, E, and F if she is a Hittite
   (D) C, D, and G if she is an Etruscan
   (E) B, E, and F if she is a Goth

Questions 21–25

In the days of sailing ships fresh food was not available, and at the end of long trips many sailors came down with scurvy. Many attempts were made to seek a cure for this condition.

1. John Hall cured several cases of scurvy by administering an acidic brew made of a certain grass and watercress.
2. William Harvey suggested that the sailors take lemon juice to prevent scurvy. He thought the specific acid (citric acid) in lemon juice would prevent the disease.
3. James Lind experimented with 12 sick sailors to find out whether the acid was responsible for the cure. Each was given the same diet except that four of the men were given small amounts of dilute sulfuric acid, four others were given vinegar (acetic acid), and the remaining four were given lemons. Only those given lemons recovered from the scurvy.

21. How many controls did James Lind use?
   (A) One
   (B) Two
   (C) Three
   (D) Four
   (E) None

22. A possible cause of scurvy is
   (A) lack of watercress
   (B) lack of acidity
   (C) lack of fresh food
   (D) lengthy sea voyages
   (E) lack of lemon juice

23. Credit for solving the problem described in the passage belongs to
   (A) Hall because he devised a cure for scurvy
   (B) Harvey because he first proposed a solution of the problem
   (C) Lind because he used the scientific experimental method
   (D) Harvey and Lind because they found that lemons are more effective than Hall’s brew
   (E) All three men because each made some contribution

24. The hypothesis tested by Lind was that
   (A) lemons contain some substance not present in vinegar
   (B) the citric acid of lemons is effective in treating scurvy
   (C) lemons contain some unknown acid that cures scurvy
   (D) the substance to cure scurvy is found only in lemons
   (E) some specific substance, rather than acids in general, is needed to cure scurvy

25. Which question did Lind’s experiment NOT answer?
   (A) Will lemons cure scurvy?
   (B) Will either sulfuric acid or vinegar cure scurvy?
   (C) Will citric acid alone cure scurvy?
   (D) Are lemons more effective than either sulfuric acid or vinegar in the treatment of scurvy?
   (E) Are all substances that contain acids equally effective as treatments for scurvy?

### Section 6  Verbal

|   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 1 | B | 6 | D | 11 | C | 16 | D | 21 | E | 26 | C | 31 | D | 36 | E |
| 2 | E | 7 | E | 12 | D | 17 | B | 22 | D | 27 | C | 32 | E | 37 | B |
| 3 | C | 8 | C | 13 | C | 18 | D | 23 | D | 28 | C | 33 | E | 38 | A |
| 4 | D | 9 | D | 14 | D | 19 | C | 24 | D | 29 | C | 34 | E |
| 5 | D | 10 | E | 15 | E | 20 | B | 25 | B | 30 | D | 35 | C |

### Section 7  Analytical

|   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
| 1 | D | 5 | E | 9 | B | 13 | D | 17 | E | 20 | E | 23 | E |
| 2 | D | 6 | D | 10 | A | 14 | B | 18 | C | 21 | B | 24 | E |
| 3 | A | 7 | C | 11 | A | 15 | B | 19 | D | 22 | C | 25 | C |
| 4 | B | 8 | C | 12 | C | 16 | D |
8. B. A lodge is a place of shelter constructed by a beaver. A nest is a place of shelter constructed by a bird.

(Defining Characteristic)

9. E. To rustle cattle is to steal them. To hijack cargo is to steal it. Note that you are dealing with a secondary meaning of the verb rustle here.

(Defining Characteristic)

(Function)

11. C. A jug is an example of crockery or earthenware. A hat is an example of millinery or the hatmaker’s ware.

(Class and Member)

12. B. A glint is a small gleam of light. A whiff is a slight puff of scent.

(Degree of Intensity)

13. E. Doggerel is trivial or inferior verse produced by a poet. A potboiler is a trivial or inferior literary work produced by a novelist.

(Defining Characteristic)

14. C. Something feral or wild lacks domestication or taming. Something crude or rough lacks refinement or polish.

(Antonym Variant)

15. C. To scotch or block a rumor is to suppress it. To quash or quell a riot is to suppress it.

(Defining Characteristic)

16. D. To qualify something is to make it less general and more particular. To mollify something is to make it less harsh and more agreeable.

(Defining Characteristic)

17. E. By providing background on how the theory of a dynamic abyss came to take hold in the scientific community and on how the forces that activate the global patterns of ocean currents actually work, the passage serves to “summarize evidence supporting oceanic circulation.”

18. C. The opening sentence states that “many investigators were initially reluctant” to accept the evidence in favor of this controversial hypothesis. Committed to the belief that the depths of the ocean were calm (“the notion of the tranquil abyss”), these scientists at first viewed the idea that the abyss could be dynamic with marked skepticism (distinct doubt).
19. E. The passage states that the *first* argument for the existence of dynamic currents in the deep sea came from theory, based on "models of ocean circulation" involving the tendency of cold water to sink.

20. D. Because they need to take into account the effects of strong sea-floor currents on the structures they plan to build, *designers of sea-floor structures* are most likely to be interested in this particular article.

21. B. Both minute particles of rock and grains of wind-blown soil belong to the first type of sediment discussed ("detritus whose source is the weathering of rocks on continents and islands"). Only the *fragmentary shells* of dead microscopic organisms belong to the second type.

22. D. The authors approximate an amount ("about three billion tons per year"), refer to a model of ocean circulation, give several examples ("such as the..."), and list evidence to support a theory. They never *propose a solution* to a problem.

23. C. In this explanation, the authors are objective and factual. They are conveying information. Therefore their style can best be described as *expository* (explanatory).

24. D. In the two paragraphs of this passage, we find the justification for Choice D. In the first paragraph, we are told that Goethe loved the elements of classicism but could not adhere to its requirements. In the second paragraph we are shown how Goethe embodied the elements of romanticism in his writings.
Choice A is incorrect. The passage fails to give equal weight to both writers.
Choice B is incorrect. The passage focuses on Goethe, not on romanticism.
Choice C is incorrect. The passage refers to the differences between classicism and romanticism in order to explain Goethe’s writings.
Choice E is incorrect. The passage deals with Goethe’s art, not his life.

25. E. The author never mentions *simplicity of language* as a characteristic of romanticism.
Choice A is incorrect. The passage refers to a “continued faith in nature” as one aspect of Goethe’s romanticism.
Choice B is incorrect. The passage refers to impulsiveness or *spontaneity* as savoring strongly of romantic individualism.
Choice C is incorrect. Since romanticism has *formed* so many modern attitudes, one finds in romanticism ideas that seem noteworthy for their modernity.
Choice D is incorrect. The passage refers to “a disregard of artistic or logical propriety” as characteristic of romanticism.

26. D. You can arrive at the correct answer by the process of elimination.
*Sensitivity towards emotional promptings* is characteristic of romanticism; it is an unlikely characteristic of classicism. Therefore, you can eliminate Choices C and E.
*Emphasis on formal aesthetic criteria* is a likely characteristic of classicism. The passage talks of the formal beauty that distinguishes the classical works of Dante and Virgil. Therefore, you can eliminate Choice B.
*Meticulous planning of artistic works* is a likely characteristic of classicism. The passage talks of the carefully planned compositions of the classicist Dante; it also tells of the structurally flawed compositions of the romantic Goethe. Therefore, you can eliminate Choice A.
Only Choice D is left. It is the correct answer.

27. D. The author both admires Goethe’s writings and notes their flaws; his attitude is one of *measured admiration*.

28. A. The opposite of *superficial* or shallow is *profound*.
Think of “superficial ideas.”

29. C. The opposite of *naiveté* or lack of worldliness is *sophistication*.
Think of “innocent naiveté.”

30. E. The opposite of to *tether* or fasten is to *loose*.
Think of “tethering a horse to the hitching post.”

31. D. The opposite of *pandemonium* or tumultuous uproar is *tranquillity* or calm.
Word Parts Clue: Pan- means all; demon- means evil spirit. Hell or *Pandemonium*, the place where all the evil spirits dwell, is a place of noise and uproar.
Think of “pandemonium breaking loose.”

32. B. To *enervate* (weaken or enfeeble) is the opposite of to *stimulate* or energize.
Think of being "enervated by the heat.”

33. C. The opposite of *destitution* (privation; lack of life’s necessities) is *affluence* or wealth.
Think of “the poor living in destitution.”

34. C. The opposite of to *bereave* (deprive or dispos- sess, especially by death) is to *restore*.
Think of being “bereaved of all hope.”

35. E. The opposite of to *eschew* or shun is to *seek*.
Beware eye-catchers. Choice A is incorrect. *Eschew* is unrelated to chewing or gnawing.
Think of “eschewing violence and seeking peace.”
36. D. The opposite of recondite (obscure; difficult to comprehend) is obvious. Context Clue: “Many consider quantum theory a recondite subject.”

37. B. The opposite of to obviate something (make it unnecessary) is to require or necessitate it. Think of “obviating a need.”

38. E. The opposite of contumacious (insubordinate; stubbornly disobedient) is tractable (docile; obedient). Think of “contumacious rebels.”

Section 2

1. B. \[ \frac{7 + 7 + 7}{-7 - 7 - 7} = \frac{21}{-21} = -1 \]

2. D. The value of \( x \) may be 30 or 60 or 90.

3. B. The 13 microscopes are divided so that Classroom A uses 6 odd-numbered microscopes and Classroom B uses 7 even-numbered ones.

4. C. 0.01 percent = 0.0001
   \[ (0.0001)(10,000) = 1.0 \]

5. B. Since Martin is 5 times as old as Sara, Sara’s age is \( \frac{1}{5} \) of Martin’s age.

   Michael is younger since his age is \( \frac{1}{6} \) of Martin’s age.

6. D. The only information we have is that the sum of the weights of the 3 children is 150 pounds.

7. D. We may assume that \( x \) and \( y \) have positive values but only that \( x \) is greater than \( \frac{1}{3} \) \( y \). Note the many possibilities.

   If \( x = 3 \) and \( y = 2 \), 3 is greater than \( \frac{2}{3} \).

   If \( x = 4 \) and \( y = 5 \), 4 is greater than \( \frac{5}{3} \).

8. C. The number of those on both squads = 10.
   The number on the baseball squad = 20.
   The number on the baseball squad but not on the football squad = 10.
   The number on the football squad but not on the baseball squad = 20.
   Column A: 10:20 or 1:2
   Column B: 10:20 or 1:2

9. C. Distance = rate \times time
   \[ \text{Distance} = (30 \text{ m.p.h.}) \left( \frac{1}{3} \text{ hour} \right) = 10 \text{ miles} \]

   \[ \text{Distance} = (20 \text{ m.p.h.}) \left( \frac{1}{2} \text{ hour} \right) = 10 \text{ miles} \]

10. C. Because the arcs are equal, \( ABC \) is an equilateral triangle. \( AE \) bisects \( BC \) (given); therefore, \( DC \) is \( \frac{1}{2} \) of any side of \( ABC \).

11. C. Since \( y = 50 \), the measure of \( \angle DBC = 100 \).
    Since this is a parallelogram, the measure of \( \angle ABC = 80 \) and \( x = 40 \). In the triangle formed, since \( x + y = 90 \), the measure of \( z \), the vertex angle, is 90 because the sum of all the angles is a straight angle.

12. D. We may conclude that \( a = 80 \) but we have no information to determine the value of \( b \), since we may not assume that any lines are parallel.

13. C. \( x + y + z = 180 \)

   \[ 40 + 80 + z = 180 \]

   \[ z = 60 \]

   \[ 3x = 120 \]

   \[ 2z = 120 \]
14. C. \( z + y + \angle ABC = 180^\circ \)
\( 40 + 65 + \angle ABC = 180^\circ \)
\( \angle ABC = 75^\circ \)
\( m \angle OCD = m \angle ABC \) (alternate interior angles)
\( x = 75 \)

15. C. Since \( BD \perp AC \), \( x = 90 \)
Since \( ABC \) is equilateral, \( z = 60 \)
Therefore, \( y = 30 \)
\( \frac{x}{y} = \frac{90}{30} = 3 \)

16. B. This is a direct proportion. Let \( x \) = number of postage stamps that can be purchased for \( c \) cents.
\[ \frac{1 \text{ stamp}}{5c} = \frac{x \text{ stamps}}{cc} \]
\[ 5x = c \]
\[ x = \frac{c}{5} \]

17. D.

\[
\begin{array}{cccc}
A & B & C & D \\
\hline
AC & = & 2 \text{ equal segments} & \frac{2}{3} \\
AD & = & 3 \text{ equal segments} & \frac{2}{3} \\
\end{array}
\]

18. E. A time-consuming method would be to solve for \( y \) in terms of \( x \) and to substitute that value in \( 5y \). A superior method would be to multiply both sides of the equation by 6 in order to obtain a value of \( 5y \).
\[ 3x = \frac{5}{6} y \]
\[ (6)(3x) = \left( \frac{5}{6} \right) (6y) \]
\[ 18x = 5y \]

19. B. (See diagram)

20. A. \( 20\% \) \( \left( \text{or } \frac{1}{5} \right) \) of 2 = \( \frac{2}{5} \)
\[
\frac{3}{7} - \frac{2}{5} = \frac{15}{35} - \frac{14}{35} = \frac{1}{35}
\]

21. C. Teachers' salaries represent 30% of the budget. Salaries of other school personnel represent 10% of the budget.
30%:10% or 3:1

22. D. Tax rate per $100 for schools = 24.856
Tax rate per $100 for community college = 0.654
\[ \frac{24.856}{0.654} = 38 + \]

23. C. $10,000 = 100 ($100)
($100)(24.856) = $2485.60

24. C. 25% = \( \frac{1}{4} \)

25. C. If SD = 20% of the budget then
\[ \frac{SD}{20\%} = \frac{?}{15\%} \]
\[ (20\%)(?) = 15(SD) \]
\[ ? = \frac{15}{20} D = \frac{3}{4} D \]

26. B. Area of triangle = \( \frac{1}{2} \) (base)(altitude)
Area of triangle = \( \frac{1}{2} \) (6 units)(2 units) = 6 units

27. D. 3 gallons = 12 quarts = 24 pints
165 pints = 6.8 (3-gallon cans)
Only six 3-gallon cans will be filled.

28. B. One-minute unit on the clock = \( \frac{360^\circ}{60} = 6^\circ \)
At half-past six the large hand of the clock is midway between 6 and 7 (2 \( \frac{1}{2} \) units) or \( 15^\circ \).

29. D. Let \( x \) = number of ounces of water to be added to make a 25% alcohol solution.
\[ \frac{\text{amount of alcohol}}{\text{amount of solution}} = \frac{1}{4} \]
\[ \frac{48}{48 + x} = \frac{1}{4} \]
\[ 48 + x = 192 \]
\[ x = 144 \]
30. C. Draw $DF \perp BC$

$DF = AE = 4$

Therefore, $FC = 3$

$BE = 3$

$EF = 26 - 6 = 20$

$AD = 20$

Section 3

1-3. A quick reading of the three questions will reveal that the student is not asked to prepare a seating arrangement. The student should examine what is presented.

1. E. Choice I is satisfactory.

Lady —
Language or Languages Spoken

1 1 1 1 1 1 1 1 1 1 1 1
F O L M P J H K G O N R

Choice II is unsatisfactory.

Lady —
Language or Languages Spoken

1 1 1 1 1 1 1 1 1 1 1 1
F R N P

Having discovered that Mrs. L will not be able to communicate with either Mrs. N or Mrs. P, the student need not continue examining the remaining ladies’ abilities to communicate with their neighbors.

2. A. Since Mrs. J speaks Russian only, she must sit alongside Mrs. P or Mrs. H. Mrs. H is already seated; the only place left for Mrs. J is alongside Mrs. P.

3. D. An examination of the list of guests reveals that five ladies speak French. Four have already seated themselves in this group of seven. Mrs. L speaks only French and therefore must be seated alongside Mrs. Q.

4. E. It is not really necessary to examine statements I, II, and III. A glance at the chart should reveal that Mrs. J, who speaks Russian only, will have no one to converse with, since the only other Russian-speaking women—Mrs. H and Mrs. P—will not be in attendance. Choice E is the only possible answer.

5. D. Johnson makes two claims: (1) anyone supporting the bill must have an ulterior motive, and (2) therefore, there are no valid grounds for supporting the bill. Choice D makes the same two claims about Johnson. Choice B is the best response to Johnson, and does not make the error in reasoning that he makes; choice A grants Johnson’s claims and does not attack him; choice C attacks Johnson’s argument rather than attacking his motives; and choice E attacks Johnson but doesn’t claim that motivation discredits his argument.

6. C. This deluded father is basing his whole argument about his daughter’s talents on the rave reviews from a single high school play. The best way to counter his argument would be to point out the inadequacy of that evidence, which is what choice C does. All the other choices refer to the stiff competition for jobs on Broadway and the high odds against succeeding. They do not directly counter the father’s line of reasoning.

7. D. The original argument states that most X (opponents of gun control) are Y (conservatives); therefore, someone who is not X is probably not Y. The flaw in this reasoning is that many persons other than X may also be Y. Choice D makes the same error: most X (sports cars) are Y (expensive), so a non-X is probably not Y. But many kinds of cars other than sports cars may be expensive. The other arguments have logical structures different from that of the original argument. Choice A wrongly argues: most X are Y, therefore a Y is probably X. Choices B, C, and E are all logically valid.

8-11. Since this problem involves both days of the week and calendar dates, make a calendar. Keep it simple. It doesn’t have to show all days of the week—only one choice in one question involves a day other than Tuesday, Thursday, or Saturday—and it doesn’t have to go all the way through May. It will look like this:
8. C. The conditions mean Dan can go to the museum only on Tuesday, Thursday, or Saturday. By starting on Tuesday, he can complete the three visits in five days, whereas by starting on Thursday or Saturday he must take six days. This is enough to get you to choice C. Dan must go to the Eakins or Ryder exhibition first, since the Twachtman Gallery is closed Tuesdays.

9. C. Since the Pollock Wing is closed Thursdays during May, Ellen must see the Ryder exhibition first, on Thursday, April 30 (I); she must, then, see "The Hudson River School" second, on May 7, since the "Precursors of Eakins" does not open until May 8 (II). This excludes choice III.

10. B. Your calendar tells you that all three exhibitions can be seen on Saturday, May 9, 16, or 23 (II)—not on Saturday, May 2, because the "Eakins" is not yet open, and not on May 30, because "The Hudson River School" is closed (I). III is out both because the Twachtman Gallery is closed Tuesdays and because the Eakins exhibition does not open until May 8.

11. B. Terry’s visit falls on Thursday, May 7 (six days after the May 1 opening of "The Hudson River School"). A glance at the calendar shows that "The Hudson River School" is the only special exhibition open on that date.

12-18. To diagram this one, start with seven blanks for the seats. Put the moderator in the middle; put the initials of the speakers under the blanks and abbreviated titles over the blanks. (Of course, your diagram may be slightly different. Any clear and readable system will do.) Starting with statements (3) and (5), you have:

<table>
<thead>
<tr>
<th>Impact</th>
<th>Pub/Rad</th>
<th>Pub/Rad</th>
<th>Epidem</th>
<th>Benign</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>F</td>
<td>Mod.</td>
<td>A</td>
<td>E</td>
</tr>
</tbody>
</table>

By elimination, Burris is in the last available seat. We still don’t know the title of Albert’s paper, nor do we know which paper is to be delivered by Felsenstein, which by Burris.

12. E. By inspection of the diagram. Notice that choices A and B include Albert as pro-industry, while statement (6) says that he or she is a critic.

13. B. By inspection of the diagram.

14. A. Albert is the only person the title of whose paper is unknown.

15. B. Statements (1) and (6) together are sufficient to establish the seating positions of Albert, Durand, and Ettis. Once we know that Ettis is seated between Albert and Durand, statement (1) tells us the title of her paper.

16. D. The diagram shows that, if the seventh speaker is to sit midway between Cathode and the moderator, he must sit between Felsenstein and Burris.

17. B. If the eighth speaker is to sit exactly midway between Durand and the author of "Public Health and PBX," then the latter must be Felsenstein, not Burris, since otherwise there would be no vacant spot exactly midway between the two. Therefore, Burris must be the author of "Radiological Aspects of PBX." The eighth speaker will sit between the moderator and Albert.

18. A. We’ve seen that I remains ambiguous. II and III can be read from the diagram.
19-22. We’ve drawn a diagram similar to the traditional “family tree” diagram used in history books and genealogies. Since so many persons are of uncertain sex, we’ve used m for male, f for female, and x and y for unknowns. We know, for example, that G is the same sex as C, so we label both x; B and therefore F are the opposite sex from C, so we label both y, and so on. Horizontal lines indicate marriage, vertical or diagonal lines indicate children.

19. D. This question orients you, in case you made an unwarranted assumption about the sexes. Since we do not know B’s sex for sure, we don’t know F’s; this rules out all the wrong choices —including E, since we do know H’s sex. As the child of D’s sibling B, F is D’s niece or nephew.

20. E. D is an x, and can therefore marry any unmarried y.

21. E. H is female. If x = male, H can marry D or G, so I is out. If y = male, H can marry F. Clearly H cannot marry both. (J and K are ruled out, since they are H’s direct descendants.)

22. B. This generation (the middle generation) contains three x’s and two y’s. If the more numerous x’s are female, J, who is a y, must be male. If x = female, choices A, C, and E are untrue. Choice D can never be true.

23. B. Statement I is not assumed. The author assumes only that we are in danger of running out of oil eventually. Statement II is assumed. The author’s claim is that we must use oil to produce plastics and other goods. Statement III is not assumed. The author assumes only that someone could develop alternative methods of transportation, not that the oil companies are in a position to do this themselves.

24. D. The author’s only basis for advocating the banning of the internal combustion engine is that the oil it burns is needed for other purposes. If a synthetic oil were developed that did every-thing natural oil does, the author’s complaint would lose its force. All the other choices describe events which would ameliorate the problem without eliminating it.

25. B. The author claims that the oil we are burning is needed to produce many important commodities. Choice B underscores both the value of some of those items and the necessity of using oil to produce them. Choice A supports the author’s secondary point that other methods of transportation could be developed, but does not directly support the main conclusion that the internal combustion engine should be banned. Choice C emphasizes the urgency of the problem, but the original argument makes no claims about time. Choices D and E provide bases of other arguments for the banning of gasoline-burning cars, but have no effect on the original argument.

Section 4

1. C. Area = \( \pi r^2 = \frac{\pi}{4} \)

\[ r^2 = \frac{1}{4} \]

\[ r = \frac{1}{2} \text{ or } 0.5 \]

2. C. If equal quantities are added to equal quantities the sums are equal.

3. C. From −5 to zero inclusive there are 6 integers, and from 1 to 5 there are 5 more integers, for a total of 11 integers. From 5 to 15 inclusive there are also 11 integers.

4. B. \( x < y \) because when \( x \) is squared and multiplied by 9 it has the same value as \( y \).

5. D. From the information given, we can only deduce that \( \frac{1}{2} \) the product of these two values equals 18.

6. D. We may conclude only that \( AD = BC \) and \( AB = DC \).

7. C. The median and altitude of the equilateral triangle is \( BD \). Therefore \( y = 60 \) and \( x = 90 \).

\[ \frac{90}{3} = \frac{60}{2} \]

8. A. Angle \( BEC \) is a right angle. Therefore \( w + z = 90 \). Since \( w + x + z + y = 360 \) and \( w + z = 90 \), then \( x + y = 270 \).

9. C. Let \( s = \) side of square

Then area of square = \( s^2 \)

\( s^2 = \) area of triangle \( ABC \) (given)

Therefore, \( AB = BC = s\sqrt{2} \) for \( s^2 = \frac{(s\sqrt{2})(s\sqrt{2})}{2} \)

Therefore, \( \frac{AB}{DG} = \frac{s\sqrt{2}}{s} \) or \( \sqrt{2} \)
10. C. Area of a triangle = \( \frac{1}{2} \) (base)(altitude). Both triangles share the same base \((AB)\). Since distances between parallel lines are the same, the two triangles have equal altitudes.

11. C. Because the arcs are equal, \(ABC\) is an equilateral triangle. \(AE\) bisects \(BC\) (given); therefore \(DC = \frac{1}{2}\) of any side of \(ABC\).

12. A. Time = \( \frac{\text{distance}}{\text{rate}} \)

- Time = \( \frac{\frac{1}{2} \text{ mile}}{20 \text{ miles per hour}} = \frac{1}{40} \text{ hour} \)
- Time = \( \frac{\frac{1}{3} \text{ mile}}{30 \text{ miles per hour}} = \frac{1}{90} \text{ hour} \)

13. C. \( \frac{\text{Distance}}{\text{Circumference}} = \text{number of revolutions} \)

- 70 feet = 10 revolutions
- \( 7 \text{ feet} \)
- 100 feet = 10 revolutions
- \( 10 \text{ feet} \)
- Circumference = \( \pi d \)
- Circumference = \( \pi \cdot \frac{7}{\pi} = 7 \) (Column A)
- Circumference = \( \pi \cdot \frac{10}{\pi} = 10 \) (Column B)

14. A. If \(X + Y = 100\) and \(Z = 250\)

- Then \(100 + Z = 350\)
- If \(X < 100\) and \(Z > X\)

15. D. If \(Y\) is at the center of both circles, then \(Z\) could be anywhere on the circumference of the circle with radius = 2, and \(X\) could be at any point on the circumference with radius = 3. There are many possibilities for the location of \(X\) in respect to the location of \(Z\).

16. B. \( \frac{\text{potassium} + \text{nitrogen} + \text{oxygen}}{39} = \frac{39 + 14 + 48}{101} = \text{approximately 39\%} \)

17. B. The width is 50, since the length is twice the width. Perimeter = \(50 + 50 + 100 + 100 = 300 \text{ feet} \)

18. C. Let \(x = BC\); then \(AB = 2x\).

Area of triangle \(ABC = \frac{1}{2}(b)(h) \)

or \( \left( \frac{1}{2} \right) (x)(2x) \) or \( x^2 \).

Area is given equal to 64 square feet.

- \(x^2 = 64\)
- \(x = 8\)

\(BC = 8; AB = 16\)

\((8)^2 + (16)^2 = (AC)^2\) (Pythagorean theorem)

\(64 + 256 = (AC)^2\)

\(AC = \sqrt{320}\)

or approximately 18 feet

19. B. \(x = ky\)

- \(5 = 3k\)
- \(\frac{5}{3} = y\)

20. D. The reciprocal of 0 is \(\frac{1}{0}\). Any number with a zero in the denominator does not exist, since division by zero is meaningless or undefined. Therefore, 0 does not have a reciprocal.

- (A) The reciprocal of 1 or \(\frac{1}{1}\) is 1.
- (B) The reciprocal of \(-2\) or \(-\frac{2}{1}\) is \(-\frac{1}{2}\).
- (C) The reciprocal of \(\frac{1}{3}\) is \(3\)
- (E) The reciprocal of 3 is \(\frac{1}{3}\).

21. B. 8 ounces buttermilk = 90 calories

2 tablespoons light cream = 60 calories

3 tablespoons light cream = 90 calories

22. D. 4 ounces chocolate milk = 4 grams of protein

4 tablespoons cream cheese = 4 grams of protein

4 tablespoons cream cheese = 220 calories
Section 5

1. C. \[ a^2 = 9, b = 9; \ a^2 - b = 0, \ b = 9; \ a^2 = 9; \ b - a^2 = 0. \]

2. A. Multiply the expression \( a < b \) by \(-2\). The result is \(-2a > -2b\). Recall that, when you multiply each side of an inequality by the same negative expression, the inequality is reversed.

3. B. \[ \frac{1}{2} + \frac{1}{3} = \frac{5}{6} \]
   \[ \left(\frac{5}{6}\right)(1813) < 1813 \]

4. C. \[ xy = 1 \]
   \[ y = \frac{1}{x} \quad \text{(divide by } x) \]
   \[ \frac{x}{y} = \frac{x}{1} \quad \text{(substitution)} \]
   \[ \frac{x}{y} = x^2 \]

5. B. Since \( x \) is negative, \( \frac{1}{x} \) is negative and \( x^2 \) is positive.

6. C. Let \( g \) = value of each gold coin, and let \( s = \) value of each silver coin. Then
   \[ 3g + 1s = 5s + 2g \quad \text{(given)} \]
   \[ 1g = 4s \]

7. B. \( b^2 = 120 \) (corresponding angles of parallel lines)
   \[ a^2 + 120 = 180^\circ \]
   \[ a^2 = 60 \]

8. A. Add the two equations.
   \[ 3a = -3 \quad \text{and} \quad a = -1. \]
   \[ -1 + b = -6 \]
   \[ b = -5 \]
   \( -1 \) is greater than \(-5\), so \( a \) is greater than \( b \).

9. C. Since vertical angles 1 and 2 are equal, right triangle \( ABE \) is similar to right triangle \( DEC \), and \[ \frac{AB}{DC} = \frac{AE}{EC}. \]
   In \( ABE \), hypotenuse \( BE = 5 \), and \( AB = 4 \); then leg \( AE = 3 \).
   In \( DEC \), if \( AB = 4 \), and \( DC = 12 \), and since
10. C. Circumference = $2\pi r$. If radius of $A = \frac{1}{2} \text{ radius of } B$, then circumference of $A = \frac{1}{2} \text{ circumference of } B$. This may be stated as follows: twice the circumference of $A$ equals the circumference of $B$.

11. C. Both triangles share the same base and they have equal altitudes, since $AD$ is parallel to $BC$.

12. C. Since $b = c$, each fraction equals 1.

13. C. Since $BA = BC$, $\angle A = \angle C$. Since $\angle x = 60^\circ$, $\angle A + \angle C = 120^\circ$. (The sum of the angles of a triangle equals 180°.) Therefore $\angle C = 60^\circ$. Since $\angle y = 100^\circ$, $\angle CGH = 80^\circ$, because these angles are supplementary. In triangle $CGH$, since $\angle C = 60^\circ$ and $\angle CGH = 80^\circ$, $\angle CHG$ must equal 40°. Since $\angle z$ is the supplement of $\angle CHG$, the $\angle z = 180^\circ - 40^\circ$, or 140°.

14. A. Draw $EC$. $EC = AB = 400$ feet. Area of square $ABCE = (400)^2$, or 160,000 square feet. Area of triangle $EDC = \frac{1}{2} (400)(300)$, or 60,000 square feet. Area of entire lot = 160,000 + 60,000, or 220,000 square feet (Column A).

15. C. The numbers are $q$, $q + 1$, $q + 2$, $q + 3$, $q + 4$, $q + 5$, $q + 6$, $q + 7$, $q + 8$. The sum of the numbers is $9q + 36$. The average is $\frac{9q + 36}{9}$, which is $q + 4$.

16. C. $\frac{41.5 \text{ feet}}{6} = 6.91 + \text{ feet}$, or each string is just under 7 feet. Checking each answer for the closest figure is more rapid than changing 41 feet to 498 inches, dividing by 6, and converting the answer to feet and inches.

17. C. $\frac{\text{difference}}{\text{original}} = \frac{2.50}{12.50} = \frac{1}{5} = 20%$

18. C. $\frac{\text{difference}}{\text{original}} = \frac{24}{96} = \frac{1}{4} = 25%$

19. C. $\frac{t + n}{n} = \frac{t}{n} + \frac{n}{n}$ or $\frac{t}{n} + 1$

20. C. $\left( \frac{ab}{100} \right) + \left( \frac{ba}{100} \right) = \left( \frac{ab}{100} \right) \left( \frac{100}{ba} \right) = 1$

21. D. Using the upper graph, follow the July 1990 point to the 110 mark.

22. D. In March 1992, the unemployment rate was slightly more than 7%.

23. A. During July 1990 there were a low unemployment rate (5%) and a high employment rate (110 million), indicative of a fairly healthy economy.

24. C. The upper chart shows that the highest peak was reached in May–June 1990, when between 110 and 111 million persons were employed.

25. B. Logically one would expect to find unemployment decreasing as the number of people employed increases.

26. B. $\frac{760}{200} = 3.8$ gallons. It will be necessary to purchase 4 gallons.

27. C. (A) $\frac{1}{5} = 0.2$

   (B) $\frac{1}{4} = 0.25$

   (C) $\frac{2}{5} = 0.4$

   (D) $\frac{16}{25} = 0.64$ (which is more than $\frac{1}{2}$)

   (E) $\frac{3}{10} = 0.3$
28. C. Since the first car uses 1 gallon for 15 miles, it will use 4 gallons for 60 miles. Since the second car uses 1 gallon for \( m \) miles, it will go 4\( m \) miles on 4 gallons. Choice D is incorrect. A *grotto* would not be described as island-like. Choice E is incorrect. Nothing in the sentence justifies the use of the term *hazardous*.

29. D. If the cow were tethered by a ten-foot-rope in a pasture without fences, it could graze in a circular area of 100\( \pi \). Since the fences form an angle of 60\( \degree \), the cow will be confined to \( \frac{60}{360} \) or \( \frac{1}{6} \) of that circle, or \( \frac{1}{6} \) of 100\( \pi \) or \( \frac{50\pi}{3} \).

30. C. Radius = \( \frac{7}{2} \) inches, and the area of the bottom of the smaller tin = \( \pi \left( \frac{7}{2} \right)^2 \) square inches. The volume of each small tin = \( \pi \left( \frac{7}{2} \right)^2 \left( \frac{7}{2} \right) \) cubic inches. The volume of the two small tins = \( 2\pi \left( \frac{7}{2} \right)^2 \left( \frac{7}{2} \right) \) cubic inches. Let \( x = \) depth of dough in the larger tin. Since the radius of the larger tin = 5 inches, the volume of dough in the larger tin = \( (5)(5)(\pi)(x) \) or 25\( \pi x \). 

\[
25\pi x = \frac{49}{2} \pi \text{ (the amount of dough is the same)}
\]

\[
x = \frac{49}{50} \text{ or } 0.98
\]

**Section 6**

1. B. The writer contrasts the individualistic nature of early explorations with the *collaborative* nature of present-day ones.

2. E. The anthropologists have dismissed Villa’s theory. Nevertheless, they still must stress that other interpretations of the evidence are possible. Why? Because they have not been able to dismiss his evidence. Thus, they are forced to *grant* or concede that his research was carefully done.

3. C. Rather than being *barren* or devoid of life, the vent regions are like *oases* that support life. Choice A is incorrect. A *waste* by definition is not *teeming* but *barren*. Choice B is incorrect. The vent region would not be described as an *enclave* (tract enclosed within a foreign territory).

4. D. Instead of allowing the exchanges to develop fully, the playwright cuts short or *truncates* them.

5. D. A *spate* or flood of examples of fraud suggests that the review system intended to catch such frauds is severely *taxed* or burdened.

6. D. Despite his self-centeredness, White could be kind to others. He could even go beyond kindness and do what for someone egocentric was harder still—*deprecate* or belittle himself. Note the use of *even* as an intensifier here.

7. E. Characters who define themselves by their betrayals *belle* or contradict any assurances they have given others of their good faith. Choices A, B, and D are incorrect. Nothing in the sentence suggests they *flaunt* (parade), *underscore* (emphasize) or *deplore* (lament) the promises they have made. Choice C is incorrect. Updike’s characters break their promises; they do *not* fulfill them.

8. C. A *book* consists of several *chapters*. A *building* consists of several *stories*.

9. D. To *inaugurate a president* is to introduce him or her into office. To *install an officer* is to do the same.

10. E. To *tinker* is to *adjust* or repair something in an unskilled manner. To *scribble* is to write or draw something in an unskilled manner.

11. C. *Zinc* is a specific example of an *element*. A *quark* is a specific example of a *particle*.

12. D. Something *uproarious* is by definition extremely *amusing*. Something *repugnant* is by definition extremely *disagreeable*.
13. C. *Forensic* means pertaining to the art of *debate*. *Histrionic* means pertaining to the art of the *theater*. Beware eye-catchers. Choice A is incorrect. An argument may be empirical or based on fact; however, arguments are not necessarily empirical. (Defining Characteristic)

14. D. A *limpet* (mollusk that adheres strongly when disturbed) is difficult to *detach*. A *tick* (parasite that burrows into its host) is difficult to *extract*. (Defining Characteristic)

15. E. To *countenance* or allow something is to give it *approval*. To *air* or voice something is to give it *expression*. Note that *air* here is used with a less familiar, secondary meaning. (Synonym Variant)

16. D. Someone *insouciant* (nonchalant; unconcerned) is difficult to *disturb*. Someone *incredulous* (skeptical; disbelieving) is difficult to *convince*. (Antonym Variant)

17. B. The opening sentence maintains the growth of scholarly activity was stimulated by the protest movement. The protest movement caused an upsurge of popular interest in the Afro-American past. It also created a climate in which professional studies of black history were legitimized.

18. D. The author cites no public opinion polls in the passage. However, he does cite personal anecdotes (Logan’s and Litwack’s experiences), magazine articles (Bennett’s series in *Ebony*), curricular materials (both the freedom schools’ materials and those developed for the New York and Detroit public schools) and scholarly publications (Logan’s and Litwack’s texts).

19. C. The three men are cited as examples of scholars who were encouraged to resume their earlier researches in black history. Choices A, B and E are incorrect. None of the three men was identified in the passage with these concerns. Choice D is incorrect. Only Logan is identified with research on blacks in nineteenth-century North Carolina.

20. B. Since the advice was not actually “indicative of how things were going” in the field, it was inappropriate to the times or out of keeping with the current state of cultural and professional development.

21. E. The author is describing what occurred during the period to change black history from a marginal field to a vital field of specialization.

22. D. You can arrive at the correct answer by the process of elimination. Statement I is supported by the passage. At the time Bennett and Logan wrote, both the pre-Mayflower period of black history and the nineteenth-century life of blacks in North Carolina were relatively unexplored. Therefore, you can eliminate Choices B and E. Statement II is unsupported by the passage. Bennett’s work was a popularization intended for a wide general audience. It was not aimed at academics. Therefore, you can eliminate Choice C. Statement III is supported by the passage. Bennett’s work appeared first as a series of magazine articles, then as a book. Logan’s work first appeared as a doctoral thesis, then (with revisions) as a book. Therefore, you can eliminate Choice A. Only Choice D is left. It is the correct answer.

23. D. According to the passage, prior to the early 1960s Negro history was not an object of particularly great renown in academe. In the 1950s, the advice given to Blassingame to avoid black history if he desired “a future in the historical profession” seemed wise —graduate students of the caliber of Huggins and Litwack felt an ambivalence about entering the field because of “practical concerns.” What these concerns boiled down to was the sense that to choose black history as one’s specialization would be detrimental or harmful to one’s career.

24. D. The author is discussing the behavior of various rodents that become *dormant* or inactive for brief periods of time.

25. B. Fat storage has worked against the fat mouse’s survival because it has led to the mouse’s being considered a succulent delicacy by African hunters.

26. C. This detailed account of a particular aspect of rodent behavior clearly belongs in a *textbook on rodent biology*.

27. C. In the opening sentence the author refers to hibernation and aestivation, two other types of dormant states. This suggests he has just been discussing these dormant states in some detail.

28. C. The opposite of to *sap* or weaken is to *invigorate* or strengthen. Think of “sapping one’s energy.”
29. C. The opposite of unfeigned or not pretended is simulated or feigned.
Beware eye-catchers. Choice A is incorrect. Pretentious means ostentatious, showy, or ambitious. It does not mean pretended or feigned.
Think of welcoming someone "with unfeigned delight."

30. D. The opposite of vacillation or wavering is firmness. Think of "indecisive vacillation."

31. D. The opposite of to swathe or cover up is to unwrap.
Beware eye-catchers. Though babies are sometimes described as swathed in swaddling clothes and injured persons are sometimes described as swathed in bandages, swathing is related to wrapping, not to nurturing or anointing.
Think of "swathed in blankets."

32. E. The opposite of cognizance (conscious knowledge, awareness) is unawareness.
Context Clue: "He had no cognizance of the crime."

33. E. The opposite of nebulous (vague, cloudy) is distinct.
Think of "a nebulous memory."

34. E. The opposite of to denigrate (belittle or defame) is to extol or praise.
Think of "denigrating someone's efforts."

35. C. The opposite of decorum (correctness, good taste) is impropriety or unseemliness.
Think of "a proper degree of decorum."

36. E. The opposite of condign or due (as in exactly deserved) is unmerited.
Think of "condign punishment."

37. B. The opposite of puissance or power is powerlessness.
Beware eye-catchers. Choice A is incorrect.
The opposite of power is a lack of power, not a lack of effort.
Think of "the puissance of the emperor."

38. A. The opposite of to palliate or moderate in severity or intensity is to exacerbate or increase in severity.
Think of "efforts to palliate a disease."

Section 7

1-5. In this extremely tricky problem, the first five statements will tell you only who is in what generation and some of the relationships, but the last two statements clarify everything.
Using solid horizontal lines for marriages, circles for married groups, broken lines for sibling relationships, and vertical lines for parent-child relationships, we first get the following diagram:

We know that N and M must be brothers of E or sisters of F, but we never find out which. We don't yet know the relationships among A, B, and C, although we do know that C and A aren't married (because their male and female children marry). We don't know exactly who Q's children are. The next two statements tell us. A and B are male; the paternal grandmother of E and F must be the mother of their fathers, so A and B must be brothers. But if they are the only grandfathers of H, they must be the fathers of her father E and her mother F. Since C is F's mother, B and C must be married, and G must be F's sister. Since A and C can't be married, A must be married in Brihtu marriage to several sisters (remember, A and B are H's only grandfathers), while B is married in Brihtu marriage to C and her sister or sisters. J, K, and L are the wives of A and B, but we don't know who is the wife of which of them.
All this gives us the following completed diagram:

The questions are now easy.

1. D. This can be read from the diagram. G is definitely not a sister of E, since she is a sister of F who is married to E. Since F may be the sister of N and M, G may be their sister as well; but she would be the sister of both, which eliminates choices A and B.
2. D. N must be the sibling of more than one person, since he or she is married to three people. The possibilities are: M and E, if N is male; M and F, if N is female—but not both.

3. A. A is definitely one of Q’s children; C, J, and K cannot be, since they are married to Q’s children (A and B); M must be a sibling of one of Q’s grandchildren.

4. B. The only Brihtu marriages we are sure of are those of A and B. The marriage of N, M, E, and F, of which H is the daughter, could be either. We don’t know whom Q married, so we can’t tell what kind of marriage A and B are children of. We don’t know who J’s parents might have been.

5. E. We know that E is eligible to marry F, and that G is F’s sister. N cannot marry M (choice A), since they are the same sex—there would be either no male or no female in the marriage. Choice B may be permissible, but we don’t know. Choice C is impermissible: assuming that N and M are E’s brothers, this would mean that two brothers married two sisters, which is neither Brihtu nor Prahtu marriage. Choice D is a monogamous marriage, which is definitely out in the society under consideration.

6-9. The players must be seated as shown in the following diagram:

Cooper or Edwards or Edwards or Baker
D’Amato or Farley or Farley
Cooper or Adams or Adams
D’Amato or Goldberg or Goldberg

Note that all the seats except for the center seat may be occupied by either of two individuals. Take this into account when answering the questions.

6. D. In order for Farley and Edwards to be seated together, they must occupy the second and third seats from the left, in either order.

7. C. Since Edwards is in either the second or third seat from the left, he cannot be next to Adams, who is in either the first or second seat from the right.

8. C. Goldberg is in one of the two seats nearest the exit, and therefore cannot be on either side of Baker.

9. B. If neither Edwards nor D’Amato is seated next to Baker, then Baker must be flanked by Farley on the left and Cooper on the right. This means that the table must be seated as follows (left to right): D’Amato, Edwards, Farley, Baker, Cooper, and, in the last two seats, Adams and Goldberg in either order. The fact that Adams and Goldberg may be seated in either order results in the two possible seating arrangements for the table as a whole.

10-15. An examination of the seven number series reveals

I. 64 is the third power of 4 (4 × 4 × 4); 125 is the third power of 5 (5 × 5 × 5). The next number should be the third power of 6 (6 × 6 × 6).

II. This is a more difficult series. The square of 6 is 36. 37 is the square of 6 + 1. The square of 7 is 49. 50 is the square of 7 + 1. The square of 8 is 64. 65 is the square of 8 + 1. We may assume that x in this series will equal 9 × 9 + 1 or 82.

III. Here we find a pattern of three elements. 25 = 5 × 5; 125 = 5 × 5 × 5. Similarly 49 = 7 × 7; 343 = 7 × 7 × 7. We may assume that x will equal 9 × 9 × 9.

IV. The difference between 9 and −7 is 16 (4 × 4). The difference between −7 and 18 is 25 (5 × 5). The difference between 18 and −18 is 36 (6 × 6). The difference between −18 and 31 is 49 (7 × 7). We should also notice that these squares alternately use plus and minus signs. The next number (x) should be 31 −(8 × 8) or −33.

V. 16 = 4 × 4, 80 = 16 × 5, 480 = 80 × 6, 3360 = 480 × 7. The next number should be 3360 × 8. Here the pattern is increasing multipliers of the preceding number.

VI. Increasing units of subtraction. The pattern is number −1, −2, −3, −4, etc.

VII. Descending order of squares. 100 is 10 × 10, 81 is 9 × 9, 64 = 8 × 8. 49 = 7 × 7, 36 = 6 × 6. The next number should be 25 (5 × 5).

10. A. Questions involving the third power occur in I and III.

11. A. See analysis of II above.

12. C. Example III cannot be solved unless we see that 5, 25, and 125 make a pattern which is repeated with 7, 49, and 343.

13. D. Choice V does not involve the use of second or third powers of numbers.

14. B. See analysis of IV above.

15. B. See analysis of V above.
16-20. Make a table of the rooming possibilities. Since Hittites and Goths must be separated, D and G must always be in one cabin, while B and F are in the other. In the first three lines of the following table, D and G are placed consecutively with A, C, and E, while whichever two of these three remain are placed in the other cabin with B and F. Then, B and F are put with A, B, and C in turn, the two remaining being put with D and G in the other cabin. The ✓ mark shows combinations in which everyone in each cabin can talk, whether directly or with one person translating. The X mark shows combinations where this is impossible.

| DGA | BFGE ✓ |
| DGC | BFAE ✓ |
| DGE | BFAC X |
| DGCE | BFA ✓ |
| DGAE | BFC X |
| DGAC | BFE ✓ |

16. D. The combination of DGCE and BFA is satisfactory. BFC is impossible, because B and F speak only Hittite and C speaks only Etruscan and Gothic. Likewise, DGE is out, because E speaks no Gothic. The other two choices are fine by themselves, since A speaks all languages; but they represent the four-person second cabins corresponding to the two impossible choices given in choices A and B.

17. E. There is one acceptable rooming arrangement that places C with A (I). There are two acceptable arrangements in which A is not in the three-person cabin (II). In one acceptable arrangement, DGCE and BFA, E does not room with a Hittite (III).

18. C. If your table has been set up correctly, just count.

19. D. D, E, and G are not part of any acceptable arrangement (I); B, E, F and C, D, E, G are (II, III).

20. E. B, E, and F—an acceptable combination previously, since E speaks Hittite—becomes impossible now, since Goths won’t room with Hittites. The others all place the newcomer with persons of her own nationality.

21. B. The group receiving the dilute sulfuric acid and the group receiving vinegar were the control groups. These sailors received the same diets as the third group except for the substance tested.

22. C. The passage indicates that lack of fresh food was the cause of scurvy.

23. E. While Lind used the scientific method, the contributions of Hall and Harvey set the stage for his experiment. Credit for the discovery must be given to all three men.

24. E. Hall and Harvey seemed to have established the fact that acids are effective, but Lind’s experiment was to find out whether it was acidity or some specific substance perhaps associated with acids that cured scurvy. Today we know this substance is ascorbic acid. Hall’s brew and Harvey’s lemon juice must have contained ascorbic acid.

25. C. Lind did not use pure citric acid. Lemon juice contains other substances besides citric acid.
BARRON'S

GRE®

GRADUATE RECORD EXAMINATION
GENERAL TEST

WITH COMPUTER SOFTWARE
for Macintosh® and Windows® users

12TH EDITION

Prepare for the Computerized Version of the GRE
A pair of 3½" Disks: one for Macintosh® and one Windows®
give you one practice test that you can take in Study Mode or Test-Taking Mode
All questions answered
Your test score automatically calculated

Additional Preparation in Book Includes:
Six model GRE exams
An in-depth briefing on the optional computerized GRE, with advice on who should take it and how to prepare
A math review section
A 3,500-word vocabulary building list
An additional 300-word high-frequency vocabulary list
Exercises in language usage, reading comprehension, and analytical skills

Model Exams Simulate the Actual GRE Exam
All Questions Answered and Explained

Barron's Educational Series, Inc.
